The basic problem is one that cannot be easily solved, for, on the one hand, there are some aspects in which the metric system simply without question is superior to the system of units we now use; it is easier to use and easier to learn. On the other hand, as a nation we have built up a huge investment (from milk bottles to machine tools) in English units. How much short-term cost is justified to achieve the long-term benefits of conversion from English to metric units is a nice problem for study. I am glad that S. 2420 has been introduced, and hope that the committee will give it serious consideration.

Sincerely,

DAEL WOLFLE,
Executive Officer.

[From the Oregon Journal, Portland, Oreg., Aug. 30, 1959]

FOREIGN MARKETS AND THE METRIC SYSTEM

We are still chuckling over a well-written feature story in a recent issue of the Journal reciting the handicap under which United States industry operates with our present standards of weights and measures. A clever headwriter headlined the article: "Bushel and a Peck and Our System's a Wreck."

Dr. Edward Teller, father of the hydrogen bomb and University of California physicist, insists that failure of the United States to adopt the metric system can cost us dearly in foreign markets where we must compete with nations selling machinery and goods under that intelligent use of weights and measures.

Teller said: "If a foreign custom has a chance of buying a piece of machinery which he knows, and for which he understands how to replace a screw and how to measure that screw without the introduction of a whole new branch of learning, he will buy that simpler machinery."

Of course, one country does not give us any competition in the bushel-and-peck, inch-and-yard race. That is Great Britain, where we learned the awkward standards under which we jointly operate. Russia, Germany, France, Scandinavia, Japan, and India have adopted the metric system through the years. Russia made this step only in 1927, joining most of the rest of the world except the United States and Britain. Britain has the additional handicap of the pound, shilling, and penny money system, likely the clumsiest numerical system since the Romans employed the hard-to-do "letter" method. Most Britons in private conversation will admit their system is virtually incomprehensible to a foreigner and calls for intensive local schooling in multiplication and division, particularly.

When our Founding Fathers set up the decimal system for our money, it is most regrettable that they did not adopt the metric system introduced by France early in the 18th century.

So we cripple along with the inch and 12 of them to the foot, 16½ feet to the rod, and 5,280 feet to the mile, mostly divisible by nothing; 16 ounces to the pound, 4 pecks to the bushel; 16 ounces of liquid to the normal pound, while the nations with the metric system are working with meters and kilometers for distance, grams as the unit of mass or weight, and the liter as the unit of volume. Fractions are simple and multiplications easy to do.

Proof is given of Teller's assertions when one realizes that many scientific processes in the United States have had to adopt the metric system because of its value and convenience.

The United States has been so long a practitioner of the bushel-and-peck, inch-and-yard, ounce-and-pound school of standards it would take a convulsion of nature to turn us to the commonsense metric system. But we ought to do it for our own convenience, if not to keep from being shut out of world markets.

[From the Oregon Journal, Portland, Oreg., Aug. 2, 1959]

BUSHEL AND A PECK AND OUR SYSTEM'S A WRECK

The U.S.'s standards of weights and measures threatens this Nation's position in world economy, believes Dr. Edward Teller, University of California physicist and father of the hydrogen bomb.

In advocating U.S.'s adoption of the metric system used by much of the world, Teller told a Marquette University audience in Milwaukee recently:

"If we do not change, we shall lose in the economic competition with Russia. If a country has a chance of buying a piece of machinery, which he knows, and which he understands how to replace a screw and how to measure that screw without the introduction of a whole new branch of learning, he will buy that simpler machinery."

"In 1927," Teller said, "the Russians did away with whatever rudimentary words and other absurd units they had and they, like most of the rest of the world, are now on the metric system. Also relatively recently, the Hindus and the Japanese have adopted the metric system.

"But there are still some wild Anglo-Saxon tribes which cherish their traditions above everything else. Let me mention to you a few of these * * *."

"The yard: It is said that King Henry I established the yard by measuring the distance between the tip of his finger and the tip of his nose. It is indubitably true because it is found in the 17th pronouncement of King Edward II that an inch is three, dry, round barley corns laid end to end.

"The mile: You all know that the mile comes from the Latin 'mille' or thousand, for the thousand double steps of the Roman soldier. The French, who since that time have improved their ways, have a more civilian and more civil measure of great lengths; and that was the 'pip'—the distance you can walk while smoking your pipe.

"Temperature scale: (This) comes from a very erudite German by the name of Fahrenheit, who lived in Danzig. * * * Mr. Fahrenheit waited in Danzig until it had got as cold as it would get. Then on the day that was absolutely the coldest possible, he stuck his thermometer out the window, and that was zero. Then he put it under his arm and he seemed to have slightly elevated temperature, and that became 100."

The metric system of measurement uses the meter as its unit of length, the gram as the unit of mass or weight and the liter as the unit of volume.

The Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. OLIVER. Mr. Speaker, in voting against the Landrum-Griffin so-called labor reform bill and the 90 percent Landrum-Griffin conference agreement, I voted to prevent retrogressive developments in the trade union movement which are certain to cause more far-reaching adverse results to the American economy and democracy, itself, than have been disclosed by the McClellan committee, in its many months of antiracketeering investigations.

It seems to me almost inevitable under the provisions of this law, that the clean, legitimate small unions of this Nation will have no future because of the roadblocks against their growth and expansion, written into this law. Expensive legal and accounting requirements will force these unions to merge or to become absorbed by the powerful and big international organizations.

It also seems inevitable that the dedicated, honest leaders of small unions will be forced out of office by the persecution and prosecution with criminal sanctions which are certain to stem from planned incidents in union meetings by stooges of management, drunks, and agitators, including Communists; such a vacuum in leadership will be filled by racketeers and hoodlums, the very same type of leadership which this law is supposed to destroy. A few examples of such probable incidents are as follows:

First. One member, among hundreds, is not given the floor at a union meeting because the chair understood the debate to be closed; the speaker had exhausted his time; or the speaker acted in a disorderly fashion; or for a dozen other reasons which are well-founded, but possibly illegal under the statute.

Second. One member, among hundreds, did not receive adequate notice of a union election, due to a misaddressed envelope.

Third. Union dues are increased, pursuant to arrangements for a secret ballot election, but the ballot of one member among hundreds, was marked in an open area where it was observed by others.

Fourth. A hand was raised to nominate a local union officer at a local union meeting, but the chair overlooked it.

Fifth. A charge, upon which a member is disciplined, after due notice and a fair hearing, is held not to be as specific as some judge may subsequently determine.

Sixth. The involved, intricate and confusing internal government and financial reports which the officers—most of whom are unschooled as well as unpaid—are required to file, prove to be inaccurate, due perhaps to an error in arithmetic.

It, furthermore, seems inevitable to me that any such developments, involving the destruction of clean leadership and

the absorption of small unions by large powerful unions will naturally result in the next attack, by the U.S. Chamber of Commerce and National Manufacturers Association on the trade union movement, being directed against the bigness of unions. This attack, after sufficient public demand has been generated, will have antitrust controls over labor as its goal. Another objective already being discussed by President Canham of the U.S. Chamber of Commerce is a so-called national right-to-work law.

In short, Mr. Speaker, the pattern is clearly indicated. The great industrial and financial giants of America are determined to be the political giants, as well. They will, then, have the package, all wrapped up. Complete control of America by the forces of conservatism and even reactionaryism will be the inevitable result of the weakening of trade unionism.

To document my viewpoint with regard to this detrimental trend for small unions, Mr. Speaker, I am including in my remarks the following newspaper story by Wilfrid C. Rodgers in the Boston Daily Globe of September 7, 1959:

[From the Boston Daily Globe, Sept. 7, 1959]

LABOR REFORM BILL HIKES COSTS OF RUNNING UNIONS—MEMBERS GET MORE SAY BUT MUST PAY

(By Wilfrid C. Rodgers)

Passage of the labor reform bill by Congress will have two almost immediate effects on individual union members:

1. Gives them a bigger voice in union affairs.

2. Makes bigger dues almost automatic in many unions.

The bigger voice in union affairs was given members by legislative law in an effort to get rid of crooks in the labor movement.

The bigger dues will be assessed on members because of an economic law—the labor bill pushes up the cost of doing business for unions and the members have to pay these costs through dues.

Why the increased costs for unions?

Every time the Federal Government passes labor relations laws it costs unions more to operate.

It started for most unions with passage of the Wagner Act. There were no complaints from union officials on this score, however, because to them the Wagner Act was the "magna carta of labor."

It opened a whole new field of organizing and brought in new union members by the thousands.

It also opened a new legal field for lawyers—labor relations.

Until the Wagner Act, the Nation's labor laws depended upon what State you were in. The State courts were supreme.

A strike declared legal by a court in New York could well be—and often was—declared illegal in Massachusetts.

In effect, with the passage of the Wagner Act, the Federal Government said to the States:

"When it comes to interstate commerce we'll make the laws on labor relations and enforce them. You keep your hands off."

This was the way things operated during the New Deal and through much of the Truman administration.

The National Labor Relations Board administered the Wagner Act with appeals from its decisions going to the Supreme Court.

Then came the Taft-Hartley Act.

One Boston labor leader sums it up this way:

"The Wagner Act meant a union had to have a lawyer. The Taft-Hartley meant you had to have two. And the labor reform bill means we'll have to have three lawyers and a corps of certified public accountants."

The labor reform bill now has placed a large segment of labor relations cases back in the hands of State courts or State administrative boards.

The reason for this was the so-called "no man's land."

At first the NLRB took jurisdiction over any firm that was even closely connected to interstate commerce.

If the firm, its products or its raw materials crossed State lines, the NLRB took charge.

Then business became heavy. The NLRB complained it couldn't carry the entire load. It set up standards, usually stating that only firms doing a certain amount of gross business interstate, were eligible to use the NLRB.

This reduced the amount of work for the NLRB but meant chaos for some small businesses and small unions.

STATES COULDN'T ACT

Because the Wagner Act said the Federal Government would handle the interstate commerce disputes, the Supreme Court held that even if the NLRB declined jurisdiction, State courts or State administrative bodies couldn't touch the disputes.

The labor reform bill now says that if the NLRB declines to handle the case, the firms or unions involved can go into the State courts.

The rub comes—so far as labor is concerned—when the labor reform bill says that State law will govern the State court in acting on the cases.

State courts have been mostly out of the labor relations business since New Deal days. Except for a small handful of States, no attempt has been made by legislatures to keep State laws up to date on labor relations.

Why should they, when labor relations mostly was in the hands of the Federal Government?

BABY WAGNER ACT

In Massachusetts there exists a Baby Wagner Act. This created a State labor board which did for intrastate business what the NLRB did for interstate business.

Now the State labor board will have jurisdiction over those cases turned down by the NLRB. (This board was almost eliminated during the budget-cutting sessions of the legislature on the grounds it didn't have enough business to do.)

In Maine, however, there is no State labor board, so cases declined by the NLRB in that State will be thrown into the State courts.

Already unions and management are preparing for legislative tugs of war over this issue.

The unions will press for State labor boards where they don't exist and State statutes governing labor relations.

To comply with the financial reporting provisions of the labor reform bill, unions will have to spend money for certified public accountants. (Many already do.)

The touchy part of this provision of the bill, to labor leaders, is that if the financial reports aren't correct the union officers can be thrown into jail.

SMALL UNIONS AFFECTED

Since small unions—with less than 300 members—aren't exempt from these reporting provisions, union leaders anticipate trouble getting members to run for office.

Most of these officers receive little if any pay; most aren't experienced in making financial reports.

To induce members to run for office, some locals may have to make the position salaried.

Other locals may well be forced into merging with other small locals in their area who belong to the same international.

In this manner, two, three, or even four small locals could merge into one and pay but one bill for lawyers and accountants rather than three or four such bills.

Trouble is that some of the very men the labor reform bill aims at getting out of the labor movement, such as James R. Hoffa, have been trying to merge these small locals for years without too much success.

Dumping three small locals—that the international doesn't control—into one big local that it does, resulted in many abuses the labor reform bill hoped to eliminate.

Proponents of the bill, however, hope that giving individual members a bigger voice in union affairs they will use it and rid labor of some of the corruption exposed by the McClellan committee.

Sane Way to Smut Control

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. ADAIR. Mr. Speaker, because we are all interested in controlling the smutty and obscene material which is sometimes made available to our people, particularly young people, I think the following editorial is very timely.

The Postmaster General of the United States has given a great deal of effort and thought to this, and the editorial from the Indianapolis Times indicates that Indiana's Governor Handley has also launched his own crusade against smut:

SANE WAY TO SMUT CONTROL

Governor Handley has launched a crusade against smut that seems to us to have the best, if not the only, chance to succeed of any of the several so far undertaken.

His plan strikes at the roots of the problem.

Instead of blunderbuss-type raids of dubious legality that in the past have helped to defeat their own excellent purposes, the Governor proposes to mobilize the public opinion that obviously already exists in overwhelming majority against the distribution of obscene literature, and which in our opinion is the only force that can cope with it.

To that end he has assigned the Governor's Youth Council, a statewide group already active in various areas, to the job. It will invite the cooperation of all organizations concerned with the problem, and enlist more, in every county of Indiana, including wholesale and retail distributors of magazines and books, city and county officials, Parent-Teacher Associations, the Indiana Council of Churches, and the Citizens for Decent Literature, and various others. With such forces working together on a sane and reasonable program there appears to us very little doubt that objectionable printed material can quickly be driven off the magazine racks, and permanently.

Not everyone, perhaps, will agree completely on just what specific publications are objectionable, which are acceptable, for sale. They never have so far. That need be no bar to establishment of reasonable standards, though, which will be generally satisfactory to most of the people of any community.

Such standards can neither be established nor maintained, however, by arbitrary force.

This program the Governor proposes takes into account realistically the obvious fact that nearly all those in the business of selling printed matter of whatever kind and at whatever level, are just ordinary decent citizens themselves, with no conscious intent to peddle pornography and certainly no desire to destroy the good will on which their business is built by flaunting offensive material on their display racks.

If the Governor's program does succeed, as we have every reason to believe it can, there should be no great difficulty in defining of such reasonable standards, and gaining the fullest cooperation to maintain them.

The Late Honorable Edmund P. Radwan

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. DULSKI. Mr. Speaker, yesterday it was my sad duty to announce the death of a former Member of the House of Representatives, the Honorable Edmund P. Radwan. The passing of Mr. Radwan removes from our community one of the most dedicated public servants. He showed great love for his work and his devotion to public service is best reflected by the wonderful record he has left. As one who was privileged to call him a friend, I extend my heartfelt sympathy to the members of his family.

Under leave to extend my remarks, I wish to include the following editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on Septemebr 8, 1959:

EDMUND P. RADWAN

Ill health last year compelled the retirement of Edmund P. Radwan after four terms in Congress. His death now at the age of 47 writes a sad epilogue to a brilliant career cut short just as it was reaching its prime.

Mr. Radwan had served in public posts at all three levels of government. Starting as village attorney in Sloan, he was elected to the State senate in 1945 while serving in the Army. After 5 years at Albany, he entered Congress in 1950. His ability as a votegetter increased apace with his years of service; though hospitalized throughout his final campaign in 1956, he was reelected to the House by a plurality of more than 44,000.

Voter confidence in the young Congressman was not misplaced. For several years he served with distinction as a member of the Veterans' Affairs Committee. Later, as a member of the Foreign Affairs Committee, he proved one of the mainstays of support for the Eisenhower foreign policy. With the two other Buffalo Representatives in the House—Representatives PILLION and MILLER—he was a member of one of best teams ever to speak for this area in Congress. Working in close harmony, they compiled a legislative record of unusual productivity and effectiveness.

Mr. Radwan's voting record showed a flair for independence throughout his legislative and congressional career. He was thoroughly devoted to well-being of his constituents and did not lose sight of their needs even while striving to serve the interests of the Nation as a whole.

It is a loss to both the community and the Nation that a kinder fate did not spare him for the even more important years of congressional service that surely would have been ahead.

U.N. Maps Latin America Socialism

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. ADAIR. Mr. Speaker, the Indianapolis Star recently carried two disturbing stories relating to Latin America. Because it is so important to our people and free people everywhere, I think they deserve a wide reading. Accordingly, with unanimous consent, I enclose the first of the articles herewith:

[From the Indianapolis Star]

U.N. MAPS LATIN AMERICA SOCIALISM—RUSS WOULD GAIN IF FIRMS MUST GIVE SECRET DATA

(By Jameson G. Campaigne)

A complete blueprint for Socialist integration of all Latin American industry and agriculture is planned under the supervision of the United Nations.

The plan has been prepared by the U.N. Economic Commission for Latin America, the same agency which would make massive industrial sabotage possible in South American countries through a plan to require all power companies to reveal secret information for the files of the United Nations.

Neither plan has been revealed publicly, but I have seen a copy of each in the office of U.S.A. Magazine in New York. The magazine obtained the information from a confidential source inside the United Nations.

Senator STYLES BRIDGES, ranking Republican member of the Senate Foreign Relations Committee, has announced that he will demand a congressional investigation. He declared that he was shocked by the revelations.

The ECLA development and hydraulic resources program, which seeks secret information from all Latin American power companies, is headed by Adolfo Dorfman, described as an undesirable alien in the United States by the U.S. Attorney General.

The plan to socialize Latin American industry and agriculture is contained in supplement No. 4 of the official records of the 28th session of the U.N. Economic and Social Council.

Generally the ECLA report plans to achieve the progressive socialization of Latin American economics into a single integrated unit by first aiming at the establishment of a common market. This common market would be brought about through the efforts of U.N. economic experts who already are advising and counseling many Latin American governments. It would, of course, follow a Socialist pattern, since every top economic executive in the United Nations is either a Socialist or a Communist.

There is not one top economic expert in the U.N. agencies or commissions who is known to be devoted to free economics, the market economy or capitalism. The U.N. chief regional commissions, of which ECLA is one, is a Communist from Poland, W. R. Malinowski. The reason Adolfo Dorfman was considered an undesirable alien in the United States when he worked for the U.N. here is his contacts with Communists and fellow travelers.

The ECLA report proposes that the U.N. seek to impose economic development programing under U.N. experts on all Latin American governments. "The Secretariat," it says on page 55, "in cooperation with other United Nations departments and specialized agencies, had been assisting governments (in Latin America) in various fields. It was important for such assistance to be systematically extended to economic development programing." What this means in Socialist language is the establishment of a government-controlled economic plan for all Latin America under the supervision of the U.N. commission.

In addition, ECLA proposes that the U.N. provide "training for government officials concerned with budgetary matters." Since all top U.N. economic officials who would choose these experts are Socialists or Communists, it is clear that the training would be in Socialist and Communist techniques.

Already OPEX, "Operational and Executive Personnel" in the U.N., is sending U.N. experts directly to national governments in Latin America to take over key positions "until such a time as national personnel can be trained to take over."

This Socialist-Communist influence in the United Nations extends right up to the top and down to the bottom. Speaking to the opening meeting of ECLA last May 14, U.N. Secretary General Dag Hammarskjold, who is a well-known Swedish Socialist, praised ECLA's plans to "integrate" Latin American industry and agriculture.

"Bold proposals stand before you," he said, aiming at the establishment of a regional market. "* * * *Such an idea has not sprung from a sudden and visionary inspiration * * *. Rather, it derives from the systematic investigation and analysis made in ECLA * * *. It is in the course of analyzing the economy of individual countries * * * that the limitations inherent in political fragmentation have shown themselves in such a clear light.

"As you are embarking on a new phase of this long and difficult journey toward ambitious goals for which social scientists use the word 'integration,' it is my sincere hope that the United Nations, where this idea received its first concrete formulation, will continue to be closely associated with it."

In other words, the Secretary General proposes that the U.N. become a permanent adviser and director of an economic revolution in Latin America aimed at Socialist integration of all industry and agriculture.

How does this affect the United States? If it were ever put fully into effect it could destroy our markets in Latin America and create on our southern borders a huge Socialist regime with all the state trading, centralized and government-controlled economic practices that go with it. It would put large segments of American business at the mercy of people like Adolfo Dorfman and W. R. Malinowski who would be the advisers of the new order in Latin America.

One-fourth of all U.S. exports go to Latin America. One-half of all Latin American exports come to the United States. One-fifth of all American private investment abroad is in Latin America. Obviously the Socialist-Communist aim of ECLA could inflict mortal damage on American business and American investments in that area.

How can the United States put a stop to this Socialist-Communist meddling in Western Hemisphere economic affairs by the United Nations? We have surrendered without protest from our Government the control of all personnel appointments to the Secretary General and members of the Secretariat. At one time in 1952 when it was discovered that many American Communists had gone to work for the United Nations, the then Secretary General Trygve Lie asked the advice of a special commission of jurists on whether he could fire American Communist or pro-Communist employees. The ju-

rists recommended that he could and should do so. But not long after that Lie rejected this advice and Dag Hammarskjold also had.

But the United States does have and should have some rights when its interests in the Western Hemisphere are endangered by threats of industrial sabotage and the "integration" of Latin American economies. We supply one-third of the U.N. budget. We are the host nation. We can demand that our interests be protected, that Socialist-Communist activities in Latin America by the U.N. be stopped, and that people whom we consider dangerous to American security and liberty be fired.

Dag Hammarskjold fired Paul Bang Jensen when the Soviet Union and other Communists demanded it. He can just as well fire Adolfo Dorfman if the U.S. Government demands it. The United States has the power to protect itself in the United Nations. It is the power of the purse. At present the United States is being forced to finance steps designed in the U.N. to destroy our hemisphere defenses and our hemisphere economic freedom.

American industrialists and specialists in the electric power field assert that two great dangers exist if secret information concerning powerplants is made available to a U.N. commission.

They are: 1. Should the information fall into possession of the Russians, all Central and South America could be paralyzed in a single stroke by saboteurs in event of war.

2. Economic, because the Soviets would know exactly who was selling power equipment to Latin American companies, thus enabling Russia to penetrate those countries by undercutting American and Allied suppliers. At the same time Russia could flood those countries with technicians.

Adolfo Dorfman, who heads this project for ECLA, is a leftwing, Russian-born Argentinean. In 1953 the Attorney General demanded that the State Department rescind his accreditation to the United Nations because of his association with Communists.

Schedule of Meetings, Eighth Ohio District

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. BETTS. Mr. Speaker, the best way for a Congressman to secure the views of his constituents is by personal interview. For this reason, I plan to visit the county seats in the Eighth Ohio District this year, as I have each year in the past. If anyone has any problems or views in connection with the Federal Government, I will be pleased to have him come in and discuss them with me.

I shall be at the commissioner's office in the courthouses at the following places on the following dates from 9 a.m. to 4 p.m.:

Monday, October 5, Bucyrus; Tuesday, October 6, Tiffin; Wednesday, October 7, Tiffin; Friday, October 9, Upper Sandusky; Tuesday, October 13, Marion; Wednesday, October 14, Marion; Thursday, October 15, Mount Gilead; Friday, October 16, Kenton.

If I Were a Member of the 86th Congress

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. DEROUNIAN. Mr. Speaker, I submit for the interest of my colleagues these thoughts of a former Member of Congress on the various votes on labor-management reform legislation:

IF

If I were a Member of the 86th Congress I would continue to be true to consistency. I would not have performed a flip-flop as did some 150 Congressmen on August 14 when they voted for final passage of the Landrum-Griffin labor bill after voting twice on the previous day to defeat the measure.

I would have alined myself with the side that I felt was right and best for the public as well as for the members of the labor unions. Once that stand was taken I would not switch on a third vote after declaring my position on two previous votes.

If I had voted against the substitution of the Landrum-Griffin bill; if I had voted for recommittal of this same Landrum-Griffin bill in a further attempt to defeat it; then I most definitely would have voted nay on the final passage of the bill. That is the essence of consistency and a proof of sincerity to self and to others.

If I had supported the Landrum-Griffin bill on two previous votes, then I would have voted for its final passage. It's just that simple.

If I had received a letter from James Carey or from any other person threatening me at the polls in the next election, I would have returned the letter to him with three short words added. We dare not have government by intimidation. We need more men like DEROUNIAN, AYRES, BUDGE, BOSCH, and many others who were unafraid to send a sharp reply to Mr. Carey and also to have this reply printed in the CONGRESSIONAL RECORD.

The men who should be respected in the House of Representatives are the 229 who had the fortitude to vote for the substitute, or the 125 who consistently voted against the Landrum-Griffin bill on the three votes that were made possible.

If I had been there—but I was not there and so I applaud the sincere souls who honestly represent their districts without fear of any recrimination at the next election. I know what I am talking about, too, because this past winter for the first time in my life I have found time to reflect and to contemplate. I have a great satisfaction in reviewing my 10 years of service to my State and my Nation in the knowledge that I voted at all times for those measures that I sincerely felt were for the greatest good for the greatest number of people. I have been able to live with my conscience.

Incidentally, if I had been there I would have voted for the Landrum-Griffin substitution for the committee bill; against the recommittal motion; and for final passage. Why?—because so many members of labor unions are quietly asking for this kind of help and because the public also needs protection from the unfortunate evils that have crept into the labor movement.

Political Expediency Versus Educational Needs

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DENT. Mr. Speaker, those of us who are part and parcel of the political scene in this Nation can easily put our finger on the culprit that causes our public criticism and the loss of public regard—the culprit is expediency.

In the name of all that is fair and good and just, we use expediency to cover up our failure to be fair and good and just.

One need not go deeper into history than this present session of Congress to come up with some rather disturbing facts and conclusions.

Let us look at education. For the past decade we have heard about the school crisis and yet, with the school bells tolling the new school year this September, we hear the same talk of crisis and shortages in both schoolrooms and teachers. If anything, the bells are louder because the crisis is worse.

For the past 6 years there have been repeated warnings that Federal aid for education has become a desperate necessity. Schoolroom shortages have plagued us. Miserably low teachers' salaries have caused a dangerous shortage of well-equipped instructors for the Nation's youth. The Eisenhower administration has shown no enthusiasm whatever for a sweeping Federal program. It is the job of the States and the local communities, is the answer—even though the States and local communities have been unable or perhaps unwilling to measure up to the task.

American parents will awaken from their vacation time lethargy with the complaints of their youngsters of overcrowded rooms and harassed school authorities.

Let us see what some of our better known experts have to say on this subject. An article by Robert B. Cooney pointed up some of the thinking on this subject and also showed the weakness of substituting expediency for effort:

The classroom and teacher shortage has grown over the years even as the Nation debated first whether it existed and then what to do about it.

One turning point was reached when a 1955 White House Conference on Education, stacked in its selection of delegates against Federal aid to education, unexpectedly decided there was a need for Federal aid.

Since then, school bills have come closer than ever to passage but have still foundered on such issues as civil rights, Federal control or plain politics.

Probably the chief obstacle has been business opposition. Federal aid to build schools has been fought by the U.S. Chamber of Commerce, the National Association of Manufacturers, and the American Farm Bureau Federation.

EISENHOWER SHIFTS POSITION

President Eisenhower has constantly shifted his position on the school problem. He once expressed himself as flatly against Federal grants for school aid.

However, Democratic proposals of sizable Federal grants inspired him to counter with proposals which emphasized bonds and loans. In 1957, Eisenhower could have helped pass a school bill if he had moved to change the votes of just three House Republicans. He remained silent.

In Congress, a coalition of Republicans and southern Democrats has sabotaged Federal aid to schools, the latter in part because more schools would mean easier desegregation and a quicker transformation of the South.

At present, such a coalition has had bottled up since June 8 in the southern-controlled House Rules Committee a 4-year $4.4 billion Murray-Metcalf bill. It would raise teacher salaries as well as help build schools.

In the Senate, a labor subcommittee recently OK'd a 2-year $1.1 billion program, a sharply reduced compromise move which provides for construction only.

However, even as the Democratic bill in the Senate was cut down as a compromise to improve chances of passage and came to resemble closely the Eisenhower proposal of 1957, it ironically came under the threat of veto.

Flemming informed his August 26 press conference the classroom shortage is a problem of considerable magnitude. But he told the same conference that the Democratic Senate bill is contrary to the President's fiscal policy.

The U.S. Office of Education reported a few days ago that an estimated 42.7 million youngsters will enter classes from kindergarten through the 12th grade this school year.

This is an increase of 1.75 million over last year.

Because of the shortage of classrooms, one out of every four in the total school population will be shortchanged in education.

The number of pupils whose education is being impaired in varying degrees by the classroom shortage is about 10 million according to Health, Education, and Welfare Secretary Arthur S. Flemming.

Flemming said recent reports on public school enrollment show there were 1,843,000 pupils in excess of normal school capacity last year.

These excess students were added to an estimated 6 million in crowded urban elementary schools alone and another 2 million or so in obsolete or inadequate buildings to arrive at the total of 10 million.

And these figures are understated, since the statistics leave out urban high schools and all rural schools.

The way in which overcrowding impairs education is reasoned this way: The desirable maximum class size is considered to be 30 pupils; if a class has 40 or 50 pupils, then everyone's education is hampered, not just that of the 10 or 20 "excess" pupils.

INDIVIDUAL ATTENTION EFFECTIVE

The effect of individual attention through smaller classes can be startling. Carl J. Megel, president of the American Federation of Teachers, was visiting a school in New York City earlier this year. A heavy snowstorm that particular day cut attendance from the usual 45 pupils to 16. The teacher told of this incident:

"Mr. Megel, a very interesting thing happened today. A young lad, who has been a serious disciplinary problem, in this small class on this particular day, conducted himself in exemplary fashion and at the end of the day came to me and said: 'This is the first day that I have thoroughly enjoyed school.'"

If the problem of surplus students is handled simply by cramming more pupils into each classroom, the problem of the teacher shortage has multiple effects.

U.S. Commissioner of Education Lawrence G. Derthick had this to say a few days ago:

"The deficit of teachers will mean, in many communities, overlarge classes or the employment of teachers without adequate training, or both. In many instances, it will also mean curtailing the number of subjects offered."

Last year the Nation's elementary and secondary schools were short 182,000 teachers. This year, Derthick reported, the shortage will amount to 195,000.

TEACHER TURNOVER RATE HIGH

Derthick said the teacher shortage is intensified by a teacher-turnover rate of 10.9 percent. He said current studies show this rate to be more accurate than the 7.5 percent formerly used in calculating shortages.

Why are teachers increasingly leaving their profession?

Low salaries is the chief reason, according to Megel.

The head of the teachers, whose job requires him to keep in touch with trends around the country, discussed the problem in these terms:

"A school district which I visited in May offers a case in point. Out of 160 teachers, 34 well-qualified certificated teachers resigned their positions and indicated their decision of finding employment elsewhere.

"Low salaries, of course, still constitute the major reason for this exodus of teachers from their chosen profession.

"But, in addition to low salaries, the overcrowding occasioned by shortage of classrooms makes it impossible for the conscientious teacher to do a competent job in the classroom.

"Overcrowding increases disciplinary problems because teachers are unable to provide individual attention to so many boys and girls in such a few minutes of a class period."

Segregated schools, where they exist, add to the problem because they prevent the most efficient use of school facilities and teacher resources.

SCHOOL AGERS INCREASE STEADILY

The Nation's school-age population was 37.3 million in 1955. It rose 6 million to an estimated 43.3 million in 1959. This was a rise of over 16 percent.

By 1963 the school-age population is expected to increase nearly 13 percent, or by another 5.5 million, to a total 48.8 million.

Meanwhile, 10 million American schoolchildren are handcuffed in their educational opportunities.

Is it any wonder that some of us, both in and out of Congress, wonder if we are seeing and hearing straight when we hear and see the inexcusable doubletalk and lack of sincerity in our whole approach to the crisis in education?

The real threat of this inaction and political expediency is the threat to unity in this country. How can a nation so confused and in a sense, so inconsiderate of its own needs, hold out that hope to the world leadership that will lead us all to the promised land of peace, tranquillity and prosperity.

How can an American explain the President's veto of two housing bills, each of which contained sums of money to be loaned to our institutions of higher learning for the purpose of building needed dormitory space to relieve conditions described by some observers as being close to a national disgrace, while at the same time approving a foreign development fund expenditure of some $30 million, to build dormitory housing for the University of Burma.

Whom do we fool with this silly and almost idiotic procedure? Do we fool the American workmen, businessmen, or farmers when the President talks about refusing to sign a $1 billion a year aid to education bill, while at the same time, he demands a higher appropriation for so-called foreign mutual aid which he has had amended to give the receiving foreign countries the right to spend the whole aid program for education. This is no fairy tale, it actually happened. The President threatened to veto the Murray-Metcalf bill for $1,100 million yearly aid to American education while at the same time threatened to call Congress back into special session, if it failed to up the multibillion-dollar foreign aid bill.

The question was, who was fooled? The answer is simple—All of us are fooled and especially the harassed taxpayer who too often condemns the teachers and the school system for taking too much out of his tax dollar.

The best dollar's worth we buy is education. Recently, we had an example of how easily the American public can be fooled by the clever and sometimes sinister activities of the hired specialists whose job it is to mold public opinion.

In the face of the highest military budget and the lowest people's needs budget in history, we were led to believe that if we passed a killer labor bill and got rid of Jimmy Hoffa, everything would be all right.

The sun would shine again, cats would purr, dogs would whine, clouds would disappear, and American enterprise could prosper and grow rich.

The only trouble with that is that the so-called tough bill has passed, and yet the schoolrooms are still crowded, our teachers are still underpaid and although Jack Parr still has his show, the salaries of southern teachers are only 50 to 60 percent of our northern teachers while the southern coalition of Congress smiles broadly at the maneuvering that has gained them the greatest victory in all of the years of their political control of congressional committees.

The southern Democrats and northern Republicans have combined to put this program on this year's list of congressional achievements:

First. Bottled up the aid to education bill.

Second. Killed the civil rights—desegregation—bill.

Third. Passed the Landrum-Griffin bill—described by GOP leaders as labor "killer" bill.

Fourth. Veto of two public and education housing bills.

Fifth. Veto of Army Engineer approved and planned flood and water control.

Sixth. Increased gasoline tax 1 cent to meet higher banker interests on loans for the highway program.

Seventh. Increased interest rates for the benefit of bankers and moneylenders increasing short-term interest from a low of three-fourths of 1 percent under Truman to over 5 percent under Eisenhower—the increased interest payments alone would pay for two Murray-Metcalf aid to education bills.

Eighth. Passed amendments to foreign aid allowing foreign countries to keep money loaned for aid purposes if they put it into education, while at the same time killing American aid to education here at home.

Ninth. Vetoing any bills dealing with area redevelopment.

Tenth. Refusing to allow deduction in personal income tax to help pay for educational and ordinary living requirements.

Eleventh. Refusal of coalition to pass bill extending and revising social security, unemployment compensation, and so forth.

Twelfth. Continuing a disastrous farm program that has allowed certain persons and groups to receive millions of dollars in the name of farm subsidy.

Last, but not least, the covering up of all of these failures by shouting "crook" at labor and bringing Khrushchev over to the United States in a drive to create a trade bargain that will further load our domestic shelves with cheaper made goods and in the end, further depress our American way of life.

All throughout this year's sessions there appeared to be a feeling of no reality. One keeps asking himself, is it really true—no education bill, no housing, no public works, no cut in military, no disclosure of known military purchase frauds and waste, no civil rights—all this, and work in Congress on Labor Day and next weekend, Khrushchev for lunch.

Of course, we will have a better record next year—why every politician from Ike's doors will be out lamenting the status of our educational system, the plight of the unemployment, the heartaches of the aged, the need for housing, the waste in Government—oh, yes, and above all the great rights of labor and the underpaid schoolteacher.

This will be the off-season talk, but come January and a new session, what will we get, I will tell you, the coalition.

News for Unemployed Americans

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an editorial that appeared in the current issue of the United Mine Workers Journal, under the caption, "News for Unemployed Americans."

The editorial deals with the present practices of the TVA of purchasing equipment and supplies in foreign countries, rather than awarding these contracts to American firms.

The editorial follows:

[From the United Mine Workers Journal, Sept. 6, 1959]

NEWS FOR UNEMPLOYED AMERICANS

The Tennessee Valley Authority, which has just been handed a carte blanche by the Congress to do as it pleases, spent three times as much money on foreign-made equipment last year as during all the years since TVA's inception in 1933.

TVA reported domestic and foreign purchases totaling $125,936,788 during the Government fiscal year ending June 30 for materials, equipment, supplies and nonpersonal services.

Of this, $66,924,517 was for manufactured goods, such as turbines, generators, and transmission lines; $51,931,238 for raw materials, such as coal to generate electricity, and $7,081,033 for miscellaneous services. The latter category included barging of coal, labor costs in installation contracts and the like.

Twenty-seven percent of the total money was for manufactured equipment purchased from foreign firms. This amounted to $17,900,000, compared with $5,600,000 on such purchases for all previous years since 1933. All but a small fraction of the foreign purchases went for generators and transformers.

About 41 percent of the total, or $51 million, went for coal purchases for TVA steam plants. This was $33.5 million less than the previous year, probably reflecting TVA's continued purchase of dog-hole, nonunion coal.

Harrigan Scores Again

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anthony Harrigan from the August 31, 1959, issue of the New Leader:

DEFENSE BY SEAPOWER—A FAST-MOVING, WELL-BALANCED U.S. MISSILE FLEET COULD PROVE THE FREE WORLD'S MOST EFFECTIVE FORCE IN THE NUCLEAR AGE

(By Anthony Harrigan)

It is a matter of historical record that the United States met the challenge of Soviet aggression in Lebanon in 1958 with the resources of seapower, not with airfleets based on the doctrine of massive retaliation. Naval vessels and ship-based aircraft, plus units of the Fleet Marine Force, were utilized to secure U.S. diplomatic objectives. They were able to exert a stabilizing force in that troubled region without precipitating serious incidents with the Soviet Union. The lesson for the future should be clear to Americans.

A compelling reason for the increased reliance upon seapower is the emphasis the Soviet Union has placed on missile warfare. Now, guided and ballistic missiles can and undoubtedly will be located at ground installations here and abroad. But the difficulties that will result from ground installations can be clearly discerned. Fixed missile positions in the United States pose many of the problems that preatomic age coast artillery posed. Locations of firing stations can be determined by spies. And it is conceivable that saboteurs could damage or destroy these ground stations. Furthermore, ground missile stations can be zeroed in by the enemy and rendered useless.

Perhaps the greatest drawback of ground missile stations, however, is their utter lack of flexibility. They cannot be shifted from one area to another in order to cope with a changing threat from overseas. Fixed concentrations quite obviously cannot take into account the shifts in concentration of nuclear firepower. One of the greatest advantages of the missile systems currently being developed for shipboard use is mobility. This mobility makes possible concentration of missile firepower in any quarter of the globe, in any defensive or offensive combination against an enemy's weapons or land.

There is yet another advantage to seaborne missile forces. Although North Atlantic Treaty Organization allies of the United States have agreed to permit the location of missile-launching sites on their territories, the political complications involved increase almost from month to month. Indeed, the United States is finding it very difficult to retain existing Strategic Air Command bases in North Africa and the Mideast. Neutralism is on the increase in these regions, and the day when overseas bases on foreign soil are no longer possible does not seem distant. Even in Great Britain, the stanch ally of the American Republic, powerful political forces oppose the location of nuclear-armed bombers on the home islands. There is a fear in some friendly countries that the location of ballistic missile bases will cause their lands to be prime targets in the event of a Soviet attack. The atomic blackmail practiced by the Soviet Union increases this fear of sudden attack.

A missile fleet is predicated on the role of the United States as the great insular power of the modern world. This country's geographical position should be utilized to the greatest degree in defense planning, for this position is extremely favorable. Our greatest protection remains the oceans shielding us. It also is well to remember that our traditional good friends are island countries and/or nations whose principal defenses are ships—Great Britain, Australia, the Philippines, the Netherlands and Canada. The maritime resources of the combined NATO nations are truly immense. These nations have not the manpower to meet the Soviet Union division for division on land. But in warships of all types, the NATO countries have total assets of tremendous value in the event of war. These seapower resources can be expanded without great difficulty.

Clearly, then, a major missile fleet, including Polaris-equipped submarines on station under the polar ice cap so as to guard Arctic Ocean approaches to the North American continent, would provide a war deterrent of massive proportions. Indeed, the Polaris missile, with a range of 1,200 miles, is the key to the missile fleets of the future.

From the positions off the west coast of Norway, a ballistic missile fleet would be able to command the whole of European Russia, including the cities of Leningrad, Moscow, Kiev, and Kharkov. Stationed in the eastern Mediterranean, a fleet equipped with the Polaris missile would be in a position to retaliate against the oil-producing region of southern Russia and submarine bases in Abania and the Black Sea. A missile fleet in the Indian Ocean, the Bay of Bengal, the Arabian Sea would be able to reach targets in Samarkand and western China—an area presently being developed for heavy

industrial purposes. And a missile fleet in the western Pacific would have the capability of retaliating against China, Manchuria, and the Pacific region of Siberia. Only the innermost zone of the Soviet-Red China heartland would be beyond the reach of a Polaris-equipped missile fleet.

The far-ranging operations of naval task force in World War II demonstrated what havoc seapower can bring to the homeland of an enemy. Since that time, the striking power of naval task forces has been vastly augmented and even greater power is soon to be given fleet units. Nuclear propulsion, the guided and the ballistic missile, and the nuclear warhead have created a new era in seapower, in which the only limit on naval operations is the endurance of the men who man the ships.

Of course, in order to provide a more perfect deterrent to war and become a superbly effective strategic striking force under the new conditions of sea warfare, the U.S. Navy must complete the naval revolution that is underway. Replacement of oil-burning powerplants with nuclear engines is the most fundamental change in store for the Navy.

But there is also a need for wholly new types of warships. New ships and new missiles are in the process of development. A great deal has been done along this line in the area of antisubmarine warfare. The plant to carry helicopters aboard destroyers, the development of frigates, and the use of sonic buoys and atomic depth charges—all are part of the mighty change taking place in the fleet.

The Polaris-equipped submarines planned for the fleet are ideally suited as the prime instrument of defense along the Arctic frontier. But undetermined as yet is the capital ship of the Navy in the years ahead. Certainly, neither the Polaris submarine operating alone nor "wolf packs" of Polaris submarines is the answer to the need for a fleet-action capital ship. While a submarine can be built sufficiently large to fire a ballistic missile, the size of ballistic missiles today and those sure to be developed in the years ahead make necessary a capital ship with ample storage facilities for the big weapons.

Vice Adm. Charles R. Brown, U.S. Navy, commander of NATO's Southern Europe naval forces, recently outlined his ideas on the capital ship of the future. Speaking in Washington, Brown reviewed the advantages of the missile monitor and the heavy missile assault ship. Such vessels, he said, would be battleship hulls revamped to carry ballistic missiles instead of conventional armament. He stressed that the Polaris missile could be fired with great accuracy from the big surface ships.

The missile monitor is the logical extension of the concept of the aircraft carrier. That is not to say that missile monitors or assault ships should replace flattops at any time in the near future. Manned aircraft are weapons of unique reliability that are able to carry out complex missions which missiles cannot undertake.

The heavy missile attack ship is needed, however, because a ship of great size is required if a sustained attack with Polaris missiles is to be carried out. Smaller vessels, both surface and subsurface, would have to replenish their supply of missiles after a single mission. The heavy attack ship also must be of sufficient size to provide for a vast complex of surface-to-air defensive missiles that would enable the ship to operate in safety during close-in attacks—operations several hundred miles off an enemy coast.

Thus, one may conclude that the task force of the missile era will require a variety of different types of warships—nuclear, missile-equipped submarines for high-speed lightning raids, nuclear radar picket submarines of *Triton* size for long-range warning of conventional air and missile attack, high-speed antisubmarine destroyers and frigates, aircraft carriers for repelling aerial attacks and for special missions, and heavy missile attack ships for sustained attacks against the enemy's homeland.

Such a task force offers the maximum in offensive and defensive power that can be foreseen in the present era. Able to move at great speed across the sea and prepared to strike with nuclear weapons at any point from the Mediterranean to the Sea of Japan, such a task force would be able to survive any attack. Were the United States rocked by nuclear attack, the fleet still would be on the move, prepared to retaliate against the enemy. As Admiral Brown has noted, "Wars are won by remnant forces."

The missile fleets of the years ahead undoubtedly will pose new requirements. If they are to be prepared to play the role of remnant forces after a destructive enemy attack on the continental United States, they must be free of dependence on fixed bases. This country learned in World War II and Korea that great quantities of fuel and other supplies must be in the ocean pipeline at all times. This lesson is especially applicable in the age of missile fleets.

Until the conversion to nuclear power is completed in the fleet some years hence, there will be a very great need for high-speed supertankers. For the missile fleets to be ready for extensive war operations at all times, vast quantities of fuel must be kept at sea in all parts of the globe. Even as SAC keeps its retaliatory forces airborne and refueled in the air, the Navy in the years ahead must keep its missile fleets moving at sea and refueled at sea.

As is the case with aerial refueling, the process of gradually dispensing with shore stations and shore refueling in distant parts of the world is expensive and cumbersome. But the worth of such battle readiness would be manifested if war came. In a world that has suffered crippling nuclear attacks, it would be essential for a fleet, if it is to be effective, to be independent of shore stations. The need, then, is for dispersal rather than concentration.

Admiral Brown, in discussing the role of missile monitors, correctly pointed out that vessels of this type would be a visual symbol of power and would help in controlling sensitive areas in a time of limited hostility. These vessels, he noted, would represent an excellent cold war and small war weapon. To bring graduated force to bear in troubled international situations is a job for the modern navy. Thus the missile fleet of the future requires yet another type of ship than the missile monitor.

The high degree of combat readiness required of all U.S. defense forces makes necessary the availability of a large contingent of Marines aboard special assault ships. This, of course, is standard procedure in the 6th Fleet. The 7th Fleet also moved into the Singapore area last year with Marine units on shipboard. This procedure paid off in the Lebanon intervention, when battle-ready Marines could be dispatched to the trouble zone at the same time that ships were ordered to steam to the eastern Mediterranean. The interests of the United States in an era of brush-fire wars and superheated political situations call for maintaining seaborne assault forces at all times.

The British are keenly aware of the need for such assault forces. Speaking in Norfolk last fall, Adm. Lord Louis Mountbatten, First Lord of the Admiralty, stressed that a battalion of commandos on the spot shortly after an incident occurs may be worth a division of regulars several weeks later. Realizing that truth, the British are augmenting their commando forces and converting an aircraft carrier into a special commando assault ship. Though the U.S. Marine Corps has pioneered in the development of the helicopter assault carrier, even greater stress should be placed upon this innovation in warfare. Had the Nation pushed the development and conversion of helicopter carriers as much as our changed strategy requires, the United States would have been better prepared to speed a landing in Lebanon.

The assault carrier and the missile monitor would complement each other. Fully seaborne battle forces, with their own short-distance airlift, plus the nuclear bombardment capability of the missile monitor, would provide the United States with the best possible answer to indirect or all-out aggression, a brush-fire war, or a major enemy attack.

The Lebanon intervention also made clear that far more adequate airlift facilities will be needed in the years ahead. The Navy has the answer to this need in the P6M seaplane known as the Seamaster, which has a speed of 600 miles an hour and which can refuel from a submarine. Replacement of conventional land-based MATS transports with a troop-carrier version of the Seamaster would enable the United States to use the water areas of the world as bases. The problem of circuitous routes, involving flights through the airspace of several countries (a matter that vexed Lebanon airlift planners), would be eliminated by having all refueling carried out at sea.

The new weapons, vessels and supply and repair organizations necessitated by this plan involve revolutionary changes in the fleet. More exactly, perhaps, the changes represent further development of existing equipment or trends. The Navy has missile cruisers; it has only to build or adapt battleship hulls in order to have heavy missile assault ships. The Navy has helicopter carriers; it has only to augment its force of these vessels and to make refinements.

In general, the Navy will have the basic task of promulgating doctrines of seapower that will take into account the capabilities of the weapons when used in combination. There also is the task of explaining to the country what is taking place in the Navy and in American defense planning in regard to the new role of seapower. For more than a decade, indeed since the attack on Japan in 1945, the American public has been persuaded that the destruction of an enemy's bases, industrial complexes, and other strategic targets is strictly a function of the Nation's long-range Air Force, and now of missiles fired from land.

The creation of a vastly enlarged strategic mission for seapower, involving limited war capability and shows of force, will require an adjustment in interservice thinking and in the understanding of the American public. It would be a grave mistake for naval planners to be lacking in missionary fervor or to fail to push the strategic role of seapower, for U.S. defense requires that seapower's mobility and concentration of firepower be fully utilized. It is simply necessary for naval planners to make the country understand the truth of what Adm. A. T. Mahan said decades ago: "Every danger of a military character to which the United States is exposed can best be met outside her own territory—at sea."

View From the Farm

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

editorial from the Wall Street Journal of August 17, 1959:

VIEW FROM THE FARM

"Today's burdensome surpluses with their fantastic storage costs are symptoms of a sick farm program which has infected the business of agriculture with the disease of Federal aid and control."

Now, people reading those words might conclude they came from some city slicker so ignorant of the farm he things prize-winning calves always come in pairs a couple of inches above some shapely ankles.

Not so. Charles B. Shuman, president of the American Farm Bureau Federation, was the speaker. The Farm Bureau Federation represents 1.6 million farm. families throughout the country, but does not, of course, claim to speak for all of them. It can speak for a considerable majority of its members, however, for frequent polls the Federation holds invariably show opposition to the support programs.

"The farmers would be vastly better off," Mr. Shuman told an audience recently in New York, "if the Government would permit them to use the free marketplace to supply consumer needs. Government subsidy programs based on parity serve neither the interests of the consumer nor the farmer," he added.

Nor of anybody else, for that matter. Consumers and farmers pay taxes (somebody once figured out that there are 51 taxes hidden in one loaf of bread) and the taxes they've paid for the monstrous farm program might be enlightening to some who don't realize the figures. Since 1954, and including 11 months of fiscal 1959, the farm program has realized losses of $5.8 billion.

In addition to paying farmers for things they grew and for things they didn't grow, the Government also spent some pretty impressive sums of money the farmers didn't get a dollar of.

For example, the Commodity Credit Corporation reports for the 11 months ending last May 31 that carrying charges alone on crops amounted to $495 million, interest amount to $145 million and "general overhead"—that euphemism for a bureacracy that has moved in on the farmer faster than a corn borer through the lower 40—has cost the taxpayer $39.3 million in the same period.

Well, if a wasteful program such as this isn't even liked by farmers it's supposed to benefit, what in the world keeps it going?

Mr. Shuman had an answer for that one, too. "Though farmers often have asked that these programs be changed, the Congress has not yet taken effective action."

And that, so far as letting the public know who is really to blame for the follies of the farm program, ought to help separate the sheep from the goats.

How To Win in Asia

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. ANDERSON of Montana. Mr. Speaker, there are many approaches possible in dealing with our problems in the Far East, particularly in southeast Asia. Last year I had the opportunity to visit Laos and Vietnam. I inspected their military defenses, their parachute schools, repair depots, and other facilities, and discussed matters with their leaders. I flew over the dense jungles and, believe me, it is hard to visualize military operations in such a place. Only those who experienced jungle warfare at its worst in World War II could have full appreciation of the tremendous problems involved.

Consequently, I am much concerned at the present situation in Laos, and, indeed, in all of southeast Asia.

One of the finest series of firsthand current reports on this region has been written by Ernest K. Lindley of Newsweek. In the current issue of Newsweek he presents some authoritative conclusions on "How To Win in Asia." The article follows:

HOW TO WIN IN ASIA

(By Ernest K. Lindley)

This final report on my firsthand survey of free Asia deals with the great question for us: What must we do now and in the visible future to keep the favorable tide running? Earlier I set forth the evidence that Communist influence has waned and confidence in the United States has grown. I cited the reasons why: The disenchanting Communist deeds and the successful elements in American policy. I also pointed to some current errors and to three special problems.

I have emphasized also that the struggle between Communist imperialism and freedom in Asia is far from finished, that it is apt to be long and hard. Now, with the aggression against Laos and armed incursions into India, it is rising to a new climax. All that has been gained can easily be lost if we don't do the right things.

INDISPENSABLES

What are the right things? They are what free Asia must have but cannot wholly provide for itself: Security and economic development. Without protection against aggression, the free regimes would fall quickly. Without economic development, rapid enough to satisfy their people, they will fall eventually. Only we have the strength, military and economic, to guarantee to free Asia these indispensables. Beyond these, the right things are whatever increases understanding and friendship between the free Asian peoples and ourselves. More specifically, we should:

1. Never yield an inch to force or threats. Never permit the slightest doubt to arise about our readiness to do whatever may be necessary to repel aggression. We now face a decisive test in Laos. We are committed to its protection, not only generally through the U.N. Charter but specifically through SEATO and morally because we encouraged a new Laotian regime to take brave measures against internal communism. Our defensive alliances are the backbone of Asian security. Even neutralists have come to see that there is no security in Communist promises of peaceful coexistence. If the aggression against Laos is allowed to succeed, all southeast Asia will again be seized with fear and its confidence in our word—and our courage—gravely impaired.

2. Maintain and, in some cases, strengthen the military forces of our frontline allies.

3. Never automatically limit ourselves to purely local defense against aggression. Various countermeasures might be used now against North Vietnam and Red China.

4. Keep Red China what it has made itself: A pariah. Keep it out of the U.N., don't recognize it, do nothing that would restore its deflated prestige. The Indian thesis that Peiping would behave better as a U.N. member is unsupported by experience with the U.S.S.R.—Hungary, for example. Besides, no regime should be permitted to shoot its way into the U.N. A new approach should not be considered until Peiping begins to act civilized, at least externally.

5. Meet at least halfway Asian leaders who, learning from experience, are moving toward us.

6. Gird ourselves to compete with the Communist economic offensive. Slash red-tape. Dismiss the notion that technical aid, and perhaps a few small projects, are all that free Asia needs. Capital—in growing amounts—is indispensable. Use the World Bank and its affiliates to the utmost. Encourage private enterprise and Western Europe to do more. But don't duck the fact that for a long time much of the capital, as well as of the technical aid, must come from the U.S. Government.

7. Put economic aid on a long-term basis. Encourage each nation to draft a sound plan. See that all are underwritten (not just India's—the others are not waiting to see how India fares). Spur inter-Asian cooperation within feasible limits. But recognize that Asia is too diverse for a continentwide Marshall-plan approach.

8. Provide more scholarships for Asian students, more educational and cultural exchanges.

These guideposts confirm and extend policies that have proven successful so far. They are planted in visible realities, not in complacency, wishful thinking, or sheer conjecture about more distant possibilities, such as hostility between the Soviet Union and Red China. They are things we must do to win a struggle that we cannot afford to lose.

A Reexamination of the Fifth Amendment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. MULTER. Mr. Speaker, I am pleased to comment to our colleagues the following very erudite article written by Harris B. Steinberg, chairman of the Committee on Penal Law and Criminal Procedure of the New York State Bar Association. It appeared in the association's bulletin of July 1959.

It is most timely because at this moment we are not under the stress, tension and hysteria of more recent days. I hope our colleagues will give it the attention it deserves.

The article follows:

[From the New York State Bar Bulletin]

A REEXAMINATION OF THE FIFTH AMENDMENT [1]

(By Harris B. Steinberg, Chairman, NYSBA Committee on Penal Law and Criminal Procedure)

Many years ago, I read a story which left a lasting impression upon me. It was by Katherine Mansfield, I believe, and it dealt with a man whose son had died in battle. The genuine love which the man felt for his son filled his heart, and he was beset by

[1] This article is an extension of a speech made at the Summer Meeting of the Association at Saranac Inn, June 26, 1959. Dangling participles, nonstop sentences and similar lapses have been excised, and some other changes have been made by the author with a view to giving the appearance of scholarship, commonsense and other desirable attributes.

tender memories of his son's childhood. His son's face was constantly and clearly before him. Then he was invited to speak about his son's heroism and sacrifice at a patriotic dinner. It was so successful that he was asked again and again to give similar talks. Eventually a strange thing happened—he could no longer evoke the picture of his son in his mind, and he realized that he no longer felt any sincere emotion or grief. The story ends with the man sitting at his desk, playing dully with a fly, which buzzes near the open mouth of an inkwell. He pushes the fly into the well, and it emerges briskly, shaking the ink off its wings. He pushes it in again and again, and each time it grows weaker and more lethargic, until finally it succumbs.

I have a feeling that in dealing with the fifth amendment, we have been coming dangerously close to that sort of conduct. I have a feeling that the fifth amendment—particularly that portion of it which deals with the right not to be compelled to give incriminating evidence against oneself—is being poked at in a dangerous way, and unless we are careful it could be lost to us.

The provision of the fifth amendment with which we are here concerned today, is, of course, one of the provisions embodied in the Bill of Rights—the first 10 amendments to the Federal Constitution. It has its counterparts also in almost all of the State constitutions, including our own. It stems from common law, and is recognized in England. It finds itself in good company—the same fifth amendment prohibits the taking of property without due process, requires indictment by a grand jury for serious crimes, and prohibits placing a defendant twice in jeopardy. These provisions commend themselves to us very readily—no one is attacking or questioning them at the present time, so we accept them as part of our traditional heritage, and think them worth preserving.

TODAY'S CHALLENGE TO THE FIFTH AMENDMENT

The challenge we face today, however, arises from the fact that the portion of the fifth amendment which protects us from self-incrimination is being questioned by a troubled public. Is it wise? Is it necessary? Doesn't it amount to protecting the guilty? Shouldn't we amend it, or do away with it?

I submit that unless we, as lawyers, can give good and satisfying reasons for the preservation of that right, it may well be lost to us. If there are good and sufficient answers to those questions, we should first formulate for ourselves the reasons for the validity of the provision, and then we should do our utmost to educate the public, who look to us for advice and guidance in legal matters, that their best interests lie in the preservation, unchanged, of the basic right we are now considering.

Let no one think that a right which is good and basic automatically commends itself to the great majority of mankind. It takes reasoning, and if necessary, fighting, to defend it; and it takes tender, loving care to nurture it, when it is abused and sickly. Today, the greatest portion of the population of the globe subscribes to philosophies alien to ours. Vast hordes behind the Iron and Bamboo Curtains live and die without freedom to worship God according to their consciences; free speech is denied to them; trial by jury; presumption of innocence; freedom to educate their children in the way they think best—these rights, among others, which we take for granted, are also repudiated by the iron-fisted rulers of millions and millions of human souls, who submit meekly to such rule.

Nor can we relax and feel that these alien concepts are so far from our shores that we need not concern ourselves with them. Only a matter of months ago, we read of the events in Cuba, where men were placed on trial for their lives before a howling, bloodthirsty mob of 18,000 spectators in an open-air arena. And recently, we read that in Cuba an acquitted man was retried on a capital charge, because Castro was displeased with the original verdict. Ideas, like viruses and jet planes, travel fast and far.

Finally, even in our own country, men trained in the law have from time to time disagreed with the wisdom, not only of the fifth amendment, but with the desirability of other provisions of the Bill of Rights, and sought their repeal. As the hydraulic pressure of great events is exerted from time to time, there are recurrent attacks on all of our basic liberties.

Emotion and fuzzy talk are not enough to resist these attacks. A person sensitive to art may look at an abstract painting, and be stirred by it; he finds beauty in it. Another well-intentioned person who sees nothing beautiful in it may ask the first one to explain why he finds it beautiful and meaningful. This may be a hard or impossible task if there is no common meeting-ground of receptiveness and sensitivity. So, too, if one is sincerely convinced of the desirability of a basic right, it may not be enough to take a lofty, superior tone to the troubled person who asks for reason why the right is a good one. In the case of the picture, the insensitive person may turn away, but he is not going to stop the artist from painting similar pictures to delight the sensitive enthusiast. In the case of our basic right, however, if a well-meaning but uninformed body of opinion gains strength, the clamor and votes will become available to change the law, and then the right will be taken from all of us, convinced protagonists or not.

A PERTINENT ANALOGY—CONSIDERATION OF THE FOURTH AMENDMENT

Lawyers often find that attacking a problem by analogy is a useful device; in the present case, I beg leave to adopt this crabwise approach.

The fourth amendment, which immediately precedes the fifth, and which is often linked with it in consideration of constitutional problems, is, of course, the provision protecting against unreasonable searches and seizure. In practical effect, this provision prohibits a government official from breaking into one's home without a search warrant.

You may recall that in recent months the Apalachin meeting occupied a great deal of the attention of the press, and it developed that for a long time investigators and process servers sought to gain entrance to Joseph Barbara's home, to serve him with process, or perhaps to search or examine the premises. For weeks they parked on his doorstep, but did not gain entrance. It never occurred to them to break in. Why not? Surely they had the physical means to do so; they were officers of the law; public opinion was on their side; the occupants of the house were the object of widespread unpopularity and notoriety. Why didn't they summarily break in? Because today the fourth amendment is strong, and recognized by everyone as something worth honoring. There are no attacks on the fourth amendment by any organized groups; one doesn't hear of "Fourth Amendment Communists," or "taking the fourth," as terms of opprobium. There has been no holding up to the public displeasure of the oft-repeated spectacle of suspected criminals, poised inside their doors, refusing to honor requests that they open their houses to let the law have a look around. Yet, when one keeps his door locked in the face of authority, he is merely asserting his constitutional privilege. When he is not asked to waive his rights, he is not required affirmatively to assert them.

"I refuse to admit you to my home, on the ground of my constitutional privilege under the fourth amendment," would be often heard in the land, if the Government instituted a policy of sending its agents to the doors of persons suspected of crime with a request that searches be permitted. And the reading of such a formula, from a typed slip supplied by a lawyer would be a commonplace. It might even cow respectable people into hastily opening their doors to the world, so that no one would suspect them of hiding narcotics in the fireplace.

Somehow, I doubt it. Everyone has a home; everyone has a strongly developed feeling for privacy (that is, their own); and everyone would resist the idea that a failure to allow searches of one's home founds a necessary or reasonable inference of criminality.

But it was not always thus. In 1925, so thoughtful and able a judge as Judge John Knox, of the U.S. District Court for the Southern District of New York, spoke at the Association of the Bar of the City of New York, and launched a strong attack upon the fourth amendment. He said, "The fourth amendment is a terrible stumbling block in the way of justice." If this sounds surprising from such a source, we ought, in fairness, to examine the surrounding circumstances. Judge Knox had then had almost a decade of service on the district court. Prohibition was in force. Gangsterism, bootlegging, corruption and racketeering were rife. Everywhere, agents were breaking into homes and places of business, without proper warrants, finding illegal liquor, yet cases were thrown out, because of violation of the fourth amendment. In despair at what he felt were frequently unjustified verdicts, and results which protected guilty people, the judge spoke. The fact that a trained, intelligent person felt that way (no doubt mirroring the feelings of many respectable people) at that time, shows that there is a certain virtue in the long-range view when we deal with basic constitutional safeguards. It was far wiser to repeal the 18th amendment than the fourth.

But, most important, it shows us that governmental abuses of a basic right may stir up a great deal of resentment, not against the abuse, but against the unpopular person who stands in the way of that abuse, and claims his rights.

APPLICABILITY OF THE FOREGOING TO THE FIFTH AMENDMENT

Why has the fifth amendment come under a cloud in recent times? I submit that in our day we have been witnessing widespread governmental abuses of the privilege against self-incrimination, with the consequence that the public has been led, like a frightened and blindfolded beast, to attack the other tormented victim readily at hand—the person whose rights are violated—rather than the real tormentor.

People are being exposed to questioning in public, when it is known in advance that they will claim their privilege—more, when it is known that they will properly claim it. No one will argue that a crook should be protected. If his derelictions are discovered, and proof is properly presented in a court, he should be convicted and punished. Similarly, when a congressional committee seeks information as a background for legislation, and some individual's misdeeds are uncovered to the public indignation, in the course of hearings, no one has a right to complain.

The McClellan committee is an able group of highminded Senators who have done a fine job of exposing conditions which should be remedied. They have produced evidence which demonstrates that certain laws should be changed. They have shown that certain

individuals have violated the law. They have passed this information along to law-enforcement authorities, and prosecutions and convictions have eventuated. But what do they add to the efficacy of their job when they learn, at private preliminary hearings, that a prospective witness, whose misdeeds will be the subject of a public hearing, intends validly to claim his privilege, but nevertheless insist on his appearance, and the public claim of privilege? Again, what purpose is served by asking that witness a score, twoscore, or a hundred questions, knowing in advance that every one will be answered by a claim of privilege? Certainly, the committee learns nothing from the witness. If the witness' misdeeds are relevant, they are usually documented from other sources.

On the other hand, what do we lose from such a procedure? Widespread publicity, motion pictures, television broadcasting, bring home to the lay public that A has claimed his privilege 197 times, or 215 times, that he read his statement monotonously from a paper prepared by a lawyer, and thus he has thwarted the Government. The more times the privilege was claimed, the greater the criminality; the more times he asserted his undoubted rights, the more vicious the man. Ergo, let us do away with the privilege, so we will have no more such unedifying scenes. This is a dangerous logic. Much more valid, it seems to me, is the conclusion that if a man has a right, and we know that he intends properly to assert it, we should not force him to assert it, and thereby impugn not only his own integrity, but the rights of all of us. I would hope that now, 5 years after the turmoil of the McCarthy hearings, in quieter retrospect, we have learned the lesson that self-restraint, in matters like this, better serves the public interest in the long run than heated, sensational dramatics.

THE FALLACY OF EQUATING A CLAIM OF PRIVILEGE WITH GUILT

What makes our present problem peculiarly difficult is the easy assumption that a claim of privilege amounts, in reality, to an admission of guilt. In actual fact, in most cases, this is probably so.

What about a bank clerk who is accused by his employer of stealing from the till—doesn't a claim of privilege in such case warrant his discharge? I would readily agree. What about the admission committee of a golf club, which in answer to a question about a man's background, are met by a claim of privilege—aren't they warranted in turning down his application? Of course. Well, then, wherein lies the difference, when a witness at a Senate committee hearing, asked about whether he stole money, claims the privilege?

When it comes to social relationships, everyone has a right to pick and reject his friends. Logic, prejudice, whim, caprice, may all serve as basis for decisions of this nature, and no one can complain. Arbitrary decisions, for the most part, can be made in most human relationships, with certain exceptions. Some employers may be prevented by union contracts from hiring and firing at will; pension rights may have accrued; a club member cannot be fired out without cause, in many instances. But for the most part I would think that the more valuable the thing we seek to take from someone, the more careful we have to be in adhering to principles of fairness which have stood the test of time.

In considering whether a lawyer can be deprived of the right to pratice because of a claim of the privilege against self-incrimination, the court of appeals, in *Matter of Kafenburgh*, 188 N.Y. 49 (1907) wrote that the privilege had long been regarded as a safeguard of civil liberty, "quite as sacred and important as the privilege of the writ of habeas corpus or any of the other fundamental gauranties for the protection of personal rights. When a proper case arises, they should be applied in a broad and liberal spirit, in order to secure to the citizen the immunity from every species of self-accusation implied in the brief but comprehensive language in which they are expressed." The court held that there was no necessary inference of guilt, from a claim of privilege, and wrote that "To now hold that by availing himself of such privilege it amounted to a confession of his guilt upon which a forfeiture could be adjudged would, in effect, nullify both the provisions of the Constitution and the statute."

It is refreshing to consider this language of a half-century ago, and compare it with the frightened attitude of some lawyers who would proclaim their own respectability, and freedom from Communist taint, by proposing to make it grounds for disbarment to claim the privilege. Such is the osmosis of contact with laymen—we find ourselves drawing weakness from them, instead of infusing them with the fervor and strength of enlightened understanding of the Constitution.

The most fundamental deprivation which one human can visit upon another, of course, is taking away his life or liberty. Cruel and criminal when one individual wreaks it on another, it is often necessitated and proper when organized individuals—society—practices it against an erring member, or violator of society's laws. But here, in the most awesome duty of man—that most closely approaching the power of a god—particular self-restraint is necessary. Blood lust, revenge, public clamor should all ideally be kept to a minimum. Who can ever forget that chilling story by Shirley Jackson, "The Lottery," when the unbearable suspense is released by the community stoning of the woman chosen for death by the lottery.

The long struggle for civilization finds one of its noblest accomplishments in our modern rules for determining guilt or innocence of crime. We take no one's life or liberty except in accordance with rules tested over many centuries. Would anyone quarrel with the requirement that guilt must be proved beyond a reasonable doubt? Proved by whom? By the prosecution—not by the defendant. When a defendant is placed on trial, he need not take the stand, and he may properly put the prosecution's case to the test. Nor may comment be made on a defendant's failure to take the stand. We all accept this as a valid premise. But the inescapable logic of these rules is that a failure to take the stand raises no inference of guilt, and indeed the law expressly requires the court so to charge a jury. How can such a rule exist, and remain at the foundation of our criminal law system, if it has no validity? Yet, whenever one says that a claim of privilege is tantamount to a confession of guilt, one is attacking that rule, since a defendant's decision to remain off the stand is nothing more nor less than a claim of privilege.

Experience has taught us that there are many reasons, other than guilt, which may prompt a claim of privilege—or its equivalent, a defendant's decision not to take the stand. Every criminal lawyer knows that it is not fear of denying criminality in the case on trial which keeps a defendant from giving evidence. Indeed, the eagerness to deny guilt is often in direct proportion to that guilt. But the real reason why most defendants choose not to testify is the fear of being questioned on collateral matters affecting credibility. A criminal record of past convictions, illicit romances, income tax evasions—in short, a myriad of things other than the issue raised by the indictment and plea of not guilty, are often the deciding factor in such decisions.

Dean Erwin Griswold, in his book, "The Fifth Amendment Today" gives other instances of the fallacy that a claim of privilege is tantamount to a confession of guilt. I have no hesitation in borrowing copiously from that work, since a book so excellent and so widely discussed must have escaped actual reading by most.

Perhaps the best example one can envision of the invalidity of such an inference of guilt from the assertion of the privilege lies in the Salem witch trials. Consider the charge—being a witch. It would be safe to assume that none of my readers believes in witches. Yet in the Massachusetts colony people were tried for their lives on the charge of being witches, and they were tortured to make them confess. Would a claim of the privilege there be an admission of guilt? Could it be? It could, to the people of Massachusetts in the 17th century. Yet the unfortunate defendants of those days could only maintain their innocence, and be tortured; confess to something of which they were not guilty; or claim their privilege.

ORIGIN OF THE PRIVILEGE AS A PROTEST AGAINST TORTURE

Dean Griswold speaks of the privilege as a landmark in man's struggle to civilize himself. We shudder now to think that torture—the physical breaking of bodies on the rack, hot irons, all the devilish devices testifying to the inhumanity of man to man—was once a recognized instrument of Government policy to get at the truth. Lilburne's case marked the end of the infamous Court of Star Chamber in England. The colonists were determined to eradicate it when the Constitution was adopted. Can anyone say that the urge to break men's bodies and minds, in order to extract evidence from them, is dead? We need only to look across the oceans, east and west, to remind ourselves that right now, and in the last two decades, millions of people have been tortured to death by governmental action, and forced to say anything which suited their tormentors. Can we say with assurance that no such specter can ever arise here? Only by strengthening our belief in the constitutional safeguards can we add to that assurance.

If we were to do away with the fifth amendment, and its State counterparts, as some people advocate, we would face a situation where people would be called to testify against themselves as a matter of course. In my opinion, we would be taking a long step toward opening the door to torture if we did so.

THE PRIVILEGE HAS BEEN A POTENT DEFENSE AGAINST OPPRESSION

As our life becomes more complex, government becomes more complex. If a citizen were to read all the ways one can violate the law and become a criminal, he would be inclined to stay in bed, for fear that a step beyond his threshold held innumerable terrors. The endless, serried ranks of the red volumes of the U.S.C.A., the fat volumes of the New York Penal Law, the cleverly hidden municipal traffic and sanitary regulations and unconsolidated laws carrying criminal sanctions, create a maze wherein we must all tread carefully, lest we expose ourselves to prosecution. No longer is adherence to the Decalogue a trusty compass through life. I say this half in jest, but only half so.

It becomes important to keep something of the pioneering independent spirit of our forebears. They know that constituted authority, being administered by men who sometimes suffered from the human failings of avarice, jealousy, pride, and stupidity, sometimes had to be kept in place. In doing so, the privilege has been a potent weapon. Two interesting examples come to mind.

In the Pennsylvania Colony, the printer, Bradford, was so fired by the spirit of liberty

that he undertook to print the Pennsylvania Charter of Liberties, so that the people might know their rights, vis-a-vis their rulers. He was also realistic enough to realize that it would be well to leave his name off the publication. He was haled before the Governor, and we are indebted to Dean Griswold for the following excerpt from the record.

"GOVERNOR. Why, sir, I would know by what power of authority you thus print. Here is the charter printed.

"BRADFORD. It was by Governor Penn's encouragement I came to this province and by his leave I print.

"GOVERNOR. What, sir, have you license to print the charter? I desire to know from you whether you did print the charter or not and who set you to work?

"BRADFORD. Governor, it is an impracticable thing for any man to accuse himself. Thou knows it very well.

"GOVERNOR. Well, I shall not much press you to it, but if you were so ingenuous as to confess, it should go the better with you.

"BRADFORD. I desire to know my accusers. I think it very hard to be put upon accusing myself.

"GOVERNOR. Can you deny you printed it? I do know you did print it and by whose direction and will prove it and make you smart with it, too, since you are so stubborn."

In England, in the 17th century, in the reign of William IV, the highly respected Lord Chief Justice of England once found it expedient to claim his privilege. Chief Justice John Holt was summoned before the House of Lords to explain a decision of his, which seemed to that body to trench on their jurisdiction. He refused to answer, in these words:

"I look upon this as an arraignment; I insist upon it if I am arraigned; I ought not to answer."

He maintained this position, the Lords retreated, and we learn from Campbell's "Lives of the Chief Justices" that the "public has strongly taken the side of the Chief Justice and his health was given with enthusiasm at all public meetings throughout the kingdom."

It is heartening to think that a judge could be a popular hero—not for bowing to authority, or to the legislative branch—but for standing up to them, by asserting his privilege. It was only possible, I submit, because the people of England knew their rights, valued them, and were quick to respond to a challenge to those rights.

One can only ask oneself morosely what would happen today if a Chief Justice were impelled to claim his privilege. Would the public, aware of the meaning of that step, judge him properly, or would they pick up their papers, read the headlines, "Chief Judge Takes Fifth," and promptly assume he must be guilty?

CONCLUSION

1. The privilege is historically part of a package of rights evolved over the centuries by an Anglo-Saxon common law determined to protect the citizens from governmental excesses and repressions.

2. It is an expression of our dissatisfaction with torture as a governmental instrument to determine truth.

3. It is a recognition of human dignity; it is more fitting that society, when it judges and punishes people for transgressions, should not humiliate and degrade a defendant.

4. It is an essential part of the process, which requires proof beyond a reasonable doubt, and is inextricably interwoven with it.

5. It is not necessarily true that a claim of privilege is an admission of guilt; there are sufficient instances of the inference not being valid, to make use reject that proposition when we seek the certainty which justifies our depriving others of life and liberty. To put it another way, the cliche, "It is better to acquit 99 guilty men than to convict 1 innocent one," is still true.

6. Experience tells us that from time to time things which seem immediately important must collide with basic rights, which frustrate these temporary things. In the long run, it is better and wiser to give up temporary, high-keyed satisfactions and adhere to permanent ones, on a quieter scale. A diet of vegetables is better for us than candy.

Tribute to Representative Burleson, of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. JOHNSON of Texas. Mr. President, I was gratified to see that one of Texas' most respected newspapers, the Houston Chronicle, recently paid tribute to one of Texas' ablest, most distinguished young Congressmen, OMAR BURLESON, of Texas.

Representative BURLESON has served in the House for 13 years and has risen to become chairman of the House Adminstration Committee. He is widely respected and admired for his forthrightness, his honesty and his impressive grasp of the important problems confronting us today.

Mr. President, I ask unanimous consent that an article entitled "Burleson Has Risen Rapidly in Influence," written by Edward Jamieson, and published in the Houston Chronicle, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURLESON HAS RISEN RAPIDLY IN INFLUENCE

WASHINGTON.—Seniority is all-important in determining the leaders of the U.S. House of Representatives. As a result, many Members serve in the House for a score or more years before reaching the chairmanship of a committe or a similarly influential post.

A notable exception to the usually long period of a Member slowly rising to a top place is Representative OMAR BURLESON, of the 17th Texas District.

BURLESON did not enter the House until 1947, but already he is chairman of a standing committee of that body, and ranks fourth on the Foreign Affairs Committee.

ALMOST FULL-TIME JOB

He has been chairman of the House Administration Committee since the 83d Congress and in that capacity has directed legislation and other activities dealing with the actual operation of the House itself.

This is virtually a full-time job in itself, but the Texan also devotes a great deal of attention and effort to the work of the Foreign Affairs Committee.

While has has been critical of some phases of the international policies of the administration of President Eisenhower, he feels that the appointment of former Representative Christian Herter, of Massachusetts, to succeed John Foster Dulles as Secretary of State was an excellent decision by the President.

"I served with Secretary Herter in the House and have great confidence in his ability," BURLESON declared. "I think the President made a very wise decision in naming him at this critical period when a decision must be reached over the future of Berlin."

The 51-year-old Member whose home is in Anson, west of Fort Worth, is a quiet-spoken Member of the House who works long and hard at his job, but does not normally try for newspaper headlines.

ONE EXCEPTION

An exception has been his attempt to force his colleagues to report to the House the amounts of money they spend on their visits to foreign countries each year.

"Most of the Congressmen who make these inspection trips while Congress is not in session really try to do a conscientious job and I am sure that in the end, they save the taxpayers money," BURLESON says. "Nevertheless, I do not see why each Member should not be required to report to the public how much he spent, whether it was given him by his own committee, or through the State Department with its counterpart funds."

BURLESON, through his campaign, has forced the various committees to report their total expenditures for trips by Members out of the country, but he still feels that individual Members also should be required to make similar reports.

ONE OF TWO CHAIRMEN

Though Texas has the Speaker of the House, Representative SAM RAYBURN, and many Members high up on important committees, BURLESON is only one of two Texans who are chairmen of standing committees. The other is Representative OLIN TEAGUE, of College Station, who is chairman of the Veterans' Affairs Committee.

After serving as county attorney and county judge of Jones County prior to 1940, BURLESON was a roving agent of the Federal Bureau of Investigation for 2 years. He entered the Navy in 1942 and shortly after he returned to active law practice in Anson, he ran and was elected to the House.

He is married to the former Ruth DeWeese. They have no children.

Is Red China Embarrassing Khrushchev in Laos?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert into the Appendix of the RECORD two articles on the problem of Sino-Soviet affairs. The articles, written by Walter Lippmann and George Sokolsky, deal with the problems of southeast Asia and the apparent interest in the Chinese in establishing a partial Mongolian hegemony.

The United States should be aware of the problems which the southeast area now faces and should revamp our policies in this area of the world.

Both Mr. Lippmann and Mr. Sokolsky surmise that the present tactics of the Chinese Communist government are aimed, to a great extent, at showing Khrushchev Chinese independence from Soviet leadership. This policy of independence of the Communist Chinese is dangerous for the United States at this time since there are few controls which

can be exercised over Chinese policies. The usual strictures and considerations which nations that are members of the United Nations are inapplicable in the case of Communist China.

[From the Washington Post, Sept. 8, 1959]

ASIA AND MR. K

(By Walter Lippmann)

The eruption on the Indian frontier and in Laos is an ominous development, not least of all because it lies outside of an beyond the control of the existing international order. Western relations with the Soviet Union are conflicting and unfriendly. But they are conducted within an existing order. There are ambassadors, there is the United Nations, there are conferences of foreign ministers and of experts, there are the exchanges of visits by the heads of governments, and there is the prospect of summit meetings.

But the Chinese revolution, unlike the Russian revolution, is outside the international order, and it is not subject to its rules and obligations. For all practical purposes it is isolated and incommunicado. This means that there is no way to talk with the Red Chinese Government except through the Soviet Union, and this poses some very complicated questions.

The complications arise out of the indubitable fact that the relations between Moscow and Peiping are themselves complicated. Their relations are unclear and ambiguous. We do not know, and probably Russia and China themselves do not know, to what degree they are independent of each other and how far they are entangled. It is certain that Red China is not a Soviet colony, or dependency, or satellite. Yet it is certain, too, that under any conditions now possible they are bound together on the issue of war and peace.

The relations between Red China and the Soviet Union are not healthy. It is a peril to the peace of Asia and of the world that the Chinese revolution, which is in a highly expansionist phase, should be represented in the international order only by the Soviet Union. It is evident that the enormous revolutionary convulsion will not be and probably cannot be restrained by the Soviet Union. Yet the Soviet Union will not and cannot stand aside and allow the United States and its allies to attempt to contain that revolution.

In the coming talks with Mr. Khrushchev it is possible to imagine how coexistence might be stabilized in Europe. But it is not possible to imagine, so it seems to me, how coexistence can be stabilized on the periphery of the Chinese revolution.

In Europe for the time being coexistence would mean the status quo—two Germanys, two Berlins, two Europes, with arrangement for increasing cultural, economic and political intercourse between them. This would leave to the future the problem of German reunification, the problem of the military status of a reunited Germany, and the problem of the redeployment of forces within the NATO and the Warsaw Pacts. This is possible because such a de facto understanding does no immediate violence to the vital interests of any of the great powers.

But nothing comparable with this is in sight or even conceivable in South Asia. The fires of the Chinese revolution are burning fiercely and the Russians could not extinguish them even if they wished to do so. Although the Russians are indubitably apprehensive from the point of view of their own national interests because they are the neighbors of this portentous revolution, they are also Communists who as true believers must also believe in the Chinese revolution. They cannot oppose it, they can restrain it, if at all, only secretly, and they must defend it if it becomes involved in war.

There have been a few voices raised in this country suggesting that as a protest against and punishment for what is happening in Asia, we should break off the coming talks with Mr. Khrushchev. That would be very unwise. If a modus vivendi for Berlin and Germany can be worked out, we should do so, not only because that would be a good thing in itself, but also because it would put us—and it may be the Soviet Union, too—in a better position to work on the containment of the Chinese revolution.

[From the Washington Post, Sept. 8, 1959]

KHRUSHCHEV AND MAO

(By George E. Sokolsky)

Two views can be taken of the Sino-Indian situation and it is not likely that the truthful explanation will be available for many years. Mao Tze-tung is a complex personality, the product of a mixture of Confucian and orthodox Marxist thinking. He is a pragmatist whose measure of the rightness, the fitness, the propriety of a course of action is its effective implementation.

Obviously, Nikita Khrushchev would not take the trip to the United States and make all the preparations he is making for it, if he anticipated a total failure. It is equally obvious that the support that the United States is giving Laos and the support that Great Britain and the United States must give to India could lead to real trouble. In fact, Nehru fears a war between India and Red China because he would have to call in British and American (or United Nations) protection. India is a member of the Commonwealth of Nations and of the United Nations.

It begins to look as though the troubles in Asia, coming a fortnight before Khrushchev comes to the United States, could spoil the effectiveness of his visit here. The two views on this subject are:

1. That Khrushchev intends to ride into our land with a fanfare of explosions to show his power and his fearlessness. I do not hold to this view because it is self-defeating. It would so stiffen the backs of our people that it would not be long before Khrushchev would discover that we cannot be bullied and Eisenhower would find that his peace program had been defeated not in Moscow or Washington but in the southeast of Asia. Why come at all under such circumstances?

2. The other view is that Mao Tze-tung is making it very tough for Khrushchev. There can be several reasons for this.

First of all, Mao is an orthodox Marxist. He has clearly indicated that he does not approve the middle course (that is, within Marxism) that Khrushchev pursues. Mao was closer to the Kaganovich-Malenkov-Molotov group, which Khrushchev denounced as antiparty and exiled, than he ever was to Khrushchev.

Secondly, in the past Khrushchev's orientation has been eastward and he has supported Mao's empire-building throughout Asia. It will be recalled that Chou En-lai, Mao's Premier, sought to play the leading role at the Bandung Conference (1955). As far back as that Nehru must have suspected that Mao hoped to establish a hegemony over the whole east and south Asia.

What Mao must fear is that Khrushchev will go European on him. He must fear that a prolonged series of summit meetings, constant personal contacts with heads of Western States, such fraternization as was evident during the Nixon visit, could reorient Khrushchev's position into a westward direction. Without Russian support, Mao could not last in China. He has depended upon Russia since he forsook philosophy for politics sometime about 1925.

Third, it has been a sore point with Mao that despite Russian support, Red China has not been admitted to the United Nations and has not been recognized by the United States. Year after year, the Russians plead with the United Nations to admit Red China, which, as things stand, is an outlaw nation. Just as Khrushchev has recently been advocating two Germanys, so he has been advocating two Chinas, an idea which evoked considerable sympathy among the pro-Russians in the State Department.

Mao understands his own people and he knows that two generations will have to die before the hatred for Russia, long existent in China, dies off. Meanwhile, he is forced to show his dependence upon Russia because he has no voice in international councils. He can only talk through Russian mouths.

And now Khrushchev is coming to Washington and Eisenhower is going to Moscow and one thing can lead to another. Mao is an envious man. I can recall his hatred for Chen Tu-shiu who organized the Chinese Communist Party. Mao disliked in the Peiping University such philosophers as Hu Shih and Chiang Monling, his contemporaries: An envious man can only view what Khrushchev is doing with bitterness. He, too, would like to be at a summit—but how? Only through Khrushchev. It is not good enough.

This is not based on facts. It is a surmise that comes from long residence in China and some experience with Chinese habits of thought.

Difference in Charges to Federal Government as Against Other Contractors

---

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting this letter, a copy of which was given me by a constituent, to call the attention of my colleagues to the difference in charges to the Federal Government as against other contractors. I am informed this is a common practice:

THE COMMERCIAL SHEARING & STAMPING CO.,
Youngstown, Ohio, August 27, 1959.

Reference: P.O. No. 131/1–70965/60XY.

Mr. S. YEVELSON,
Code 530 B1, New York Naval Shipyard, Brooklyn, N.Y.

DEAR MR. YEVELSON: As discussed in our recent phone conversation, this is to confirm that the price of $446.82 was quoted in error. Correct unit price should be $893.50 for cylinder model D32 JE–3–45'' stroke.

The reason for this is, Mr. Yevelson, that we have two pricing policies, one for users, such as the Federal Government, and original equipment manufacturers. Since the Government falls in the former category, and the original price given to you was an O.E.M. price, we have been instructed to inform you that the user price is to apply, namely, $893.50.

We regret this error and any inconvenience it may cause. It would be greatly appreciated, however, if you would issue an amendment to this order correcting the price to read $893.50 net each.

Thank you.

Sincerely,

F. B. COOPER,
East Orange Regional District Sales.

Another Korea?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, the folly of surrendering our independence to any international organization is becoming increasingly obvious.

Possibly no one could conceive of a finer thought or program than that of bringing permanent peace to the world, improving the living conditions of all people wherever found, bringing prosperity and security to everyone. That might be the thought which took us into United States, NATO, and other international organizations.

The idea back of our entanglement in foreign affairs, and you will recall that Washington warned against it, may be somewhat similar to that entertained by those who attempted to build the tower of Babel. That failed, we are told, because of the confusion of tongues.

Since then human nature has remained much the same.

A "ONE WORLD ORGANIZATION"

We now find that, by joining United Nations and NATO, we are committed to a policy, wherever in the world what we are pleased to call a free nation is invaded or imposed upon by the Communists, of sending not only money and supplies, but our young men to fight in a war in which we are not directly interested.

Because of our previous commitments to our so-called allies, we became involved in Korea, and the cost in lives and suffering was enormous.

An extremely unfortunate result of our joining these foreign organizations is that so far, and evidently in the future, we—our people—will be forced to bear an undue part of the cost, both in treasure and in lives.

It is extremely difficult for the young women and the young men of America of today to see why they should be forced into the armed services, into a program of intensive training and ultimately to fight and die at the call of some foreign group which has no real interest in the future of our country.

Today, whether our young men and, perhaps, our young women, because of our membership in U.N. are taken from their homes and sent to fight in Laos depends upon what the Security Council of the United Nations decides. For years, we have poured millions into Laos.

We have sent billions upon billions taken from our taxpayers to bolster not only the independence and integrity of other countries, but to make them active and efficient competitors of our industry.

Certainly, we believe in charity, in being helpful, and that has been our record since the beginning of our Nation, but, in my judgment, of far more importance is a policy which will enable us to remain independent, in control of our own destiny, to make secure the future of our own people.

Why not do a little serious thinking on the issue of how far can we weaken ourselves, and are we justified in imposing burdens upon our own folks to aid others?

The present demand is that, if we are better acquainted with the people of other nations, there will be less contention. Perhaps so. But history shows that the nations of the Old World—neighbors, it might be said—have always been on the verge of war with each other.

Helpful to others? Yes. But not at the cost of our own independence.

Civil Rights Report: Unhappy Reading

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. COHELAN. Mr. Speaker, too long have we been content to assume an immature attitude toward the problems which our Negro citizens face. The new report of the Federal Civil Rights Commission spells out the areas of difficulty, corroborates conditions already known to those who have taken the trouble to inquire and makes recommendations in line with proposed legislation.

It is my hope that this report will create the sense of urgency on the part of legislators warranted by these critical problems. We can no longer equivocate or ignore our responsibilities.

The case is stated effectively in the following editorial from the pages of the New York Times which I place in the RECORD under permission to extend remarks:

CIVIL RIGHTS REPORT

The report of the Federal Civil Rights Commission to the President makes important, though unhappy, reading. It describes in detail what every informed American should be aware of—that large numbers of Negroes in the South are prevented from voting by methods which range from physical violence to legal trickery, that the Supreme Court decision outlawing school segregation has been far from implemented and that racial discrimination in housing forces Negroes, Puerto Ricans and similar groups to provide disproportionate percentages of the Nation's slum dwellers. No American who takes seriously the ideas of freedom and equality in this Nation's heritage can feel anything but shame about the basic situation described in this report, even though progress has been and is being made in the area of extending civil rights to all.

What can be done to eliminate these evils in our democratic society? The recommendations of the Commission have already come under attack, particularly from those who benefit from the disqualification of many Negro voters in the South. But on the whole the proposals and recommendations of the Commission are moderate in nature and worthy of serious consideration by all men of good will.

The proposal that temporary Federal registrars be appointed to take over in southern areas where State and local officials prevent Negroes from voting has drawn immediate opposition from the diehards. Yet those who have begun shouting States rights must answer the grim story the Commission's report tells of how many State officials in the South have labored to prevent Negro Americans from voting. It is no answer to say merely, as does Commissioner Battle in his dissent, that "present laws are sufficient to protect" the right to vote. Too many Negro Americans are being denied the right to vote to take that claim seriously.

On housing, the Commission is constructive in its emphasis upon the need for more housing and for equal opportunity to secure decent housing. On education the three northern members of the Commission should find a sympathetic reaction to their proposal that Federal aid be withheld from institutions of higher education which exclude students on racial grounds. We still have far to go to reach the ideal in the civil rights field, but the Commission's report promises to help us make progress. And it is certainly to be hoped that the move begun in the Senate yesterday to continue the life of the Civil Rights Commission beyond next November will be successful.

Padre Island, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. JOHNSON of Texas. Mr. President, in recent years there has been increasing concern at the rapid rate at which our Nation's natural shoreline areas have been vanishing.

One of the greatest of these areas, embracing the longest undeveloped shorelines area in the United States, is Padre Island which stretches for 117 miles along Texas' gulf coast.

In an effort to assure timely action by the Federal Government in preserving this priceless heritage for the public good, I recently joined with my distinguished colleague from Texas [Mr. YARBOROUGH] and two able Members of the Texas delegation in the House [Mr. KILGORE and Mr. YOUNG] in addressing letters to the distinguished Senator from Montana [Mr. MURRAY], the chairman of the Committee on Interior and Insular Affairs, as well as the Honorable Fred A. Seaton, Secretary of the Interior.

In the interest of apprising others in the great potential of Padre Island, I ask unanimous consent, Mr. President, that both these letters be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SEPTEMBER 2, 1959.

Hon. JAMES E. MURRAY,
Chairman, Senate Committee on Interior and Insular Affairs, Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: As you are well aware there has been increasing concern in recent years over the rapid rate at which the natural shoreline areas of the United States have been vanishing. It is generally recognized that unless the Federal Government acts soon to preserve for the American people some of the few remaining areas of shoreline wilderness, this aspect of our heritage will have disappeared forever.

The Committee on Interior and Insular Affairs currently has under consideration a number of bills which would authorize the

establishment of shoreline park areas, including S. 4 introduced by Senator YARBOROUGH, which would specifically authorize the establishment of a national park at Padre Island, Tex. Other bills would authorize the acquisition of shoreline areas, and though they are broad enough in scope to permit development at Padre Island, its selection would not be assured under the terms of these bills.

The purpose of this letter is to urge your committee to conduct hearings on the question of establishing a national shoreline area on Padre Island and to report to the Senate legislation which would insure the preservation of this natural wonder. Padre Island, stretching 117 miles along the Texas gulf coast, is the longest remaining undeveloped beach area in the Nation. Here at Padre Island the United States has its last opportunity to preserve a substantial length of beach area in its natural state.

The National Park Service has conducted a full investigation of the potentialities of Padre Island, and both the Park Service and the Interior Department's Advisory Board on National Parks, Historic Sites, Buildings, and Monuments have recognized the opportunity at Padre Island and have strongly recommended the establishment of a national shoreline area here. If Padre Island is to be preserved for future public use and enjoyment, action must be taken soon. Otherwise, the island will follow other shoreline areas into conventional commercial beach development.

We believe that the Congress must enact authorizing legislation soon if this beautiful wilderness is to be preserved. If at all possible, Congress should act on the matter next year. Therefore, we respectfully request that your committee hold hearings on this question between the adjournment of the present session of Congress and the commencement of the next session. If the committee does hold these hearings we recommend that the committee visit the area for on-the-spot hearings in order that its members will personally appreciate the wonders of nature found at Padre Island.

We are most anxious that the Congress act on this matter soon, and we know that if the members of your committee would visit Padre Island and report their impressions to the Senate, the early establishment of a national shoreline area at Padre Island would be assured.

Sincerely,

LYNDON B. JOHNSON,
U.S. Senator.
RALPH YARBOROUGH,
U.S. Senator.
JOE M. KILGORE,
Member of Congress.
JOHN YOUNG,
Member of Congress.

U.S. SENATE,
OFFICE OF THE DEMOCRATIC LEADER,
Washington, D.C., September 2, 1959.

Hon. FRED A. SEATON,
Secretary of the Interior, Interior Building, Washington, D.C.

MY DEAR MR. SECRETARY: On April 27, 1959, you transmitted to each of us a copy of a field report by the National Park Service on the proposal to establish a national shoreline area on Padre Island, Tex.

We were and are extremely impressed with this report. It is apparent that the National Park Service's investigation of the potentialities of Padre Island as a shoreline area was extremely thorough, and the need for immediate action to preserve this beautiful area for the people of America is fully demonstrated by this report.

Both the National Park Service and the Advisory Board on National Parks, Historic Sites, Buildings and Monuments have recommended the establishment of a national shoreline area on Padre Island. But to our knowledge the Interior Department has not approved this proposal nor has the Department recommended that the Congress enact legislation which would insure that a national shoreline area be established on Padre Island.

This is one of the Nation's last opportunities to preserve a substantial segment of our shoreline in its wilderness state. Padre Island, stretching 117 miles along the Texas gulf coast, embraces the longest undeveloped beach remaining in America. Thousands of acres of Padre Island are still in a natural state providing many miles of spacious beaches and lovely dunes. If these can be preserved, American families in the future will be assured of the opportunity to enjoy the natural beauty of the island as well as the recreational benefits the wonderful Padre Island beaches can bring. But if this is to come about, action must be taken now. Otherwise, the opportunity will have been lost, and the natural beauty of Padre Island will have given way to conventional commercial beach uses.

We strongly urge you to take immediate action to implement the recommendations of the National Park Service and the Advisory Board on National Parks, Historic Sites, Buildings and Monuments that a national shoreline area be established on Padre Island. We ask that Padre Island be officially designated by the Department of the Interior as a suitable location for such a national shoreline area, and that the Department immediately recommend to the Congress that it enact legislation which will specifically authorize the establishment of a national shoreline area on Padre Island.

Sincerely,

LYNDON B. JOHNSON,
U.S. Senator.
JOE M. KILGORE,
Member of Congress.
RALPH YARBOROUGH,
U.S. Senator.
JOHN YOUNG,
Member of Congress.

Poison in Your Water—No. 168

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Gary (Ind.) Post-Tribune of October 9, 1958, entitled "Reveal Pollution Survey Results":

[From the Gary (Ind.) Post-Tribune, Oct. 9, 1958]

REVEAL POLLUTION SURVEY RESULTS

HOBART.—Delegates to the Inter-Chapter Council of the Izaak Walton League, at a meeting in the Hobart chapter's clubhouse, were jolted to an awareness of the existing conditions of Hobart's water pollution when they were told that "Lake George and Deep River are nothing more than an open sewer."

Speaking for the committee which made a survey of the lake and river as well as spot checks in the area was George Maywald.

In presenting the report of statistics compiled in the survey, he also listed the specific locations from which the water samples had been taken and a description of the samplings. They are:

At Deep River, at the Ridge Road Bridge above the confluence of Duck Creek and above the sewage treatment plant outfall; Deep River at the Rand Street Bridge approximately one-third mile below the sewage treatment plant outfall; Duck Creek at the Michigan Avenue Bridge at the south edge of the sewage treatment plant grounds, 150 yards above its confluence with Deep River.

Contaminated water was found at several septic tank installations and raw sewage entering the sewage treatment plant final effluent from the sewage plant ditch flowing north under Eighth Street to Lake George just west of Fleming Street; the ditch at the intersection of Wisconsin and 10th Streets; sewer outfall to the south side of Lake George 10 yards east of Wisconsin Street.

And, ditch running south from Third Street just west of Colorado Street; ditch on the north side of Ridge Road, just east of Ash Street; and the 16-inch outfall to the south side of Lake George at the west end of Pennsylvania Street.

VIOLATIONS

Conditions observed during this survey violated the regulations required by the stream pollution control board, that generally, "the oxygen content of the receiving water shall be no less than 50 percent of saturation and, in no case, shall it fall below 25 percent saturation." Other sections of the regulation were also violated.

The high bacteria concentrations noted during this survey indicate a serious health hazard to the community, the committee pointed out.

Deposits of organic materials in a stream or ditch cause putrid sludge banks which inhibit and destroy aquatic life. Odors arising from the decomposing material cause nuisances and lower property value adjacent to the stream or ditch.

Maywald also read from a copy of a letter to Mayor Fred Rose and the board of public works, from Oral H. Hart, sanitary engineer at the State board of health, in which a copy of the survey was included.

The letter also stated that consideration was given in 1950–51 to the construction of additional sewers and a complete sewage treatment plant. The program was reduced because of financial difficulties. Approval of the stream pollution control board for the construction of an interceptor sewer and a primary treatment plant was with the understanding that it was the first step toward the construction of a complete sewage plant.

NO DELAY

The continued population growth in the Hobart area and the increased discharge of raw or inadequately treated sewage to miscellaneous streams and ditches and to Lake George makes it imperative that further construction be undertaken with the least possible delay, the letter concluded.

Field and office work in connection with the survey was accomplished by personnel of the Water Pollution Section, Division of Sanitary Engineering, State Board of Health.

With the exception of field determination for dissolved oxygen, the analyses were made in the laboratories of the State Board of Health.

"This survey," according to the committee "is only the beginning of the fight to clean up our lake and the streams leading to it."

The committee conducting the survey here, is comprised of members from a number of organizations in this area, who are interested in furthering the project. Of these, the Izaak Walton League and the American Legion are two.

THE COMMITTEE

Maywald, T. N. Bale, William Chadwick, and Mrs. Howard Enslen represent the Hobart chapters of the league and Clarence Schultz of Hammond is the representative from the American Legion.

The business session concluded with the election of officers for the coming year.

Arthur Minninger of Griffith chapter will be the new president, with Harvey Mosher Glen Park chapter as vice president, Mrs. Mosher, of Timberlost chapter, secretary and Mrs. George Bodin of Lake-Wood, Hobart, is the treasurer.

Formal installation rites will be November 6. At this time trophy awards will be presented to winners in the casting and rifle tournaments.

The remainder of the evening was spent with members voicing their concern and interest in the report heard during the session.

The Cause of All Mankind

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 25, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the remarks of Mr. Norman Knight, president of the Yankee Network Division, RKO General, Inc., at the annual awards luncheon of the American Heritage Committee, in New Bedford, Mass., on June 5, 1959:

THE CAUSE OF ALL MANKIND

(By Norman Knight)

Were we pessimists, we might say it is unfortunate that so few people in this land of ours are aware of the dangers of communism.

Were we optimists, we might be inclined to feel that we are making great progress in fighting the Communist threat.

I like to believe, though, that we are neither optimists nor pessimists but that we are realists; and that we are constantly aware of the traits of our Communist enemies and, conversely, that we are appreciative of the fine, decent qualities of those Americans who support true American traditions and are not apathetic to the Communist menace.

My remarks will be brief, and it is my wish to spend most of these few minutes discussing the words of wisdom of a man whose writings and whose actions as an American have always given me great personal pleasure and pride. He was first called the Father of his Country. As much as I admire George Washington, this is not the great American to whom I refer since some years before this title was passed on to Washington, a man was called the Father of his Country, because of his work at the very beginning in establishing the independence of our country.

Of all the patriots, this man was the only one to sign all five of the great state papers that achieved our independence—the Declaration of Independence, the Treaty of Amity and Commerce With France, the Treaty of Alliance With France, the Treaty of Peace With England and, of course, the Constitution of the United States.

When I think of the work of your good committee, the American Heritage Committee, and of our own modest efforts in the field of promulgating American traditions, I always like to think first in memory of Benjamin Franklin.

It is particularly fitting as we attend this function in New Bedford, itself the scene of great American historical traditions, that we reiterate thoughts expressed by Benjamin Franklin because, not only was he first called the father of his country but I believe it was Carlyle who later called him father of all the Yankees.

Were Benjamin Franklin alive today, he would not have need to philosophize any differently nor with greater depth or perception than he did during the 18th century were he able to guide us in our current struggle with communism.

Boston-born Franklin believed that an essential service of man to his fellow man was the free communication of ideas, and without this communication he felt there could be no real freedom and no universal peace. His first public act at the age of 16 was to start fighting for freedom of speech and the press. His last public act just before he died at 84 was an appeal for the emancipation of slaves, employment for freed Negroes, and education of slave children.

Franklin was, above all else, a practical man, and his beliefs were backed with action.

His brother, James, was publisher of the New England Courant and was thrown into jail for criticizing British authorities in Boston. To save the paper, young Benjamin, then an apprentice, was named publisher and with rare courage under the pen name of "Silence Dogood" he wrote these words in the London Journal:

"Without freedom of thought, there can be no such thing as wisdom; and no such thing as public liberty without freedom of speech; which is the right of every man. * * * Whoever would overthrow the liberty of a nation must begin by subduing the freedom of speech."

Were Franklin here today, I am sure that he would say there are many ways to subdue the freedom of speech, and one of these would be apathy, doing nothing about something.

When I think of the Communist menace sometimes it occurs to me that next to creating frictions among religious, ethnic, and racial groups (which I still consider to be the foremost objective of the Communists in America) the most important target for communism is plain and simple apathy. From the day that our Founding Fathers signed the Declaration of Independence until this very moment, America has remained great because of what her people have done. Our problems have been caused by the things that we did not do.

Americans must think and act to meet Communist aggression here and abroad. This is why I have insisted that our organization reprint and distribute materials that will better educate New Englanders to the menace of communism, this is why we have produced films and other visual materials that would show Communist leaders to be untrustworthy and that is why we have produced the only continuing network program in today's radio which pictures in depth the fanaticism of hard-core Communists and the need for grassroot opposition to communism by Americans everywhere.

It is fitting that we call this last described program the "Dangers of Apathy." It was made possible only by the resources that we have available to us, the determination of people like Jack Maloy and my other associates who have contributed so much to this task and most importantly by the dozens of men and organizations whose backbreaking work over the years has developed the storehouse of information which our communications media can distribute. The undercover agents who have worked voluntarily, the FBI and other law enforcement groups, the American Legion and the American Heritage Committee and other patriotic committees, the citizens who have moved forward to help us—all of these have made it possible for us to further our objectives in this work.

Now we must urge others to join us. There are many things we can do. Let us take courage from the words and deeds of Benjamin Franklin and other Revolutionary patriots and find ways to do things to express our patriotism with action. Here are some of the things that all of us can do:

1. When we see communications media courageously fighting communism, be they magazines, newspapers, TV stations, radio stations, or any other type of media, write to them and encourage them to continue their work.

2. When articles concerned with American traditions are printed, order reprints and distribute them to more people.

3. When special TV and radio programs are scheduled, such as our "Dangers of Apathy," call friends and urge them to call more friends to listen to the program.

4. Order reprints of such statements as J. Edgar Hoover's recent one-page statement, "What You Can Do To Fight Communism," and mail them to your friends and neighbors.

5. Write to your Congressman, your Senator, and to members of the executive branch of our Government and praise them and encourage them when they stand up and fight communism at home or abroad.

6. Speak out against any act of bigotry or prejudice, because words that create friction among Americans aid the Communists' cause. Denounce as un-American any man or woman who spreads hate in any form, because as Franklin once said, "Fools multiply folly."

7. Seek to find ways at the grade school and high school levels to encourage reading of American history and to stimulate forum discussion, contests, and other activities concerned with acts of American liberty and justice. A great fear of the Communists is that American children will gain a greater appreciation of American heritage and the great struggles that have won and maintained our freedom.

8. Demand honesty from public servants, union officials, and management men, all of whom have trusts, since it is proven that in many countries graft precedes confusion and confusion precedes communism.

9. Certainly be constructively critical where circumstances deserve criticism, but be alert to Communist-inspired criticism of government services and government functions. Do not support demands for further expansion of governmental expenditures except where they are deemed necessary for national security, for it is an oft-repeated Communist statement that capitalistic countries are doomed by inevitable economic collapse. Our answer must be one of concerted economy, balanced budgets, and immediate planning to institute reduction in the national debt. Individual support by Americans everywhere is essential to the attainment of these objectives.

10. Be informed and urge others to be informed through a sincere desire to know all possible about communism's devious plans and maneuvers which change in execution (but never in long-term objectives) almost on a daily basis.

For all of us it is important to remember that our fight is not just the fight for New Englanders nor is it the fight only for Americans. Our opposition to communism serves an even greater cause best expressed in a statement made by Benjamin Franklin whose foresight must have destined his remarks to be as appropriate today as they were the very hour that he expressed them. I have studied these remarks many times, and our finest statesman of the 20th century could not weld words in such a way as to do greater justice to our situation in the world today than did Franklin's almost two centuries ago.

"All Europe is on our side of the question, as far as applause and good wishes can carry them. Those who live under arbitrary power do nevertheless approve of liberty, and wish for it; they almost despair of recovering it in Europe; * * * it is a common observation here, that our cause is the

cause of all mankind, and that we are fighting for their liberty in defending our own. God grant that not only the love of liberty but a thorough knowledge of the rights of man may pervade all the nations of the earth, so that a philosopher may set his foot anywhere and say: 'This is my country.'"

Save Our Shorelines

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD, a letter signed by Mr. J. W. Penfold, conservation director, Izaak Walton League of America, Glenview (Ill.) on the introduction of H.R. 8445, a bill to "save our shorelines."

THE IZAAK WALTON LEAGUE OF AMERICA,
Washington, D.C., August 13, 1959.

The Honorable JOHN D. DINGELL,
House Office Building,
Washington, D.C.

DEAR JOHN: The Izaak Walton League of America wishes to congratulate you on the introduction of H.R. 8445, a bill to save our shorelines.

Studies made in recent years by the National Park Service and comparable State agencies reveal the appalling fact that the public is fast losing the opportunity to use beneficially our great shorelines of the Atlantic, gulf, and Pacific coasts, the Great Lakes and major inland waterways. More and more shoreline areas heretofore available to the public for recreation have been lost to private development for industry, commerce and community expansion. At the same time the population burgeons, leisure and real wages increase with a more than corresponding increase in public demand and need for shoreline recreation.

It is clear that a comprehensive and coordinated Federal-State program will be required, if we hope to preserve even some of these opportunities for present and future generations. Moreover, it is clear that except as we do implement very quickly such a program as H.R. 8445 proposes, the chance to do so may be lost entirely or rendered infeasible due to constantly rising costs of shoreline real estate. To put it crudely—such lands, however costly, can never again be acquired as cheaply as today. Senator MURRAY has cited the instance of an area the Park Service could have acquired 20 years ago at $9,000 a mile which would now cost $110,000 per mile, illustrating what has already occurred. In this connection, I noted recently an advertisement offering a Florida property, stated to be the last 5-mile stretch of undeveloped shoreline between Miami and Daytona Beach, for "$1 million down—terms for the balance."

The bill approaches the problem on three important fronts: (1) It lists several areas which have already been studied and proposes their consideration for authorization; (2) proposes a cooperative program by which the States can be assisted in expediting their State park and shoreline programs, and (3) lists additional areas for study to determine whether they are suitable for national or State shoreline designation. We are pleased that the bill recognizes that regulations established for national shoreline areas should permit continuation of present recreational uses such as hunting, fishing, water-fowling and the like where appropriate. In effect, then, the legislation would establish in the park system under congressional policy a new category of public area, so successfully pioneered by the Cape Hatteras National Seashore Recreation Area.

We are pleased that the legislation sets fairly broad acreage limitations on the areas to be considered for authorization within which, if authorized, the Secretary of Interior may acquire lands. This is a sound method as has been demonstrated at Big Bend, Cape Hatteras, Everglades, Virgin Islands, Fort Clatsop, Shenandoah, and other national parks and monuments established under similar or identical procedures. During the course of hearings, of course, the committee will be able to study specific boundaries in more detail and may, if it appears desirable, describe them with more preciseness. We note also that the Secretary, before designating any authorized area, would be required to consult with the Governor of the State concerned, and to hold local hearings. Beyond this, and before the Secretary could spend any Federal funds for land acquisition, he would be required to come before Congress, in the usual appropriation process, for funds. This provides Congress with still another opportunity to assure itself that the program is being carried out soundly and within the congressional intent. These appear to be adequate safeguards against any possibility of abuse of administrative authority. At the same time it provides means at the daministrative level whereby the most sensible areas can be worked out in terms of national, State, and local interests.

It is an unfortunate fact that the Nation's national park system protects and preserves in the broad public interest little of our shoreline. This great gap has been filled to only a slight degree by State park programs, splendid as they are. The save-our-shorelines bill is designed to expedite Federal and State programs cooperatively before it is too late. It is a most worthwhile objective in which all thinking Americans should and will, I am sure, join forces to support.

Sincerely,

J. W. PENFOLD,
Conservation Director, Izaak Walton League of America.

The Late Ken Reagan

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. FISHER. Mr. Speaker, I desire to join with my colleagues in the House in paying deserved tribute to the late Ken Reagan, a former Member of this body. He was a dedicated public servant. He was a true patriot of the old school, and always will to fight for the cause of good government whenever the occasion arose. Few men have ever served in this body who were more devoted, more courageous, and more deserving of commendation.

Ken Reagan was my personal friend. I visited with him frequently. I was always inspired by his pleasant mannerisms and by his philosophy. He was a friend of friends, a big-hearted and generous person, who always had a good word and a pleasant thought.

This Nation needs more men of the statute of Ken Reagan. He was a man who always put the welfare of the country ahead of petty politics. He voted the way he thought, the way he believed, never looked back. The one test that he applied to every issue was: Is it right or is it wrong? Ken always associated himself actively with the economy-minded bloc in the House. He warned of the dangers of inflation and the importance of balanced budgets. He was a man of great foresight who thought more of the future than he did of the political benefits that might accrue at a given moment.

I extend to his wife, Roberta, my deepest sympathy in her bereavement.

Council Seeks To Change Laws That Hamper Federal Employees

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the Washington Daily News of September 4, entitled "Council Seeks To Change Laws That Hamper Federal Employees":

COUNCIL SEEKS TO CHANGE LAWS THAT HAMPER FEDERAL EMPLOYEES

(By Thomas G. Walters, operations director, Government Employees Council)

Although America's first labor law was enacted in 1813, by far the greater part of effective labor legislation is the fruit of the period since 1910, and especially during the 1930's.

HOLIDAY VOTED

In 1894, 65 years ago, the U.S. Congress voted Labor Day a legal holiday. Labor Day now is celebrated by parades and meetings at which addresses are made by prominent labor leaders and political figures.

Notwithstanding the law of 1894, declaring the first Monday in September a legal holiday, postal and Federal employees continued to be denied and harassed by Executive orders forbidding them the right of free speech and the right to petition Members of Congress or to appear before congressional committees in the interest of better financial and working conditions.

On January 31, 1902, President Theodore Roosevelt issued an Executive order as follows:

EXECUTIVE ORDER

"All officers and employees of the United States, of every description, serving in or under any of the executive departments or independent Government establishments, and whether so serving in or out of Washington, are hereby forbidden, either directly or indirectly, individually or through associations, to solicit an increase in their pay or influence or attempt to influence in their own interests any other legislation whatever, either before Congress or its committees, or in any way save through the department or independent Government establishments in or under which they serve, on penalty of dismissal from the Government service."

In 1909, President William Howard Taft added the following paragraph to the Executive order of 1902:

"Nor shall any such person respond to any request for information from either House of Congress, or any committee from either House of Congress, or any Member of Congress, except through or as authorized by the head of his department."

Several postal employees were removed from the service because they did not buckle under and go into a shell after these Executive orders were issued. But the courageous and freedom-loving employees of the Federal and postal service rededicated their lives to the passage of laws to eliminate these Executive orders.

MAGNA CARTA

On August 24, 1912, they were rewarded by the passage of Public Law 336, 62d Congress. This became known as the Lloyd-La Follette antigag law. This has become known as the Magna Carta of Federal and postal employees.

In 1912 the States began to enact laws regulating the hours of work for women.

With these and other laws on the statute books, Federal and postal employees continued to be embarrassed and humiliated, and denied free and collective bargaining with their superiors.

Even some Members of Congress continue to think that we, the Federal and postal employees, are denied the right to petition Congress.

What we need, and need badly, is a law setting forth the ground rules of personnel management in Federal and postal service. We will not rest until such a law is approved by Congress and signed into law by the President.

World Refugee Year

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. CONTE. Mr. Speaker, I was proud to be able to offer the successful motion to restore to the Executive authority to spend up to $10 million for U.S. participation in the activities of the World Refugee Year, at the time that the mutual security appropriation bill was before us. I sincerely hope that this provision will be included in the final measure which we vote.

Under leave to extend my remarks, I wish to include an excellent editorial from the Washington Post showing the tremendous importance of American participation in World Refugee Year.

THE UPROOTED

The United Nations General Assembly designated the period July 1, 1959-June 30, 1960 as World Refugee Year with the hope of focusing interest on the refugee problem and encouraging some concerted effort to meet the problem by governmental and nongovernmental agencies. The problem is unlikely to be solved in a single year—there are still some 2½ million homeless and uprooted human beings in the refugee centers of Europe and the Middle East and north Africa and Hong Kong—and, of course, there are now the Tibetans who have fled to India.

But by resolution and energy and generosity something can be done. And perhaps the most important spur to doing something is to remember that the refugees are not mere numerals in a table of statistics but flesh and blood persons capable of feeling cold and hunger—and even hope.

Although the United States has contributed a great deal to the aid of refugees in the years since the war, it has not yet committed itself to any special action in support of the World Refugee Year program. There are two minimum steps which, in our judgment, Congress ought to take before adjournment. One is to pass a bill authorizing a modest American financial contribution of $10 million to be spent at the President's discretion for refugee relief of various sorts. The other is to adopt a joint resolution proposed last May by Representative FRANCIS WALTER permitting a limited number of refugees to enter the United States under parole and in excess of the regular quotas. The attempt which has been made in committee to restrict such admissions to "Europeans" is, of course, entirely out of keeping with the spirit of a World Refugee Year.

There are pragmatic as well as humanitarian reasons for helping the refugees. Homeless and uprooted people present real perils to the political and economic stability of the countries where they are stranded. Migration is only one of the solutions to their plight; and it is a mistake to assume that all or even most of them want to come to the United States. They need housing and education and food and self-help projects and rehabilitation assistance; and some of them, of course, need transportation to lands such as Australia and Brazil which have ample room for them. It is unthinkable that the United States, a sponsor of World Refugee Year, should fail now to take some measure of effective action toward solution of one of the world's most tragic problems.

Khrushchev's Peace and Friendship

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the text of an advertisement which is currently appearing in many newspapers throughout the country, entitled "Peace and Friendship."

This advertisement was sponsored by the Allen-Bradley Co., located in the district which I represent in Congress. It contains a timely message to the American people on the subject of Khrushchev's impending visit to our country. It warns our people that there is a vast difference between what Khrushchev says and what Khrushchev does. By listing the nations which have fallen under Communist domination, the message proves its point very clearly.

I have repeatedly expressed my deep concern about the possible effect of Khrushchev's visit to the United States, and warned that we should not be deceived by his smiles and his talk of peace. Let us keep our eyes and ears open, and, as the Allen-Bradley message suggests, remember that there is a big, big difference between Communist pledges and Communist performance.

A few days ago, I introduced a resolution in the House, calling on the American people to observe a minute of silence on the day of Khrushchev's arrival in the United States—a minute of silence devoted to silent prayer and meditation about the spiritual heritage of our great Nation. I sincerely hope that my resolution, suggested by the Foundation for Religious Action in the Social and Civil Order, receives wide attention and support. The dramatic demonstration of our respect and reliance on divine guidance should have a salutary effect on Mr. Khrushchev.

The text of the Allen-Bradley message follows:

PEACE AND FRIENDSHIP

Under this banner, Kremlin Boss Khrushchev is coming to the United States.

To Khrushchev, peace and friendship means the total enslavement of all nations, of all peoples, of all things, under the God-denying Communist conspiracy of which he is the current czar.

In exploiting his hypocritical theme, he promises profitable trade to the businessman, and heaven on earth to the workingman.

No one, however, has better translated his real meaning and purpose than has Khrushchev, himself, in his ugly boast: "We will bury you."

This invitation to visit the United States will give Khrushchev the additional standing he needs among the Russian people and among the peoples of those countries teetering on the Communist edge. It will also create despair among the peoples of his Communist-enslaved nations.

If our statesmen or business leaders overlook that Khrushchev is reputed to be one of history's most brutal murderers, and most vicious liars they will tend to rob the Khrushchev-captive peoples of their belief that their best hope for liberation is through the United States.

It is imperative for our national survival that our people realize the vast difference between what Khrushchev says and what Khrushchev does.

The terrible brutality of burial into Communist enslavement is known to the people of the 22 captive nations listed below.

Let there be no concessions, no appeasement, no deals with Khrushchev. Let us not be negotiated into that position which Khrushchev plans for us—the position of becoming his greatest captive nation.

Meanwhile, let us remember those thousands who died trying to defend their freedom in these Khrushchev-controlled captive nations: Poland, Hungary, Latvia, Estonia, Lithuania, Tibet, North Korea, North Vietnam, mainland China, Czechoslovakia, East Germany, Albania, Idel-Ural, Cossackia, Turkestan, Azerbaijan, White Ruthenia, Georgia, Ukraine, Armenia, Bulgaria, Rumania.

The Allen-Bradley Co., Milwaukee, Wis., urges you to hold fast to your American freedoms. These include your freedom to live, your freedom to worship God, and your freedom to work and to vote as you choose. These freedoms are still with us in the United States of America. But these freedoms have been destroyed by the Communists in those large portions of the world where the Communists have seized control. Don't let it happen here.

The Allen-Bradley Co. manufactures quality motor controls and quality electronic components. With this public service advertisement, the Allen-Bradley Co. is trying to sell you nothing except the importance of recognizing and understanding the horrible threat posed by Kremlin-directed international communism against our country, our people, and our incomparable American free enterprise way of life.

Citizens of San Leandro, Calif., Can Be Justly Proud of Their City Officials

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the city of San Leandro, in Alameda County, Calif., is a progressive and rapidly growing community whose population in the last 12 years has just about trebled.

In spite of this explosive growth San Leandro has met all of her commitments to her citizens. She is not deficient in the services she furnishes.

Under the guidance of Mayor Jack D. Maltester, and a forward looking city council composed of the Honorables Valance Gill, William Swift, Kenneth Cheatham, James Frazier, Alvin Kant, and Robert J. Taylor, San Leandro has prospered well. Wise and able Wesley McClure, the efficient city manager, has done a fine job as chief administrative officer.

On September 1, 1959, the following release was issued by the office of the city manager:

Last night the San Leandro City Council once again reduced the city tax rate.

In these days of inflation, rising costs, and rising taxes, the city of San Leandro, Calif., is, it believes, justifiably proud. This year the citizens of San Leandro will, for the 12th consecutive year, benefit from a tax rate decrease.

In 1947 the city tax rate per $100 assessed valuation was $1.98; it has been reduced annually to its present low level of $1.22.

How has this been accomplished? There are many contributing factors. A most important factor is the philosophy of city councilmen to provide for prudent spending and administration. The council believes strongly in the pay-as-you-go philosophy of financing. Thus, there is not a multitude of expensive bond issues to be repaid out of tax moneys.

As a first step however, in 1947 a bond issue was passed which permitted construction of separate industrial sewage lines, and further sewage plant expansion. These lines were laid through many acres of orchards and farmlands; on the site of these orchards and farmlands now stand some of the most valuable industrial properties on the west coast.

Indicative of the city's economic growth is the fact that the city's assessed valuation in the last 12 years has increased sixfold to its present level of $120,849,700.

Simultaneously, the population of the city has increased from 26,442 in 1947 to its present 66,700. The growth of both population and industry demonstrates the desirable balance between the two which is present in San Leandro. The city is a good place to live and a good place to work.

This constant decrease in the tax rate has not been accomplished at the expense of services. The size of the full-time staff has more than tripled. There is presently under construction a $1,700,000 Community Library Center. The city is in the fourth year of a $140,000 per year capital improvement program for expanding recreation facilities. There is under construction at present the first stage of a major marina development on the city's shoreline. It is anticipated that this extensive development will be self-supporting and cause no tax increases.

The city's 6-year capital improvement program has been made possible by the city council allocating annually one-half of the city's sales tax revenue for major capital outlays, rather than using it for normal day by day city operations.

In addition to the above, the city has embarked upon a self-administered downtown revitalization program. A citizen's committee, in cooperation with the downtown property owners, has received pledges of full support from the San Leandro City Council.

While these major projects are uppermost in the minds of the citizens, it must be remembered that the city has also increased its level of service in such areas as street repairs, street lighting, police, and fire protection, etc.

For all of these reasons, the citizens of San Leandro can be justly proud of their city officials for combining a high level of municipal service with a consistently lowered city tax rate.

The 100th Anniversary of Theodor Herzl

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. TOLL. Mr. Speaker, Theodor Herzl, the man whose dreams of a western democracy in the Middle East became a reality in the State of Israel, was born in Budapest almost a century ago. The Jewish world is engaged this year in marking the 100th anniversary of his birth.

The great leader, Louis Lipsky, in his portrait of the founder of modern Zionism, likens Herzl, whose life story has become a source of continuous fascination and attraction, to Abraham Lincoln, whose life became a source of inspiration a decade after his death.

Under permission to extend my remarks, I include the article by Lipsky, as it appeared in the September 1959 issue of the American Zionist:

THE 100TH ANNIVERSARY OF THEODOR HERZL—A PORTRAIT OF THE FOUNDER OF MODERN ZIONISM

(By Louis Lipsky)

The Jewish world is engaged this year in marking, with due solemnity and emphasis, the 100th birthday anniversary of Theodor Herzl whose personality illuminates the modern Jewish movement, and today occupies a living memory in the State of Israel, and among the Jews of the world. The anniversary will give emphasis to the dream of which Herzl was the first to give utterance to in our day, and who, with his imaginativeness and creativeness, gave form to Zionist action, and set in motion the revolution that brought to life the Jewish state.

As the years pass, it seems that the man, Theodor Herzl, evokes deeper memories, and more significance to Jewish destiny today than he did 57 years ago when he died. Like Abraham Lincoln, whose life became a source of inspiration a decade after his death, so Herzl, through his diaries, has become a source of continuous fascination and attraction. His archive grows larger and more colorful, and with more of the elements of his unique personality. This is due to a large extent to the remarkable revelation of his personality—in thought and in action—as seen through his diaries which are the fascinating record of his great adventure, and seems gradually to increase in volume, and to reveal over the years more and more of what was first hidden and is yet to achieve is final completion.

The international anniversary celebration is being organized under the auspices of the organization to which Herzl gave life and form and purpose. The appended article is a substantial abstract of the profile of Theodor Herzl as published in my book "Gallery of Zionist Profiles" in 1956. (Farrar, Strauss & Cudahy.)

The story of his life has been told in a substantial volume written by Alexander Bein; it has been revealed in his amazing "Diaries." When you have read all that has been written about him, you begin to understand why the new symbol of the old legend would not be the weird and futile story of another false Messiah, but the engrossing first chapter of the modern exodus which led in 1917 to the Balfour Declaration and in 1948 to the rebirth of the Jewish state in the land of Israel.

There were no indications of his later transformation in the beginnings of his life. Born in Budapest in 1860, he was matured in an alien environment. He was not part of the mainstream of Jewish life. His Jewish education came to an end when he was 13. What he knew of Jewish tradition was packed away in his memory and rarely disturbed him. He knew of Jewish disabilities only as an affront to an ancient people and as a personal humiliation. He was made conscious of being a Jew by the society in which he lived. He was educated in the University of Vienna. He studied law and was admitted to the bar. He practiced his profession for a while, and then turned to journalism and literature.

He was drawn to the press, to the theater, and to the society of the elite. Like most young men of the time, he was first a Viennese, then a cosmopolitan. He looked through a small window into the larger world of culture and longed to be included in it. He was not troubled by the deeper problems of life; he was not "a soul in torment." He became a good reporter and commentator, and a writer of light and easy entertainment in the theater. His security was assured by the generosity of his father. When he was 29 he married. When 32, re was well known as a journalist and dramatist, and reached the highpoint of his ambition when he was sent to Paris by the Vienna Neue Freie Presse as its correspondent.

Herzl was unaware that for several decades the Jews of Eastern Europe were engrossed in a national revival. They were emerging, in spite of Russian oppression, from life in the ghetto, and were opening their windows to modern thought and aspirations. They were greeting the alien air. They welcomed enlightenment. In the course of their spiritual and intellectual escape, they ran toward the liberating ideals of the Russian Revolution, but at the same time the Hebrew language was reborn and the old ideal of the "return" experienced a revival. Hebrew became the medium of a modern literature.

To all of this Herzl was alien. Paris was, in a sense, the birthplace of his conversion. There, slowly, with uncertain steps, he found his way back to his people through the provocations of anti-Semitism. He read anti-Semitic periodicals and books with avid curiosity and rising indignation. He was present as a correspondent at the trial of Alfred Dreyfus in 1894, and saw the ceremony of degradation. He heard the cries of "Down with the Jews" in the streets of Paris. He followed the intrigues and sensations of the Dreyfus affair as it moved to its revision under the angry challenges of Emile Zola. He was obsessed by an inner unrest. He fell into a mood of feverish agitation which he could not explain to himself. He wrote a

play with a Jewish theme in which there was sharp debate about the Jewish problem.

His mental state was reflected in the restless inquiries he made of friends and acquaintances as to the validity of his ideas. He was not sure of himself. He even doubted his sanity. He composed "The Jewish State" in various forms. He sent the first version to Baron de Hirsch; the second was a revision addressed to Baron Edmond de Rothschild. In desperation, he wrote and rewrote the text to get the matter out of his system. He then decided upon the publication of his manuscript in order to validate the creation of his mind and to win, if possible, public support.

Herzl's distinction was that he gave the Jewish problem form, dramatic content, and political reality. He provoked a general international discussion. The pamphlet he wrote—"The Jewish State"—was the first public expression of a dynamic concept of how the Jewish people could achieve their freedom, a land of their own, how their redemption could be organized and financed.

With startling self-assurance, on his own responsibility, he proposed the creation of a Jewish state and became its sponsor and advocate. He used all his friends to help him find a way to distinguished supporters. He won the loyalty of Max Nordau, then at the height of his international fame. He met Baron de Hirsch who rejected his plans. He submitted a memorandum to Baron de Rothschild who thought his enterprise would be dangerous to Jews in general. He established contacts with Jews in England, in the United States, in Russia.

At first, Herzl hesitated to identify the territory of the Jewish State. The charter he aimed for made necessary, however, approaches to the Turkish Sultan, who held sovereignty over Palestine. The pressures of the Russian Zionists forced him to come down to terra firma. When he wrote the novel "Altneuland" in 1902 he had beyond doubt landed definitely and forever in Zion. But here he revealed, even 5 years after the First Congress, that he still had not penetrated the deeper meaning of redemption and rebirth. The Zion he saw 20 years hence in "Altneuland" in 1902 was a synthetic composition. It was made of shreds and patches, picked up from alien gardens. The home the Jews returned to was provided with modern furniture not of their own design. It had acquired no distinctive way of life based upon Jewish tradition or Jewish ethics or Jewish aspirations. The garments of the ghetto were removed, social living was cleaner and roomier, but nothing distinctive had been developed. There was only a faint reflection of a new Jewish spirit. There was no evidence of the renaissance of Hebrew. Only in the last year of his life did Herzl realize what creative power was hidden in the promise.

The publication of "The Jewish State" was the first public step in his great enterprise. It was not submitted as a dogmatic finality. It was not not a plan or blueprint. There were many improvisations subsequently discarded. But the objective was clear. It was to secure for the Jewish people the grant of sovereignty over a territory large enough for the requirements of a nation.

The magic title of the brochure evoked widespread interest and comment, rejection, and acceptance. It raised the sights of many Jews and made them conscious of their origins, their depressed position, their servitude, and the urgency for organized action. It was their first exposure to world scrutiny as a people. It made them feel that the world might be won for the cause of their liberation. It gave them courage and hope and liberated their spirit. It gave wings to their imagination and work for their hands.

When Herzl set out on his mission he had no sponsors or backers, no committee or organization. He was the sole promoter and advocate of an international project, and its leader. It was not his aim to create a mass movement. He was not concerned with democratic forms. His first thought was to seek the cooperation of Jewish philanthropy. When these efforts failed and he realized that political negotiation must be backed either by masses of people or by funds, he called the first Zionist Congress to be held in Basle in August 1897.

Through the congress the leader of a people emerged. When he stood on the platform at Basle it was said that "he was like a scion of the House of David risen from the dead, clothed in legend and fantasy and beauty." In the congress he was the moderator in clashes with persons and parties. He curbed his natural impatience. He was gracious and considerate, sharp in retort, but quick to recover balance. He was aware of the dramatic. His interventions in debate were well-timed, arresting, but controlled. He became a skilled parliamentarian in a democratic assembly in which procedures and languages fought for dominance. He was seldom an orator. He spoke as if he were the first minister of state. He gave the impression of a man convinced of the validity of his mandate which stood higher than the vote of congress. Beneath his public calm and reserve a fierce restlessness beat against his strained heart.

All his unrevealed talents converged to provide the audacity to become the first Jewish diplomat, the first to negotiate the cause of reestablishing the Jewish State on practical, political levels. The man of letters became a political strategist and diplomat. He seemed to carry the credentials of an ancient people who had regained old political manners and came straight to the throne of public opinion, seeking not special favors or mercy, but the righting of an ancient wrong; on the record, not in secret treaty.

He was not an economist. He was not a financier. But he had the gift of an extraordinary imagination and an amazing resourcefulness. He was able to find harmony in discord, unity in diversity. It required great resoluteness at that time to face an arrogant Kaiser and to plead the Jewish cause with restraint and dignity. The effort to see and influence the Sultan of Turkey was an elaborate conspiracy of great ingenuity. The influence of the Kaiser died early, but Herzl played the gambit with the Sultan to the bitter end. The crafty ruler finally offered him Mesopotamia, Syria and Anatolia, but specifically excluded Palestine.

Herzl had proposed the refunding of the Turkish debt by a group of Jewish financiers. The consideration was to be a Charter for Jewish Colonization in Palestine. His efforts to establish contact with the Sultan is a fantastic story of Oriental intrigue. He had to push his way through the meshes of a corrupt court. His own agents were not to be relied upon. Every step had to be paid for. Bribery was the order of the day. He was never sure that his messages were being received or that alleged replies by the Sultan were authentic. He seemed to be playing with an invisible adversary. Finally, in 1901 he succeeded in having an interview with the Sultan and spent 2 hours face to face with the ailing ruler.

Herzl left the audience with the Sultan and touched many hands stretched out to him in the vestibule. He distributed gold pieces. The next day he received a diamond stick pin. That was all he ever received from the Sultan. The Turkish debt was taken over by the French. When the time came for him to return to England, it was in fact the last available station on the zigzag march begun in 1895. The English offer of Uganda was the only definite proposal Herzl was ever able to bring to his people.

Herzl did not know that he had fired a revolution in Jewish life and thought. He did not know that he had created the instrument of redemption which would live on long after his departure, and would ultimately reach the goal he had missed. In the first flush of revelation he had thought freedom would come through the contributions of Jewish philanthropists, through foreign influence bought and paid for. He organized the Jewish Colonial Trust. He set in motion the Jewish National Fund. He made the Zionist Congress the international voice of the Jewish people. In the final hours of his life he knew that redemption would come from the struggle of his people, their sacrifices, their belligerency, their obstinacy. It was his historic privilege to set the Jewish people on the road that would bring them to the Promised Land—not any land, not Argentina, not Uganda, but the land which finally found a living place in his bruised heart.

He said that the foundation of the Jewish State was laid at the first Basel Congress. He foretold that 50 years later the Jewish State would be a growing reality. The first congress was held in 1897. The Balfour declaration was issued in 1917. The Jewish people proclaimed the State of Israel in May 1948.

In his last will he asked that his remains be buried in the Jewish cemetery in Vienna near the grave of his father "to remain there until the Jewish people take my body to Palestine." When the Russians entered Vienna in 1945, it was found that the Nazis had overlooked the desecration of Herzl's grave. The new State of Israel—the reality of all Herzl had striven for—resolved to fulfill his wish. On August 17, 1949, the dust of Herzl was gathered together and brought from Vienna and interred in one of the hills of the Holy City of Jerusalem where the memorial to his historic struggle will be an everlasting shrine and beacon.

Tribute to Clarendon College, Clarendon, Tex.

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, September 9, 1959

Mr. JOHNSON of Texas. Mr. President, some of this country's best colleges are also its least known, and some of the small colleges which have been answering the needs of the frontier country are often forgotten as larger, more spectacular institutions fill the newspapers with tales of tournaments and regattas.

Mr. President, Clarendon College, in Clarendon, Tex., has served the people of the Texas Panhandle and surrounding counties for more than 60 years. It is one of our distinguished smaller colleges.

Because of the interesting story that it relates of people working together for noble ends, I ask unanimous consent that an article entitled "Clarendon College Survived, Thrived Because of Community's Determination," published in the Amarillo Daily News of August 28, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLARENDON COLLEGE SURVIVED, THRIVED, BECAUSE OF COMMUNITY'S DETERMINATION

(EDITOR'S NOTE.—A short history of Clarendon College appeared recently in the Shamrock, magazine of the Shamrock Oil & Gas

Corp. As it will be of interest to many of our readers, we are reprinting it here.)

Back in the days of late 1800's, institutions of higher learning were relatively few and far between in the still-young West. A number of colleges had sprung up in Texas, but most of them were in the southern and central parts of the State.

The Panhandle—a vast and rich expanse comprising more area than the entire State of Mississippi—was attracting settlers by the thousands. As the population increased at a rapid pace, the need for a college in the area increased just as steadily.

The citizens of Clarendon saw the need for such an institution. They decided something should be done. Thus it was that 2 years before the turn of the century, the Methodist Church, South, founded the first college in the Panhandle.

Known as Clarendon College, the institution served its community for more than a quarter century as a junior college before a transition to senior college standing proved unsuccessful. Its successor—Clarendon Junior College—took up where the original 2-year school left off and has fulfilled the educational needs of the area for more than 30 years.

Today, Clarendon Junior College, an A-grade institution, is considered one of the better 2-year colleges in the State, keeping pace with the times by offering a complete and up-to-date curriculum. The college is also keeping pace with the space age, boasting one of the few rocket clubs in the country. Students build and fire their own rockets, all under the strict supervision of college instructors.

It has been a long and uphill climb for the college which was founded in a virgin territory for higher education. But based on the premise that education can best be offered in the familiar and homelike atmosphere of a small institution where "the individual is a name, not a number," the college has continued to grow and prosper.

Clarendon College was founded as the result of the perseverance and determination of the early-day citizens of the city. A committee of townfolks started a subscription campaign in the summer of 1897 to build the college. This list was presented by a special committee to the District Conference of the Methodist Church, South, which met in Memphis, Tex., in November of that year. The group offered to erect a two-story brick building on a 4-acre campus which would in turn be deeded to the church.

The conference received a similar offer for a college at Goodnight, a small town located 20 miles to the west of Clarendon. Rev. W. B. McKeown, a member of the conference board of education, was assigned to investigate the proposals.

Reverend McKeown recommended the Clarendon project be placed on the list of Methodist schools. Rev. J. W. Adkisson was elected its first president and classes were scheduled for the fall of 1898.

The promised building was not completed when fall arrived, but classes opened as scheduled on September 5 in the Methodist church. Harwood Beville was credited with being the first student at Clarendon College when he allegedly won a footrace for the honor.

All 75 pupils who enrolled the first year were grade school pupils. Each was eligible to enter public school, but their parents preferred to send them to Clarendon College because "there can't be a college without students." They had contributed to the construction of the college and were making sure it would be a success.

It was the same Reverend McKeown who recommended the college be built in Clarendon that succeeded Reverend Adkisson as president. It was also the same Reverend McKeown who inspired the following editorial in the Clarendon Press.

"His bishop assigned him to the Panhandle territory where rattlesnakes and sinners outnumbered Christians 15 to 1. But the story of his ministry was one of the sagas of the Old West. McKeown supplemented his Bible with a pair of six-shooters and tackled the West on its own terms and won the respect of its citizens. He preached in barrooms, railroad stations or in the open—wherever there was an audience to listen."

It was the indomitable spirit which prompted the continued growth of the college. The enrollment increased steadily, and today the Panhandle boasts many who proudly proclaim Clarendon College as their alma mater.

Clarendon College was 27 years old when its first real trouble began to brew. It had become a 4-year senior college in 1925, but after 2 years in this status it soon became apparent that something must change.

The school's indebtedness had been paid, but the material improvements requested by the Methodist conference had not been completed. Only part of the endowment for the college had been promised and not enough funds were available to complete the gymnasium for which the cornerstone had been laid.

There had been rumors from the beginning of the school term that the college might be moved from Clarendon.

It was at this juncture that Dr. R. E. L. Morgan, president, requested the Northwest Texas Conference of the Methodist Church to settle the question once and for all. Despite the pledges of the citizens of Clarendon to endow the college with the needed funds if it would remain in Clarendon, the committee announced on March 1, 1927, its decision to move the institution to Amarillo.

The proposal hit a snag, however, when suitable finances could not be arranged in Amarillo, and the conference voted to give the original endowment for Clarendon College to McMurry College in Abilene.

Thus came the end of one era and the beginning of another.

The citizens of Clarendon, sticking by their determination for a college of their own, proposed and carried by a margin of 343 to 2 a bond issue for $42,000 to purchase the physical assets of defunct Clarendon College. The Clarendon Independent School District now owned a college of its own, and Clarendon Municipal Junior College opened its doors in September 1928.

The college has moved along at a steady pace since. Today it boasts 128 full-time students and 48 in night classes, including many townspeople. Attendance has been far above the college average, with only 12 absences reported in the final 9-week period of the last semester.

Athletics have played a large part in the life of Clarendon College and its junior college successor. The original college was credited with bringing the first intercollegiate football game to the Panhandle in 1903. The grid sport has long since made its demise, but other activities such as basketball, tennis, track, and volleyball have gained eminence among the college's athletes.

The Clarendon Junior College Bulldogs are rated one of the best small school teams in the district and are perennial contenders for the district championship in basketball.

One of the most popular departments of the college today is the science department, thanks chiefly to the intense interest of the Clarendon Rocket Club, an organization made up of college and high school students.

The club was organized in the spring of 1958 to prove that rockets could be fired safely. The group makes its own missiles in the college laboratory and has met with phenomenal success in firing them from their launching site on the W. J. Lewis ranch northeast of the city.

W. W. Cooper, science instructor, is one of the sponsors of the club which now boasts nearly 30 members, including several girls.

"The students have developed a deep interest in rockets and are not only learning that rockets can be fired safely, but are also gaining a wealth of basic knowledge of science," Cooper says.

Clarendon is proud of her college and thousands of alumni scattered throughout the land are quick to proclaim the merits of the small school.

The complete story cannot be told in a small space. But Ethel Harvey, a former resident of Clarendon, has ably recorded many of the glorious memories of the oldest college in the Panhandle in a recent book, "The Athens of the Panhandle."

Those memories, as is Miss Harvey's book, could well be dedicated to those doughty pioneers of education "whose lives were devoted to guiding youth in the search for knowledge."

A Plan To Relieve Traffic Congestion in Downtown Washington

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. MULTER. I am sure that many of our colleagues have shared my frustrating experience of trying to get downtown to a Government agency to keep an appointment, or trying to get to National Airport, during the rush hour traffic.

A plan to relieve this congestion has been proposed by the D.C. Transit System, Inc., and I commend it to the attention of our colleagues. Unfortunately, we have no means of reproducing maps and charts of the type included in the company's pamphlet. Those interested may get a complete copy of all thereof from the company.

The booklet is as follows:

THE FIRST OF A SERIES OF PLANS TO RELIEVE TRAFFIC CONGESTION

(Prepared by D.C. Transit System, Inc., Washington, D.C.)

PREFACE

The purpose of this booklet is to present a new look at a problem which we all face. Indeed, not a day goes by but what every one of us is affected, regardless of our individual activities, even down to the youngest children.

While the automobile has proven a blessing, it also has developed many staggering headaches, not to mention heartache inherent with accidents, regardless of blame. The big problem, however, is the volume of vehicles on our streets and highways, today and tomorrow. More specifically, let's concern ourselves with just one phase of this constantly increasing menace, namely, rush hour traffic.

The next few pages are designed to point out some basic ideas concerning a sensible solution which, if applied, will show widespread success immediately.

There would appear to be only two solutions to the gigantic problem of relieving our overcrowded roads and bridges. One, build even more roads and bridges, or two, reduce the number of automobiles on these overcrowded facilities by imposing legal restrictions. Such restrictions would certainly have bad effects on all concerned; and as the problem grows in size, the restrictions will

necessarily increase to the point where even the suburban streets will feel the pain.

We are all familiar with the first solution; that is, the mammoth construction programs which are presently in progress and the plans for years ahead to relieve the superroad systems now being built. Necessarily, this type of solution is slow in producing results, due to the nature of construction coupled with the fact that property acquisition is, in itself, a time consuming process. From the daily traffic jams, through the long drawn-out planning stages and the seasonal influence on the actual building program, this type of remedy is, at best, only temporary relief. An all important factor involved in this type of solution is the millions of dollars that must be raised in order to pay the staggering costs necessary to this program.

For many years, new construction has been the only sought after answer to our rush hour traffic congestion. It is clear that this type of remedy is running a losing race. When all the superroads have been built, at the expense of vast demolition involving business, landowner and taxpayer, have we at last reached the final answer? No. It will be impossible for existing city streets to accommodate the flow of traffic from the network of wide superroadways. We then must begin more roads and more roads and still more roads. Yes, all this, just to enable us to proceed to and from work each day in a method which becomes more time consuming and expensive each year.

Such has been the history of our area for many years. The systems to be built 10 years from now are needed today; we cannot catch up at the rate we are proceeding. We should all be aware by now that we are constantly falling further and further behind in the race to prevent traffic strangulation of the Nation's Capital. Would it not be a refreshing idea to think that the financial planning and manpower involved in this losing struggle could be diverted to the building of facilities to accommodate other needs? Let's build parks, not think of pouring tons of concrete over the few we have left. Such things as more adequate schools, playgrounds and recreational facilities are sadly needed. Surely there are a countless number of projects worthy of undertaking which have seen defeat in order to establish the budget necessary to attempt the roadbuilding program which cannot catch up.

In view of the tremendous expense and long delays of construction projects would it be sensible to try some other plan of attack which will show immediate success, a plan which could be put into effect today, with results today. A plan relatively free of expense to anyone.

Let's look again at the problem and break it down to its simplest form. What causes the rush-hour congestion, too many cars in a concentrated area at one time—simple. This is the reason for congestion. A street will accommodate only a certain number of vehicles, and to exceed this number means we must stop and wait. For what do we wait, the overflow to be eliminated, easy. The heart of the problem must then be the overflow above the designed capacity of the streets and traffic signal systems. Inasmuch as congestion causes a lot of waiting and delay, it would be ideal if we did not have to leave our homes to do this waiting. We could spend a very substantial part of the time required for our journey to and from work doing things more important than wasting gasoline, blowing horns and tangling fenders. This clearly shows that everyone shouldn't want to be in the same place at the same time.

Were it not for a plan initiated during World War II, our traffic problems today would be in far more critical condition than they are. For it was during the war years that the staggered hours system was put into effect. This, as we all know, relieved downtown streets of having everyone all in one place at one time. Unfortunately, this plan still operates on the basis of gasoline rationing. It was designed for the purpose of more economical use of transit vehicles during the times when most private automobiles were not in use due to fuel shortage. Staggered hours can easily help solve our traffic problems again today.

Since most of us already work under the principle of staggered hours, let's make the most of it. It's time we used the staggered hours idea to the advantage it would best serve. By incorporating the wasted travel time with our hours of work, we can eliminate the long delays, horn blowing and maybe even some of the tangled fenders.

Conditions have changed since World War II, no more rationing, plenty of automobiles, plenty of gasoline. So let's bring staggered hours up to date.

Do something now.

A PLAN OF ACTION

It must be realized that the restaggering of staggered hours is not a small, insignificant, overnight change. It must be handled on an orderly, systematic method so as to avoid confusion. The final result will be a major reduction of traffic congestion during the rush-hour periods.

A logical beginning point in the program is with the largest employer—the U.S. Government. By incorporating a change of only 15 minutes in the reporting and leaving hours of 90,000 Government employees, a 20-percent reduction of their congestion can be accomplished.

This means that 4,125 employees of the Department of Interior who now work from 7:45 a.m. to 4:15 p.m. will then work from 7:30 a.m. to 4 p.m.; 51,725 employees of the Department of Defense who now work from 8 a.m. to 4:30 p.m. or 8:15 a.m. to 4:45 p.m. or 8:30 a.m. to 5 p.m. or 8:45 a.m. to 5:15 p.m. will then work from 7:45 a.m. to 4:15 p.m., 8 a.m. to 4:30 p.m., 8:15 a.m. to 5 p.m., respectively; 2,575 employees of Department of Labor who now work from 8:15 a.m. to 4:45 p.m. will then work from 8 a.m. to 4:30 p.m.; 11,225 employees of the Department of Commerce who now work from 8:30 a.m. to 5 p.m. will then work from 8:15 a.m. to 4:45 p.m.; 1,400 employees of the Post Office Department who now work from 8:45 a.m. to 5:15 p.m. will then work from 8:30 a.m. to 5 p.m.; and 4,000 employees of the Department of Health, Education, and Welfare who now work from 9 a.m. to 5:30 p.m. will then work from 8:45 a.m. to 5:15 p.m.

The present peak of 47,600 employees reporting to work at 8 a.m. will be reduced to 39,800 employees reporting at 7:45 a.m. The secondary peak of 38,500 employees now reporting at 8:30 a.m. will be reduced to a secondary peak of 34,000 employees reporting at 8:15 a.m.

In the evening the maximum peak of 47,600 employees leaving work at 4:30 p.m. will be reduced to a peak of 39,800 employees leaving at 4:15 p.m. The secondary peak of 42,000 leaving at 5 p.m. will be reduced to a secondary peak of 29,800 leaving work at 4:45 p.m.

This is proposed as only the first step in the overall program. The chart [not printed in RECORD] on the following page shows the benefits to be derived from just this 15-minute change.

Another proposal would change the hours of work of some departments by 30 minutes. This means that 7,900 employees of the Department of Agriculture who now work from 9 a.m. to 5:30 p.m. will then work from 8:30 a.m. to 5 p.m.; 11,225 employees of the Department of Commerce who now work from 8:30 a.m. to 5 p.m. will then work from 8 a.m. to 4:30 p.m.; and 51,725 employees of the Department of Defense who now work from 8 a.m. to 4:30 p.m. or 8:15 a.m. to 4:45 p.m. or 8:30 a.m. to 5 pm. or 8:45 a.m. to 5:15 p.m will then work from 7:30 am. to 4 pm., 7:45 a.m. to 4:15 p.m., 8 a.m to 4:30 p.m., or 8:15 a.m. to 4:45 p.m., respectively.

The present peak of 47,600 employees reporting to work at 8 a.m. will be reduced to 41,000 employees reporting at 7:30 a.m. The secondary peak of 38,500 employees now reporting at 8:30 a.m. will be reduced to a secondary peak of 36,000 reporting at 8 a.m.

In the evening the maximum peak of 47,600 employees leaving work at 4:30 p.m. will be reduced to a peak of 39,000 employees leaving at 4 p.m. The secondary peak of 42,000 leaving at 5 p.m. will be reduced to a secondary peak of 36,000 leaving work at 4:30 p.m.

This is proposed as an alternate method of taking the first step and is illustrated by the chart [not printed in RECORD] on the following page which shows graphically the good to be achieved from this 30-minute move.

The maximum plan, or plan to achieve the greatest benefits, can only be devised through the cooperation of the departments of Government. This, of course, is necessary to produce the most effective and attractive working hours and at the same time have an equalizing effect on the number of employees starting and ending work at peak times.

The desired maximum leveling of the flow of employees to work can be comfortably accomplished within the framework of customary working hours, with a minimum adjustment by individuals.

This is a fast and economical way of attacking traffic congestion; it does not involve the lengthy planning and construction of new highways. Highway construction priorities will be reallocated to projects designed to serve other purposes than local home-to-work travel in the urban area.

The staggered hours program can be implemented overnight without cost once it is decided upon. It offers a simple solution to a big problem.

Let's do something. Support the proposed first step. Demand staggered hours.

West Virginia Is Getting Shortchanged: XII

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. HECHLER. Mr. Speaker, in yesterday's CONGRESSIONAL RECORD, at page A7840, I furnished State-by-State figures on employees of the Department of Commerce, relating them to the population of each of the 50 States in the Union. This record, compiled from official figures supplied by the Department of Commerce itself, reveals that my State of West Virginia ranks absolutely last in the relationship of Commerce Department employees to State population.

We have only 37 employees of the great Department of Commerce within our State, Mr. Speaker—a mere 37 out of a department with some 25,000 employees of whom almost two-thirds are located outside of the District of Columbia and within the 50 States.

Today, one out of every eight able-bodied workers in West Virginia is unemployed. There is no blinking at this

stark fact. There are those who have accused me of advertising West Virginia in an adverse light for bringing out this fact, but neither the State of West Virginia nor the Nation can afford to stick its head into the sand and wish the problem would go away. Of course, the solution is to attract more and diversified industries, and believe me we have been making some fine progress along these lines in recent years: the construction and expansion of the Kaiser Aluminum plant at Ravenswood, the Goodyear plant at Apple Grove, and the projected Montocatini Chemical plant in Wayne County, to mention only a few.

But industry does not automatically settle and build plants on those tracts best suited for their products, labor supply, transportation, and resources. Frequently the assistance of Federal officials, working in conjunction with State and local leaders, cause an industry to decide on one spot rather than another. Now I submit that the Department of Commerce, by its prejudice against West Virginia in the number of its employees in the State, is loading the dice against West Virginia in industrial development.

The Department of Commerce maintains a Business and Defense Services Administration with field offices in 33 States. Not one of these 33 offices is located in the State of West Virginia, which sorely needs an office of this nature. Huntington, W. Va.—with a population of 86,353 according to the 1950 census—would be the ideal location for such a field office. Let us examine some of the cities in which these 33 field offices have been located. Perhaps these cities have been selected on account of the size of the city. If this be the case, then why is one of the 33 field offices located in Greensboro, N.C., with a population of 74,389 according to the last census? Or Cheyenne, Wyo., with a population of 31,935? Or Charleston, S.C., with a population of 70,174? Or Reno, Nev., with a population of 32,497? Each of these cities mentioned is exceeded by Huntington, W. Va., in population; yet Huntington and the entire State of West Virginia are deprived of a single field office. This further weights the scales of disadvantage against West Virginia when it comes for assistance in business development.

It is all very well for people to say: "All business development depends ultimately on community initiative." Of course community initiative is the most important single factor, and no community can attract and foster industrial development if its schools, roads, resources, and leadership are inferior. But when you do have a high-spirited community, with lots of able people, and which after years of work has made the community and its resources highly attractive, why handicap them because they are in a State to which the Department of Commerce gives an absolute minimum of assistance?

It seems to me that from the standpoint of improving the national economy, the Department of Commerce should not concentrate on making wealthy States wealthier, but should try to be of greater assistance to those States like West Virginia where the potentialities for future industrial development are greatest, and where the labor supply is high and readily available. Yet what do these 37 employees of the Department of Commerce in West Virginia do? They are employed by the Bureau of Public Roads in Charleston, and the Weather Bureau in Charleston, Huntington, and Parkersburg. This is small comfort for a State working hard against odds to develop and expand its industry.

Not long ago, my hometown of Huntington, W. Va., was selected by an expert jury as an All America City. Huntington worked for this award. Its citizens sacrificed a great deal to build up the city to meet higher standards—economic, political, and cultural. The city voted special levies to improve its services to all the people. It built a fine new airport with the aid of individual and community contributions. Yet the specter of unemployment still stalked the city, and it worked hard to attract new industry and provide job opportunities for its younger people. Of what earthly justification is all of this blood, sweat, and tears if the Federal Government turns around and uses the money of the taxpayers of West Virginia to help other and richer States expand their industries? I say, Mr. Speaker, that is not only downright unfair but it is high time we blow the whistle on that kind of misapplication of the people's money.

Let us look at this whole problem in perspective and in a constructive spirit, Mr. Speaker. To develop the Nation's economy to make a stronger America, do not throw the weight of the Federal Government against certain States and areas like West Virginia where there is a good labor supply, natural resources, transportation, and markets.

Give West Virginia an even break—that is all we ask. Stop making us cover 25 yards instead of 10 when we make a first down.

Professor Goddard, Space Pioneer

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. PHILBIN. Mr. Speaker, it was most gratifying to me to have word early this afternoon that the Senate had passed my bill, House Joint Resolution 19, honoring the late Professor Robert H. Goddard for his pioneering accomplishments on space rockets, missiles, and jet propulsion.

I would like to reiterate my deep appreciation to Chairman BRENT SPENCE of the House Banking and Currency Committee and our former colleague, the Honorable A. WILLIS ROBERTSON, chairman of the Senate Banking and Currency Committee, for their effective help and cooperation. Members of both committees and the professional staff members went out of their way to consider, report, and act favorably on this bill in these closing hours of the first session at a time when such vital legislation as the housing bill was under discussion and I am indeed grateful to all for their interest and concrete assistance.

Congressman DONOHUE, cosponsor of the Goddard resolution, and I are tremendously pleased that the Congress should take this action to honor a distinguished native son of Worcester County, Prof. Robert Hutchings Goddard, whose name and pioneering works will go down in history as one of the great scientists of the ages.

Father of modern rockets and missiles, pioneer experimenter in radioactive materials and jet propulsion, and innovator of the modern bazooka, the control of rocket flights by gyroscope and instrumentation to record conditions of rockets in flight, Professor Goddard made great sacrifices to carry out his epochal work. Congressional recognition, in the name of the people of the United States, is a fitting action to memorialize his outstanding contribution to science and national security.

In his lifetime, Professor Goddard never received the credit and recognition that was his due for the genius of his conceptions and the brilliant painstaking work he accomplished in advancing his pioneering ideas to practical use.

The world is now entered upon an entirely new era, the space age, which is already replete with phenomenal, almost incredible developments in science. These advancements have already had—and will continue to have—revolutionary impact upon our military organization and our way of life. It is impossible, of course, for any of us to envision or predict at this hour the miraculous developments yet to come, but already we have taken giant strides from the early experiments of Professor Goddard.

For all of this great progress, Professor Goddard must certainly be given a major share of the credit because it was his painstaking researches, sacrifices, talents, and work that started missiles and rackets on their way toward playing such a vital role in all human life.

I think that we can all be resolved, even at this late date, that Professor Goddard, together with his wife and family, should receive that recognition which has long been their due for his fabulous exploits and contributions.

It is just about 1 year ago that I made known in a speech in the House my intention to sponsor the Goddard bill in the House when the 86th Congress was convened. Since that time, many expressions of interest in the bill have come to me from outstanding American scientists. Some of these statements I furnished to the House and Senate Banking and Currency Committees as an evaluation of the work and accomplishments of Professor Goddard. At the conclusion of my remarks, I ask unanimous consent to have printed in the RECORD some of these statements.

These scientists have known for many years what has escaped the general public until recently—the great strides in the development of long range rockets, missiles, earth satellites and space flight are due in great measure to this comparatively unknown American scientist, Prof. Robert H. Goddard, who opened up

an entirely new field of science and engineering through his pioneering efforts.

Professor Goddard began his experiments in rockets long before other scientists saw any value or promise in this new field. His interest began at an early age in 1899 when he was only 17. As early as 1908, Professor Goddard while a senior at Worcester Polytechnic Institute carried out static tests with small solid-fuel rockets. In 1912 he worked out the detailed mathematical theory of rocket propulsion and showed that the rocket, because it needs no air to push against, could be sent to the moon or into space, provided an efficient motor could be developed.

With the entry of the United States into World War I, Professor Goddard explored the military possibilities of rockets for the U.S. Signal Corps.

An account of his work from February 1917 to June 1918, as compiled by Mrs. Robert H. Goddard from her husband's diaries, is described in the following memorandum made available to me by Worcester Polytechnic Institute:

On January 8, 1917, Dr. Robert H. Goddard (Worcester Polytechnic Institute 1908), at that time assistant professor of physics at Clark College, received word from the Smithsonian Institution that it would grant him $5,000 from the Hodgkins Fund to continue his development of more efficient rockets. After a conference with Prof. Wilmer Duff of the Worcester Polytechnic Institute and Carleton D. Haigis (Worcester Polytechnic Institute 1915) on February 9, he learned that Mr. Haigis was willing to start on preliminary work under his direction. Apparently the Magnetic Laboratory on the Tech grounds was used very soon thereafter, for after several further conferences, we find a record of new wiring to the building being arranged for, on March 7.

The work undertaken by Mr. Haigis under Dr. Goddard's direction concerned a powder "gun" or rocket, using a reloading mechanism for cartridges. Several Goddard patents, beginning in 1914, cover breechblocks and feeding mechanisms for dry-fuel rockets. In the course of the work many kinds of powders were tried. On July 9, 1917, he records that the gun "blew up" and the detonation was apparently heard by neighbors.

Clark University also had a fine machine shop and one or two instrument-makers at this time. Dr. Goddard employed at least one of the men to make some devices at Clark, which were brought to the Worcester Polytechnic Institute Magnetic Laboratory to be tested. As the work progressed, Mr. Haigis needed an assistant, for he himself was teaching at the institute. Dr. Goddard approached Professor Bird for help in getting more men, for the pressure was apparently great. He was at this time in correspondence with a General Dunwoody regarding possible military applications of his rocket. By January 1918 he was planning work for the military, with funds supplied by the U.S. Signal Corps.

Some annoyance was experienced at the Magnetic Laboratory building from intruders, who might, in that spy-conscious period, be suspected of sabotage. In February Dr. Goddard saw Chief of Police Hill, and next day, presumably with the consent of the police, he brought a shotgun to Mr. Haigis, and on February 12 a watchman was hired. A draftsman was also at work there, together with several machinists, for the names of Parker, Jernberg, Carlson, Ljungquist, Fagerquist, and Sloan appear in the notes. Mr. Milo Riffolt, an instrument-maker at Clark, was also on the Goddard payroll.

Mr. Haigis was subject to the draft, and both he and Dr. Goddard made several trips in order to obtain deferment for him. By April, however, Mr. Haigis spoke of leaving, but was given another assistant and a vacation in an effort to keep him. Some rocket testing was transferred to Clark University late in April.

Meanwhile, perhaps because of undue public curiosity regarding the activities, the Signal Corps (or the Smithsonian) decided to move the project to the Mount Wilson observatory shops at Pasadena, Calif. Mr. Haigis is not mentioned in the diaries after May 11, 1918. Messrs. Sloan and Fagerquist accompanied Dr. Goddard to California on June 6, helped unpack and returned east June 17. Messrs. Parker and Hickman joined Dr. Goddard shortly after his arrival, and stayed with him throughout his California stay, accompanying him in November to the Aberdeen Proving Ground in Maryland, for demonstrations to the military of the capabilities of the new weapon, which proved to be the prototype of the "bazooka" of World War II. The demonstrations went off very successfully, but the armistice prevented further allotment of funds. Just before and during World War II, Dr. Clarence N. Hickman, with Dr. Goddard's permission, worked most effectively to put the bazooka into the hands of infantrymen in time to be of help in the war.

Thus the magnetic laboratory at the Worcester Polytechnic Institute served Dr. Goddard and his assistants from about February 1917 to June 1918, in the preliminary development of a useful World War II weapon, and played a part in bringing about the present "jet age".

Mr. Speaker, these glimpses of the early work of Professor Goddard show how closely Worcester County is identified with the early beginnings of what has grown to be a multi-billion-dollar missile and space industry and with the development of the bazooka of World War II. Here in the faded pages of Professor Goddard's scientific diaries is recorded his successful development of several types of solid-propellant rockets to be fired at tanks or other military objectives. Successful demonstration of these rockets—from a hand-held firing tube or one steadied by two legs—were shown at Aberdeen Proving Ground as World War I came to a close. From these experiments came the great American developments in solid-propellant rockets during World War II.

Professor Goddard continued his experiments until his death in 1945, at which time he was developing jet-assisted takeoff and variable-thrust liquid-fuel rocket motors for the U.S. Navy. In an article which appeared in the Worcester Evening Gazette of May 9, 1958, Albert B. Southwick, an editorial writer, describes some of the pioneering accomplishments of Professor Goddard. I ask unanimous consent that the news article be printed at this point in the RECORD:

THE MEMORIAL WHICH DR. GODDARD WOULD HAVE LIKED BEST OF ALL

(By Albert B. Southwick)

I met Dr. Robert H. Goddard only once. It was in the late thirties when I was a student at Clark University. He had come up from Washington to attend to some business at Clark, from which he was on a leave of absence at the time. I do not recall what he said, but I still have the vivid impression of a tall, quiet man with dark, penetrating eyes. But even though Dr. Goddard was already famous, few of us students realized how far into the future those penetrating eyes had peered.

TOWARD THE MOON

The whole world knows now. Far overhead, in empyrean vault of space, three manmade satellites are weaving their huge, elliptical paths about the earth. The Explorers and the Vanguard, hurtling along at 18,000 miles an hour, sending down their mysterious messages to scientific checkpoints on earth, are the tangible fruits of Dr. Goddard's vision, the incredible dream come true. It was in 1920 that he had written: "Incidentally, it is worth mentioning that the rocket method is the only method of raising apparatus of any delicacy to great heights that is consistent with the known laws of mechanics and of commonsense."

At a time when his claims seemed like the imaginings of a Jules Verne, Dr. Goddard coolly and flatly stated that he eventually could build:

(1) A rocket that would enter the stratosphere and send down important meteorological observations; (2) a rocket that could reach the moon and set off a flash charge which could be seen from the earth; (3) a rocket capable of carrying a man to the moon and back.

In making these seemingly absurd claims 30 and 40 years ago, he showed the assurance of genius.

ACHIEVEMENTS

A few years ago, the Guggenheim Foundation, which supplied Dr. Goddard with money to finance many of his rocket experiments, listed some of his major achievements as follows:

In the course of his pioneering work, Dr. Goddard:

Developed the basic idea of the bazooka during World War I (1918), though his plans lay unused in the U.S. Army files until they were put to use in World War II.

Was first to develop a liquid rocket. (Mar. 16, 1926, at Auburn, Mass.)

Was first to develop a rocket motor using liquid fuels (liquid oxygen and gasoline), thus anticipating the German V-2's about 15 years.

Was first to shoot a liquid-fuel rocket faster than the speed of sound (1935, near Roswell, N. Mex.)

First developed gyro steering apparatus for rockets, about 10 years before the Germans did it.

First patented the idea of the rocket motor for steering rockets.

First patented the idea of "step rockets."

First explored mathematically the practicality of using rocket power to reach high altitudes and to shoot to the moon.

Was first to develop in detail the mathematical theory of rocket propulsion and rocket flight.

First proved, by actual test, that a rocket will work in a vacuum; that it needs no air to push against.

First developed pumps suitable for rocket fuels, self-cooling rocket motors, practical rocket landing devices, and forecast scientifically buzzbombs, jet-driven airplanes, rocket-borne mail and express, and travel in space.

This brief list alone shows why rocket and space experts all over the world look upon Dr. Robert H. Goddard as perhaps the greatest pioneer of the space age which we are now entering. Worcester has produced no more illustrious son. It is fitting and proper that this, his native city, where he was born and where he attended high school and college (Tech), should do him the honor of establishing some sort of memorial to his achievements.

But what sort of memorial? A plaque? A statue? A scholarship?

Of the three, I think that Dr. Goddard would far prefer the latter. A man of imagination and capacious intellect, he would like the idea of some bright student receiving a substantial scholarship every year, especially for advanced study in the sciences.

But I believe that, fine as a scholarship fund would be, there is an even more fitting memorial which Worcester can raise to Dr. Goddard.

It is this: A Robert H. Goddard Memorial Hall in the new library which Worcester will soon be building. This, I think would give the community an unequalled opportunity to serve both the memory of Dr. Goddard and the future of its young people.

The Goddard Memorial Hall would be a library of science. It would have reading tables and reference works, and a first-class collection of the latest books and periodicals dealing with the branches of science to which Dr. Goddard devoted his life. An initial contribution by the city of Worcester of $5,000 or $10,000 would establish the nucleus of a first-rate science library.

VALUE

A fantastic figure? Not at all. In the first place, Worcester would be honoring one of its most brilliant figures, one who deserves far more than a casual tribute. In the second place, a science library, carefully selected so as not to overlap with the libraries at Clark and Tech, would be a permanent and priceless addition to the intellectual life of Worcester. It would serve Worcester's young people indefinitely.

I cannot claim that I knew Dr. Robert H. Goddard personally. But I will stake a great deal on the assertion that this is the sort of memorial he would like best of all.

Mr. Speaker, Professor Goddard was born in Worcester, Mass., on October 5, 1882. He was graduated from Worcester Polytechnic Institute in 1908 where he obtained a position as instructor of physics after graduation while doing graduate work at Clark University. He received his M.A. from Clark in 1910, his Ph. D. in 1911.

In 1912 and 1913, he was a research fellow in physics at Princeton. In 1914, he joined the Clark University faculty at Worcester and became a full professor in 1919.

It was in 1919 that he published the classical paper, "A Method of Reaching Extreme Altitudes," wherein he outlines his mathematical explorations and gives some of his space flight ideas. This paper, published by the Smithsonian Institution, has become one of the basic documents in technical rocket and jet propulsion literature and the source of numerous developments since its publication.

During the 1930's Professor Goddard developed near Roswell, N. Mex., at his rocket proving range, large and successful rockets which anticipated many features of the German V-2 rockets. These experiments were made possible through grants from the Daniel and Florence Guggenheim Foundation and financial assistance from Daniel Guggenheim. In 1936, the Smithsonian published his report of progress in liquid propellant work, "Liquid Propellant Rocket Development."

With the start of World War II, Professor Goddard received an assignment from the U.S. Navy to the development of practical jet-assisted takeoff and liquid propellant rocket motors capable of variable thrust. He was successful in both fields and continued his Navy work until his death in 1945.

Since his death, the world has seen Professor Goddard's dream of rocket power become a reality. We are now on the threshold of another great Goddard dream—flight into space, a dramatic turning point in the history of mankind.

It is, therefore, fitting that Congress, through its enactment of House Joint Resolution 19, expresses its commendation of the monumental work of Professor Goddard by memorializing his unselfishness, his high ideals, his originality, his great skill and genius, tenacity of purpose and painstaking labors in conceiving and carrying out ideas which are leading mankind to the stars.

The text of House Joint Resolution 19 and some of the statements from my files on Professor Goddard's contributions to science follow:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That in recognition of the great, creative achievements of the late Doctor Robert H. Goddard, and his historic pioneering research on space rockets, missiles, and jet propulsion, the chairmen of the House Committee on Science and Astronautics and the Senate Committee on Aeronautical and Space Sciences, on behalf of the Congress, are authorized to present to the family of the late Doctor Robert H. Goddard an appropriate gold medal. For such purpose, the Secretary of the Treasury is authorized and directed to cause to be struck a gold medal with suitable emblems, devices, and inscriptions to be determined by the chairmen of the House Committee on Science and Astronautics and the Senate Committee on Aeronautical and Space Sciences. There is hereby authorized to be appropriated the sum of $2,500 for this purpose.

SEC. 2. The Secretary of the Treasury shall cause duplicates in bronze of such medal to be coined and sold, under such regulations as he may prescribe, at a price sufficient to cover the cost thereof (including labor), and the appropriations used in carrying out the provisions of this section shall be reimbursed out of the proceeds of such sale.

ARMY BALLISTIC MISSILE AGENCY,
U.S. ARMY ORDNANCE MISSILE COMMAND,
Redstone Arsenal, Ala., February 10, 1959.

The Honorable PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR MR. PHILBIN: I have your letter of January 29 requesting from me a brief statement concerning the work of the late Robert H. Goddard.

I have always held Dr. Goddard and his work in the highest esteem. I believe my sentiments can be summed up in the statement made by the board of directors of the American Rocket Society after he died in 1945. The eulogy read as follows: "The lifework of Goddard, both as a scientist and a man, will always remain a brilliant inspiration to those who are privileged to carry on his endeavors, and to every other bold explorer on the frontiers of science. In time to come, his name will be set among the foremost of American technical pioneers."

To this statement, I would add that speculation on whether our generation will live to see the predictions of Robert Hutchings Goddard become realized facts is not of paramount concern. But whether there is to be an aggressive continuation of fundamental research in a climate of tolerance is the concern of every living American. It is imperative that such a climate include aid, encouragement, and proper recognition for men like Goddard who in spite of technical difficulties, disbelief, and ridicule persist with dogged resolution until they realize their aims. The true fulfillment of our hopes for a peaceful and better world lies in the fruit of their labors.

With every good wish, I am,

Sincerely yours,

WERNHER VON BRAUN,
Director, Development Operations Division.

NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION,
Washington, D.C., February 11, 1959.

Robert Hutchings Goddard will long be remembered for his fundamental contributions of great and enduring value to the art and science of rocketry and space flight. Throughout most of his adult life, his very considerable talents were devoted to the furtherance of his soundly based concepts about "a method of reaching extreme altitudes." These pioneering efforts of Dr. Goddard, both in the development of theory and in the proving of his theories by experiment, pointed out the path along which scientists and engineers around the world have since moved toward the far reaches of space.

T. KEITH GLENNAN,
Administrator.

SMITHSONIAN INSTITUTION,
Washington, D.C., October 7, 1958.

Hon. PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR MR. PHILBIN: I have read with great pleasure your remarks published in the CONGRESSIONAL RECORD Appendix of September 12, 1958 (p. A8292), announcing your proposal to introduce a bill at the next session of the Congress to honor the late Prof. Robert H. Goddard.

I am grateful to you, both for your very excellent tribute to this great man of science and for your thoughtfulness in proposing that a medal be struck in his honor.

We at the Smithsonian Institution revere the memory of Dr. Goddard and take pride in the early relationship between him and the Institution. As you probably know, it was through a grant of funds to him from the Smithsonian Institution that his early experiments in rocketry were made possible.

It will be a matter of great satisfaction to me if the Congress acts favorably upon your proposal.

Sincerely yours,

LEONARD CARMICHAEL,
Secretary.

During the 28 years of the Smithsonian Institution's association with Dr. Goddard, many reasons developed to justify the financial and advisory assistance we gave to him. The most important one was that which derived from the will of our founder, James Smithson, of England, who in 1829 directed that we engage in "the increase and diffusion of knowledge among men." Certainly the fundamental and advanced discoveries in rocketry achieved by Dr. Goddard and reflected in today's accomplishments have broadened man's knowledge of the universe.

Another reason was our specific interest in meteorology, stimulated by Dr. Goddard's letter of September 27, 1916, to this Institution, describing his theories and experiments for developing "a method of raising recording apparatus to altitudes exceeding the limit for sounding balloons" (then about 25 miles) "* * * capable of propelling masses for very great distances * * * would very likely be useful in warfare * * * and I therefore feel that an investigation of my method should be conducted by such a body as the Smithsonian Institution * * * with

the understanding that if in subsequent work, results should arise which appeared to be of importance for national defense the Government should be given exclusive data concerning these results."

The opportunity of assisting with the development of a new kind of vehicle and a new type of force which would be capable of reaching extreme altitudes was particularly interesting to the Institution. When Dr. Goddard's letter was received, the Institution had for a third of a century been conducting research in solar radiation and the physical properties of planets. Also, a fund for investigation of the upper air had been given to this Institution by Thomas G. Hodgkins. We were therefore able, from that fund, to make the first advance to Dr. Goddard.

Another reason for our support was a patriotic one which developed soon after the declaration of war with Germany in 1917 and the military potentials of Dr. Goddard's experiments became apparent. Those potentials were realized in part, during that war, in the development of a recoilless projectile having greater range and impact than the trench mortars then in use. The modern counterpart is the bazooka.

As the Institution contained its relations with Dr. Goddard, there were temporary disappointments, and some failures, but nevertheless through the center of those swirls and eddies of pioneer experiments there flowed the stream of progress. Looking back now upon the Institution's association with Dr. Goddard, it is felt that it was a supreme privilege to have the opportunity to support him and to aid a true genius in attaining the goal which he set out to accomplish.

INSTITUTE OF THE AERONAUTICAL SCIENCES, INC.,
New York, N.Y., February 9, 1959.

The Honorable PHILIP J. PHILBIN,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR SIR: I would have no hesitation whatever in recommending any recognition that might be given by the Congress of the United States in acknowledgment of the work of Dr. Goddard.

As a matter of fact, we have just participated in honoring him ourselves through the presentation of the first Louis W. Hill Space Transportation Award. It was presented to his widow, Mrs. Esther Goddard, at our honors night dinner in New York on Tuesday, January 27. For your information I am attaching several copies of the booklet which was prepared for that occasion. This booklet will indicate to you the importance which we have attached to Dr. Goddard's scientific contribution. I trust that this will be helpful.

Sincerely yours,

S. PAUL JOHNSTON,
Director.

DIRECTOR OF DEFENSE,
RESEARCH AND ENGINEERING,
Washington, D.C.

DEAR CONGRESSMAN PHILBIN: It is a pleasure to have the opportunity of adding a few words of praise of Dr. Goddard, posthumously, in support of joint resolution (H.J. Res. 19) to authorize the issuance of a gold medal in honor of the late Prof. Robert H. Goddard.

Dr. Goddard's achievements are an inspiration to all men in science and engineering.

As early as 1912, at 30 years of age, Dr. Goddard made the initial computations that led him to the conclusion that lifting a load to great heights by rocket fuel would require relatively little fuel.

In 1916, when Dr. Goddard found that he could not continue his research on his own resources, the Secretary of the Smithsonian Institution, impressed with Dr. Goddard's ideas, earnestness, and enthusiasm, was instrumental in making money available.

Three years later, in 1919, when Dr. Goddard had completed a manuscript entitled "A Method of Reaching Extreme Altitudes," he had laid claim to the title now generally acceded to him—Father of Modern Rocketry. The $11,000 made available by the Smithsonian Institution is frequently described as the investment that launched modern rocketry and jet propulsion.

Some of the experiments performed by Dr. Goddard during the fruitful years 1929–41 were sponsored by Daniel Guggenheim and subsequently by the Daniel and Florence Guggenheim Foundation.

Harry F. Guggenheim eulogized Dr. Goddard in the foreword of the book, "Rocket Development," which presented for the first time the Goddard data on experiments during 1929–41. Mr. Guggenheim stated that there is evidence that the German rocket engineers followed Dr. Goddard's work very closely from the time of publication of his first Smithsonian report until his death and that Dr. Goddard was the undisputed father of modern rocketry.

The American Rocket Society considered Dr. Goddard's 1919 report of sufficient significance to warrant their printing a facsimile in 1946. Remarks preliminary to the facsimile state: "Only 1,750 copies of this paper were printed, but they were sufficient to launch a new era, creating almost worldwide interest, and setting off trains of research and speculation which are undoubtedly to have profound effects on the future history of the world."

House Joint Resolution 19 reflects the statements quoted here as well as many others that have been made by persons capable of evaluating Dr. Goddard's contribution, and I strongly endorse this joint resolution.

Sincerely yours,

HERBERT F. YORK.

THE DANIEL AND FLORENCE GUGGENHEIM FOUNDATION,
New York, N.Y., February 5, 1959.

Col. JOHN P. STAPP,
President, and the Board of Directors, American Rocket Society, Wright Air Force Base, Dayton, Ohio.

Mr. WILLIAM LITTLEWOOD,
President, and Members of the Council, Institute of the Aeronautical Sciences, Washington, D.C.

GENTLEMEN: Will you permit me to suggest that you recommend to the President and the Congress of the United States that the highest appropriate posthumous award be granted to the late Dr. Robert H. Goddard.

Dr. Goddard's pioneering and original contributions to the theory, science and art of rockets and space flight are just as important as the contributions of the Wright Brothers that made posisble the airplane and aviation. I believe that knowledgeable scientists throughout the world would acknowledge these contributions of Dr. Goddard's, an American whose genius and contributions to the space age have not as yet been suitably recognized by his Government.

Attached is a résumé of some of Dr. Goddard's contributions and accomplishments.

I am sending a copy of this letter to Senator LYNDON B. JOHNSON, chairman of the Senate Committee on Aeronautical and Space Sciences, and Congressman JOHN W. MCCORMACK, chairman of the House Committee on Astronautics and Space Exploration.

Yours faithfully,

HARRY F. GUGGENHEIM,
President.

AIR FORCE BALLISTIC MISSILE DIVISION,
AIR RESEARCH AND DEVELOPMENT COMMAND,
Los Angeles, Calif., February 25, 1959.

Hon. PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR MR. PHILBIN: I read your letter of February 4 with a great deal of personal interest for I have long felt that Dr. Goddard has never received the proper recognition due him.

Without doubt, Dr. Goddard's work is one of the cornerstones upon which today's space programs are built. Both Nation and the field of science are greatly indebted to this brilliant and imaginative scientist.

I most heartily concur in your proposal to strike a gold medal in honor of Dr. Goddard.

Sincerely,

B. A. SCHRIEVER,[1]
Major General, USAF Commander.

---

[1] General Schriever is now Lieutenant General Schriever. He is the first commander of the Air Force Ballistic Missile Division.

Ex-Congressman, 38, Proves a Business Whiz in Texas

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, in glancing through the Daily Review, published in Hayward, Calif., the other day, I came across a story originating in Houston, Tex. The title of the story was "Ex-Congressman, 38, Proves a Business Whiz in Texas." Naturally, the headline caught my eye and I was indeed tickled when I saw the story was about our former colleague, Lloyd Bentsen.

Lloyd Bentsen's office was next to mine and over the years we became great friends.

We all hated to see Lloyd leave Congress, though he was succeeded by the personable JOE KILGORE.

I am sure that all of my colleagues who served with Lloyd will be interested in the story which appears below:

[From the Hayward (Calif.) Daily Review, Sept. 2, 1959]

EX-CONGRESSMAN, 38, PROVES A BUSINESS WHIZ IN TEXAS

HOUSTON, TEX.—A Texan who retired undefeated from Congress at the age of 34 has made such a mark on Houston's fast-moving business circles in just 4 years that he is already being linked with those legendary Texans who "built things big."

He is Lloyd M. Bentsen, Jr., and he is the head of not one but two multimillion-dollar firms.

As a politician from the Rio Grande River, Bentsen was a sensational success, having first been elected to Congress when he was only 27. But that success may have been surpassed already by his swift rise in the ranks of high finance in the South's fastest growing city.

His financial growth started in 1955 when he retired from Congress after serving in the House of Representatives for 7 years to devote his time to private business.

After leaving Congress, Bentsen, with the backing of his father and an uncle, founded the Consolidated American Life Insurance Co., with initial capital and surplus of $5,337,000 which was then a record for an insurance firm in the United States at the time it was formed.

In its first 28 months, his insurance company recorded sales in Texas of $30 million.

Still "wanting to build," Bentsen merged his company last year with Lincoln Liberty

Life, which had its home office in Lincoln, Nebr. He paid $7 million for the company in one of the largest cash transactions in American business in 1958.

Bentsen's most recent business venture was the announcement that construction will begin soon on a $15 million center in downtown Houston which will house an 800-room luxury hotel and will serve as southern headquarters for his Lincoln Liberty Life Insurance Co.

The Sheraton Corp. of America signed a long-term lease to operate the hotel, which will be completed in 1961.

Bentsen, a tall wiry Texan, has always enjoyed fierce competition. When he was the youngest Member of the 80th Congress, at 27, he had five times as many bills passed as any other freshman Congressman.

Before that, he had defeated a strong political machine to become a county judge in the Rio Grande Valley when he was 25. He piloted his own private plane in hectic political campaigns along the Rio Grande.

Bentsen said there was a marked similarity between being a Congressman and heading a multimillion-dollar insurance firm.

"In Congress, I came up for reelection every 2 years to see if the voters liked my management," Bentsen said. "Now, I come up for reelection every year."

Bentsen said stockholders seem to appreciate a full disclosure of what's been accomplished just as voters do.

"Stockholders, like voters, want to know what you have done for them recently," he said. "In one case, you have the company's operating statement to show. In the other, you stand on your voting record."

Labor Leaders Finally Becoming Disturbed by Cheap Imports

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. GROSS. Mr. Speaker, according to Victor Riesel, newspaper columnist, labor leaders are at long last showing signs of becoming disturbed by the flood of cheap imports that is hitting this country.

The time for them to have demonstrated their concern was last year when a majority in Congress was whipped into line to support a 4-year extension of the Trade Agreements Act, with a 5-percent reduction in tariffs in each of the 4 years. Instead of supporting labor, industry, and agriculture in providing protection against the increasing flood of cheap labor products from foreign countries, most of the leaders of labor or their representatives joined hands with Eric Johnston, former president of the U.S. Chamber of Commerce, and other of his international cohorts, in staging the drive on Congress for a further lowering of tariffs and opening the doors of this country to virtually free trade.

A year ago, in opposing extension of the Trade Agreements Act with a 20-percent lowering of tariffs, I warned, as did others, that this legislation would haunt those who supported it. A few days ago the Department of Agriculture announced that for the 12-month period preceding July 31, 1959, imports of agricultural products into the United States exceeded exports. The so-called Reciprocal Trade Act made a substantial contribution to that unfavorable trade balance, and to the fact that American farmers suffered a net income loss of $1 billion in the first 6 months of 1959.

Now comes Mr. Riesel to set forth a few of the facts and figures concerning the dumping of millions of dollars worth of cheap labor products on the American market. American labor and industry cannot possibly meet this onslaught. This is not competition, for there is no possible way that American industry can meet these costs. Neither can American workers provide their services on a competitive basis and do anything but starve.

If Eric Johnston and others of his international stripe are bent on putting labor, industry, and agriculture in this country on a world price level, they are on the way to achieving their diabolical end. But I again warn that this will not be accomplished without first putting a host of workers, employers, and farmers through the wringer of bankruptcy.

There will be another meeting this fall of GATT—General Agreement on Tariffs and Trade. Is it too much to hope that American delegates and representatives to that conference will have the ability and courage to speak out in behalf of the welfare of the United States? Or will there be among these representatives the same number of politicians and junketeers as attended last year's meeting?

Mr. Riesel's article follows:

RIESEL SAYS LABOR LEADERS DISTURBED BY CHEAP IMPORTS

(By Victor Riesel)

Very clever people those Japanese. Soon they expect to unload on this country thousands of $50 television sets, $19 combination short-wave and regular transitor radio receivers and read-to-wear men's suits at $15 to $20 apiece f.o.b.

Already they're pouring in scores of millions of dollars worth of children's and women's garments at prices so low you won't believe it, so we won't even list them. This year Japanese and Hong Kong Chinese exports of women's wear, mostly dresses, blouses, and brassieres, and youngster's clothing, will total about $150 million.

All this can be dumped on the United States—wiping out firms and jobs across the land—because the ayerage garment wage in the Orient ranges from 9¾ pennies in Hong Kong to 14 cents an hour in Japan's clothing and electrical shops.

This is the story behind the visit of U.S. Ambassador Douglas MacArthur II to the honorable gentleman, Hayato Ikeda, Tokyo's Minister of International Trade and Industry. I don't know if there was a majority of one in that two-man parley—but our Ambassador was under specific instructions to tell the Minister to stop dumping stuff in the United States.

And behind this message is the fact that key industries employing some 2 million Americans may be crippled by our low-wage friends abroad.

There is the men's clothing field, for example. In Washington the other day, Leo Ullman, vice president of the Clothing Manufacturers Association of the United States and Jacob Potofsky, gentle-voiced but determined president of the Amalgamated Clothing Workers of America, told Congressmen about Japanese firms like one named Tara.

Tara gets out a $36.75 f.o.b. New York suit. It is delivered to distributors here at that wholesale price almost completey hand-tailored. There is only one machine seam. Fabrics are woven in Japan by dime-an-hour weavers from the finest wools, silks, and mohairs. Ask your tailor what he would charge you for such a suit completely hand-felled, made with inside bellows coat pockets and even the bar tacking—done by hand.

Such a suit would cost you at least $150 manufactured here. Furthermore, one observer described new Japanese fabrics as "mohair blends and silk worsted blends along with some very exotic blends of cashmere, the samples of which had the 'hand' of whipped cream."

These textiles, produced at less than 10 cents an hour labor costs can crush our already hard-hit textile industry.

Also being dumped are overcoats, raincoats, shirts, knit gloves, pajamas, robes, underwear, pants and sporting apparel.

The other day the high command of the International Ladies' Garment Workers Union, lead by David Dubinsky, was startled by statistics from its research director Lazar Tepper. He revealed that before 1950 total imports from Japan and Hong Kong for all female garments were less than $10 million annually. Last year this figure hit $120 million. This year it will probably top that by some $20 million, according to other estimates.

Dubinsky and his colleagues lashed out at a small band of American manufacturers who are working with the Japanese starvation-wage operators.

Now the union leaders want the United States to take an average year's average production, say 20 million pairs of pants of a certain type. This amount should be protected each year—that is, only after such a total is sold would the Japs be permitted to dump their stuff. This high-tariff protectionist policy is a switch for such militant leaders as Dubinsky and Potofsky, now fighting to save their industries and jobs. They expected full support of the AFL–CIO high command. But they didn't get it.

Opposed to such high tariffs are Walter Reuther and James Carey. This surprised many, especially since the auto industry and the electronic field also have been hard hit by foreign imports. This is just one of the many battles which will be fought out at the San Francisco national convention.

Weaknesses in the Benson Farm Policies

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. McGOVERN. Mr. Speaker, yesterday I took the House floor to tell as best I could some of the difficulties and anxieties that beset the American farmer. Today I want to discuss what I believe to be the weaknesses in Secretary Benson's approach to the farm problem. On tomorrow, I plan to take the floor for the third time this week to make some positive suggestions for improving our agricultural economy.

Let us get one central fact clear in our minds. The farm problem is not a matter of concern only to rural people. Our agricultural economy is so intertwined with the national economy, that any weakening of agriculture's position

is a loss to every American. Let me say to my colleagues in the Congress who represent metropolitan areas that the welfare of your people is closely tied to the American farmer. Not only do our farm families provide you with the finest supply of food in the world but farm customers buy the products that keep your factories running.

Farmers, for example, use more steel each year than is consumed by the American automobile industry. When farm income drops, so do the sales of steel companies, farm machinery manufacturers, and auto companies. The Detroit auto worker and the Peoria farm machinery worker have as much at stake in a good farm program as does the farmer.

Of course, the wise farmer knows that his welfare is likewise tied to the buying power of the worker and the merchant in the city who consume the products of the farm. Those who divide and confuse the farmer, the worker, and the merchant do a grave injustice to all three of them. Together they comprise a three-legged stool that tumbles if any one of the legs is broken.

It is especially clear that the farm problem is closely tied to the economic well-being of the small businessman. Farm families purchase large quantities of groceries, shoes, clothing, washing machines, medicine, machinery, furniture, haircuts, gasoline, et cetera.

It has often been pointed out that the farmer creates new wealth from the soil. The rest of us depend so directly or indirectly upon that new wealth that we all suffer every time the farmer's income takes a dip. In fact, it is estimated that the farm dollar turns over six or seven times in its impact on the economy.

The Conference on Economic Progress report, prepared in December 1958, reached the conclusion that from one-fourth to one-half of our entire national production lag since the end of the Korean war in 1953 stems from depressed farm purchasing power. With farm income for the first 5 Benson years $12 billion less than the previous 5 years, the cash registers in towns and cities across the Nation have been slowed down.

Who can deny that the farm problem is America's problem—the problem of each one of us? It will take the best efforts of a great many of us to meet that problem successfully.

I am convinced that no proper answer to the difficulties of agriculture is to be found in the approaches recommended by Secretary Benson. He is doubtless a man of good character and sincere purpose, but he seems to be totally lacking in understanding of farmers and their problems. Since he took command of our agricultural programs in 1953, he has repeatedly made administrative rulings and exerted pressures that have aggravated rather than helped our farm economy. Nearly all of the major farm bills passed by the Congress in recent years have been vetoed by the President on the advice of Mr. Benson.

Many of us in the Congress were dismayed when the administration vetoed our wheat bill earlier this year. That bill would have reduced surplus wheat production by 480 million bushels, cut Government costs by $528 million, and protected the farmer's income. The bill was further improved on the floor when Congress accepted my amendment to place a $35,000 ceiling on the amount of price support loan that any one farmer could receive. Yet, the President vetoed this bill at Mr. Benson's insistence.

In a nutshell, Secretary Benson's program has consisted of lowering the farm price-support level to accomplish three objectives: First, reduction in farm surpluses; second, reduced Government costs; and third, reduced food prices to the consumer.

The policy has been an enormous failure on all three counts. The Secretary has cut farm prices to be sure, but in doing so he has sharply reduced farm income, driven many farm families from the land and most frustrating of all, instead of reducing surpluses, tax costs and food prices, the reverse has happened.

While farm income was falling, farm surpluses and farm program costs to the taxpayer have skyrocketed and food prices are up instead of down.

Here is the record based on Government statistics for the Benson administration from 1953 until the present:

Farm income down by one-fifth.

Farm purchasing power down by one-third.

Farm surpluses have quadrupled from $2.4 billion in 1953 to $9.1 billion in 1959.

Department of Agriculture budget now seven times greater than in 1952.

Food prices up 5 percent.

Four million Americans have left the farm. Instead of eliminating surplus production, the Benson policies have eliminated farmers whose farms have been incorporated in larger units. Many of these family size farms have been swallowed by vertical integration or corporation farming.

A year ago, the distinguished chairman of the House Committee on Agriculture [Mr. COOLEY] summarized the results of Secretary Benson's policies as follows:

> Since Mr. Benson began to bring down farm prices 5 years ago, farm income has dropped about $1 billion a year, the cost of farm programs has increased by about $1 billion a year, farm debt has climbed about $1 billion a year—and farm people have been leaving the farms at the rate of about 1 million a year.

No fair-minded person would argue that Secretary Benson is solely responsible for the current agricultural problem. The evidence is clear, however, that he is promoting a discredited theory which may sound convincing to those who preach it but which has disastrous consequences when applied.

The Benson theory is "the free market theory." According to this view, farmers are overproducing because of Government price supports; overproduction depresses farm income; take away firm price supports and farmers will balance supply with demand so that all will be well.

The only trouble with this "free market" or "supply and demand" theory when applied to agriculture is that every time it is applied it leads to economic disaster. Farmers have wryly observed that the law of supply and demand means that when there is a supply there is no demand.

When the farmer brings his produce into a free market, he is more often than not like a lamb going to slaughter. He has nothing to say about either the price he shall be paid for what he sells nor the price he himself will pay for the things that he must buy.

Before the advent of the Federal farm program which Mr. Benson has been gradually taking apart, farmers were taken for an economic ride each year by the speculators. During the marketing period following harvest, speculators enjoyed a hey-day as they watched the temporarily-flooded market sink. They would then move into the glutted market and buy low knowing that the farmer had to sell to pay his bills and his expenses. They could then sit back and wait for the market to rise before they unloaded at a neat profit.

We need not rely on theory to know how the "free market" would work in the absence of a Government farm program. We had such a market in the 1920's and early 1930's. During that period the stock market boomed to an all-time high in 1929. Industry was prospering. The farmer, however, saw his markets collapse in late 1920 and 1921 and from then on for the next decade he was in serious trouble.

All across rural America while prosperity reigned in the cities, farm families were forced to the walls, mortgages were foreclosed, mainstreet businesses and banks closed and everyone suffered.

That is why farm State Republicans and Democrats joined in demanding a program that would bring order out of chaos in our agricultural economy. Great champions of the farmer in Congress such as Norbeck, of South Dakota; Norris, of Nebraska; and LaFollette, of Wisconsin; tried unsuccessfully to convince Presidents Harding, Coolidge and Hoover that the Federal Government had a responsibility to meet the crisis in agriculture. Their efforts fell on deaf ears, however, with Coolidge typifying administration attitudes when he said:

> Farmers have always been poor and there isn't much that can be done about it.

It was this lack of administration understanding of agricultural people and their problems that led Norbeck, Norris and other farm State Republicans in the Congress to shift their support to the Democratic President, Franklin Roosevelt. Norris campaigned for the Democratic presidential candidate as early as 1928.

These men knew that in the absence of a national farm program, millions of individual farmers have no way of keeping supply and demand factors in balance. They can never know whether Mother Nature will bring drought, hailstorms, or bumper harvests.

Nor can the farmer know what the impact will be of shifts in production by other farmers, or a change in the pattern of international trade and foreign production. The farmer, for example, who might decide that a 10 per-

cent cut in corn production would help stabilize prices, is powerless to do anything about his hunch if other millions of farmers should fail to act on the same impulse. Even then, in a free market, during the period when the crop is brought to market, the price would sink, giving the speculators their opportunity to profiteer on the farmer's toil.

It is only through a carefully planned farm program that supply and demand factors can be made effective.

The Federal farm program established in the 1930's and 1940's gave farmers an opportunity for the first time in American history to market certain basic commodities in an orderly and profitable manner. Under this program, farmers were assured price support loans up to 90 percent of the parity value of their crop, provided they complied with production limitations. The farmer paid interest on his loan, and had the option of either redeeming his stored commodities by paying off his loan or letting the Government keep the commodities. For 20 years, 1933–53, this program operated for six basic farm commodities. Not only did it stabilize farm production, marketing, and income, but at the end of two decades the Government, instead of subsidizing farmers, had actually made a $13 million profit.

Furthermore, there were no burdensome surpluses. The Government farm storages were a great blessing during World War II and the Korean war. Even in peacetime years, the surpluses were never larger than that needed for a national reserve.

There were, of course, weaknesses in the farm program. One basic weakness was that it was never geared sufficiently to the needs of the smaller farmers. There was no graduated scale of acreage allotments and parity guarantees similar to the Federal income tax principle. As a result, acreage restrictions worked a hardship on the small producer. Likewise, big producers parlayed price support profits into investments in bigger and bigger farms that made it increasingly difficult for the little man to enlarge his holdings.

Another fundamental failure has been our slowness to convert our farm abundance into an effective foreign policy instrument in a world overrun with hungry inhabitants. There is something immoral about the constant deploring of farm surpluses while other human beings in Asia, Africa, and the Middle East are yearning for food. Indeed, there are hungry Americans here in the United States who ought to be benefiting from our surplus food.

But the lack of family farm considerations and an imaginative food for peace concept have not been the weaknesses that Secretary Benson has sought to correct.

Because of a deepseated prejudice against Government intervention in economic life, Secretary Benson set out in 1953 to dismantle the Federal farm program. Mr. Benson was not motivated by any desire to remedy the weakness of the program for the benefit of the small farmer. He was determined to do away with the entire program by a series of reductions in the farm price support level.

Mr. Benson's biggest error is the basic assumption that he could reduce farm production by reducing farm price supports. Each time that he has lowered farm price supports, production has gone up—not down.

The reason is clear. Farmers have high, fixed operating costs which can only be met by multiplying the volume of production times the price. If their prices are lowered, they have no recourse other than to increase their volume. This they have done in the case of every commodity following reductions in the price support level. Cuts in farm prices, combined with acreage cuts and rising costs, comprise a three-way pressure on farmers to increase the yield per acre as much as humanly possible. Scores of farmers have told me that Secretary Benson's policy of lower prices, combined with reduced acreage allotments, has forced the very surplus production it was supposed to prevent. Thus, the $2.4 billion in Government-held farm surplus of 1952 has mushroomed to $9.1 since Mr. Benson has been handling the program.

We have already seen that Benson has failed equally in his two other objectives—that of lowering food prices and reducing Government costs. During the years that Benson has been administering our farm program, each time he has lowered farm price supports, middlemen have simply widened their profit margins. Neither farmers nor consumers have benefited from lower farm prices.

Consider, for example, the case of bread. During the past 10 years the price of a bushel of wheat has declined 13 percent, but the cost of bread has increased 39 percent.

The record of failure is equally clear in the case of Mr. Benson's claim that his approach would lower costs of the farm program to the taxpayers. His policies, including his highly advertised soil bank, have been vastly more expensive than any previous farm program in our history.

The annual budget of the Department of Agriculture, prior to Secretary Benson, was approximately $1 billion. This year's fiscal budget has reached the astounding total of $7 billion.

A news item in the Washington Post of June 1, 1959 tells the story as follows:

> A Library of Congress study shows that Agriculture Department appropriations from 1862 to 1931 totaled $2.4 billion. From 1932 to 1953, expenditures were $35.2 billion. Since Benson took over in 1953, net budget expenditures have reached $31 billion. In other words, the present Secretary has spent more than all his predecessors combined.

Let us see briefly how this has happened. First of all, although there are 4 million less Americans engaged in farming today than in 1952, Mr. Benson has increased the number of employees in his Department from 67,406 in 1952 to 98,487 as of June 30, 1959—an increase of more than 31,000.

Second, price support losses by the Commodity Credit Corporation which formerly were either very small or actually net profits to the Treasury, have increased enormously in recent years.

The Department of Agriculture supported the prices of major storable crops for 20 years prior to 1953 and ended that 20-year period with a net profit of $13 million. During this same period, even with the price support losses on the perishable commodities included, the Government cost was only slightly above $1 billion. By contrast, Mr. Benson lost more than $4 billion during the first 5 years that he handled the price support program.

Because Mr. Benson has been protected by the big metropolitan press and friendly commentators, the shocking cost to the taxpayers of his policies is not generally known. Yet, the record is clear. He has lost more than four times as much in price support operations in 5 years as was lost in the 20 previous years by Secretaries who believed in the program they were administering and did their best to make it work rather than trying to prove it would not work.

Here are some of the other factors in the Benson financial record:

First. Interest charges in the Department of Agriculture have increased from $16 million in 1952 to $323 million in 1958.

Second. Storage and handling charges have gone from $73 million to $409 million.

Third. Transportation costs for moving Government commodities have risen from $45 million to $178 million.

Fourth. Administrative expenses for Mr. Benson's office have jumped from $15 million to $34 million.

Fifth. County office expenses have zoomed from $13 million to $50 million.

The biggest expense of all in the Benson years was his highly administered soil bank. That program has cost the taxpayers $2½ billion and has benefited only a small minority of our farm families. When Mr. Benson and his supporters in the Congress told us in 1956 that the soil bank was the answer to the farm problem, I publicly protested this false claim. "The soil bank may have certain conservation values, but it is a poor substitute for a strong price support program," I warned repeatedly during the months this new program was being advanced.

The soil bank was actually promoted by Secretary Benson in 1956 as an election-year scheme to get some quick cash into the pockets of farmers who had been hurt by his policies. The Secretary recommended that $1,200 million be paid out to farmers just before the 1956 election on the farmer's promise that he would take acreage out of production the following year. "I wonder what would have been the reaction of the press and the Nation if a Democrat had offered any such thing just before an election," observed Congressman WHITTEN, of Mississippi, chairman of the House Subcommittee on Agricultural Appropriations.

Although the Government has spent nearly $2½ billion on the soil bank, it has had little effect on reducing production. The acreage reserve costing $1¾ billion was junked by Congress this year after Mr. Benson publicly admitted his plan had not worked.

The conservation reserve of the soil bank, which remains, has some good features, but involves only a small fraction of the Nation's 4 million farmers—125,000 in 1957–58. It has cost three-quarters billion dollars to date, and we are committed under this program to some contracts running 10 or 15 years.

Here, too, the effect on production has been slight. Congressman WHITTEN reports that his committee investigations revealed that "all sorts of nefarious schemes were used, in some instances, to bilk the Treasury in connection with the program. Most of the lands rented had little real production history anyway." Chairman WHITTEN concluded, after an intense committee study of the soil bank, that its chief purpose was "to place in the hands of some farmers cash which they have lost under the policies of Secretary Benson."

Strangely enough, while pouring $2½ billion into the soil bank, Secretary Benson has tried to undercut such programs as the agricultural conservation program in which 1¼ million farmers participate. He has recommended cuts in the already small school lunch and milk program, has resisted efforts by the Congress to expand the use of our farm surpluses overseas, and for needy American families, and has strongly urged higher interest rates for our rural electric users.

The more I study Mr. Benson's record, the more convinced I become that he is a representative not of the farmers, but of the powerful and influential middlemen who process, store, transport, and handle the farmer's products.

I fully recognize that it is not enough simply to criticize Secretary Benson's policies. My purpose in doing so is my conviction that any improved program must begin with a recognition of the mistakes that have been made in the recent past. I have given a great deal of time and thought to the farm problem in recent years and have discussed it with hundreds of farmers in my home State of South Dakota. The suggestions which I shall make tomorrow for improving our farm economy are offered in humble recognition of the fact that no one of us has any quick and easy solution to this tough national problem.

Philosophy in American Education

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following article by Dr. George S. Reuter, Jr., research director of the the American Federation of Teachers, and Mrs. Reuter:

PHILOSOPHY IS THE MOST IMPORTANT FACTOR IN AMERICAN EDUCATION

(By Dr. and Mrs. George S. Reuter, Jr.)

I. INTRODUCTION

American education is in need of many things, but an adequate consideration of a school philosophy for each school district in our Nation should have priority over all other things. This, in turn, should spell out a national philosophy of education that each citizen will make a part of himself, because he had a part in developing it.

The Bible was first to give status to the area of philosophy in dealing with individuals. More recently the United Nations noted the important phase of philosophy by calling attention to the fact that "wars begin in the minds of the people."

American education has always had a difficult struggle. Thomas Jefferson wrote in 1786: "Preach, my dear sir, a crusade against ignorance, establish and improve the law for educating the common people," but few people had his zeal and understanding of a sound educational philosophy. Too often the philosophy has been much like that described by Jonathan Swift that "the best doctors in the world are Doctor Diet, Doctor Quiet, and Doctor Merryman."

During the age of Jefferson, people permitted their philosophies to include royalty. While royalty should have a part in any age, because many regal people have made great contributions to all ages, yet it is doubtful whether royalty should be a basis of our Nation's philosophy even though Louisville, Ky., was named as a tribute to Louis XVI of France for his services to the colonies during the War of the Revolution, or the fact that the common law, that is so important in our legal history, gives great importance to the King.

Some Americans desired to make George Washington a king. Others referred to various members of royal households and their influence over rulers. One such remark, in the latter category, was that DuBarry was the last of the left-handed queens of France, which gives the historian two considerations in the area of philosophy.

First, the expression "left-handed," gives the idea that "right-handed" is superior. In reference to the fact that these women were mistresses and not legal wives of rulers, the point is correct. Also, a married couple should always be true to each other, as this is a basic part of the Christian philosophy expressed in the Bible, yet a second consideration must be noted. The mistresses normally did not possess royal blood and seldom became recognized queens. Ann Boleyn, of England, was an exception to both counts. The fact remains that these women did influence the development of the philosophy of the nation.

Second, "left-handed," or "to the left" has developed the idea that these things are inferior to "right-handed," or "to the right." This is false, because one extreme is as bad as the other. This philosophy is traced to the Bible where many believe it is more desirable "to sit on the right" than to "sit on the left." Jesus was critical of honored places to sit, but the idea has continued.

II. THE DEVELOPMENT OF THE PUBLIC SCHOOLS

Horace Mann and others saw the necessity of public education. In one way, public education was the answer to the condition expressed by Josiah Holland: "Every man who can be a first-rate something—as every man can be who is a man at all—has no right to be a fifth-rate something; for a fifth-rate something is no better than a first-rate nothing."

Those people who favored a philosophy that provided for free public education created much controversy. Mann was somewhat in the same status in his day as Mrs. Roosevelt is in our day. Ambassador Henry Cabot Lodge, Jr., recently described this condition as: "It was once said of Mrs. Franklin D. Roosevelt that no woman has ever so comforted the distressed or so distressed the comfortable. Our country has need of people who can do both these things."

The public schools have developed under the philosophy that each system should reflect its community. Of course, there are times when the result will be poor because the community is poor. This basic concept of reflecting the majority ideas and ideals goes through all areas of government, so the comment by Dr. Arthur M. Schlesinger, Jr., is basic here. He recently referred to our age as the "homogenizing atmosphere of the age of Eisenhower," and if this description is correct, the philosophy of the schools will reflect this.

The current weakness of the reflection theory in general is the fact that our population is so mobile. This is noted in a recent study where it was found there are more Negroes in New York City than in New Orleans; more in Detroit than in Birmingham, Ala.; more in Pittsburgh than in Little Rock; more in Chicago than in Atlanta. This question thus develops whether the future philosophy should include the reflection theory.

Even if the reflection theory is retained conflicts often become bitter and the schools may take years in adequately reflecting these changes. For example, George Meany, recently made a statement that reflects a school of thought, when he said: "We support legislation that will get at the crooks. We oppose legislation which will do harm to the trade union movement." Another reflection comes from the statement of the Senior Citizen Prayer: "Heavenly Father, give us serenity to accept what cannot be changed; courage to change what should be changed; and wisdom to know one from the other."

The public schools will be affected in the area of philosophy whether it is Panos D. Bardis' "Eternal Tests," or William Watson's "The Woman With the Serpent's Tongue." The "Eternal Tests" is an expression of retaining the status quo philosophy beyond a reasonable time, and is expressed:

"There was a most clever
Professor who never
Prepared a new test,
Although Dean Don Daly
Would lecture him daily
And plead and protest.

"So three generations
His examinations
(Identical all)
For decades had taken
Frustrated and shaken,
At old Froebel Hall.

"At first the grandparents
And later the parents
Were able to pass
The children, however,
Despite their endeavor,
Flunked all tests en masse.

"Such doom enigmatic
Resulted from static
Test questions like this:
'Is Leipzig's Herr Schlendent
School Superintendent?
Yes? No?—Do not miss!'

" 'No!' answered the classes,
'You're wrong, lads and lasses!'
The old test key said.
Yet every class member
Could this well remember:
Herr Schlendent was dead."

"The Woman with the Serpent's Tongue," is at the other extreme in philosophy. This could be the type of "frustrated old maid in the classroom" that may be found in many school systems. This concept is completely discussed in the humorous chapter, "Let's Spank Old Maid Teachers," which appears in the new book "For Conscience' Sake." Watson's poem:

"She is not old, she is not young,
The woman with the serpent's tongue,
The haggard cheek, the hungering eye,
The poisoned words that wildly fly,
The famished face, the fevered hand—
Who slights the worthiest in the land,
Sneers at the just, condemns the brave,
And blackens goodness in its grave.
In truthful numbers be she sung,
The woman with the serpent's tongue;
Ambitious from her natal hour.
And scheming all her life for power;
With little left of seemly pride;
With venomed fangs she cannot hide;
Burnt up within by that strange soul
She cannot shake or yet control:
Malignant-lipped, unkind, unsweet;
Past all example indiscreet;
Hectic, and always overstrung—
The woman with the serpent's tongue.
To think that such as she can mar
Names that among the noblest are.
That hands like her can touch the strings
That move who knows what men and things?
That on her will their fates have hung.
The woman with the serpent's tongue."

III. SOME SUGGESTIONS FROM AUTHORITIES

Facts are still important and should have a place in American education and life. For example, it is well to know that Baron Robert Silvercruys recently retired as Ambassador from Belgium to our Nation after 16 years and that his wife is the former Mrs. Brien McMahon of Connecticut. It is also proper to cite famous people, as did U.S. Senator LYNDON B. JOHNSON recently, when he said: "One of our most distinguished American statesmen once said to me that in a long life he had met only three great men. They were Mr. Justice Holmes and Mr. Justice Brandeis of the Supreme Court of the United States and Gen. George Catlett Marshall—and he said also that General Marshall was not the least of the three."

We are, however, more concerned about statements by authorities that relate to a more complete educational philosophy. First, we should note three expressions concerning the status of our Nation in 1970.

1. Dr. Allan Nevins: "The United States will have failed to keep up with urban and suburban growth in planning, housing, roads, parks, schools. * * * The line between countryman and cityman will be blurred. * * * The intellectual level will be higher but we will lack a superculture."

2. Dr. Henry S. Commager: "Atomic power will grow vastly for both war and peace. * * * The passing of the dominant position of the United States and Russia and the emergence of other regions, will mean a new balance of global power. * * * The welfare state is here to stay."

3. Dr. Crane Brinton: "The rivalry between Russia and the United States will remain as before. * * * Intellectuals will still take an unrealistic view of nonintellectuals. * * * We shall return to small families, to repression of much now considered irrepressible, to Victorian decencies."

Second, the further interdependency is noted by Mr. Hanson, Dr. Malott, and Dr. Gould.

1. Earl H. Hanson: "The defense value was admirably expressed by Admiral Rickover when he urged a congressional committee that, if it were necessary to take money from the Armed Forces to support the schools so that they might function adequately, it should go ahead and take that money."

2. Dr. Deane W. Malott: (It is) "Fascinating because there is significant progress being made in the Soviet economy; frustrating because * * * a dictatorship is a most inefficient operation; frightening because of 40 years and because of their united determination for further accomplishments, as compared with much less apparent purposefulness of the American people."

3. Dr. Samuel B. Gould: "We are entering a new age of education * * * of which the paramount characteristic is a new seriousness of purpose. Each day there is increased realization that the role of education on the stage of modern society is more and more the central one. The American people, as never before, are moving steadily toward the full recognition that the quality of today's and tomorrow's educational process represents the basis for hope and for progress. Emerging from all the critical comments made in recent times and intensified by our sense of competition internationally is a deep concern for the proper encouragement and nurture of our youth."

IV. A SCHOOL PHILOSOPHY

Of the more than 200 school philosophies studied in the United States, one of the best came from Pinellas County, Clearwater, Fla. While it is essential to adapt each school philosophy to local conditions, many of the principles found in the one from Clearwater, Fla., are important throughout the Nation. The 1957 edition is as follows:

"Pinellas County schools have a twofold responsibility: to contribute to the growth and development of individuals and to improve and strengthen our democratic society. Our statement of philosophy for our school system expresses the hopes and aspirations of all those who are concerned about or who are responsible for our educational program. We feel strongly about the statements presented here as we believe they are based on fundamental truths which must be sustained if our country is to survive. Though our system of education does not completely achieve all these goals, yet they serve as a common basis by which to evaluate procedures and practices used in any part of the system.

"We believe moral and spiritual values should be emphasized at all levels. We feel strongly about this because we realize that by observance of moral and democratic principles this Nation was built, and only by preserving and following them can this Nation survive.

"We believe that the school is a social institution and as such is an integral part of the community.

"We believe that we should recognize the individual as a growing organism and that we should recognize both the differences and likenesses of each individual and of the group.

"We believe that all persons who are physically and mentally able should continue in school until their maximum potentialities have been reached or until they have graduated from the 14th grade.

"We believe that public schools should offer our children and youth desirable experiences through which each one will have the opportunity to achieve physical, intellectual, social, emotional and spiritual stability.

"We believe the public schools should offer children and youth opportunities to master the basic skills through the various areas of subject matter.

"We believe that the schools should help each individual to develop respect for the dignity and worth of people regardless of race, religion, nationality, and socio-economic status, and an interest in and a desire for the welfare of all mankind.

"We believe that the schools shold be organized, administered, and conducted in a democratic manner so that those who are trained in the schools will learn to live together democratically and practice good citizenship.

"We believe that the schools should acquaint individuals with vocational opportunities, and should develop in them an appreciation for all kinds of work.

"We believe that public instruction should include vocational education and opportunities in vocational and recreational instruction to meet the needs and abilities of youth and the older members of the community.

"We believe that the schools should provide instruction not only in normal growth and development but also in social relations and marriage when such instruction is appropriate to the emotional and intellectual maturity of the individuals.

"We believe that the schools should build common backgrounds of tradition and loyalties.

"We believe that the schools should help boys, girls, and their parents develop an interest in maintaining good family relations.

"We believe that the schools should give instruction in the desirable use of and continuous preparation for leisure activities.

"We believe the range and the use of experiences and materials should be sufficient to help every individual progressively appreciate his community, State, country and the world.

"We believe that the curriculum is a coordinated series of experiences, continually changing according to the needs of the maturing individual and of society.

"We believe an effective and flexible curriculum utilizes all community resources, both those within the schools and those outside the schools.

"We believe that understanding the growth and development of the individual is basic in the preparation for teaching and is necessary to the continuous growth of teachers.

"We believe that our Pinellas County school system is a functioning part of the State, regional and national educational program.

"We believe that members of our system should participate in developing and maintaining the standards of the program of these groups.

"We believe that responsibility for our public school system is a joint one shared by the community, the county, the State, and the Nation."

V. CONCLUSION

If we are to have an adequate public school system in America that will serve the needs of all our youth, philosophy must become the major factor in American education. Once this is established other factors, like adequate salaries, well-trained teachers in adequate supply, fringe benefits, etc., will follow. This is a serious problem for all the Nation to face, but success is possible.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

John Tatsey, Well-Known Columnist of Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several of the news columns, written by John Tatsey, the widely known and well liked columnist, which were published in the Glacier (Mont.) Reporter and the Hungry Horse (Mont.) News, on various dates. I know that my colleagues will enjoy reading the neighborly accounts of the happenings in the vicinity of Heart Butte, Mont.

There being no objection, the news columns were ordered to be printed in the RECORD, as follows:

[From the Glacier (Mont.) Reporter, Aug. 16, 1959]

HEART BUTTE NEWS

(By John Tatsey)

Heart Butte celebration was a good gathering what few days they had there were races of all kinds horses men women and children.

There were 2 days of dancing and there were visitors from Wolf Point and Cardston. they got many gifts and plenty to eat. the only bad thing was the weather windy and cold. There were some tents that blew down.

There were five boys that were a little off balance and were soon taken care of at Heart Butte. Next day were taken to town.

Stoles Head Carrier went to Browning for the Indian Days but no one saw him till the last day. he was O..

There was some happening on White Tail Creek during the celebration when two Joes were drinking together and they had to cross a foot bridge. The older Joe took the lead and the other behind. When in the middle of the bridge the one in the back struck the other in back of the head and knock him in the creek. When old Joe got out of the water he was on a fight but the lady on the other side had a gallon of gallo and cool him off.

Peter Tatsey has got himself a 1959 Chev and is well satisfied with it.

Patrichia Tatsey has gone to Havre with her aunt Doris Eagle Feathers who is attending summer school there.

A planning will be taken up by the people at Heart Butte for a race meet for labor day.

Sunday was a big day for horse racing. horses came from different parts of the reservation. there was a large crowd.

Police Tatsey was gone on a trip to Themopolis, Wyo., last week end and got back Tuesday. Had a good trip and saw lots of country but no place like the Blackfeet Reservation.

Mrs. Shirley Truckman from Kent Washington was over for the Indians celebration and visited friends and relatives. Her brother Robert took her along the mountains and saw a band of sheep and one black one in the band. She told her brother look there is a car driving among them but it was only a black sheep.

Some of the Heart Butte Indians went to Arlee to celebrate and play stick game. All lost. Fred Marceau did not feel bad over his money because when he came home he brought a young Flathead girl so he got his moneys worth. Lucky boy.

George G. Kipp took Pete Stabs By Mistake to Great Falls where he got check up and feels a lot better. Pete has been down for 6 weeks.

George Tatsey from lower Blacktail was in Browning. got some boys from James Walters Place. he has them bucking bales of alfalfa. They will sweat the gallo out.

Stoles Headcarrier found Tatsey was gone Sunday. guess he really opened up and there were others so will start picking up. Boys better get out and work for wages or you will be at the brick house.

[From the Hungry Horse (Mont.) News, Aug. 14, 1959]

LOUIS RED HEAD, JR., LOSES SOCKS, SHOES

(John Tatsey, Indian Service policeman, writes Heart Butte news for the Glacier Reporter, Browning newspaper.)

Louis Red Head, Jr., was picked up at East Glacier Monday night and brought to Jas H. Walters stop over motel. When he appeared before Judge Brown he did not have any socks or shoes.

Last Wednesday the Heart Butte people celebrated Father Mallman's 25th anniversary. He received donations and gifts. Hope he stays another 25 years.

Stoles was in town Tuesday so there be some things about him next week. It takes 2 or 3 days to hear about him.

Bernard Red Head and John Head Carrier are working for Jas H. Walters. They say Jas is a good pay.

George Comes at Night went to the Flathead Reservation last Sunday to play stick game. He likes to play with some of those Flathead women don't mind what he looses.

There was a big crowd at the races and a lot of folks came from Browning.

This Sunday, August 9, there is match between Carlson and St Goddard horses. These ran once before so this is a return race.

Johnnie and Kaye Stopped at Hi-Line Lumber got some presto wood that Jas Calf Robe bought, they loaded and took off but never delivered the wood. Had a good time on it.

[From the Glacier (Mont.) Reporter, Aug. 20, 1959]

HEART BUTTE NEWS

(By John Tatsey)

It was a sad day Monday when Mr. Joseph Iron Pipe was buried at Heart Butte cemetery. After the funeral the survivors and Family of Iron Pipe were relieved of their sorrow by the crowd that attended. County Sheriff Jesse Harlan and the Governor Aronson from Helena were pallbearer. It was a fine funeral.

Rufus Good Strike of Cardston was over for the funeral of Iron Pipe at Heart Butte.

Racing on two medicine was not very well attended. Not many horses. There was one horse from Starr School that took all races and money. There will be racing at Starr School next Sunday.

George Wippert of Heart Butte has found a cook job with a Pack outfit back in the mountains for a couple of weeks. Maybe that's why Heart Butte shook Monday night.

James Eagle Head has moved to Heart Butte after living in Browning. Jim is about 74 years old. Was born around Old Agency. When he growed up a young man he took up riding bronchos and race horses. In his riding days there were not many spurs or boots. All he wore was moccasins. He told of a time when he rode a bucking horse in mid summer and was headed to Heart Butte for races when a blizzard storm came up but he had on a fur overcoat and the next thing came up was a thunder and rain but he put his slicker on and the horse was broke gentle. He was shook up by the bucker that winter and summer was all mixed up in his mind.

Tatsey drove to Pete Stabs By Mistake home to see how he was getting along. He feels better and able to walk around and get up on his own power.

Stoles has disappeared. Tatsey has not seen or hard anything of him but when he shows up there will be Plenty news of him.

Two Short bear stories as told to the reporter at Heart Butte.

One evening last week Phillip Dog Gun came to Mike Swims Under House on upper Big Badger. He left after dark and meet three boys on the hill his hands were all scratched up and face. He told that a bear attacked him at the house and also said he fell down and layed still and the bear would turn him over. When Mike come home he noticed his windows were broke. The window was the bear. Little gallo was mixed up with the story.

Pete Stabs told the reporter some one came to his house to visit and was telling stories when this man told him that Wm. R. Crane came home to his hay camp only to find his tent taken down and everything scattered. Even his cook stove thrown over a bank. After that Willie would sit in his car and watch while his family would sleep in the tent.

There was a meeting held at the Wippert Place Tuesday evening where they decided on the Labor day racing. There will be the following distances one-fourth, three-eighths, one-half miles. There will be relay races, shirt races and others. The committee has money to put out for the Purses. This money was left over from the 4th of July fund so bring your horses. You will get feed and have People selling bottle and can pop. Please bring a garbage can.

Found two black male pups by Joe Running Crane. The two pups showed up at Joe's house for breakfast. Joe feed them he said they were good blooded dogs and bob tail so any sheep man lost any dogs look up Joe R. Crane at Heart Butte. Joe ain't lucky enough to find money only dogs. Not like the one found money instead of grasshoppers.

More wind next week.

[From the Glacier (Mont.) Reporter, Aug. 27, 1959]

HEART BUTTE NEWS

(By John Tatsey)

Sunday was a nice day and there were a lot of People at the church.

Louie Jackson has come back from Cardston, Canada, after spending a few days at the Indian celebration and said the People the blood indians were doing very good.

Last Saturday evening Joseph Jackson drove to Dupuyer with a Party and he had the good luck of getting Picked up for being disorderly and spent a week in Conrad.

The south side race horse men went to Starr School and they lost two races and won the last two all broke even.

Races will be at Heart Butte this Sunday the 29 of August and also labor day the program will be out in next weeks paper.

Chas Reevis of two medicine was at Heart Butte Tuesday with Louie and James Reevis to attend a meeting.

Walter (Blackie) Wetzel, Geo. G. Kipp from the counsel were invited to Heart Butte to a meeting by the People.

Mr. Wetzel made talks on the Payment for the School children and on other tribal matters. they brought sandwiches and coffee everyone enjoyed there visit. Some one was new. There will be another meeting some time soon and hope more counsel men come.

One speaker at the Tuesday meeting said the tribal counsel should adopt the Heart Butte People into the tribe, this has been a lost tribe for long time.

Wm Running Crane made a talk where he said that the big shots that comes in from different offices of the government first the north side of the reservation adopt and give a name. Running Crane said they should wait till these men do something good for the tribe because we will need help this winter. Heart Butte has a surplus of chief names.

Last Monday evening Leo Bull Shoe left Browning on his way home when on Duck Head Hill he stopped to look at a wheel which had already caught fire when Tatsey got there the whole car was ablaze.

Bill James reporter for the Great Falls tribune has been promoted to City Editor of the Tribune. he did a good write up of the Heart Butte news gatherer.

Young Kickingwoman of Starr School got drunk one night started kicking windows he did not have a woman to kick. his wife took off.

An old lady came out of the counsel meeting last week. she said she wanted to get out of the room. everyone that came of there were really ugly for some reason.

Mrs. George Wippert of Heart Butte was telling of the earth quake what happened at her house when it shook the children said maybe a horse was rubbing against the house. She felt a second one when her big Boxer dog was asleep under the bed when the dog started scratching under her bed.

The Bluebonnet Bowl

EXTENSION OF REMARKS

OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. CASEY. Mr. Speaker, in a few short days, the great American collegiate football season will open throughout our Nation .

Millions of football fans will support their favorite teams as they begin the long, grueling contest which is climaxed by the annual classics, the postseason bowl games.

I am extremely proud and happy that Houston, Tex., has added another to the great list of such postseason bowl games, one that will rank high with the sports-minded in our Nation.

Scores of civic and business leaders in Houston have formed the Greater Houston Bowl Association, which will sponsor these annual classics.

The official flower of our fair State was chosen as the name for this great contest: the Bluebonnet Bowl. And on December 19, and on each succeeding year, two of the Nation's outstanding college football teams will gather on the gridiron of the 70,000-seat Rice Institute stadium to play in this great bowlgame. I know that through the years, you will hear much of the Bluebonnet Bowl, and that it will stand in your mind with such favorities as the Cotton Bowl, the Sugar Bowl, the Orange and the Rose Bowls.

I want to invite all of you not only to see this great football game, but to take the opportuity to share in the warm hospitality and view the industrial assets of this great Queen City of the South.

While I urge you not to miss this initial game, I am also happy to tell you that CBS television network has completed arrangements to telecast the game over a nationwide hookup.

To the great sports-minded and public-spirited citizens who formed the Greater Houston Bowl Association goes the credit for this wonderful achievement. It is fitting that the net proceeds of this game—and I assure you it will be a sell-out—will go to charitable and educational purposes within the Greater Houston area.

The formation of the Greater Houston Bowl Association, and sponsorship of the Bluebonnet Bowl, exemplifies the type of public spirit which has made Houston the largest, greatest, and most progressive city in the South. Residents of our area—and I am sure that football fans throughout our country—are especially grateful to the 99 directors and the officers of the association, Elvin M. Smith, president; J. K. Butler, executive vice president; Charles Fleetwood, Dan M. Moody, and Corbin J. Robertson, vice presidents; John B. Holmes, treasurer; and A. Frank Smith, Jr., secretary.

Statement of Walter P. Reuther, President of UAW

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1959

Mr. FULBRIGHT. Mr. President, on August 20, 1959, UAW President Walter P. Reuther issued a statement with regard to the visit of Prime Minister Khrushchev. Mr. President, I think it is all to the good if Mr. Khrushchev has an opportunity to meet with representatives of American labor. It may be helpful if Mr. Khrushchev is able to observe at firsthand the strength of this Nation, and certainly a great deal of that strength is represented by American labor.

I ask unanimous consent that the statement issued by Mr. Reuther be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY UAW PRESIDENT WALTER P. REUTHER AT THE AFL–CIO EXECUTIVE COUNCIL MEETING AT UNITY HOUSE, PA., AUGUST 20, 1959

There is room for honest disagreement between people of good will over the forthcoming visit of Mr. Khrushchev. There is no disagreement whatsoever about the basic immoral character of communism and the brutal suppression and denial by the Soviet dictatorship of human freedom and the democratic rights and values that we as free people cherish.

Mr. Khrushchev's visit cannot wipe out the tragic chapter of the brutal Soviet suppression of the Hungarian people's thrust for freedom, of the heroic efforts of the workers of Posnam and the people of Poland to assert their independence and the many other incidents of Soviet aggression and inhumanity, for these are indelibly etched upon the conscience of the world.

The purpose of contact with Mr. Khrushchev during his visit to the United States upon invitation of President Eisenhower is not to honor him, is not to befriend him nor to consort socially with him. The purpose is to enable Mr. Khrushchev to see America at firsthand, to meet its leadership and its people, to witness our industrial progress, our productive power and, most important, the sense of spiritual dedication to basic human and democratic values which give our tremendous resources and technology a deeper meaning and a higher purpose than mere materialism.

No one with a realistic view about the Soviet dictatorship and the drive of communism for world domination remotely believes that Mr. Khrushchev's visit to the United States and Mr. Eisenhower's visit to the Soviet Union will contribute to relaxing world tension and minimize the possibility that current pressure points may trigger rash action which could lead to a full-scale nuclear war and the total destruction of the human family.

Whether or not any tangible results flow from the exchange visits of Mr. Eisenhower and Mr. Khrushchev, the United States is morally obligated to do everything humanly possible, without compromising our basic principles of human freedom, to relax world tension and improve the prospects of world peace. To do less would be to play into the hands of Soviet Communist propaganda which has by hypocrisy tried to camouflage the Soviet Union's aggression with slogans of peace while calling America the warmonger.

Mr. Khrushchev will undoubtedly be impressed by the industrial might of America and the phenomenal productivity of both our farms and our factories. This he expects, and we should show him what he expects to find. What is more important, however, is that we demonstrate that America as a free society respects and encourages differences between labor and management and between other groups, unlike a totalitarian society which achieves unity by absolute and rigid conformity. We must show him that we achieve a stronger, more indestructible unity in diversity. While American labor might disagree with American industry, Mr. Khrushchev must have the opportunity to see and hear that all Americans, regardless of economics or politics, are united in common dedication to the defense of our system of freedom and are unalterably opposed to and will resist with all our energy the efforts of the Soviet Union at world domination.

During his visit Mr. Khrushchev ought to have contact with every segment of American life. Since Soviet dogma and propaganda are essentially built around the myth that communism is the liberator of the working class, it is essential that American trade union leaders, who represent millions of the working people of America, ought to have the opportunity of telling Mr. Khrushchev straight from the shoulder that the workers of America through their trade union movement, are irrevocably committed to the cause of human freedom and no amount of Communist propaganda will succeed in deluding or diverting us from our total dedication to our system of human freedom and our firm opposition to communism. No one in America has better credentials to do this essential job than do American trade union leaders, and if they fail because of an attitude of isolation, they do America and the cause of human freedom a great disservice.

Conference Report on Labor-Management Reporting and Disclosure Act of 1959

SPEECH
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. GRIFFIN. Mr. Speaker, I do not propose to discuss in detail the provisions of the conference report, a few brief comments on several sections of the bill might be helpful in clarifying legislative intent.

Section 101(a)(4) of the bill of rights is designed to protect the right of a union member to resort to courts and administrative agencies. The proviso which limits exhaustion of internal remedies is not intended to impose restrictions on a union member which do not otherwise exist, but rather to place a maximum on the length of time which may be required to exhaust such remedies. In other words, existing decisions which require, or do not require, exhaustion of such remedies are not to be affected except as a time limit of 4 months is superimposed. Also, by use of the phrase "reasonable hearing procedures" in the proviso, it should be clear that no obligation is imposed to exhaust procedures where it would obviously be futile or would place an undue burden on the union member.

Furthermore, the proviso was not intended to limit in any way the right of a union member under the Labor-Management Relations Act of 1947, as amended, to file unfair labor practice charges against a union, or the right of the NLRB to entertain such charges, even though a 4-month period may not have elapsed.

The last proviso in section 101(a)(4) was added to make sure that interested employers do not take advantage of rights accorded union members by encouraging or financing harassing suits or proceedings brought by union members against their unions. The purpose of the proviso should be kept in mind and it should not be so narrowly construed as to impose unnecessary or unintended restrictions upon employers in their relationship with their employees. For example, the language does not prevent, and there is no intent to preclude, an employer from encouraging his employees to write or otherwise communicate with their Congressman or legislators concerning legislation.

Section 201(d) repeals the reporting and non-Communist affidavit filing obligations of section 9 (f), (g), and (h) of the Taft-Hartley Act. This provision will become effective upon enactment of the bill. However, the repeal of these sections does not have a retroactive effect and is not intended to excuse any previous failure to comply therewith.

Section 701(b) authorizes the National Labor Relations Board to delegate to its regional directors certain powers under section 9 pertaining to representation elections. Two safeguards are included to make certain that regional directors precisely follow Board rules and policy regarding representation cases. These are, first, the explicitly stated right of the Board to review any action of a director delegated to him under the section; and second, the permissive nature of the delegation. The latter would allow the Board to withdraw the delegation from a director who refused or failed to follow Board policy in such matters. It should be emphasized that the section relates only to representation matters and is not intended in any way to alter the present supervisory authority of the General Counsel over regional directors and their staffs.

Section 702 relaxes the present ban on voting by economic strikers in representation elections. Two limitations are imposed: First, economic strikers are not to be eligible to vote after 12 months from the commencement of the strike; and second, they shall be eligible prior to that time only in accordance with regulations established by the Board consistent with the purposes of the act. In other words, a maximum length of time is established but the Board may limit the right by regulations consistent with the purposes of the act.

Section 704(c) is an amendment to the Taft-Hartley Act dealing with organizational and recognition picketing. It bans such picketing in three instances:

First, where the employer has lawfully recognized another labor organization and an election under section 9(c) is barred.

Second, where a valid representation election under section 9(c) has been conducted within the preceding 12 months. Any valid election is sufficient; the picketing union need not have been on the ballot. Otherwise, this subsection could easily be avoided through picketing by different locals of the same international union.

Third, where picketing has been conducted beyond a reasonable time (not more than 30 days) from the commencement of the picketing without a representation petition having been filed. Of course, the picketing may be enjoined in less than 30 days if the Board finds the circumstances are such as to make it unreasonable to permit it to continue and it must be stopped at the end of 30 days.

The second proviso to the subsection makes an exception of picketing or other publicity directed to consumers which is for limited purposes and which does not have the effect of inducing employees of others to refuse to cross the picket line to make pickups and deliveries and to perform services. Any type of publicity, including picketing, which has this effect is not protected by the proviso. The proviso pertains to subsection (c) only and therefore consumer appeals for organizational or recognition purposes are banned after an election.

Moore County News, of Dumas, Tex., Remembers Labor's Services in a Prosperous Economy

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. YARBOROUGH. Mr. President, Labor Day is an annual holiday set aside to honor the working men and women who make up the vast majority of our population. Last Monday, September 7, was the 1959 official Labor Day holiday.

Those honored are the people who make machine wheels turn, provide food and needed services, and perform thousands of other necessary tasks each day. These people are honored on Labor Day, but I feel they and the vital services thye render to our Nation should be remembered the year round.

The meaning of labor to one community is discussed in an editorial in the Moore County News, published at Dumas, Tex. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

The unique thing about the editorial is that it appeared in a newspaper which is published in a primarily rural county; and the day before this editorial was published, the newspaper praised labor for what it has done to raise our standard of living—a rather unique action insofar as that part of the country is concerned.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Moore County News (Dumas, Tex.), Sept. 6, 1959]

LABOR: WHAT'S IN IT FOR US

Probably the most unobserved holiday in Moore County's lineup of annual special days will be checked off the calendar tomorrow with little or no recognition of its purpose.

To most of us, Labor Day means that extra long weekend, closing of swimming pools, racetracks, picnics, and a mad scramble on danger-infested highways to get in that last outing before settling down to the serious business of routine fall chores.

True, this national holiday was designed for a day of relaxation, recreation and family fun, in recognition of the millions of working people of our land.

But, like many holidays, few of us see past the hot dogs and watermelons and we fail to reflect over the occasion as it was intended.

If any county, anywhere, can be grateful for its labor and working status it is Moore County, for beneath our very noses is found the very essence of individual and community prosperity, the product of industry and labor.

Last official estimates show that more than 4,800 families make their homes here. They are good homes, provided by an average per family income of $6,488 yearly, about twice the national average, and one of the highest in the State of Texas. This figure has been nearly doubled since 1949, when our average per family income was $3,877 annually.

Certainly we cannot ignore the impact of industry, and its vast role in Moore County's economy. Nor can we merely toss aside the fact that the major bulk of our income comes from industry and its hundreds upon hundreds of laboring residents.

Important as they are to our area, agricultural assets have to take a second seat, for our official farm population is estimated at slightly more than 5 percent. It takes little imagination to realize that the remainder of our population is either directly dependent upon industry, or that they depend on the wage earners' income for their own living.

Industry has brought jobs to Moore County. Jobs have meant a high standard of living for the worker here, and, in turn, have meant a business community through which wages are circulated over and over.

The end result reveals little poverty indeed, but instead, we enjoy an excellent balance of income among our people.

We can praise the fact that Moore County is the largest producer of natural gas, with more than 1,000 active wells, or that we have become the Nation's greatest origin of interstate gas transmission through a huge network of pipelines, or that Moore County produces more than two-thirds of the free world's helium.

But the true praise for economic conquest in Moore County must be handled to the only source for these developments we have, our people.

It is to those who earn their living by applying their energies in labor that we salute on this Labor Day, 1959.

Congress Should Keep Control Over Foreign Aid Spending

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

CONGRESS SHOULD KEEP CONTROL OVER FOREIGN-AID SPENDING

Foreign aid started in 1946 as an emergency measure to enable the devastated nations to repair their war damage, put their economies together again and resume normal peacetime operations. Most of the countries which received our aid have got back on their feet. Some of them are our toughest competitors in international trade.

So far, so good. But the advocates of and bureaucratic dependents on foreign aid have developed a new switch. Foreign aid has forgotten about war damage; we are now supposed to develop the "undeveloped." We are now in the midst of a propaganda drive to embalm this new type of foreign aid as a permanent policy, with Uncle Sam putting the required amount into the kitty and leaving its distribution to United Nations agencies. Whether the idea is touted as an International Development Authority, or the Special United Nations Fund for Eeconomic Development—SUNFED—the nut of the proposal is always the same—take foreign aid away from Congress, which knows nothing about it, and hand the money over to the U.N., which knows all about the problem.

Curiously enough, this plan is often advanced as an anti-Soviet program, despite the fact that the Soviet Union is a member of the United Nations and despite the even more important fact that the newly appointed Secretary of the Economic and Social Council of the U.N., which will have general supervision over the distribution of aid through United Nations agencies, is Dr. Wladyslaw R. Malinowski, representing the Polish Communist Government.

To support this extraordinary proposal, some bizarre arguments have been advanced. One of these is given an airing in a little book by Cmdr. Sir Robert G. A. Jackson called "The Case for an International Development Authority" (Syracuse University Press). In an introduction to this book, Harlan Cleveland, who is dean of the Maxwell Graduate School of Citizenship and Public Affairs at Syracuse, writes, "The same American who would get nowhere operating out of an embassy is able to become a trusted adviser in a newly developing country if he represents an agency of the United Nations." In short, they won't take our money unless routed through the U.N.

Commander Jackson, who thinks the career of UNRRA (United Nations Relief and Rehabilitation Administration) could be a model for the agency given the job of passling out development aid, estimates that $25 billion would do for a starter. This sounds like a lot of money, but it always amazes the commander that "our governments are so ready to face the vast financial requirements of a fantastic defensive effort and yet fail to realize that positive economic policies which could secure peace in great areas cannot be purchased at bargain rates." He's telling us.

The Senate Foreign Relations Committee recently approved a proposal to put $1 billion a year out of our total foreign aid contribution into a Development Loan Fund which would be distributed without fear of congressional scrutiny. Thus, according to Senator HARRY F. BYRD, of Virginia, "expenditure control through the appropriation process is bypassed." This fund would not be administered by U.N. agencies, and it is doubtful if Congress even under present auspices, would sanction such an arrangement. However, the loan fund idea is a step toward the exclusion of Congress from consideration of foreign aid.

Despite the disposition of many Senators to delegate this problem to the bureaucrats, it is the bureaucrats, not Congress, who have made these foreign aid messes—in Iran, in Laos, and in a dozen other areas. The efforts of congressional committees to weed out incompetence and extravagance have had little influence. Pressure for more foreign aid continues as if nothing had happened.

So far Congress has managed to evade proposals like SUNFED and other devices for permitting United Nations agencies to take charge of our money. However, the Monroney resolution, passed last year, calls for the thorough exploration of the establishment of an International Development Association, as an affiliate of the International Bank for Reconstruction and Development. From this distance the scheme sounds like something that does need some cold, skeptical exploration.

Facts Prove Farm Myths Are False

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. WILEY. Mr. President, we recognize that the Nation still faces a serious, unresolved economic problem in agriculture.

Today, the costs of operating the American farm are still disproportionately high in relation to the prices received for farm commodities. Despite substantial costs of the national farm program, the economic plight of the farmer has not been resolved; nor have we succeeded in substantially reducing surpluses.

Consequently, it is important that a realistic effort be made to overhaul the admixture of Democratic-Republican planks in the farm program to see what can, and should, be done to effectively improve the situation.

Over the years, there have, unfortunately, developed some distorted viewpoints about the economic status, standards of living, amount of Federal assistance, and other factors in the farm picture.

Recently, the agricultural committee of the National Planning Association issued a report exploding a number of the false myths about life on the American farm.

Recognizing the need for providing the public with a true picture of the agriculture situation—as well as to promote farm-city understanding—I ask unanimous consent to have excerpts from the report by National Planning Association, published recently in the Wisconsin Agriculturist, printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, Sept. 5, 1959]

FACTS PROVE FARM MYTHS ARE FALSE—SOME PEOPLE HAVE DISTORTED VIEW OF FARM SCENE TODAY, SAYS NATIONAL PLANNING ASSOCIATION

(By Donald R. Murphy)

Did you ever have a city friend tell you, "Farm price supports are raising food prices for me?"

Or did a visiting relative from the city ever say, "Don't worry about your surpluses. Lots more babies. They'll eat up the surplus."

The agriculture committee of the National Planning Association bumped up against the same problem and decided to get out a report on myths about farming. This report says:

"It is hard for a city resident to pay much attention to the farm situation. Even though he is fed, clothed, and sheltered by resources from areas he never sees, he seldom wonders how this happens.

"Yet he is called upon to help other citizens discuss farm and settle national farm policies. He is handicapped by lack of interest and lack of information. He is also handicapped by myths about farming."

Here are some of the myths and a summary of NPA's comment:

1. "If farmers were as efficient as city workers, they wouldn't be in trouble."

Official figures show output per man-hour in agriculture in 1957 was 83.4 percent more than in 1947. Output per man-hour in manufacturing was 41.9 percent more than in 1947.

2. "Farm price supports are causing the increase in the cost of living."

Prices received by farmers actually dropped from 1955 to 1958 while the cost of food went up. So farm prices couldn't have caused the rise.

3. "Farm surpluses will be gobbled up by increasing population."

Actually farm output is keeping a step ahead of population growth. In 1958, farm output was 97 percent higher than in 1910–14. U.S. population was 87 percent higher than in 1910–14. Many estimates indicate that this tendency is likely to continue through 1975 at least.

4. "The ordinary Iowa farmer * * * has a minimum of two cars and they are usually brandnew Buicks or Oldsmobiles or Cadillacs."

This statement, in various forms, shows up constantly from people who overestimate farm income. Latest estimate shows the following ownership among Iowa farmers of the three makes of cars listed above:

	Percent
Buick	6.2
Oldsmobile	6.2
Cadillac	.4

5. "Federal taxpayer now hands out to farmers an annual gift equal to half the farmers' income."

This myth refers to the total appropriation for agriculture. This total covers loans, which will be repaid; it covers consumer services, like meat inspection, U.S. Forest Service; it covers expenditures for school lunch food.

Payments to farmers from Government are much smaller than the total appropriations.

6. "Farmers don't need much cash. They raise most of their own food."

Farmers pay 31 percent of their family living budget for food. Production expenses—machinery, fertilizer, seed, feed, etc.—amount to around 65 percent of a farmer's gross income.

7. "Farmers are getting along fine. There is no sense in giving them any help from Government."

Most people forget that farm operating expenses are rising steadily, while farm receipts jump up and down. Per capita income from farming is about one-third of per capita income to nonfarmers.

8. "Farm subsidy programs are keeping people on farms who ought to be getting out of farming and into city jobs."

National Planning Association quotes census figures to show that the big drop in farm population actually came during the period of big farm programs. People have been leaving agriculture lately at an unprecedented rate.

9. "The way to solve the farm problem is to reduce or remove support prices. Then farmers will reduce production and the surpluses will vanish."

Actually farm output has kept rising steadily, both in years when farm prices are falling and in years when farm prices were rising. National Planning Association might have called attention to the 1959 corn crop as an example.

10. "Put high supports—90 percent of parity or better—on farm products and we farmers will be all right."

This is a farm myth, rather than a city myth. National Planning Association notes that 90-percent supports, without control of production, are likely to result in production of surpluses and more farm trouble.

11. "Farmers have an advantage over nonfarm people, because of Government aid to agriculture."

Per capita income from farming is about one-third of nonfarm income. And one authority says, "Farm operator families on the 2,213,000 commercial (high production) farms received an average income of $5,415 in 1956, while all nonfarm families, including those living on skid row and public relief, received an average income of $6,900."

These are brief summaries of what the agriculture committee of the National Planning Association says in much more detail in its report.

Wisconsin members of the agriculture committee of National Planning Association are: Orval L. Erikson, Dane County, and Ralph S. Yohe, Wisconsin agriculturist.

Any reader who wants the full text of this report can send 30 cents to National Planning Association, 1606 New Hampshire Avenue NW., Washington, D.C.

Import-Export Trade Policy

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. SAYLOR. Mr. Speaker, the August 17 issue of the Washington Post and Times-Herald contained a news story on imports and exports that merits the diligent attention of every Member of Congress. I therefore ask that it be inserted in the RECORD at this point.

[From the Washington Post and Times Herald, Aug. 17, 1959]

NINETEEN HUNDRED AND FIFTY-NINE IMPORTS OF EUROPE GOODS SOAR

(By Harry W. Frantz)

U.S. imports from Europe in the first half of 1959 were sharply higher than in the same period of 1958, while exports declined. As a result, the international merchandise trade balance turned favorable to Europe.

The United Kingdom ranked first and West Germany second in both the imports and exports of the United States.

According to unpublished Commerce Department statistics obtained by United Press International, U.S. imports from Europe in January–June 1959 were valued at $2,192,813,000 compared with $1,544,119,000 in the same period of 1958.

U.S. exports to Europe in January–June 1959 were valued at $2,075,214,000 compared with $2,293,258,000 in the same period of 1958.

The Department classifies "Europe" as comprising continental countries including the Communist bloc, and also the United Kingdom, Ireland, and Iceland.

Mr. Speaker, here is another chapter in the accounting on an international trade program that subordinates the welfare of American industry and labor to the market desires of nations specializing in low wage scales. For years supporters of this program have defended their position with charts and tables aimed at convincing Congress that a favorable dollar balance was proof enough of the advisability of their scheme. They chose to ignore the fact that U.S. foreign handouts and other gratuities provided buying power for much of the business enjoyed by the Nation's exporting industries. They contended that the thousands of workers shoved out of jobs by products entering our shores from abroad had to accept this fate as a contribution to the overall benefits of free exchange of goods.

Now even this argument has been dissipated. Despite all the billions of dollars that continue to pour out of the U.S. Treasury to foreign indigents, we are buying more than we are selling in European trade. Last year America's gold deficit amounted to $2.3 billion, and the unfavorable trend is continuing. Meanwhile the invasion of our markets threatens an ever-increasing number of jobs in this country.

One of the most vicious consequences of the current foreign trade program is that more and more American capital is being shipped abroad to build plants that will provide further competition in domestic markets. Unable to compete with products of cheap foreign labor, American manufacturers are investing overseas for the purpose of, first, capturing foreign markets that would normally be supplied, at least in part, by U.S. exports, and second, taking advantage of America's easy entry to crowd out the production of this country's labor force.

I submit, Mr. Speaker, that the economic difficulties that are responsible for so many surplus labor areas in this country are never going to be solved by taking mills and factories out of the United States and setting them up in Europe, Asia, Africa, and South America. The distressed areas of Pennsylvania could quickly become prosperous regions if only a small percentage of the capital going overseas were invested in our State. Under present conditions, many of our communities are unable to meet obligations because families without incomes cannot pay taxes or make normal voluntary contributions to civic activities. The loss is also felt at the State and national levels.

For a decade the State of Pennsylvania has been plagued with considerable unemployment occasioned by foreign competition. One coal mine after another has closed because foreign residual oil was allowed to flow into east coast fuel markets without respect to its impact on the domestic economy. The President wisely placed a limit on residual oil imports when it became evident that the national defense structure was being eroded. But Congress is going to have to meet the issue of economic damage caused by imports, and I hope that the shocking data on the developing unfavorable picture on imports and exports will stimulate action in this regard.

While I am not unmindful of the other States whose working men have been deprived of jobs because of the surging volumes of imports deluging our markets, Pennsylvania has without doubt been a principal victim. We have lost heavily to foreign glassware, pottery and ceramics, clothing, machine tools, turbines and generators, and many other products. Now steel—another of our major industries—is threatened. Steel Facts for August reports that foreign competition has been more intense this year than ever

before. For the first 5 months of 1959, the United States imported 1,501,792 net tons of steel as compared to an export total of only 850,747 net tons. Steel mill product exports are also pointing downward, and of course we lose in our domestic markets every time a foreign car or other steel product enters the country. Our disadvantage extends to barbed wire, nails, reinforcing bars, and other items.

Recently the Sporting Arms and Ammunition Manufacturers' Institute filed a petition with the Office of Civil and Defense Mobilization for relief from imports of surplus military firearms. The premise for this petition is that the American firearms industry is vital to national defense, a position which can hardly be contested. The fact remains, however, that defense considerations alone should not dictate the Nation's foreign trade policies. Congress has a responsibility to all citizens regardless of whether they belong to so-called defense industries. To permit unnecessary deterioration of domestic industry constitutes grave dereliction of duty on the part of Congress, which is going to have to face up to its responsibility on the foreign trade fiasco if economic catastrophe is to be averted.

There is an important lesson in the latest import-export data. It should be studied conscientiously in the coming months with a view to taking corrective action when the next session convenes in January. I personally would prefer to withhold adjournment until legislation is enacted to protect domestic industry and labor, and to discourage further exodus of industry to foreign fields, yet I am practical enough to realize that—for the time being—our only hope of relief is through the national defense amendment to the Trade Agreements Act. If import-export statistics continue to follow the pattern established through the first 6 months of this year, then surely the opposition to a sane foreign trade program will admit to the folly and futility of its position. In any case, Congress has a moral and constitutional obligation to stop this cruel and needless exportation of American jobs.

Marymount-on-the-Potomac Expansion

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. KEATING. Mr. President, the dean of women, Mother M. Eymard, R.S.H.M., of Marymount College, Arlington, Va., has written an article entitled "Marymount-on-the-Potomac Expansion." The article, which outlines the basic philosophy and noble vision of the Religious of the Sacred Heart of Mary, was brought to my attention by my friend, the Reverend Father Joseph F. Thorning, D.D., Ph. D, professor of Latin American history and culture at Marymount.

It is noteworthy that Marymount-on-the-Hudson, Tarrytown, N.Y., was the mother institution for Marymount-on-the-Potomac. Moreover, Marymount-on-the-Hudson, a world-renowned educational center, continues to serve as provincial house for the Institute of the Religious of the Sacred Heart of Mary, not only for Marymount-on-the-Potomac, but also for the International schools in London, Paris, Rome, and Barcelona. The Very Reverend Mother M. Gerard, R.S.H.M., superior general, resides in Tarrytown, N.Y.

I ask unanimous consent that the letter I have referred to be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARYMOUNT-ON-THE-POTOMAC EXPANSION

(By Mother M. Eymard, R.S.H.M., dean of women)

In an age which has been alerted to the importance and far-reaching influence of education, it is encouraging to note the growth and development of America's educational system, the awareness of her young people of the advantages of education, and the willingness of her citizens to promote educational enterprise on all levels.

For the past few years educators have noted with both satisfaction and apprehension the ever-increasing enrollment figures in their institutions. Long-established colleges and universities have undertaken expansion programs to meet the need, and new institutions have sprung up in amazing numbers. And the picture for the future shows that such growth and development will have to continue for the next few years with even more vigor if it is to meet the needs of those who will be ready for higher education in the immediate future.

In line with the expansion of educational facilities operating on a nationwide level, the District of Columbia and environs can boast of its educational accomplishments. Its schools and colleges and universities have played a magnificent role in the past and are making every effort to provide for the future. The history of one of its colleges illustrates the foresight and planning characteristic of our American educational system.

Marymount Junior College, or Marymount-on-the-Potomac, as it is popularly known, is a 2-year liberal arts college for women founded in 1950. It has enjoyed a phenomenal growth for a small private school and has contributed to the community through the scholarship and social services of its faculty, student body, and alumnae.

Marymount Junior College began in 1950 with a pioneer class of 13. Its enrollment this fall totals 245, and this is capacity. The number of applications to the college so far exceeds the number who may be accommodated, that Marymount is this year beginning extended construction. Ground will be broken early in the fall for a recreation center which will serve the needs of present students and enable the college to provide for more students in the future. New dormitory and dining hall facilities are being planned and work should begin on these within 2 years. The pioneer class of 1950 would not recognize many of the beautiful buildings erected on the campus since they attended classes in the graceful colonial administration building, but they would find at Marymount the same spirit of dedicated service, the same ideals and traditions, the same adherence to lofty aims and objectives which characterized their alma mater from the beginning.

Marymount is one of a number of schools and colleges conducted by the Religious of the Sacred Heart of Mary in this country and abroad. This religious institute was founded in southern France a little over 100 years ago for the purpose of educating young women to take their rightful places in society by a training which would embrace the spiritual, intellectual, moral, and social aspects of the individual. The education offered at Marymount schools has always been based on this harmonious development of the whole personality, and this has been effected through an integrated program of religious, intellectual, physical, and social activity.

The first Marymount in America was opened in 1908 at Tarrytown-on-Hudson, N.Y. Marymount, Tarrytown, is now the provincial house for the institute in this country and coordinates branch houses from the east to the west coast, as well as foundations which have been made by the American province in mission territories such as Africa.

A special feature of Marymount's educational offerings is the junior year abroad. Recognizing the tremendous advantages of a year of foreign study, Marymount operates international schools abroad where American students may study for the junior year in college, returning to the United States for their final year at Marymount College, Tarrytown. International schools are conducted in Rome, Paris, London, and Barcelona. Many of the students who attend 2 years at the junior college in Arlington take advantage of this foreign-study plan and continue their education.

The location of Marymount Junior College, just 20 minutes from the Nation's Capitol, offers its students all the unique benefits of the cultural, historical and social highlights of Washington, D.C. The students visit the Capitol, the White House, the Supreme Court, the National Gallery, and various Embassies, Government agencies and other places of interest. In addition, prominent persons come for lectures and receptions at the college, and help the students to interpret world events and the implications of the contemporary scene. As a more intelligent participation in government is a desired result of education, Marymount Junior College has a distinct advantage in being able to acquaint her students personally with the persons and places involved in America's executive, legislative and judicial branches of Government.

Marymount's curriculum has been expanded and strengthened to meet the demands placed on women by contemporary society. Besides the purely liberal arts training which forms the core of its curriculum and gives the individual an appreciation of the cultural achievements and insights of previous ages, it offers specific training to equip its graduates to enter a number of careers and professions or to continue their college work towards a degree. Recognizing that women have a responsible part to play in family, social, and civic life, Marymount trains young women to utilize their opportunities and advantages to help restore and maintain peace and security in their own family circle, in their communities, and, by means of their influence, in the world at large. An awareness of world issues and the forces which shape them is necessary, and classroom instruction is supplemented by informal discussion, contact with the personalities who help to shape our history, and firsthand experience whenever possible. Courses such as world politics, American government, current social problems, Latin American history, community organization, juvenile delinquency, equip the stu-

dent to face the society in which she moves competently and constructively. Courses in marriage and the family, child psychology, integrated principles, practices and methods of education, enable her to prepare for her future role as wife and mother, with a vital interest in the schools, playgrounds, and civic regulations of her community. Courses in theology and philosophy enable her to base her life and conduct on sound, eternal principles, and give her a guide for action. Finally, courses in merchandising, in business training, in medical-secretarial and pre-professional work equip her to attain economic security in a highly technical and specialized age.

And now, Marymount in planning to offer this program to an even greater number of students. As enrollment figures rise, the administration of the junior college is undertaking an expansion program to accomodate more students and serve them more effectively. The new student center will include an olympic-size pool, bowling alleys, auditorium and modern, fully equipped stage, two full sized basketball courts, lounges, snack-bar, student offices and meeting rooms. This will contribute much to the recreational facilities of the college which now include an auditorium-gym, tennis courts, hockey field, outdoor stage, student lounge and patio. The number of resident students who can be accommodated will be augmented by the construction of a new dormitory and dining hall early in 1960. It is expected that the number of students from the area who attend the college will increase in the years ahead, as the number has increased steadily each year. These students will enjoy all the advantages of the existing college facilities for study and recreation as well as the new ones but they will live at home with their families. They will receive the same personalized guidance service through an assigned faculty adviser, the college chaplain, resident nurse, consultant doctor and psychologist according to their individual needs and specific problems. A thorough testing program is designed to help the student discover her interests and aptitudes so that she may plan her college career in the light of her ultimate vocational choices. A placement bureau operates to help the student find a position after graduation, and the alumnae association serves to keep graduates in touch with each other and with their college. For Marymount operates as more than a school. It is a home, and each student becomes a part of the Marymount family. The family has been growing for over 100 years now, and Marymount-on-the-Potomac, one of the latest branches, holds great promise for the future. It gives evidence of being a strong and permanent branch, one which will continue to provide the very best in education to the Washington-Arlington area and to the representatives of each State in the Union who make up its student body.

The Future of National Sovereignty

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I am pleased to include a significant, informative, and constructive address delivered by Spencer M. Beresford, special counsel, Committee on Science and Astronautics, U.S. House of Representatives, at the 10th annual meeting of the International Astronautical Federation held in London, England on September 4, 1959.

Discussions of space law have traditionally dealt with national sovereignty and the altitude to which it should extend. Last year, however, in the "Survey of Space Law," the Select Committee on Astronautics and Space Exploration proposed that the question of national sovereignty in outer space might be bypassed, in the interest of an early and suitable international agreement on the peaceful uses of outer space. The present address explores some of the legal and practical considerations involved, and suggests alternatives to national sovereignty as a basis for the international legal control of outer space.

The address follows:

THE FUTURE OF NATIONAL SOVEREIGNTY

(Remarks of Spencer M. Beresford, special counsel, Committee on Science and Astronautics, House of Representatives, U.S. Congress, at the 10th anual Congress of the International Astronautical Federation, London, England, September 4, 1959)

Until recently, most discussions of space law have dealt with the upper limit of national sovereignty. At other times and places, I have stated my view that the definition of aircraft in the annexes to the Chicago convention,[1] which is today the only generally accepted international flight agreement, does not apply to satellites or other spacecraft.[2] I have also suggested that the legal distinction between airspace and outer space need not coincide with any physical boundaries, and in any event should be determined by scientific, economic, military, and political considerations.[3] In the present paper, I propose to explore whether and to what extent the concept of national sovereignty is likely to remain useful from this point of view, especially in terms of national security.

My observations on this subject are personal and not official.

The law of the sea often provides a starting point for discussing the law of outer space. In simpler times, a distance of 3 miles was taken as the limit of national sovereignty at sea. According to many historians, this distance was chosen because it was then regarded as the greatest possible range of shore batteries.[4] In any event, the apparent purpose of offshore jurisdiction was defense, and its extent was limited by effective control.

The 3-mile offshore limit, however, has been riddled with exceptions and stretched by claims and practices. International law recognizes a qualified right of innocent passage through territorial waters.[5] There are special rights for such matters as fishing and the exploitation of minerals in the Continental Shelf. A 4-mile limit has been recognized by the International Court of Justice.[6] Since 1790 the United States has claimed jurisdiction for customs purposes in a contiguous zone extending up to 12 nautical miles from the coast.[7] In addition, it has established defense identification zones for ships and aircraft in contiguous waters beyond the limits of the territorial sea.[8] Last year, at the United Nations Conference on the Law of the Sea, many nations contended for a 12-mile limit, some for a limit as high as 200 miles.[9] The 3-mile limit still survives, but only for lack of agreement on an alternative.

Vertical sovereignty is even more unsettled. In the air, no upper limit of sovereignty was ever recognized. Although early air lawyers advocated "freedom of the air,"[10] the principle of air sovereignty was proclaimed in both the Paris and the Chicago conventions.[11]

The apparent purpose of air sovereignty, like that of jurisdiction in the marginal sea, is chiefly national defense. Both the Paris convention (1919) and the Chicago convention (1944) were strongly influenced by the wartime experience of danger from the air.

On the other hand, air sovereignty differs from offshore jurisdiction in having no fixed limit. Article 1 of the Paris and Chicago conventions states simply that every nation "has complete and exclusive sovereignty over the airspace above its territory." The reasons for this difference are not hard to imagine. If 3 miles was the greatest possible range of shore batteries, it was also the greatest possible range of naval guns. No one could set an upper limit, however, for the dropping of bombs from aircraft. Furthermore, aircraft as distinguished from ships are capable of reconnaissance at every point of national territory.

With the advent of space flight, many proposals have been heard for the indefinite extension of national sovereignty into outer space. Is such an extension necessary or expedient, or would it be a reductio ad absurdum?

Let us first consider the view that national sovereignty extends into outer space without any limit whatever. A cone of sovereignty conceived as stretching into space from the center of the earth through the territorial boundaries of each nation would clash with the facts of astronomy. With the movement of the earth and other astronomical bodies, the content of each nation's cone of sovereignty would change continually. Any given point in space would constantly pass from one cone of sovereignty to another. A rocket could not go from the earth to the moon, for example, without crossing through the sovereign space of many nations.

Furthermore, if different legal rules are applied to airspace and outer space, the absence of any dividing line will lead to an airspace dilemma. Unless the same rules are applied to both, jurisdictional conflict seems inevitable. Air sovereignty and freedom of space, for example, can be reconciled in practice only by a general distinction between airspace and outer space, or between aircraft and spacecraft, or by the classification of flight instrumentalities according to their functions and capabilities.

A boundary set at a fixed height between airspace and outer space would indeed reconcile the jurisdictions of air law and space law. At the same time, it would encounter the test of consistency with existing international flight agreements and the objection that it was premature in view of our present limited knowledge of outer space. Furthermore, what is the critical difference between aviation and space flight—is it altitude alone, or speed as well, or the functions and capabilities of aircraft and spacecraft, respectively?

One alternative to a boundary between airspace and outer space is a general distinction between aircraft and spacecraft. Such a distinction would conform to the language of the Chicago Convention,[12] which defines "aircraft" (in its annexes) but not "airspace" or any equivalent term. Spacecraft could be defined in such a way as to complement the present definition of aircraft, and so that spacecraft and aircraft together would exhaust the class of flight instrumentalities. In annexes to the Chicago Convention, aircraft are defined as flight instrumentalities "which can derive support in the atmosphere from the reactions of the air."[13] All others could be classified as spacecraft. Dual flight instrumentalities, capable both of space flight and or flight by means of atmospheric support, would presumably be subject (like aircraft) to national air sover-

Footnotes at end of speech.

eignty (the more restrictive of the two legal regimes).

There is a third alternative: to classify flight instrumentalities according to their functions and capabilities. Thus, a satellite capable of launching missiles, for example, would be treated differently from one equipped with nothing but instruments for measuring cosmic rays. The classification could be carried as far as policy interests required.

The view is widely held that there must be an upper limit to national sovereignty. While it would serve no purpose in this discussion to review the various limits that have been proposed, the pertinent considerations are the purposes for which the limits are set and the consequences of setting one limit rather than another.

I submit that the purpose of national sovereignty in outer space, like that of air sovereignty or jurisdiction in the marginal sea, is largely national defense and safety, limited by the principle of effective control and the reciprocity of nations.

It is hardly necessary to document the importance of national defense as a factor in fixing the limit of national sovereignty in outer space. Both American and Soviet writers have emphasized that sovereignty must extend as far as national security requires.[14]

The principle of effective control as the limit of three-dimensional sovereignty is stated as follows in Kelsen's "General Theory of Law and State":

"The territory of a state * * * is not a plane, but a space of three dimensions * * * an inverted cone. The vertex of this cone is in the center of the earth. * * * What traditional theory defines as 'territory of the state,' that portion of the earth's surface delimited by the boundaries of the state is only a vicible plane formed by a transverse section of the state's conic space. The space above and below this plane belongs legally to the state as far as its coercive power * * * extends." [15]

As Kelsen says elsewhere, effective control is "a conditio sine qua non, but not a conditio per quam" of sovereignty.[16] The principle is thus that sovereignty cannot go further than effective control (in the sense of power to exclude). It need not, however, go so far.

In extending national sovereignty away from the center of the earth, therefore, the minimum distance is set by the requirements of safety and defense, and the maximum distance is the limit of effective control. Now, what if the former exceeds the latter? This is the quandary in which nations may find themselves.

The concept of sovereign, self-contained national states no longer fits all the facts. It has become a commonplace that nations are not self-sufficient in any significant respect—political, cultural or psychological, military, scientific, or economic.

For some 3 centuries, it has been traditional to regard international politics as a system of relationships among sovereign, independent States living together in an unstable but persistent balance of power. As applied to European states, at least, this view once stood the test of events. It long formed the basis, for example, of successful equilibrium policies in foreign affairs. In our own time, however, this view seems too static. Not only the system of relationships among States but the structure of statehood itself has changed and goes on changing.[17]

Perhaps the principal cause of this change is the cumulative force if science and technology, especially in transportation, communications, atomic energy and astronautics. Science and technology have accordingly transformed the physical meaning of national security and sovereignty.

While it seems impossible to assess all the aspects of declining national sovereignty, some stare us in the face. We are giving up the old mental image of a nation—like a nut, within the shell of its natural and artificial barriers and its armed forces. Those of us who have forgotten the fall of the Maginot Line and the penetration of bombers to their targets, regardless of opposition, may yet learn the lesson from long-range missiles. For purposes of defense, at least, territorial integrity has almost ceased to exist.

More than 5 years ago, J. Robert Oppenheimer compared the United States and the Soviet Union to two scorpions in a bottle, each capable of killing the other, but only at the risk of his own life.[18]

Since that comparison was made, Oppenheimer's bottle has grown—and may continue to grow until it contains the whole world.

It does not necessarily follow, however, that a balance of terror will keep the peace. Nor can the state be safely rejected as an outmoded form of political organization, until a stable and feasible substitute can be found.

Nevertheless, atomic weapons are by no means the only factor involved in the changing significance of national security. There are other space-defying means of warware: Chemical, biological, economic, and psychopolitical, in addition to air power and space power.

It would be a digression to consider what changes in international comity and law may be required by the new means of warfare. Perhaps the nations must learn to live together, as individual human beings have done in a rather similar situation. When each can kill, all must cooperate.

More positive factors are also at work—notably, the growth of economic, scientific, and cultural interdependence. Few nations today could prosper, or perhaps even survive, without materials, products, and services from areas outside their territory. Even comparatively self-sufficient nations are obliged to act beyond their borders.

All the foregoing factors defy space, and shrink it to relative insignificance. As a result, effective control over any portion of space—in the immediate vicinity of the earth, at any rate—may soon no longer be possible except in old-fashioned or traditional circumstances.

Sovereignty is neither necessary nor sufficient for solving the problems created by the space age.

States cannot rely on sovereignty in outer space. Their security or their scientific, economic, or political interests may be materially affected by objects moving in space outside their projected territorial boundaries.

It may be doubted whether the indefinite upward extension of national sovereignty would provide as much protection as some writers seem to believe. Given the speed of missiles, the difficulty of detection, and the time required to determine their position and movement, defensive action taken after they enter a nation's sovereign space may well be too late.

The inadequacy of sovereignty for purposes of national defense is shown by the hovering of foreign ships or aircraft outside territorial limits.[19] For example, submarines may lurk beyond the marginal sea but close enough to launch their missiles against cities and other targets on land. Intercontinental bombers may remain airborne, perhaps over international waters. Satellites already in orbit may be equipped to bomb strategic targets on radio command. Traditional national sovereignty could provide no protection against such threats unless extended to fantastic extremes. In addition, intercontinental missiles in their own homeland may be preset for delivery against foreign targets.

At the same time, sovereignty in outer space is fortunately not necessary to protect the interests of national states. No claim of sovereignty is made in the Air Defense Identification Zones [20] of the United States, or under the Antismuggling [21] or Hovering [22] Acts. In all these instances, the Nation merely asserts certain limited powers and privileges in areas beyond its territory. Similar techniques can be developed by which nations, acting alone or more probably in concert, can provide for their safety without claims of sovereignty in outer space.

The foregoing considerations tend to simplify the legal problems created by space flight. It has been stated that international agreement on the peaceful uses of outer space can be achieved most rapidly by concentrating upon urgent matters which show some promise of settlement and deferring the question of national sovereignty.[23] A similar position has recently been taken by both the United Nations ad hoc committee [24] and the committee on the law of outer space established by the American Bar Association.[25] In all probability, the practical problems defined by each committee will lend themselves to speedier solution apart from larger questions of policy and jurisprudence.

The most promising alternative to the extension of sovereignty into outer space is the classification by international agreement of proscribed activities in space according to their purpose and effect, leading in time, through limited particular agreements, to a self-enforcing system of international control. It would be premature to anticipate the manner in which control wil be accomplished. Timing and the method of negotiation are essential elements of an agreement. Nevertheless, it seems reasonable to suppose that solutions will be facilitated if particular space activities are considered one by one. What activities and capabilities of artificial earth satellites, for example, are permissible or not? By a series of such steps it will be possible to build a legal order in outer space.

Hon. John A. Burns Selected as the Outstanding Catholic Layman in Hawaii for 1959

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. ASPINALL. Mr. Speaker, it gives me a great deal of personal pleasure in bringing to the attention of the Members of this House the award which was recently bestowed upon our former and beloved colleague, the Honorable John A. Burns, former Delegate from Hawaii, in being selected as the outstanding Catholic layman in Hawaii for 1959.

It is not necessary for me to express once again the regard and high esteem which the membership of this body has for John Burns. However, I do wish to make reference to the fact that John Burns is a true Christian gentleman in every sense of the word. I am extremely pleased, as I know my colleagues are, in the honor which has come his way and which he so richly deserves and merits.

The text of Reverend Churchill's announcement in this regard follows:

INTRODUCTION TO AWARDING THE "OUTSTANDING LAYMAN OF THE YEAR"

(By Rev. Raymond B. Churchill, moderator, Saturday evening at annual installation banquet of Chinese Catholic Club held at Honolulu Junior Chamber of Commerce meeting room, Queen Street, August 15, 1959)

Your Excellency, Reverend Fathers, distinguished guests, officers, members and friends of the Chinese Catholic Club, this is a day of joy. It is the Feast of Our Lady's Assumption into Heaven, and thus an ideal day for feasting. It is a delight for me to be feasting with you tonight, having inherited the fruit of the fine work done by Father Kakumano, at the 34th annual banquet.

I congratulate the new officers and board members, and the outgoing ones. I commend the outstanding members honored here tonight. It is the excellent work of these fine officers and members which continues the tradition of excellence which the Chinese Catholic Club has established and maintained for these past many years.

Tonight there is an added pleasure for me. I am privileged to announce to you the name of the winner of the Outstanding Catholic Layman of the Year award.

The outstanding Catholic layman in Hawaii of 1959 is a man who has served God and country well in these islands. It will be for history to judge the eminence of this man. In reviewing the life and character of this gentleman, we are free to proclaim to all that here we have a man of extraordinary talent, obvious courage, and to an unusual degree the virtues of honesty, industry, manly piety, fraternal charity, genuine humility—truly, a man of integrity. He was raised on Oahu by a gifted mother whose life was a model of Catholicity. He attended St. Louis, and shortly after his marriage, his wife, obviously impressed by the wonderful man she married, became a Catholic. The couple had five children, three of whom are now living, who were taught to love and serve God and their fellow man. The public service of this distinguished honoree is well known. Not so well known are his years of exemplary Catholic living, his exceptional devotion to that sacrifice by which Christ redeemed the world—his daily reception of the Holy Eucharist.

He has never been rich, but I understand he has often been poor. In his public life he has not hesitated to mention his Catholic faith and principles, nor has he been timed about saying that his political philosophy has its roots in his religion. He is certainly not a lukewarm person, nor does he inspire lukewarmness in either political friend or foe. His enthusiastic, dynamic approach to the duties of his state in life make him an enviable man—a man of conviction.

A person whose mind is set on doing the will of God is a person who has great resiliency, a person who is full of surprises, a person who can take the good times and the bad without changing his gait—often the person whose mind is set on doing God's will is the person whose victory is guaranteed by defeat. Christ set the stage, and some of his followers have Christ-like roles to play.

Our honored gentleman is not with us tonight. He is in Washington, D.C., where as Hawaii's last Delegate to the Congress, he is assisting our first Senators and Representative in their work of adjusting to life and duties in the Nation's Capital.

It is with great pride that I announce the outstanding Catholic layman of the year, the Honorable John A. Burns.

Charges by Former Representative Sam Coon, of Oregon, of Waste and Extravagance in Foreign Aid

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. NEUBERGER. Mr. President, as the Senate approaches discussion of the foreign aid appropriations bill, I have been much disturbed about reports in the press of mishandling, bungling and even outright corruption in the administration of this program. I have consistently supported President Eisenhower in his foreign aid requests because I have regarded the President and his Secretary of State as far more informed on questions of foreign policy than I could possibly be. I also credit them with a sincere desire for lasting world peace.

Yet, Mr. President, we cannot shut our eyes to imperfections in operation of a program which is so costly and expensive to the taxpayers of the United States. After he was defeated for reelection to Congress from the second Oregon District, Mr. Sam Coon received an appointment as Deputy Director in Peru for the International Cooperation Administration, which is the Federal agency conducting the foreign aid program. It is significant, I believe, to add that Mr. Coon is a Republican and thus a member of the same political party which has been responsible for operation of the foreign aid program ever since January of 1953, over some 6½ years ago. Mr. Coon has now returned to this country with a shocking tale of bungling, extravagance, waste and personal profiteering in South America by certain ICA officials. Obviously, I cannot vouch for either the truth or falsehood of ex-Congressman Coon's account. Yet I believe it should be called to the attention of the Senate.

Mr. Coon was interviewed by A. Robert Smith, correspondent for the Pendleton East Oregonian, the newspaper of largest circulation in the district which Mr. Coon once represented in the House of Representatives. This interview appeared on the editorial page of the Pendleton East Oregonian for September 5, 1959. I ask unanimous consent that this article by A. Robert Smith, entitled "Sam,

Coon Reveals ICA Misconduct in Peru," be printed in the Appendix of the RECORD for the information of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAM COON REVEALS ICA MISCONDUCT IN PERU

(By Robert Smith)

WASHINGTON.—Sam Coon, former Congressman from eastern Oregon, has disclosed details of a case of "ugly Americanism" in Peru where a U.S. foreign aid director has been fired for a conflict of interest.

Coon last March resigned from the post of Deputy Director in Peru for the International Cooperation Administration, the Federal agency which handles the foreign-aid program. In June he went before the House Appropriations Committee, of which he was once a member, to reveal behind closed doors shennanigans connected with the Peru operation. The testimony has now been made public.

The story Coon told contained these elements:

IN LIVESTOCK BUSINESS

1. John R. Neale, ICA Director in Peru, was fired for being in the livestock business in that country. He was in partnership with the Peruvian husband of another ICA employe, his administrative assistant.

2. Neale used an ICA veterinarian six or seven times to treat his stock. The vet told Coon the ranch was 17,500 acres devoted to 2,000 sheep and a string of cattle.

3. Neale's daughter then bought a ranch near an isolated town, Oxapampa. Shortly thereafter, Coon found that three main ICA programs—agriculture, health, and education—were started in that area without any apparent foreplanning. Coon sought the reason. The head of one of these three programs said he went in because he learned the other two were going in. The second said the same thing. Coon added:

"I asked the director of the third one and he told me—he kind of smiled—and said, "Do not ask any embarrassing questions."

SHORT CUT TO JUNGLE

4. A road project, whose location was settled with local authorities, was suddenly relocated into an area that hadn't been checked by ICA technicians and was only a "short cut to the jungle."

Coon, stating that local Communists took advantage of Peruvian discontent over these things, told how he personally tried to call to the attention of top ICA officials in Washington but only got the run-around. Often he was advised not to relate these developments to anyone. He wrote a long letter to the head of ICA, but his only reply was a request that Coon thereafter go through proper channels with his letters.

Coon then flew to Washington at his own expense to try to see the top brass at ICA. He was unable to get an appointment with James H. Smith, then ICA head, and lower officials suggested he return to Peru and not mention this to any Member of Congress.

When asked by his old colleagues why he didn't make these matters known then—back in 1958—to the press or to Congress, Coon said he know that a new director would be coming in soon and he thought this would bring needed changes.

When Vice President NIXON visited Peru on his rocky South American trip, Coon was told by aide to the U.S. Ambassador in Peru not to say anything critical of ICA Director Neale "or you will pay the consequences." A possible later consequence was that Coon's work in Lima was given a low rating by his superior, Neale.

Coon told how the main office of ICA in Lima showed an elaborate map that was not accurate in showing the extent of ICA work in the country, but he was told it was only to impress visitors from Washington. The budget for Peru was from $2.5 to $2.75 million a year, Coon said.

UNDER INVESTIGATION

Neale was finally relieved and replaced by another man whom Coon had little praise for. Neale then went to work for the Minister of Agriculture of Peru, and then the Minister of Agriculture was hired by ICA, Coon declared.

Coon wasn't solely responsible for bringing Neale's conflict of interest to light. That had been under investigation for several months before Coon arrived, ICA officials claim. Queried now, they are "still investigating."

The Republican from Baker, who won high praise from his congressional colleagues, said he wasn't against the foreign aid program and thought it had in many cases helped combat communism. But he criticized its top management.

Coon resigned after his initial 2-year term was up, as he was free to do. He was offered another post in Pakistan at slightly higher salary but turned it down. When asked why, he said he thought he would find "more peace of mind if I went back out in the West and did not have the responsibility of being connected with this program any longer."

Labor Bill Lobby

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of September 10, 1959:

[From the Washington Post, Sept. 10, 1959]

MOOD MANIPULATION IS GIVEN CREDIT

(By Bernard D. Nossiter)

Sophisticated business lobbying, combined with conscious manipulation of a public mood, is being credited with a major role in the passage of the strong labor bill.

Details of the skilled operation began coming out this week.

The core of the technique, as spelled out by its practitioners, was to focus on uncommitted House Members, particularly those in marginal districts. There a deliberate effort was made to translate public anger at the disclosures of union corruption by the McClellan committee into a barrage of letters urging the Congressmen to vote for a tough bill.

The major organizations involved were the National Association of Manufacturers and the U.S. Chamber of Commerce, aided by many of their State groups; the American Farm Bureau Federation, the American Retail Federation; and the little-known National Small Business Men's Association.

These groups did not march in perfect lockstep any more than their opposite numbers in labor. But one participant has said that the degree of coordination exceeded that ever undertaken by business in the past.

The small business group supplied many of the ideas and much of the intelligence; all of them generally avoided the hamhanded union tactics of descending on Congressmen in platoons and warning directly of retaliation at the polls.

The business group's first task was listing House Members in marginal districts—those won by 55 percent or less of the popular vote—who had never voted on a labor bill. About 120 were in this group.

The next step was to refine this list to those who favored a bill, but were not clearly committed to either a strict or a softer measure.

Left to their own devices, the Democrats in this group would have likely followed their leadership and backed a "moderate" bill; the Republicans, generally from industrial districts, also would have been in this camp. A few more Congressmen with similar viewpoints but from "safe" districts were added. A final list of 54 was selected for the major effort, which began in June.

The problem then became one of arousing constituents in these districts to flood their Congressmen with mail. One important tool was a television drama, "Sound of Violence."

This hour-long show portraying union hoodlums in the jukebox field had run in April on Armstrong Cork Co.'s Circle Theater to an audience estimated at 25 million. It ends with an appeal from Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, urging the American people to do something about the evils shown.

When Armstrong decided to run the drama on July 8 as a summer repeat, the business lobbyists latched on. Local NAM affiliates and other trade associations told their members when and where the show could be seen; they advised employer members to urge their workers to watch it; above all, they encouraged their members to get viewers to write their Congressmen on the labor bill.

The Texas Manufacturers Association, for example, advertised the viewing time and stations for Amarillo, Austin, Dallas, Houston, Galveston, Lubbock, Odessa and El Paso. The Lumbermen's Industrial Relations Committee did the same for Spokane and Seattle, Wash. and Portland, Medford and Klamath Falls, Oreg.

The strategists discovered that stations in 27 key congressional districts would not carry the show. Arrangements were made to get eight of these stations to run it as a public service or under local sponsorship. Newspaper ads were taken in 20 of the important districts, urging people to watch and write.

An estimated 4.5 million to 5 million mailings plugging both the show and letters to Congress were sent out. Between 15 million and 20 million persons were said to have seen the rerun.

After the Griffin-Landrum bill, strongest of the measures proposed, was introduced in late July, the strategists continued to pour on the heat.

Brief tape recordings were made for radio and television, featuring Representatives PHIL M. LANDRUM, Democrat, of Georgia, and ROBERT P. GRIFFIN, Republican, of Michigan. Beginning in August, these were run frequently, again as public-service features or under local sponsorship in 35 of the crucial districts.

In one swing area an experiment was tried. A good-sized corporation sent its foremen out to ring neighbors' doorbells. This tactic, it is claimed, produced 3,000 letters in 1 week urging a stiff bill.

The crucial House vote came on August 13, when the Griffin-Landrum bill was approved, 229 to 201. Of the 54 target Congressmen, 23 voted for the bill, or more than the 14 whose votes decided the issue.

Since the entire group of 54 had originally been selected on the premise that they leaned toward a softer bill, the lobbyists claim their missionary work helped produce the margin of victory.

Business lobbyists, pleased with their efforts, expect to use these techniques with more success in the future.

Wisconsin's Rural Teacher of the Year

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. WILEY. Mr. President, faced with the national challenge in the field of education, we recognize that there needs to be a stepped-up, coordinated effort at the local, State, and—yes, possibly at the Federal level—to meet this challenge.

Throughout the country, there are still many areas in which there is a shortage of teachers, classrooms, facilities, laboratory equipment, and other educational aids.

Improving our educational programs entails not only developing the specialties required by individuals to earn a living, but also in providing them with a well-rounded education to make them useful citizens in the human community.

We recognize, of course, that the spotlight of the educational process is on the teacher. Without high caliber—yes—inspirational teaching, the students may not succeed in attaining all that his inherent capabilities promise. For almost all of us there are definite remembrances of times when, with the guidance or words of advice or inspiration—our teachers made indelible impressions on us that improved our lives.

Unfortunately, the economic status of the teacher has been one of the last considerations. For too long, there has been a failure to recognize the significance of the contribution which the teacher makes to the education and the development of the child and thus, to the community.

Despite these unfortunate factors, however, the vast majority of teachers throughout the country continue to loyally and ably serve in their chosen profession.

Recently, the Wisconsin Agriculturist published an article entitled "Wisconsin's Rural Teacher of the Year." The article briefly reviews the splendid way in which Mrs. Hazel Clark, of Marathon County, Wis., recipient of the rural teacher of the year award—has demonstrated her loyalty to the teaching profession and her unlimited service to the community. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, Sept. 5, 1959]

WISCONSIN'S RURAL TEACHER OF THE YEAR

Under the cover of a mischievous grin, the small boy closed the drawer of the teacher's desk. Inside, the small snake wiggled uncomfortably in the new surroundings.

Students stiffened and grabbed for books as the teacher returned to the rural classroom in Marathon County. There was muffled laughter as she reached for a pencil. Finally, the desk was opened and the students in Boulevard School got their first nature lesson of the year.

"That doesn't happen very often any more," chuckles Mrs. Hazel Clark, who has taught at the school for 22 years. "Not since the word has got around that I'm not afraid of snakes or frogs.

"In fact, it's a good opportunity to really get the students interested in nature study. One time when one of my students brought snake eggs to school, we kept them until they hatched."

TEACHING HAS CHANGED

Teaching methods have changed through the years too. "Now the emphasis is on the needs of the child, rather than plain subject matter," she explains. "This doesn't mean that the three R's aren't stressed, but we give greater emphasis to subjects like science than we used to."

"Today's teacher has to be more alert than she did several years ago," she says. "Television, radio, and newspapers have increased the interest which students have in world events."

Although fast disappearing from Wisconsin's countryside, rural schools are first choice with Mrs. Clark, who's been teaching in rural or village graded schools for 30 years.

A native of Oconto County, she came to Marathon County as principal of the Boulevard School in 1937, a job she still holds in addition to teaching grades 6, 7, and 8.

Previous teaching experience was in graded schools in Oconto and Shawano Counties. She is a graduate of Oconto High School and holds a bachelor of science degree from Oshkosh State College. She has also continued her education through summer school and University of Wisconsin extension courses.

Mrs. Clark has been active in local, State, and national education associations. She has served as president of the North-Central Wisconsin Education Association, the Marathon Country Education Association, and the Gamma chapter of Delta Kappa Gamma.

Her loyalty to teaching has won the respect of her associates in the profession. Here's what the county superintendent of schools says about her: "She has real understanding of children and knows how to meet their interests, their needs, and their individual capacities for learning. On top of that, she has a keen imagination, and an enthusiasm for her teaching.

A teacher's work doesn't always end when the last student goes home. And Mrs. Clark is no exception.

"I live near the school," says a parent of one of her students, "and I know that she spends many hours each day there, arriving as early as 7 o'clock in the morning and never going home until at least 5 o'clock in the afternoon."

"Even while seriously ill last year, she continued to give her time and energy, coming to school for visits and assisting the teacher in charge during her sick leave. As soon as she was physically able, she assumed her previous duties, and there were never any happier students."

Her individual interest in students is praised by one of her former students. "She was very careful to explain the subject that she was teaching. If there were any questions, she always gave enough time to each student to understand the problem."

The reputation of the school is well established. And students are welcomed in nearby high schools.

"We are always glad to have a student from Boulevard School," says a high school official, "because we know they have an excellent background."

When you talk to the people of the community you begin to realize that Mrs. Clark is not only a dedicated worker in her profession, but an outstanding community leader as well.

Her leadership qualities have not gone unrecognized. Many of the area's service and church groups have chosen her as leader of their organizations.

In addition, she has a strong interest in community affairs including 4–H clubs and conservation programs.

WORKS WITH CONSERVATION

Her interest in conservation, which includes attendance at Eagle River Conservation Camp, is reflected in a nearby school forest and a living snow fence which protects the school from the north winds of winter.

Mrs. Clark was largely responsible for obtaining the tax-delinquent land from the county for use as a school forest.

Although not active at the present time, she was a local 4–H leader in the Boulevard community for 15 years. She has served as a camp supervisor for a district 4–H camp since its beginning during World War II. For the past several years she has had charge of Marathon County's 4–H dormitory at the county fair.

In recognition of her dedication to rural youth, her loyalty to the teaching profession and her unlimited service to the community, the Wisconsin Agriculturist—in cooperation with the National Education Association—is honored to present Wisconsin's Rural Teacher of the Year Award to Mrs. Hazel Clark.

The Sad Fruits of Government Meddling in Agriculture

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks I wish to include a release on a speech being made today in Kansas City, Mo., by Charles B. Shuman, president of the American Farm Bureau Federation, at the 44th annual meeting of the National Association of County Agricultural Agents.

Mr. Shuman's words should give food for thought to those who believe that the only salvation for the American farmer is increased, continued and fantastically expensive subsidy and control programs.

More than a quarter of a century of Government meddling as a substitute for the exercise of managerial judgment by farm operators has proved an expensive and wasteful use of resources.

Legislative efforts to control production and to guarantee prices for individual farm commodities have proved costly to farmers, the farm leader asserted.

Here are some of the problems Government price fixing and production controls have created:

Production costs of farmers producing controlled crops have been increased as operations have been reduced in size and resources and have been forced into poorer alternatives.

Farm income has declined during periods when prosperity prevailed in other segments of the economy.

The value of allotments representing the right to grow the controlled crops for guaranteed prices has been capitalized into higher land prices.

Acreage taken out of controlled crops has been shifted to the production of other commodities, thereby creating problems for other farmers.

The use of synthetics and other substitute products has been expanded resulting in loss of markets.

The right of the producer to plan his own farming operations has been restricted.

Surpluses have grown larger and more burdensome year after year. Rising program costs have become a threat to the future of all price support programs.

Unsound, unworkable Government price support programs are also threatening to put the Nation's farmers in the public opinion doghouse.

There are those who feel that mentioning the facts about the Federal farm program creates bad public relations for farmers. If farmers have a bad public relations problem, it is the result of a bad farm program. And trying to defend an indefensible Government farm program will not help farmers over the long pull.

These and other problems which farmers face today are dramatic results of the wrong kind of Government participation in agriculture.

What then is Government's proper role? It is a role of partnership with farmers in providing with with proper research findings and the proper interpretation of these findings in all of the fields of production, marketing, and utilization, so that the operator can make the best use of his land and capital resources.

One of the best examples of the profitable partnership of Government and farmers is to be found in the exemplary work of the county agent down through the years as the local representative of the cooperative extension service.

The county agent's main objective has been to help the farmer make full use of his managerial ability and take advantage of the latest findings to improve and increase efficiency and thus lower unit production costs.

In this period of rapid and dramatic changes in agriculture, the county agent is faced with even greater responsibility and challenge. One of his new demands is for advising with farmers on how to improve his bargaining position with buyers and processors of farm products.

It is more important than ever that there be constant and objective appraisal of the cooperative extension service program and its results by State and local administrative authorities. In addition State and county farm bureaus have a responsibility to make certain that the extension service program meets the constantly changing needs of farm families.

Likewise, Farm Bureau's objective is to create conditions under which farmers can earn and get a high per family real income in a manner which will preserve freedom and eliminate Government regulation of individual farming operations.

Our efficient agriculture knows it can do even a better job only if it is allowed to use the marketplace to reflect consumer needs, and to meet them.

Labor Reform: A Tribute to a Pioneer

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1959

Mr. GOLDWATER. Mr. President, sometimes in the realization of hopes long deferred, memory is shortened—and, in the flush of the hour of accomplishment, we often forget those who have borne the burden and heat of the day.

One such toiler in the vineyard whose contribution merits special recognition in connection with the passage of constructive labor legislation is the Honorable CLARE E. HOFFMAN, who so ably represents the Fourth Congressional District of Michigan in the other body of Congress.

This indefatigable fighter, who remains young and vigorous in mind and body, in spite of the passing years, has long been a pioneer in the labor reform movement.

The Senate Select Committee on Improper Activities in the Labor or Management Field, of which I am a member, forged ahead in certain areas along trails blazed by CLARE HOFFMAN.

The labor reform bill recently passed by the Congress, follows some 135 labor bills and resolutions introduced in the past 22 years by CLARE HOFFMAN, in his efforts to obtain needed labor reforms.

On August 13, Mr. HOFFMAN introduced two amendments to the labor bill: One, to outlaw strikes in public utilities; and the other, to subject unions to the restraints of antitrust legislation. While not adopted at this session of Congress, legislation to that effect may ultimately attest again to CLARE HOFFMAN'S foresight as he continues in the van of crusading legislators.

Something of the spirit of this trail blazer has been captured by Hale Montgomery, of United Press International, in an article which recently was published in newspapers throughout the country. It gives a measure of credit where credit is due. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the South Bend (Ind.) Tribune, Aug. 11, 1959]

HOFFMAN PIONEERS IN LABOR REFORMS

(By Hale Montgomery)

WASHINGTON.—Tough and peppery CLARE HOFFMAN first proposed in 1937 that Congress enact reform legislation to clean up corrupt labor unions and drive out racketeers.

The veteran Michigan Congressman followed this up in 1939 and 1941 by introducing almost identical House bills. Each time his colleagues gave these radical proposals quick burial.

Last Wednesday in the supercharged atmosphere of current events the 83-year-old HOFFMAN reintroduced a similiar bill with hardly a comma change.

FOR TOUGH BILL

The outspoken Republican veteran, who in the intervening years has introduced 136 different pieces of labor legislation, remarks:

"Something that I advocated 22 years ago now is suddenly popular. What bothers me is that now I'm getting letters and telephone calls urging me to vote for a tough labor bill. Of course I will. I've been for that all along. I didn't think anyone would be surprised to learn it now."

When House Members begin assembling around noon for meetings of the House, the wiry HOFFMAN generally is already there, waiting.

For the past 3 weeks, he has taken the floor at every opportunity to speak on the need for labor reform legislation, hammering away on this subject regardless of the topic up to debate.

FEARLESS SPEAKER

When the House debated foreign aid, HOFFMAN rose to speak on labor; when it considered a home rule proposal for the District of Columbia, HOFFMAN slipped in a blast against UAW President Walter Reuther was a man "trained in organized violence"; when the Inter-American Bank bill was before the House, he charged Teamsters Boss James Riddle Hoffa was a "greedy" leader with "unbridled ambition" who misused union welfare funds.

"I'll talk on something when no one else does," HOFFMAN said. "Some members think it is unpopular to oppose labor leaders; afraid they'll lose votes. But basically they're wrong."

HOFFMAN, who hails from the relatively well unionized Fourth District of Michigan is quick to explain he is not opposed to the labor union movement.

OPPOSED TO CROOKS

"I'm for organized labor, of course, always have been," he said. "I'm just against those few who are crooked. I never asked for anything that would hurt a union working man—never."

HOFFMAN was chairman of congressional investigating groups in 1947–48 and again in 1953–54 exposed instances of racketeering and strong-arm organizing tactics. The inquiries led to more than 12 criminal convictions of corrupt labor leaders.

As far back as 1936 when sitdown strikes were fashionable, and in 1941 when Ford Motor Co. experienced a bloody, death-marred strike, HOFFMAN went to Detroit and other cities to observe these and other labor-management violences first hand.

FEARS LABOR POLITICS

HOFFMAN'S 1937 reform bill has many of the features of the modern legislation now pending in the House. It includes a provision for a secret ballot and a requirement that unions file complete financial reports of every dollar taken in and spent.

He fears chances of passing "sound, equitable legislation" could be damaged if the boys start playing politics.

He said President Eisenhower's recent nationwide TV–radio appearance backing a strong reform measure "might tend to raise the political issue. Maybe not, we'll see."

Asked if Congress will pass a reform bill this year, HOFFMAN paused and replied:

"We'll get something. The House will pass a bill which the labor boys will call stringent. But for me, I'd call it mild. But I'm not predicting what the Senate will do."

The Problems of Small Life Insurance Companies

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. BARR. Mr. Speaker, the city of Indianapolis in my congressional district is fast becoming an insurance center for many small life insurance companies. I am submitting for insertion in the RECORD a statement of Mr. John Wilkins, who has served as president of the National Association of Life Companies. I believe that this statement is a clear and factual exposition of the problems of many of the small life insurance companies of this Nation.

REPORT OF JOHN WILKINS, PRESIDENT, TO NATIONAL ASSOCIATION OF LIFE COMPANIES FOR 1959

As we open our 1959 convention, the fifth annual convention of the National Association of Life Companies, let me tell you how much I have enjoyed serving as president of NALC during the past year and how deeply I have appreciated the honor of being president of our association and how grateful I am to the members for their loyal, constant, and effective support and help during the year. This has all been most gratifying and a year I shall never forget. I thing what has impressed me most about our association is the loyalty of its membership and the willingness of the members to cooperate in every effort that we have made. Whenever we have called, they have answered promptly. Time and distance have seemed to mean nothing to them. Willingly, cheerfully, and at very considerable sacrifice, executives of nearly every company in our ranks have thrown themselves into every undertaking of the association. It has been a rewarding experience to work with you and to get the opportunity to know more of our members closely and personally. For that, let me just say "Thank you, and God bless you."

The National Association of Life Companies began 4½ years ago out of recognition of a handful of small company executives that the smaller, younger, growing, progressive companies needed some forum where they could exchange ideas, where they could talk over common problems, where they could enlist each other's support for mutual defense and protection.

Although there were some 400 energetic small companies in the Nation, they had no one to speak for them. Each of us stood alone and isolated; each of us stood bare and unarmed before stronger, more powerful competitors, who were not always too meticulous in their dealing with "stinking little companies," that dared to offer competition to the great.

I think that every member of this association, I think that every small company executive everywhere in America—except perhaps a small score of pious blue-bloods, who were content not to compete and say, "Yes, sir, Massa," to the dominant elements in the industry—had, at the end of 1954, a feeling of being utterly alone.

If NALC has done nothing else for us, if the accomplishments of past 4½ years that we think have been so substantial in so many ways, actually mean nothing at all—the association has been worth every effort, individually and collectively, that we have made, simply because we have been able to say to ourselves, "I am not alone."

It has been this splendid feeling of comradeship that has enabled an organization that began with an actual net membership of 43, representing a few States in the South and Middle West, to expand in 4 years to a membership of 134 in 29 States—ranging from the Bering Strait to the shores of the Hudson—from the Great Lakes to the Florida keys.

During the past year, our membership has increased by 26—this is an average increase of more than 2 per month.

These new members have been brought in through the efforts of our membership. They have joined with us because they realize that the objectives of National Association of Life Companies are objectives that are wholesome and good for the small companies, the growing companies, the progressive companies; that they are objectives that are good for the industry as a whole; that they are objectives that are good for America.

NALC has one major objective: we stand for the American principle of free competitive enterprise.

In a day when this ideal is assailed in many directions, when it is under attack from both the left and the right, when it is under fire both by the regimentationists and the strangulationists of would-be giant monopolists—it may be that the small, growing, progressive life insurance companies of America have established, with NALC, a rallying point for all those who believe that free competition, regardless of the type of business, is the most essential element to the nourishment of a free society. NALC has endeavored to make its practical stand, on practical issues, conform to this basic ideal.

During the past year there were three significant issues with which this association was deeply concerned.

I must report to you that on one of them we won a complete victory; on one of them we did pretty well, but not as well as we wished; and on the third we took a pretty bad beating.

The first of these was the completion of the work that is now known as the commissioners 1958 mortality table.

When NALC asked the National Association of Insurance Commissioners, and the industry, to take a breathing spell and actually examine X–17 before precipitantly adopting it and forcing it upon the entire industry, there were some elements in the industry, and a few among regulatory authorities, that were critical. Before the examination of X–17 was complete, there was 100 percent approval and very widespread gratitude to NALC for having had the responsible conservatism, sound judgment, and broad vision requisite to assume the entire leadership of the industry in this question and prevent a possible crisis and near tragedy for every company in America. The improvement in the commissioners' 1958 tables over X–17 speaks for itself, and NALC's accomplishment speaks for its value to the younger and smaller companies and to the entire life insurance industry of America.

Our next major activity was over the Federal Income Tax Act. I think every member here is aware of the vigorous efforts we made to represent our segment of the industry effectively before the House Ways and Means Committee and the Senate Finance Committee considering this bill. The bill that was passed is not a good bill. The only thing that we can say for it is that it is not as bad in its final version, as it was when it first passed the House. On an industry-wide basis, we did not get what we wanted or what the industry needs. We are convinced, that after 4 or 5 years at the longest, the Treasury and Congress will return to the basic thesis that NALC laid down, or turn to separate measures for stock and mutual companies and junk the measure that was adopted this year.

However, we obtained reasonable treatment for the smaller companies—and, where the very young companies are concerned, we won a complete victory and obtained for them concessions that are sufficient to enable them to get into effective competition without being strangled at birth. So many members of the association worked so hard and so long and so diligently on this problem that I am not going to single out anyone, but I am going to say that all of you worked hard, and it was a good fight, a brave fight, a competent fight, and a worthwhile one.

On the third front we simply have been taking a series of beatings. It is evident to me, it is evident to our legal staff and our executive secretary, and it is evident to the members of the committee that is studying the question, that we must make a completely fresh start, possibly in Congress, if we are to obtain equality of the younger and smaller companies in the sale of life insurance of domestic companies on military establishments. The regulations provided by the Pentagon were extraordinarily stringent; the interpretations of those regulations has gone far beyond anything that reasonable men can expect, and the younger and smaller companies have simply been banished from the sale of life insurance almost everywhere that this could be effected.

We are defeated on this front, for the present. We are not surrendering; we are not quitting. To borrow a phrase from that patriarch of our association, Bill White of Denver: "We have just begun to fight."

In the coming year we are going to have to concern ourselves with three pressing problems and I pass them on to my successor, with a certain amount of unrestrained relief.

First. Modification of the Federal income tax act, to try to make the present bill workable in some way can, I believe, be expected before next year is out, and we must be as vigilant and energetic, as we have been in the past.

Second. We must watch for new monopolistic trends and elements of unfair competition. We must be vigilant in watching for tricks in State regulations, especially in the rash of new State insurance codes. There is sometimes a tendency to think that what is good, virtuous, and benign when practiced by the immensely large and immeasurably powerful giants on the shores of the Hudson—becomes wicked and dangerous when practiced by small companies on the shores of the PeDee, or the Chattahochee, or the Wabash.

Third. Nowhere is the danger more potentially menacing than in the problems connected with variable contracts—and the impact of variables creates our third major problem.

I do not want my comments to infringe either upon the careful report that will be made by our general counsel or the splendid seminar that we have planned later during the convention. I do, however, want to point out the contrast of the receptiveness, in some quarters, of the questionable idea of permitting certain large companies to, perhaps, create encumbering liabilities upon the surplus derived from the small policyholder for the protection of widows and orphans in the erection of mammoth pension structures upon pension investments with the hostility toward investment-type variable endowment contracts favored by the progressive, smaller companies. We must be vigilant. We must be very careful. We must be sure of our ground, and we must be very energetic in our fight on this issue.

In spite of a Federal tax bill that favors other savings institutions over life insurance, in spite of menacing inflation. I am quite confident that next year, and every year thereafter—will see for the life insurance industry, growth in premium income, in assets, in insurance in force, and in realized opportunity for greater service in America to Americans. I am equally confident that next year, and every succeeding year, will see National Association of Life Companies growing, surging ahead, serving better its membership in the industry—and renewing always—its dedication to that great American principle—the ideal of free competitive enterprise.

The Story That the Correspondent Told

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an article which appeared in the September 6, 1959, issue of the New York Times Book Review, entitled "The Story That the Correspondent Told."

The article is based on a speech made by Mr. Allen Drury, member of the Washington Bureau of the New York Times, before the National Press Club of Washington.

There being no objection, the article was ordered to be printed in the Record, as follows:

THE STORY THAT THE CORRESPONDENT TOLD

(Allen Drury, a member of the Times Washington bureau and author of the current best seller, "Advise and Consent," recently discussed the writing of his novel and his aims as a novelist in a speech before the National Press Club in Washington. The following article is based on that speech.)

The genesis of a novel, any novel, I suspect, lies in some one insistent theme that rises out of the writer's general observation, living, and experience. In the case of "Advise and Consent," that one theme was, of course, the American democracy and how it operates.

One gradually arrives, after covering the Government of the United States at its heart for 16 years, at some sort of philosophy about Congress, about America, and about the American people, in relation to themselves, to their times, and to each other. There are some, I think in the minority, who have arrived at a philosophy of angry and ironic contempt. There are others, I think in the majority, who have arrived at about what I have arrived at—a realization of America's weaknesses, an appreciation of her strengths, and a balance that comes down, even as it looks some quite hard facts in the eye, on the side of hope.

I do not contend in this book, nor I think can any honest man contend, that this Government or this people are perfect. The American people are rather more idealistic and goodhearted than most on this globe. And while they are sometimes weak, shortsighted and corrupt, they also posseas a fundamental duality which permits them to be on other occasions, and sometimes at the very same time, noble and generous and decent. Their strengths, as their weaknesses, it seems to me, are attributable entirely and exclusively to what they are, a free people of many backgrounds, doing what they please as they deem best.

This American duality, which I think the facts will support, is too much for some of our more vocal citizens, and they spend their time and their energies nagging at the country's shortcomings without ever once conceding or, indeed, even understanding her strengths. You will find in "Advise and Consent" many somber things about America, for she is seen, I hope, through an honest glass; yet the end result is faith in the American way.

I came to the Senate for United Press in November 1943 and within 5 or 6 years there began to stir the vague outlines of a book. The framework for saying the things I was gradually concluding about the American way of life and government, appeared to be the Senate, which I knew best; and within the Senate some one of the major battles that occupy that endlessly intriguing body.

Gradually by a process of elimination, partly conscious, but perhaps even more subconscious, I found myself thinking increasingly in terms of a controversial nomination upon whose twists and turns and developments all else could hang. There have been a number of these in the past 16 years, the nomination of Henry Wallace to be Secretary of Commerce, the nomination of Edward Stettinius to be Secretary of State, the nomination of David Lilienthal to be head of the AEC, the nomination of Charles E. Bohlen to be Ambassador to Russia; and more recently, though of course coming long after I completed the novel last November, the nominations of Lewis Strauss and Clare Boothe Luce.

At first the aim was rather narrow: to show to her own citizens and to the world, if I could, how America's system operates; to say, "This is how it is." The nomination was to be made to an independent agency, say, or perhaps to an assistant secretaryship. The interest was to lie in the mechanics of government alone; the controversial nature of the man was to provide all the drama necessary. "This is how it is" was to be enough both to state the problem and carry the reader.

This is not, however, an easy age in which to concentrate, particularly when you live at the heart of it: its terrors are too many and its fearful possibilities too great. Aside from a few fugitive scraps of dialogue and a few notes on climactic scenes, and a gnawing feeling inside that this was something I must eventually do or suffer from the lack of it in ways that would sound a little precious except to other writers, time passed and very little got accomplished.

Abruptly, however, in 1950, there came a sudden spasm of work for reasons I cannot now put my finger on exactly. Out of it came the first two chapters and, in the first four sentences, almost without conscious volition on my part, the final decision as to what this book was going to be. Those sentences, which begin "Advise and Consent," are as follows:

"When Bob Munson awoke in his apartment at the Sheraton Park Hotel at 7:31 in the morning he had the feeling it would be a bad day. The impression was confirmed as soon as he got out of bed and brought in the Washington Post and Times Herald.

"President Names Leffingwell Secretary of State," the headline said. What Bob Munson said in a tired tone of voice, was, 'Oh, God damn.'"

After that, the pattern became clearer. Of course, it should be a Secretary of State: there was the office upon which to hang not only the "This is how it is" of the American Government, but the "This is how it is" of the cold war, and of all the other problems that beset a well-meaning land in an ill-meaning century. About these too I had acquired a good many opinions, and, understandably enough, I aimed to express them. The plan, the purpose, the general project began to take on a scope far beyond what I had originally intended; yet again there was a lapse, aside from a few more notes and casual jottings, for seven more years.

Consciously, that is, subconsciously, many things were apparently going on, because by September 1957, when a mutual friend set up an appointment for me with Ken McCormick, editor-in-chief of Doubleday, the book was evidently ready to roll, though I was not entirely aware of it for several more weeks after that. By January 1, 1958, I had completed 257 manuscript pages of Bob Munson's book and sent them off to Doubleday.

From that point forward the novel progressed virtually without a hitch—certainly no major ones, at any time. There were no blocks and few worries; it wanted out, and it got out.

There are a great many things in the book that I never knew were going to be there until they actually came out of the typewriter; midway the ending changed completely. The characters, in a very real sense, took over. Incident by incident and link by link the structure built up, and from each new vantage point the ultimate conclusion became more clear.

There are two pompous and pretentious queries that almost any author has to deal with: "What kind of writer do you want to be?" and, "What do you want to accomplish with your writing?" The kind of writer I would like to be is the kind of writer any reporter or radio man or TV commentator with an ounce of integrity would like to be, and that is the kind of writer who says a little something valid about the human experience, and who illuminates also something of his times so that his contemporaries and those who come after may find their understanding a little better for what he has done.

As for the allied pomposity of "What do you want to accomplish with your writing?" there, too, I think, most of us are in essential agreement as to what we should like to do. And that is to say a little something honest, in a phony time, about a country which needs our understanding and our help and our love. America seems to have gotten lost from herself, somehow, hidden away and submerged and obscured by the more clamorous of her clever, clever citizens. It is an era in which slogans are substituted for reality, in which false values have behind them all the force of organized advertising and promotion, in which an unfounded optimism is offered as a counterfeit for sober bravery, in which everything is slightly out of focus, so that nothing shows clear and it is hard to remember and recapture and hold fast to the things that have made our Republic, and us as a people, a beacon for mankind.

Somewhere under all this phoniness there still live a great Nation and a great people; and it is to them that I, and I think most of us, should like to be true in whatever I write. For I suspect that when the last television program is snapped off, the last urgent advertisement is laid aside and the last hearty admonition from the hidden and not-so-hidden persuaders dies out upon the quivering air, the great majority of us in this country are still creative, skeptical, down-to-earth and, for the most part, level-headed; quite confused by what we face and sometimes quite scared by it, but on the whole valiant and sound, possessed of a goodly land and a heritage that warrants hope.

Beneath the mush and the organized hogwash, beneath the pretensions and the phony attitudes with which too many in influential position try to hide from the problems of our world, there is still a great vigor and a great vitality and a great decency and a great courage, both of purpose and, quite often, of achievement.

It is this essentially that I, and I think most of us in this reporting and writing business, would like to record, in whatever ways we may have the ability, when all else is said and done—that there is a Republic, not perfect, yet with great decencies; not infallible, yet with great strengths; not all-knowing, yet with a kind intention and a brave heart.

Most of us, I believe, would like to so write about America that our contemporaries can say, "Yes, we see ourselves." And in a later day if men happen to come across the record we have left, they may say to one another, "This is how it was—in that country—in that time."

The Late Honorable Edmund P. Radwan

SPEECH
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. PILLION. Mr. Speaker, it is with profound sadness that I rise to pay respect to the memory of our esteemed

departed colleague from the State of New York, the late Honorable Edmund P. Radwan. It was my privilege and good fortune to have served with Congressman Radwan both in the New York State Legislature and in this Congress.

Congressman Radwan was a man of great political and personal courage. He had a keen and high sense of honor. Although it was conceded by everyone that he could have been reelected in this last campaign, Congressman Radwan chose not to seek reelection. This decision was based upon his belief that, due to his illness, he could not give his undivided service to his constituency.

In the State of New York, I can recall his courage and determination in fighting against a proposal to increase taxes in the year 1949. In Congress, Representative Radwan earned the respect of his colleagues for his sincerity and his adherence to principle.

Congressman Radwan was a dedicated public official with a deep sense of responsibility to his constituency and to the people of this Nation.

I extend my deepest sympathy to his family.

Editorial Comment on Civil Rights Commission Report

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. THURMOND. Mr. President, two outstanding South Carolina newspapers, the News and Courier of Charleston, S.C., and the Florence Morning News of Florence, S.C., have published very strong editorial comments against the biased and irrational report which the Civil Rights Commission has made to the President and the Congress. I call these two editorials to the attention of the Senate and ask that they be printed in the Appendix of the RECORD.

The News and Courier editorial which appeared in the September 9, 1959, issue is entitled "Civil Rights Report Weakens States and Threatens Liberty in Republic." The Florence Morning News editorial which appeared in the September 9, 1959, issue is entitled "Commission Report Affront to Dixie."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Charleston (S.C.) News and Courier, Sept. 9, 1959]

CIVIL RIGHTS REPORT WEAKENS STATES AND THREATENS LIBERTY IN REPUBLIC

The Commission on Civil Rights, in its first report, has recommended changes in the law that would create a vastly different America. The Commission would have social as well as political and economic relations regulated by the Federal Government. Freedom of association in school, college, and neighborhood would end by force of law.

Though the language of the report makes plain that the Southern States are the principal targets of the report, the ill-conceived recommendations, if enacted into law, also would reduce individual liberty in all States of the Union and create strife and bitterness between racial groups.

The Commission recommends: (1) Appointment of Federal voting registrars; (2) a constitutional amendment giving the right to vote to every citizen who meets his State's age and residence requirements and who is not in jail at the time of registration or election; (3) withholding of all Federal aid funds from private and publicly supported colleges which refuse to integrate; (4) insistence on prointegration policies in public housing, urban renewal projects, and FHA- and VA-financed private housing developments.

The first recommendation—calling for temporary voting registrars—represents the most immediate threat to States' rights.

The Commission proposes that a Federal registrar be installed in any county where nine or more individuals swear they cannot register to vote.

Agents of the Commission would be assigned to the locality to investigate and to rule on applications for registration. A Federal officer such as a postmaster or clerk of Federal court, would be required to grant registration certificates.

In a forthright dissent, Commissioner John S. Battle, former Governor of Virginia, said that appointment of Federal registrars "would place in the hands of the Federal Government a vital part of the election process so jealously guarded and carefully reserved to the States by the Founding Fathers."

It also would infest scores of southern counties with Federal political agents, armed with the subpena power, who would stir up racial bitterness and virtually abolish local government. Supervision of registration, which the Commission recommends, is what South Carolina experienced during Reconstruction.

Though the proposed constitutional amendment is not a present danger, it represents a long-range threat to good government in every area of the country. It would be a godsend to the political bosses of northern cities. The Commission would admit former criminals to the polls.

In New York City, for instance, the masses of migrants from Puerto Rico could be made the motive power of a giant political steamroller to crush the educated, responsible element in the city. In many Southern States the result would be complete control of large areas by numerically superior but propertyless Negro masses that could be herded to the polls by political agents of the NAACP, each one with a marked voting ticket in his hand. The outcome would be ruinous government for able and enterprising people of both races.

Withholding Federal aid from southern colleges and universities would only further antagonize the South. Actually, this is not likely to be approved. The congressional representatives of the big northern cities, who are eager for Federal aid, need southern votes in the House and Senate to obtain even a minimum of their wants. But the Commission recommendation indicates the vengeful spirit of nonsouthern members.

In calling for integration in federally aided housing, the Commission proposes that a hornet's nest be disturbed.' This recommendation, if made law, might provoke rioting in northern cities where school integration is more or less accepted but where segregated neighborhoods are fiercely defended.

Vice Commissioner Robert Storey, former dean of Southern Methodist University Law School, and former Gov. Doyle Carleton of Florida, joined Governor Battle in a powerful dissent to this recommendation. They criticized the notion of "a fixed program of mixing the races anywhere and everywhere regardless of the wishes of either race * * * the result (of which) would be dissension, strife, and even violence in sections where you would least expect it."

The Commissioners who recommended this coercive program, which violates the traditions of the United States, are Chairman John A. Hannah, former manpower Director of the Defense Department; the Reverend Theodore M. Hesburgh, president of the University of Notre Dame; and George M. Johnson, former dean of Howard University, the only Negro on the Commission. The staff director of the Commission is Gordon Tiffany, a protege of former "Assistant President" Sherman Adams.

Each and every one of these recommendations would deprive individuals and States of rights to which Americans are accustomed. In our view, the recommendations should be rejected because they are repugnant to the principles of a free republic.

[From the Florence (S.C.) Morning News, Sept. 9, 1959]

COMMISSION REPORT AFFRONT TO DIXIE

The report of the Civil Rights Commission is certain to stir up a storm of protest from southern congressional leaders. Protest had already begun, in fact, before the report was released to the public.

There is ground for this protest. Recommendations of the Commission represent unwarranted Federal interference in the rights of the States. The most conspicuous case in point is the proposal that State registrars be supplanted by Federal appointees "until local officials are prepared to register voters without discrimination."

In the first place, this is flagrant violation of all the traditions of local self-government that are so much a part of our American system.

In the second place, there is nothing to indicate, at least so far as South Carolina is concerned, that there is discrimination in voter registration. The right of the Negro to vote is accepted without question and he is subject only to the restrictions that apply to both white and Negro. We believe that this condition prevails generally throughout the South.

To replace local with Federal registrars would be a further affront to the South and worsen the already strained relations growing out of the segregation controversy.

We have seen only that part of the Commission's report which has appeared in the public press. If this is typical of the entire report, it warrants the opinion that here is another commission which, faced with the necessity for justifying its existence, was motivated more by self-interest than the public good.

Vanishing Americans

EXTENSION OF REMARKS
OF
HON. EARL HOGAN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. HOGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article from the Evening Star for September 8, 1959, which tells about the Ringgenbergs family and their story of the American farmer, entitled, "Try Telling the Ringgenbergs That They Are 'Vanishing Americans.'"

[From the Washington (D.C.) Evening Star, Sept. 8, 1959]

TRY TELLING THE RINGGENBERGS THAT THEY ARE "VANISHING AMERICANS"

Lately, a lot has been written and said about the farmer—much of it proclaiming, "The family farm is doomed * * * all farmers nowadays are either subsidized profiteers or subsidized failures."

Like many thousands of others, the Ringgenbergs would beg to differ. They are a farm family—making a go of it on their own 200-acre dairy farm near Pierceton, Ind. They are proving that an independent family unit can thrive on the farm * * * by applying creative methods to extend the range of their own labors.

They started in 1946—late in the fall when the land was asleep. They started with 60 good-for-nothing acres; with a thousand-dollar debt; with a kind of simple, idealistic confidence that was supposed to have gone out of style with Horatio Alger.

That's how it was when 22-year-old Gene and Sally Ringgenberg moved onto this land of their own—60 wornout acres near Pierceton, Ind. Their son, Kerry, was just a baby, only 6 months old.

"And some people thought Gene was just a baby, too," Sally recalls. "Sure to be burned on a farm nobody'd ever been able to succeed with before. Corn crops so bad—they weren't worth picking."

Today, those 60 barren acres of 1946 represent a neat, alfalfa-covered corner of the 200-acre family business which the Ringgenbergs call "Green Top Farm."

The boy, Kerry, an eighth-grader now, has a sister, Karen, born in 1948—the same year Gene and Sally completed the land-buying portion of their drive to make a go of it on the farm.

And on this farm today, the Ringgenbergs are feeding a herd of 90 Holsteins, 60 of them milk cows, the rest young stock. Production last year—10,000 to 11,000 pounds of milk per cow—a total of over 1½ million pounds.

"You know, the doubters of 1946," says Gene, "would've been convinced we were crazy, if we'd told them these 200 acres could feed more than 30 or 40 cows. No telling what they'd have thought if they knew the plans we have today. I believe we can build this farm without buying more acreage—build it so, when Kerry and Karen grow up, there'll be a living here for three families, not just one."

Certainly these aren't words you'd expect to hear from the head of an economic unit—the family farm—which is supposed to be on the way out. Certainly the Ringgenberg record to date lives up to the promise of Gene's words.

CONFIDENCE VERIFIED BY RECORD

And there's even more bite to his words when you think of this—there are no hired hands at Green Top Farm. All the work is the Ringgenbergs' own. Last year, for example, the investment in outside labor was just $12 (far less than a city family might spend on baby sitters).

What's their secret?

"No secret to it," says Gene. "Lots of farmers are doing as we are. It's a matter of managing the farm as a business—using the new tools and ideas and methods that'll help you produce more efficiently.

"When a farm fails, I figure it's like any business failing. Maybe they didn't plan sensibly—or maybe they let themselves get old-fashioned and inefficient."

DO-FOR-YOURSELF PLANNING PREFERRED

"Some people say we couldn't exist without being propped up by the government," Gene continues. "I think they're wrong. I think we can lick our problems by working to a businesslike plan—by using the latest, most efficient methods for producing at the lowest, possible cost. You've got to do for yourself—not with props and hand-outs. That kind of help carries direction right with it. I'd rather do my own thinking—plan my own future." Such are the attitudes of Gene Ringgenberg at age 35. Attitudes shaped by a drive that started when he was a boy—raising his own cows on his father's farm—fabricating his own tractor from an old pickup truck.

Sally recollects, "He's always worked toward goals—in everything. Back in high school, he was the shortest man on the basketball team, just five-seven. Well, the scientific way he developed his game, by senior year, he'd won All-Sectional honors, and that's not easy here in Indiana. One of his records still stands—70 games played without once fouling out—and that's not easy anywhere."

The quickest way to appreciate the Ringgenbergs' progress is to join Gene on the job—any day of the year, about 4:45 in the morning. With the night as yet untouched by any fringe of pink in the east, you'll find Gene driving the milk cows into the dimly lighted holding pen outside the milking parlor. He's built on the order of a broad-shouldered fireplug—short but exceedingly solid. Surrounded by the mooing, pushing "ladies of Holstein," he has the look of a man fording a river, up to his chest in waves of black and white.

PUSHBUTTON MILKHOUSE

The cows enter the milking parlor five at a time. The milking is performed by electric units—with the milk being piped automatically, direct from cow to stainless steel cooler in the Grade "A" milkhouse.

How's this for mechanization? Altogether the milking of 60 cows takes just about an hour and a half (about 7 minutes per cow).

Sally generally arrives on the scene in time to supervise the cleanup of the milking apparatus. And supervise it she does—by pushing a button on an electric control box to start an automatic cycle of washing, rinsing, and sterilizing.

By this time, Gene is likely to be doing two jobs at once—feeding the herd and scrubbing down the milking parlor. "It's easy to do both," says Gene, "because the feeding is automatic."

JUST 15 MINUTES TO FEED THE HERD

He simply pulls a switch on one of his three mechanized Harvestore feed processing units—the tall, blue towers that are more than symbols of success for the Ringgenbergs. And as the switch turns, a bottom unloader begins to hum—unloading the sweet-smelling feed called Haylage onto an auger-conveyor that feeds the cows automatically. It takes just 15 minutes to serve the Ringgenbergs' entire herd their first big meal of the day. "And this is the way they get every meal," says Gene. "There are no pastures on my farm. Too much waste that way—too much feed value lost."

PROCESS THEIR OWN HIGH-VALUE FEED

"Everything my cows eat is processed through the Harvestores. To a stranger, these units may look like nothing more than big, blue silos—but they sure mean a whole lot more than that to me. They're the key to my feeding program. And next to land and livestock, that's the most important part of an efficient dairy farm."

As Gene explains it, the Haylage from his Harvestores compares favorably with any complete cow ration he might buy. And the raw material for Haylage is alfalfa grown right on his own land.

The alfalfa is mowed as it might be for hay, but that's where the similarity ends. Instead of the old way of balling and drying—a wasteful method that often cost him as much as half his crop—he now runs it through a mechanical chopper at 40 to 50 percent moisture, then blows it up and into the top hatch of one of the Harvestores.

Gene says, "We haven't had to worry about rain spoiling hay ever since the first of the three units went up. But that's just part of the saving. The real difference is in what happens inside the Harvestores. You see, they're sealed to keep out oxygen. There's no spoilage. And the feed values are preserved. No matter how many months it's stored, the Haylage we get is moist and sweet-smelling. The cows love it."

CREATIVE PRODUCTION KEY TO FUTURE

As you go through a day on the farm of Gene and Sally Ringgenberg, you appreciate the truth and validity of Gene's statement—"We can lick our problems by working to a businesslike plan—by using the latest, most efficient methods for producing at the lowest cost."

Everything you see is the result of intelligent, creative planning—the kind of planning designed to get the most value from every ounce of work. You see it is the pushbutton milking operation, in the storage and mechanized feeding system, in the modern tractors and wagons, the chopper and blower. You're seeing a healthy, productive business—a business being built to insure a family's future on the farm.

A Commission Divided

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, September 10, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I wish to bring to the attention of the Senate an excellent article appearing in the Washington (D.C.) Evening Star of September 9, 1959, by David Lawrence entitled "A Commission Divided."

Mr. Lawrence has made a penetrating study of the so-called report by the controversial Civil Rights Commission, and I think this article by Mr. Lawrence strikes at the heart of the situation with which we are confronted when we are asked to review the life of the Civil Rights Commission. Mr. Lawrence states:

> Anyone who had the idea that a national commission to investigate "civil rights" could come up with a coherent report after months of study is bound to be puzzled by the confusing and to some extent contradictory recommendations just issued by the U.S. Commission on Civil Rights.

Mr. President, I think the very controversial and divided nature of the Civil Rights Commission's report should be ample evidence to everyone that there could be no possible service to the country rendered in extending the life of the Civil Rights Commission.

As Mr. Lawrence points out in his article, the Commission has wandered far afield from constitutional principles. Indeed, it has given us no answer to any problem; to the contrary, the verbal garbage the Commission's report contains is highly inflammatory and will only tend to worsen conditions and cause a wider breach between proponents and opponents of forced integration.

It is an unquestioned matter of fact that the Commission has simply re-

flected, in a magnified way, the same old bitter issues that have beset us for so many years. The Commission's report simply makes the job more difficult for everyone concerned. Any extension of the life of the Commission will stir up more agitation, cause more confusion, and deepen hatreds.

Mr. President, when the administration was seeking the creation of the Civil Rights Commission, the Attorney General of the United States testified to the Congress that such a Commission would foster better understanding and relations between peoples of different races.

Mr. President, it appears to me that the Civil Rights Commission has accomplished nothing in the field of creating harmony in racial matters. Quite to the contrary, since its inception, violence, disorder, prejudice, hatred, and downright disrespect for law and order have increased. This is particularly true in the very areas of the Nation where integration has been forced upon people in recent years.

I hope the Members of the Senate will heed the lesson taught in the long list of racial violences that have occurred across the Nation recently, and not add fuel to the inflammatory problems of civil rights by passing civil-rights legislation or even extending the Commission on Civil Rights.

Mr. President, I ask that the article appearing in the Washington (D.C.) Evening Star of September 9, 1959, by David Lawrence, entitled "A Commission Divided" be printed in the Appendix of the RECORD for the benefit of the Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A COMMISSION DIVIDED—CONTROVERSIAL CIVIL RIGHTS REPORT SEEN AS REFLECTING SECTIONAL CLEAVAGE

(By David Lawrence)

Anyone who had the idea that a national commission to investigate civil rights could come up with a coherent report after months of study is bound to be puzzled by the confusing and to some extent contradictory recommendations just issued by the U.S. Commission on Civil Rights.

Six members—three from the North and three from the South—made a conscientious effort to come to grips with the civil rights question as it affects registration and voting, housing and education. But the net result is a sharp division between the six.

As for voting rights, the report presents an anomaly. The three northern members—John A. Hannah, president of Michigan State University, the Reverend Theodore M. Hesburgh, president of Notre Dame University, and Prof. George M. Johnson, former dean of Howard University, who is the only Negro member of the Commission—joined together to recommend a new constitutional amendment. They feel it is necessary if the people wish to take away from the States their present right to determine for themselves all the different qualifications of voters apart from race or color or sex. This is sound reasoning. For, as noted in these dispatches several weeks ago, the Constitution today specifically gives the States the right to define such voter qualifications and to provide, for instance, tests to prove that a citizen can read and write.

Oddly enough, however, two of the southern members—former Gov. Doyle E. Carlton of Florida and Robert G. Storey, dean of the Southern Methodist University Law School at Dallas, Tex.—joined with the three northern members to recommend the passage of a Federal law to prevent individual discrimination in the application of existing State laws on the subject of voter qualifications. But these same two members, together with a third from the South—former Gov. John S. Battle of Virginia—then insisted that an amendment to the Federal Constitution is unnecessary to secure proper enforcement of voting rights because existing powers of Congress are adequate.

Perhaps the most controversial section of the report is that which deals with alleged discrimination on the part of educational institutions which receive Federal funds. It is signed by the three northern members and says in part:

"More than $2 billion a year of Federal funds go for educational purposes and to educational institutions. The principal recipients of these funds are the Nation's colleges, universities, and other institutions of higher education. Whether tax-supported or privately financed, they receive Federal grants and loans both for their general support and capital improvements as well as for research projects, special programs, and institutes."

The same three members of the Commission recommend that Federal agencies "be authorized and directed to withhold funds in any form to institutions of higher learning, both publicly supported and privately supported, which refuse, on racial grounds, to admit students otherwise qualified for admission."

But, unfortunately, the three members who signed that particular statement disregard the fact that, when the Federal Government attempts to enforce one section of the Constitution with respect to Federal aid to education, it opens up to similar scrutiny the application of other parts of the Constitution, especially the first amendment, which decrees a complete separation of church and state. If this concept of existing constitutional provisions were followed literally, then the GI bill of rights and any other Federal grants might be held to be improper where any church-controlled schools or colleges are involved. It is interesting to note that the three southern members—Commissioners Storey, Battle, and Carlton—do not think the Federal Government should attempt through its money power to police the schools. Their dissent is as follows:

"We cannot indorse a program of economic coercion as either a substitute for or a supplement to the direct enforcement of the law through the orderly processes of justice, as administered by the courts.

"Such a proposal by this Commission—as a branch of the Federal Government—would drastically affect the administration of privately owned institutions of higher education. Such action goes beyond the scope of the Commission's duties."

Strictly speaking, all private schools could be compelled under such a plan to admit anyone, irrespective of race or creed or color, or else forfeit tax exemptions and other Federal Government privileges.

It is in the field of housing, however, that the Commission finds itself wandering far afield from constitutional principle. It says:

"The need is not for a pattern of integrated housing. It is for equal opportunity to secure decent housing. * * * The Negro's need for an alternative to blockbusting as a way of securing housing must be met just as the legitimate interests of white neighborhoods on the edge of Negro expansion areas must be protected."

This sounds a bit reminiscent of the "separate but equal" doctrines that used to be applied by the courts before the 1954 Supreme Court "desegregation" decisions. Interesting enough, while this very section on housing apparently won the concurrence of all six members of the Commission, again even this appearance of unanimity is offset somewhat by a supplementary comment by the three southern members concerning future methods of tackling the problem of housing. They warn that "no one pattern will serve the country as a whole."

Miss Mildred C. Thelen, Lynn, Mass., Schoolteacher, Appointed To Attend Foreign Language Institute

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a newspaper item which appeared in the Lynn (Mass.) Telegram-News and was reprinted in the Bay State Bulletin of the University of Massachusetts, about Miss Mildred C. Thelen, teacher of French and English at the Lynn English High School, Lynn, Mass., in my congressional district.

I am also including a written article by Miss Thelen, entitled "Central America, Land of Mayas," which was one of a series of seven articles which appeared in the Lynn Telegram-News for seven consecutive Sundays:

[From the Bay State Bulletin, April 1959]

LYNN TEACHER ATTENDS FOREIGN LANGUAGE SCHOOL

Miss Mildred C. Thelen, teacher of French and Spanish at the Lynn English High School, is 1 of 100 foreign language teachers appointed to attend the Foreign Language Institute being held this summer at the University of Maine under the auspices of the U.S. Government. Title VI of the National Defense Education Act provides that each participant in the institute will be paid $75 per week, plus $15 per dependent during the 7-week period of intensive study.

WORKING SCHEDULE

Members of the institute attend nine classes, clinics, and workshops per day from 7:45 a.m. to 5:20 p.m., learning and experimenting with new aural methods, language laboratory techniques, educational electronics, as well as basic conversational Russian. At meal times they are assigned to language tables where they must speak their major language (French, Spanish, and German), which they are requested to use continuously throughout the day. Miss Thelen is taking part in the French program.

The four language institutes for 100 teachers each, originally set up by the U.S. Department of Education, at the University of Maine, University of Michigan, Louisiana University, and University of Colorado received 4,000 applications from language teachers. The response was so great that several more institutes have been added throughout the country and the program under Federal auspices will continue for the next 4 years.

TOPS IN LANGUAGE FIELD

Miss Thelen, who was also appointed as an alternate in the Spanish program of the Foreign Institute at the University of Colorado, is a past president of the New England

Chapter of the American Association of Teachers of Spanish and Portuguese, is a member of the Advisory Board of Foreign Language Consultants for the Massachusetts Department of Education, and State coordinator of Spanish for both State and National committees of the Foreign Language Coordination Committee of the Modern Language Association, and is a nominee for the office of member of the national executive committee of the American Association of Teachers of Spanish and Portuguese.

She holds a master's degree in romance languages from Boston University and has attended summer sessions at the Sorbonne in Paris, the Middlebury French and Spanish Schools, the University of Mexico, and the University of Madrid.

CENTRAL AMERICA, LAND OF MAYANS

(By Mildred C. Thelen, Lynn English High School)

Several years ago, I attended the summer session at the University of Mexico, and took a course in the history of the Aztec civilization. While there I also visited the ancient Aztec ruins and pyramids of San Juan Teotihuacán outside of Mexico City. In the summer of 1957 I spent some time high up in the Andean Mountains of Peru visiting Cuzco, the ancient capital of the Empire of the Incas, as well as Machu Picchu, that awe-inspiring lost city of the Incas, which I described in one of my series of articles entitled "Around Latin America in 30 Days." As a result of my interest and study of these ancient peoples of Mexico and Peru, who attained a high level of culture and civilization many centuries before the Spanish conquistadores set foot on this hemisphere, I decided to visit Central America where the sites and ruins of the ancient Mayans are to be found.

Of these three distinct aboriginal races the Mayans had the most elaborate civilization and the most interesting customs and practices. In this article, I shall describe to you my trips through the jungles of Guatemala and Yucatán to see the temples and palaces of the ancient Mayans.

LAND OF ETERNAL SPRING

Guatemala is called the land of eternal spring and rightly so. The average mean temperature year around is 68 degrees. There are no rapid changes in climate or temperature, although there is a dry and rainy season. To escape hot summers and cold winters, this country is an ideal land for the tourist. Artists and photographers love it for its emerald green lakes and mountains, its picturesque Indian villages and markets, as well as its historic ruins. The 33 cloud-ringed volcanoes throughout the country seem to serve as a majestic backdrop for scenes of spectacular beauty and color. Most important of all, the people are friendly, polite, and kind. It is a wonderful country to visit.

TIKAL-MAYAN METROPOLIS

One of the highlights of my tour of Guatemala was my visit to Tikal, the largest city of the old Mayan Empire. Very few tourists have as yet seen this breath-taking spectacle in the dense jungle of Petén in northern Guatemala.

For the past 3 years, the Guatemalan Government and the University of Pennsylvania have been making excavations and restoring the temples, palaces, monuments, and other structures. The work has been under the direction of the American archeologist Edwin Shook of the University of Pennsylvania and Senor Antonio Tejeda Fonseca, of the National Archeological Museum of Guatemala.

ANCIENT MAYAN CITIES

Mayan cities were religious and civic centers with handsome abodes for the rulers and priests, beautiful temples and huge courts for games and ceremonies. To erect those tremendous stone temples, the Mayans must have had a mathematical and engineering knowledge of a high order. They moved the heavy stones on logs because they did not know the principle of the wheel. With only crude tods and maguey ropes, they erected buildings, carved and decorated with figures and hieroglyphics, that were truly marvels of art and beauty. The lower classes lived in grass thatched huts just as they do today.

INTERESTING PLACE

Chichicastenango (the place of the nettle leaves) at an altitude of 7,000 feet in the mountains of Guatemala, is one of the strangest places I have ever visited. About 1,000 Ladinos (mixed Spanish and Indian people) live in the little town of white houses, roofed with bright, red tile. However, 20,000 Indians live in the hills nearby and flood the town (almost empty on other days) for the Sunday and Thursday open-air markets. On these days, the large area in front of the 400-year-old Church of Santo Tomás is filled with several thousand Indians squatting about or selling their wares in awning-covered stalls.

The whole scene is one moving mass of color, as the Indians wear brilliant native costumes of all hues in the rainbow. One can immediately tell the village from whence they come by the type of costume.

THE MASKMAKER

A must on the agenda of every traveler to Chichicastenango is a climb to the top of a nearby mountain and a trip to the house of the maskmaker, who carves and paints wooden masks for the Indian dances and ceremonials.

In his workship and display room were hundreds of masks of devils and animals. The main work, however, is creating the masks for the Dance of the Conquistadores, when light-colored masks representing Pedro de Alvarado, the Spanish conquistador of Guatemala, and dark-colored masks representing Tecum Uman, the Maya chief whom he killed in combat, are used. The light masks have pink faces, gold hair, gold beards, and blue eyes. The dark-colored masks have brown skin, dark eyes, and black hair with quetzal birds decorating the temples. Very frequently whenever there is a fiesta, the Indians in elaborate costumes and painted masks, strut and dance for hours in the village plaza, as they reenact the story of the Mayas and the Spanish conquistadores.

MAYAN INN

The Mayan Inn in Chichicastenango, is perhaps the best known hotel in the country. It was built 25 years ago by Alfred Clark of Clark Tours, pioneer in the Guatemalan tourist business. The Mayan Inn opened up this whole section of Guatemala for visitors. It is a unique experience to stay there.

The Inn is a very unusual place. The walls of the flower-filled patio are decorated with Mayan hieroglyphics and figures, while here and there are old statues and chests of the colonial period. My room was very large and decorated with many valuable Spanish antiques. Most of the furniture was carved and massive. The draperies, rugs, and upholstery were all hand-woven native textiles. Tall, white calla lilies in a large vase added a hospitable touch of beauty to the room. Logs in the mammoth fireplace were read for the "fireboy" to come and make the room cozy and warm. In that cold mountain air, a crackling fire in the evenings and mornings was very inviting indeed.

RELIGIOUS CEREMONIES

Still retaining much of their ancient pre-Hispanic culture, the natives of Guatemala combine the worship of both the Christian God and their pagan deities in a most unique fashion.

For four centuries they have absorbed, within their limits to understand, the forms and teachings of the Catholic Church brought to them by the Spanish padres, and have blended them with their own ancient ceremonies. Religion answers a deep and emotional need in the nature of the Indian, and praying to the Supreme Being is the most important part of his life. The Catholic priests there, with great understanding and wisdom, are more concerned with what the Indian means, than with the details of his manner of prayer, so sincere and fervent that the onlooker is deeply touched.

MARIMBA MUSIC

The national music of Guatemala is played by marimba bands. No one knows exactly how the first marimbas came to Central America. One theory is that the conquistadores found the Indians playing on small sets of wooden bars made from rosewood trees of a special quality which, when struck, produced a mellow and resonant tone unlike that of any other wood. To amplify the tone, gourds were placed below the wooden bars. The instrument, about 8 feet in length, resembles a gigantic xylophone. Tones are sounded by striking the keys with small rubber hammers.

HUEHUETENANGO

An airplane flight brought me to remote Huehuetenango (pronounced waywaytenango), meaning "the place of the old people." It nestles on a plain in the shadow of the gigantic Cuchumantanes mountains, which range to 13,000 feet in height. It is a lead, copper, and silver mining center, but the chief attractions for the tourists are the Zaculeu ruins of the Mam Tribe and the Silver Virgin of Chiantla.

RUINS OF ZACULEU

A cab ride took me to the ruins of Zaculeu, ancient capital of the Mam Tribe of Mayan Indians, who lived there centuries before the Spanish conquest. The United Fruit Co., as a gesture of goodwill and friendliness to the Government of Guatemala, has reconstructed the ruins. Eight buildings have been completely restored as they were in the pre-Spanish conquest period. They are small and artistic. They do not compare at all with the majestic and towering structures located in Tikal and Yucatán.

MARYKNOLL MISSION

The highlight of my trip to Huehuetenango was my visit to the Maryknoll Mission. I was told by the Maryknoll Fathers in Guatemala City that the most important mission of the order was located in Huehuetenango.

There are about 28 Maryknolls at the present time in Guatemala. They are doing a wonderful work in helping the Indians to improve their way of life.

A MAN OF GOD

I met Father Leo Conners, who heads the mission, in the garden of the church in Huehuetenango. When I told him that I was interested in the work of the Maryknoll Fathers and would like to write about the work that this American order of missionaries is doing, he suggested that I accompany him in his jeep in his morning round to one or two of the mountain villages. He actually has charge of the mission work in 11 villages, some so remote that he can only get to them in his jeep about once a month to say masses, and perform marriages, baptisms, and otherwise help them with their spiritual needs.

I accepted his invitation and so Father Conners, two Indian girls and I sped around hairpin curves and barrancas at an elevation of 11,000 feet. It was certainly thrilling and exciting.

From time to time, Father Conners would stop at an isolated, thatched hut or tiny village. The Indian women would come out to greet him and hold up their babies, which he patted and fondled very affectionately. It was easy to see that they all loved him very

much, as he spoke to them in his rapid, fluent Spanish.

Father Conners has been doing missionary work in the mountains of Huehuetenango for 11 years. He is a jolly, energetic person, with twinkling blue eyes, and a great sense of humor. He is a completely happy person, selfless, and dedicated to the work of helping these impoverished Indians.

SPANISH COLONIAL RUINS

Antigua, the ancient capital of Guatemala, is a must for tourists who come from all over the world to see the most impressive Spanish colonial ruins in the Western Hemisphere. Founded in 1543, it was the third largest city in the Americas and the greatest cultural center in Central America.

In 1773, however, a shattering series of earthquakes in 10 minutes destroyed its magnificent churches, public buildings, and palaces. It was decided to abandon it as the capital. Today, the buildings, built over a period of three centuries, still stand in ruins. Antigua now has become a national monument, with all its historic shrines left in mute testimony of that fateful earthquake, a unique example of a Spanish colonial city untouched by modern times.

POSADA BELEM

I stayed at the Posada Belem in Antigua (the Bethlehem Inn) which in the 17th century was a monastery and housed the Hospitable Order of Belemiticos. Today, the old monastery, with its lovely gardens, arcades, patios, flowering terraces, and swimming pool, offers all the modern conveniences in an atmosphere of days long past.

PEDRO DE ALVARADO

The conqueror and first Governor of Guatemala was Don Pedro de Alvarado, who, in 1523, was sent by his commanding officer, Hernando Cortés, still occupied in the subjugation of the Mexicans, to invade Guatemala. He headed an army of 500 Spanish soldiers and Indian warriors.

There are a number of pictures of Alvarado in Antigua and Guatemala City. Without doubt, he is the handsomest historical figure I have ever seen, judging from his paintings. He was tall and well proportioned, with hair and beard that were reddish blond. The Indians called him "The Sun." An obscure, young adventurer of 25 when he left Spain, his ambition and daring brought him to the position of governor over the land he had conquered.

Today the Indians don dazzling mask replicas of his smiling countenance, when thye do their "Dance of the Conquistadores." Avaricious and cruel, he was brave to a fault and invincible.

LAKE ATITLÁN

No words can adequately describe the trip to the Mayan Highlands and the lake region of Guatemala, a veritable labyrinth of mountain ranges, deep gorges, and scenic volcanos. After a 3-hour drive from Guatemala City, you reach a high plateau where the turquoise waters of Lake Atitlán can be seen 2,000 feet below.

Lake Atitlán, reputed to be the most beautiful mountain lake in the world, is 70 miles in circumference and 17 miles across. The color of the lake changes constantly from soft pink and gray at sunrise to aqua blue at noon, and emerald flecked with golden tints at sunset. Twelve picturesque Indian villages, all named after the Apostles, dot its shores.

Although my primary reason for going to Central America was to see the temples and palaces of the ancient Mayans, nevertheless, while I was in that part of the world, I did want to visit some of the neighboring countries of Central America. My itinerary brought me into El Salvador to see the fires of the volcano Izalco and a trip up the El Boquerón, the crater of the Volcano of San Salvador.

I could not pass up a flight to Costa Rica, famed as a country that has more schoolteachers than soldiers. Volcano Irazú, 33 miles from San José, capital of Costa Rica, was rewarding as was a visit to the shrine of the Virgen de los Angeles at the beautiful cathedral in Cartago. The legend of the Virgen de los Angeles is very reminiscent of the miracle of Bernadette at Lourdes. Not to be forgotten were the beautiful hand-painted oxcarts of intricate designs and myriad colors.

Prior to my going to Yucatán, I stopped over in Nicaragua and spent some pleasant days sightseeing in Managua and its environs. But my heart was set upon completing my tour by seeing and visiting the most famous of all the Mayan ruins in Central America, Chichen-Itza and Uxmal.

MÉRIDA

Mérida is the capital of the State of Yucatán, Mexico. It is from Mérida that the Barbachano Travel Service specializes in tours to the ancient Mayan ruins and has an office opposite the Hotel Mérida. This company has been in business for over 30 years. Without a doubt, it is one of the most efficient and well-organized travel companies ever encountered on my tours. They own the beautiful hotels "Mayaland" and "Hacienda Uxmal" located in the heart of the jungle and archeological areas of Chichen-Itza and Uxmal.

They had fleets of cars taking tourists back and forth continuously to the ruins. The drive to Chichen-Itza was 83 miles over a well-paved road cut right through the jungle. It was hot and humid, even riding at a fast pace in the car. I was glad to reach the Hotel Mayaland. It is amazing that such a beautiful and luxurious place could be maintained in the heart of dense jungle.

HOTEL MAYALAND

Because it is unique, I would like to tell you a little about this hotel. Guests have their choice of a room with a private balcony in the hotel or a native hut in the tropical gardens surrounding the hotel. I chose the hut, but what a hut. It had a thatched roof, beautiful tile floors, tile bath, and hand-carved furniture of authentic Mayan motifs. At night the palm trees, bougainvillaea, and hibiscus trees were electrically lighted here and there in the tropical garden. An illuminated statue of Chac-Mool, the rain god, in the center of the garden, created a scene of enchanting splendor, as you strolled along the walk to the hotel for dinner.

GALA MEXICAN DINNER

Dinner was served by native girls dressed in the huipil, a vestment of primitive origin adorned with fine needle design at the square collar, sleeve openings, and lower part of the dress. The hair was worn in coiled braids piled on the head and tied with colored ribbons. In the balcony of the mural-walled dining room, three Yucatecans, dressed in the typical white shirts and trousers of the region, played guitars and sang Mexican songs during dinner.

There were large silver plates at each place, on which the regular china dishes were set. (We were all impressed with the silver plates, but then, we remembered that Mexico has a great abundance of silver.) Wild duck, venison, turtle steak, pompano, Morro crab and pollo pibil, as well as many exotic tropical fruits were featured on the menu. I chose pollo pibil, which turned out to be tiny chickens cooked with a delicious sauce, barbecued in a banana leaf, and served with friend bananas.

After dinner we all gathered in the large, handsomely-tiled lobby for the native dances. The dancers in Yucatecan costumes came down the stairs and did intricate regional dances, including the Jarana, to the accompaniment of guitars and maracas. One dance was done while the young native girls maintained wine-filled glasses on their heads.

CHICHEN-ITZA, YUCATÁN

The next day following the gala Mexican dinner at the Hotel Mayaland, our party started out at 8:30 a.m. for the tour of the spectacular Mayan ruins of Chichen-Itza. The tours begin early in the morning, led by the Hotel Mayaland guides. An early departure is necessary because it becomes terrifically hot later in the day. There is a great deal of climbing and walking to be done. Generally, tourists can take just about 2 hours of this activity in the hot sun of Yucatán. A later tour leaves every day at 4:30 a.m. to explore the remaining partially restored temples and altars in the archeological area.

Chichen-Itza, the most sacred city of the ancient Mayans, once covered 6 square miles, and at times housed as many as 500,000 people. It was excavated by a 20-year archeological expedition of the Carnegie Institution of Washington, headed by Dr. Sylvanus Morley in 1924. During this period, considerable scientific research work was done on the temples and pyramids, through the study of Mayan hieroglyphics.

MAYAN TEMPLES

On our morning and afternoon tours, we explored the Temple of the Warriors, the Temple of a Thousand Columns, the Ceremonial Ball Court, the Temples of the Jaguar and the Serpents, as well as many altars and monuments. It would be impossible to describe all the impressive ruins in this space, but I shall concentrate on a few of the most interesting.

The Temple of Kukulcan or El Castillo, as the Spaniards called it when they used it for a fortress, is an imposing pyramid over 100 feet high. It seemed to be the mecca for most of the tourists, who wanted to climb the 91 narrow steps, ascending perpendicular in the air, to reach the loft platform above. The temple was built to glorify Kukulcan, meaning, in the ancient Mayan language Plumed Serpent. It signified "Lord of Heaven and Earth," for the bird symbolized heaven and the serpent, earth.

I followed the guide along with the rest of tourists up the steep steps and into the dark, spooky chambers at the top to see the Chac-Mool (Rain God) and the fierce-looking Jaguar God. The Chac-Mool has eyes, teeth, and nails of pearl-like shell. The Jaguar, painted red, has eyes of jade, fangs of flint and teeth painted white. They are in a state of excellent preservation because they have not been exposed to the elements.

The Sacred Well of Sacrifice was a most interesting place. Steep and rough, with jutting ledge of rock, it was the scene of a strange ceremonial to propitiate the Rain God. The Temple of the Virgins of El Palacio de las Monjas (Palace of Nuns, as the Spaniards called it) is also one of the most important structures at Chichen-Itza. The ancient Ball Court is another point of interest in the tour of the ruins. There are two long high walls. In the center of one is a huge stone ring with a hole in the center. It is carved with twisted serpents and is placed about 20 feet from the ground. Present-day basketball may have had its origin from this ancient Mayan game. It also resembles the Basque game of jai-alai.

HACIENDA UXMAL

After 2 days at Chichen-Itza, our party left for Mérida in order to get to Uxmal, considered the most beautiful of all the ancient cities. There is no road between Chichen-Itza and Uxmal, so the Barbachanco tourist cars had to return to Mérida in order to make the trip to these ruins, which are distinctly different from those of Chichen-Itza.

We arrived late in the afternoon at the Hacienda Uxmal, a very pretty hotel built in

colonial style, enclosing a patio of tropical trees and flowers. All the furniture and decorated, handmade ironwork were especially designed for the hotel. The swimming pool was always filled with bathers in the late morning and afternoons, after the suenuous tours through the ruins. The polished tile floors throughout the hotel were designed in bright colors and seemed to glisten, as you looked down through the arcades and corridors.

RUINS OF UXMAL

Early the next morning, our party went out with the guide to see what the archeologists consider to be the finest examples of stone mosaics, as well as the most elaborately decorated structures of the ancient Mayan world. We followed him through the House of the Turtles, the House of Pigeons, the Temple of the Magician, with its steep stairway of 118 steps, the Place of the Governors, and many more superb structures. The buildings of Uxmal were constructed during the classic Maya period, when these ancient people had reached the peak of their culture. These temples seem almost Grecian in their beauty and proportion.

ADIÓS

"All good things must come to an end," so the adage runs, and finally came the time for me to leave for Mérida. There I finished my souvenir shopping for "recuerdos" and soon was on my way to the airport and the Pan-American plane for New Orleans. At the gangplank, I turned around and took one last look at the land of Mayas where I had had so many thrilling and interesting experiences.

I shall end this article with the very beautiful word which I said at that moment, a word that is to the Spaniards a benediction and a farewell, "Adiós."

Too Many Snakes in the Civil Rights Report

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. ERVIN. Mr. President, on September 9, a most interesting editorial was published in the Greensboro (N.C.) Daily News, which is one of the Nation's truly liberal newspapers in the grand old sense of that term. The editorial is entitled "Civil Rights Report: Too Many Snakes."

The editorial is a very wise one; and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greensboro Daily News, Sept. 9, 1959]

CIVIL RIGHTS REPORT: TOO MANY SNAKES

No wonder the Civil Rights Commission is badly split on its sweeping new recommendations designed to combat racial discrimination.

Even moderate southerners on the Commission opposed certain proposed constitutional amendments and Federal laws which would upset the traditional balance between State and Federal Government.

Key recommendation of the six-man Commission—but opposed by one member, former Gov. John S. Battle of Virginia—calls for Federal intervention if nine or more persons complain of having been denied the right to vote on a discriminatory basis.

The complainants would submit affidavits to the President who would relay them to the Civil Rights Commission for investigation. If the Commission found the complaints to be valid, the President then would appoint any local Federal official in the affected county or district to step in as registrar.

The Federal official—he could be a postmaster—would handle these duties until the President saw fit to return registration to local control. Persons certified to vote would then be able to vote only for Federal officers.

This recommendation stems from the Commission's investigation of voting discrimination in the Southern States, particularly Alabama and Louisiana, where large groups of Negro citizens are denied the ballot. The Commission found little or no cooperation on the part of some white officials in recognizing voting rights.

This is an issue basic to representative government. If a Negro is a citizen, he should be treated as any other citizen in his right of franchise. What can be done when the race which controls the political machinery at the local level will not recognize basic rights?

Every intelligent American citizen recognizes the need for remedial action here, but all will not agree that control of election processes should be removed from local hands and enforced by Washington.

The answer, in the Daily News' opinion, is not more Federal regimentation, which already has produced a continuing furor in the public schools.

The answer lies in education, appeal to the good conscience of the white South and assistance for southerners anxious to correct abuses but unwilling to upset built-in balances to accomplish even worthy ends.

Obstinate, prejudiced men and women—both North and South—will vanish or mellow in their passions as time passes. But destructive changes in the division of powers between local and Federal Government cannot be easily corrected once they are made.

The Daily News has been a longtime champion of basic rights of citizenship in a democracy. Every qualified citizen ought to be allowed to vote.

But the Civil Rights Commission is simply stirring up more snakes than it can kill by suggesting that the answer to a passing phase of racial discrimination is destruction of necessary balances between State and Federal Government.

Khrushchev Visit—Dedicated to Our Destruction

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call the attention of my colleagues today to an excellent analysis of the pending visit of Soviet Premier Khrushchev to this country, which has been prepared by Mr. Charles Rozmarek, national president of the Polish American Congress. This analysis appeared in the Chicago Tribune on September 10, 1959.

Mr. Rozmarek has been one of the most courageous fighters against Communist internationalism that this country has ever had. Mr. Rozmarek has a distinguished record, not only as president of the Polish American Congress, which represents 7 million Americans of Polish descent throughout the United States, but also as president of the Polish National Alliance, which is the largest Polish-American fraternal organization in this country.

Mr. Rozmarek's analysis follows:

[From the Chicago Tribune, Sept. 10, 1959]

"DEDICATED TO OUR DESTRUCTION"

CHICAGO, September 8.—Twenty years ago on September 17, Russia, as Hitler's accomplice, stabbed Poland in the back. It is ironic that Khrushchev's visit to this country should be timed to coincide with this sad anniversary.

As president of the Polish American Congress, representing 7 million Americans of Polish descent, I have conferred with President Eisenhower on several occasions, as I have with his predecessors, President Roosevelt and President Truman. While I have the greatest admiration for our President's dedication to peace, I would be derelict in my duty if I did not voice disapproval of Khrushchev's visit to the United States.

This is the same Khrushchev, who as a member of the Kremlin regime, shares responsibility for the mutilation of Poland, the seizure of Lithuania, Latvia, and Estonia, the Communist control of Czechoslovakia and other countries in Europe and Asia, the Katyn massacre of 15,000 Polish war prisoners, the betrayal of the Warsaw uprising, the planned starvation of millions of Ukrainians, the deportation of 40 million innocent people to Siberian slave camps, the slaughter of Hungarians, the murder of American soldiers in Korea, and the shooting down of unarmed American planes.

This is also the same Khrushchev who, despite the fact that America rescued Russia from Nazi enslavement when Hitler was at her throat, has threatened to bury us.

Although a glance at the map will show that communism is the only aggressive force, Khrushchev recently announced that he is reinforcing his army and navy "to keep them in a state of high battle preparedness."

Let Americans beware. Unless we have a strong, firm, and courageous America, ready to meet every threat, Russia will attack us without warning, just as she did Poland 20 years ago.

There is no use pretending. The master of the Kremlin is not coming here to promote peace. He is coming here with his entourage of master spies to survey the land he wants to conquer, to capture the front pages of the press of America, and to relax our guard by telling us that communism is never an aggressor and, therefore, America has no need to protect itself with H-bombs or overseas bases.

Although our Government will extend Khrushchev the courtesies demanded by protocol, we are told that we also owe him a courteous reception. We owe him nothing. We are under no obligation to greet anyone dedicated to our destruction.

This is one time when Americans of all persuasions should present a united front on the side of freedom and decency. In addition to religious services in all Protestant and Catholic churches and synagogs for the victims of communism, there should be in all cities to be visited by Khrushchev peaceable demonstrations of people carrying signs advocating "Freedom for Captive Nations." Is there anything wrong in asking the Russians to back up their words of peace with deeds?

Moreover, such an orderly demonstration would show Khrushchev and the world how fortunate we are to live in a free country where we have a right to disagree with our leaders, without fear of reprisal, and they in turn approve of our right to disagree with them.

CHARLES ROZMAREK,
President, Polish American Congress.

Don't Rob Your Children of Struggle

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. THURMOND. Mr. President, Human Events, Inc., enlists many of the Nation's outstanding citizens to write on topics of vital interest to the Nation. In the August 19, 1959, edition of Human Events, former Congressman Samuel Pettengill brilliantly discusses the need for some degree of struggle in the lives of man. He deplores the trend toward the welfare state. I ask unanimous consent that the article, entitled "Don't Rob Your Children of Struggle," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DON'T ROB YOUR CHILDREN OF STRUGGLE—OUR YOUTH MUST BE TRAINED TO FACE TOMORROW'S CHALLENGE

(By the Honorable Samuel B. Pettengill)

"The chessboard is a symbol of life—of all life. The essence of life is struggle. Take struggle out of chess, or out of life, and what is left? In chess I have found happiness." Those words were spoken 35 years ago by Emmanuel Lasker of Berlin, who had reigned as world chess champion for 24 years.

Lasker was not a mental freak. He had a Ph.D. in mathematics and wrote a profound book on philosophy. He had come to my hometown of South Bend to put on an exhibition match with some 30 local chess players. At supper that night we asked him why he had given so much of his life to chess. He gave the response quoted above.

That was a long time ago, but I have never forgotten his words. I have often said to young parents, "Don't take struggle out of your children's lives." The instinct of fathers and mothers is to do just that—to make "life easier for my boy than it was for me." It is interesting to note that youth is sounder in this matter than age. Youth revels in competitive sport, whether to do something better than its fellows or to beat some previous record. Even small children, when they invent games of their own, always put struggle into them. Struggle is a blessing to be sought for, not an evil to be avoided.

In recent years, society has gone "nuts" on the pusillanimous cult of "security" guaranteed by Government; in short, a nation of parasites. The illusion of the age is that people can vote themselves rich. It is a superstition that "social security" depends on the promises of politicians, not on the character, competence, and courage of men. It is a fable and a fraud that the output of society can be greater than the input of individuals.

It is a universal complain that nobody wants to work any more, or only enough to "get by." Employers are frantic for dependable employees. Labor unions have the laudable desire to improve the position of their members, but they overplay their hand when they say, "Stretch it out. Take it easy. Do no more than enough to stay on the payroll."

When young people apply for their first jobs they ask, "When will I begin to draw a pension? How many coffee breaks in a day? How many paid holidays? How long and frequent are the paid vacations? And if I work more than 40 hours in a week do I get time and one-half?"

The young men who ask none of these questions are sure to get and hold jobs. These young men have a golden age ahead of them. They will have less competition than their kind of men ever had—and greater rewards.

Theodore Roosevelt attracted national attention when he said: "I wish to preach, not the doctrine of ignoble ease, but the doctrine of the strenuous life." He said of himself, "Let me wear out, not rust out." He told young men to hit the line hard. At a time when any woman who had more than two children was considered subhuman, if not a little indecent, he told women not to shirk their prime function to bear children.

Theodore Roosevelt dreamed nobly of his country, and, by the fire of his example, lit other fires in millions of homes. It was said that Washington founded the Nation, Lincoln saved it, and T. R. revitalized it. He appealed to the strong side of men as is now chiefly done by Marine sergeants and the coaches of athletics like my old friend, Knute Rockne.

"Rock" had no use for "lounge lizards" or "tea hounds" on a college campus. Youth liked that. They flocked to Notre Dame to play under him, and when his players were behind at the half they proceeded to pull the game out of the fire because "we can't let 'Rock' down."

A century ago Giuseppe Garibaldi appealed to the strong side of men with these words: "Young men of Italy, I offer you nothing but the water of the streams as your drink. I offer you nothing but black bread as your food, and nothing but the blue canopy of heaven and the lights of the eternal stars as your covering at night. But if you follow me, young men of Italy, you and I will be free." They followed him and Italy became a united country.

But today the general appeal is to the soft side of men—envy, self-pity, covetousness, class hatred. Our elections have become auctions in which rival politicians of both old parties open the door of the Treasury in exchange for votes. "Come and get it" is the slogan as people become the vandals of their own country, and "bread and circuses" the formula for political advancement.

Men like John Dewey have tried to eliminate struggle from the classroom. No required subjects. No examinations. They develop inferiority complexes, rather than the challenge to do better. Never punish a child. Children should be wholly free. And so forth. The result is that employers despair because "Johnny can't read and Mabel can't spell."

So we have cities with few citizens; many who wish to share the blessings of liberty, but shirk its burdens. This is not the spirit of 1776, nor of the great chess master, nor of Theodore Roosevelt. America needs a rebirth of the strenuous life and I know I am talking to young men who will take their part in it.

It was said of those who crossed the Appalachians down into the valleys of the Ohio, the Mississippi, and the Missouri and pushed the frontiers of freedom to the Pacific shore that "the cowards never started and the weak never arrived. With no capital save courage and no resource except resourcefulness they built the American empire."

In Vermont there are hundreds of miles of stone walls—every stone dug from the ground and moved to where it now lies by oxpower and human muscle alone. We think of the Pyramids of Egypt, and the tens of thousands of slaves who dragged the huge stones across the desert under the whips of their masters. It is my guess that the stone walls of Vermont represent more toil than the pyramids. But the walls were laid by the free choice of freemen. They scorned delights and lived laborious days.

Avoid struggle and life becomes sterile, vapid, and meaningless. Our mental hospitals are being filled with thousands of neurotics, many of whom feel inadequate to meet life because they were protected from taking the bumps in childhood.

No man was ever greater than the difficulties he overcame. Great difficulties, great men. Small difficulties, small men. From struggle comes strength—and physical and mental health.

It is only struggle that calls forth hidden powers we do not know we have. The great psychologist, William James, said the average person does not put forth more than 10 percent of his potential.

My great grandfather, Peter Pettengill, came to Vermont in 1787. One time his hired man was chopping down trees in the virgin forest and did not come to the house at noon for lunch. My great-grandfather went to see what was wrong. He found that a tree had fallen on the hired man and killed him. With nothing but the strength of his own powerful body, Peter lifted the tree off the dead man and carried him to the house.

Whence came his strength to do that? From the challenge before him. That tree was never cut into timber or firewood. It lay where it fell. Other strong men in the neighborhood came and tried to lift it. They could not. Why? Because they did not have the incentive that Peter had. Nor could Peter himself ever lift the tree again. The incentive was gone.

You have all seen athletes at times "play over their heads." Why? Because of the challenge and its acceptance.

It is men who have counted struggle as a blessing who get the big rewards of life. As Emerson said, "God keeps an honest account with men."

The hard surgical case, where life hangs by a heart beat, does not go to the dilettante surgeon. The tough engineering problem, like building a bridge across a mighty river, does not go to the engineer who has always looked for the easy jobs. And the same for lawyers and top executives in business.

If at times you feel that you "did not have the same chance" that others have, ask yourself what chance did Abraham Lincoln have? Remember that "it is not so much the size of the dog in the fight that counts, but the size of the fight in the dog."

Young people today face a time of struggle with an enemy of our country more dangerous than King George III in 1776—the godless Caesars of atheistic communism. Let's lick it. Put it and all its teaching out of our schools, churches, public affairs and private life. What our fathers bequeathed us is still "the last best hope of earth." Save it for our boys and girls.

Remember robust Robert Browning: "I count life just a stuff to try the soul's strength on, educe the man."

Remember Tennyson's Ulysses and the old Greeks "who ever with a frolic welcome took the thunder and the sunshine"—hard hours with the same zest as the pleasant ones.

Remember the poem of the frontier:

"I dream no dream of a nursemaid state
That spoons me out my food.
No, the stout heart sings in its strife with fate,
For the toil and the sweat are good."

A Congressman's View of Technical Cooperation

EXTENSION OF REMARKS
OF
HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include an article published in the May issue of the Annals of the American Academy of Political and Social Science, entitled "A Congressman's View of Technical Cooperation."

The title of the article really does not do it justice, because it does not convey the important fact that the author is a Congressman who is uniquely qualified to write on technical cooperation. The author is the Honorable PORTER HARDY JR., the distinguished and exceedingly able Member of this House from the Second Congressional District of Virginia. He is the energetic and capable chairman of the Subcommittee on International Operations of the House Committee on Operations. This subcommittee has done outstanding work in investigating our Government's operations abroad, and the disclosures which his subcommittee has developed have been most helpful to the Congress in evaluating our foreign aid program. Representative HARDY'S article points out that the technical cooperation program has been a wonderful success in many places, and he makes clear that it is out of a sincere belief in our technical cooperation programs, and his concern for their success, that he has found himself in the role of a critic. I add, however, that in my view he is a most constructive critic.

The article follows:

A CONGRESSMAN'S VIEW OF TECHNICAL COOPERATION

(By PORTER HARDY, JR.)

Advocates of particular points of view commonly characterize as opponents those who are not enthusiastic supporters. For example, if a Congressman makes a speech or writes an article criticizing the conduct of a particular Government program, he is forthwith considered as against it. When, as is often the case, he couples with his criticisms a pledge of support for the program he is apt to be accused, as politicians sometimes are, of talking out of both sides of his mouth at once, doubtless with an eye on the next election.

More careful observers recognize constructive criticism. They know that the adverse comments which Congressmen make about given activities of Government do not always have ulterior motives. Instead, critical observations by Congressmen may often arise out of a sincere belief in and a profound concern for the very things being criticized. It is out of a concern for the success of our technical cooperation programs that I find myself in the role of critic.

We in the Congress have listened carefully year after year to the reports of performance and claims of accomplishment for these programs which are sent up by the International Cooperation Administration and the Department of State. Along with most of my colleagues from both sides of the aisle I have consistently voted funds for their continuance. But, as chairman of a House subcommittee charged with the duty of studying U.S. international operations, I have also had some special opportunities to observe their day-to-day conduct, and I have not always been gratified by what I saw. It is out of the experience of the past 4 years, in which I have studied at close hand technical cooperation programs from Iran to Uruguay, and from Cambodia to Mexico, that my judgments have been formed.

AIMS AND PHILOSOPHY OF PROGRAM

The objectives of this program are most inspiring and unselfish, particularly for an actively undertaken by one government on behalf of another. The technical cooperation program is founded in hope and optimism. It envisions a future in which, through the sharing of technical knowledge and skills, a better life can be created for millions of people in other lands—people for whom over the centuries tomorrow has always been bleak.

It is by no means accidental that the United States has led the way in this bold and imaginative undertaking. The stoic acceptance of life as it is has never been an American characteristic. We have always considered ourselves masters of our fate. Coupled with this confidence is a deep humanitarian urge which impels Americans into action whenever they see human misery caused by poverty, starvation, disease, and ignorance.

Moreover, when such conditions exist in lands with untapped resources, to an American it appears that what is needed is the application of American know-how to make the stubborn earth yield its stored abundance, to push back the ancient enemy of disease, to feed and clothe and house the people and give them the hope for tomorrow which seems so tragically lacking.

This is the central objective of the technical cooperation program. This is the valid element which finds a response in the heart of every American. This is why Congress so consistently supports this effort.

A praiseworthy objective, however, does not by itself assure success. Good intentions must be matched by wise actions. It is from this standpoint that it becomes the duty of even the most ardent supporters of technical cooperation programs carefully and coolly to examine the nature of these activities and the way they are carried out.

Section 418(a) of the Act for International Development of 1950 defines technical cooperation programs as "programs for the international interchange of technical knowledge and skills designed to contribute to the balanced and integrated development of the economic resources and productive capacities of economically underdeveloped areas."

The United States contributes to this effort in three ways; by sending U.S. technicians to work in the host countries, by bringing host country personnel to the United States for training, and by contributing to the support of special joint bureaus set up within the host governments to carry out technical assistance programs. The emphasis throughout is intended to be upon the transfer of skills and know-how. Any expenditure for capital equipment is supposed to be limited to that needed for demonstration purposes only. It is, in other words, intended to be a program of education, not of economic aid.

The implications of this form of foreign aid are worth noting. One of the presuppositions of technical cooperation programs is that there are human and physical resources in the host country which will be employed as soon as the necessary know-how is made available. Another presupposition is that the host country can and will initiate, or take over and continue on its own, a given activity once the method of doing it has been adequately demonstrated. Finally, the concept presupposes that technical cooperation funds will not be employed to continue a given activity after know-how has been acquired by the host country. If additional U.S. dollars are necessary, they should either be provided through private sources or through other categories of the mutual security program.

Out of a total of nearly $4 billion of the President's budget request for the fiscal year 1959 mutual security program, $164 million—about 4 percent—was for technical cooperation. Thus the technical cooperation programs do not involve large sums of money when compared to the billions which we spend each year on other foreign aid activities. A portion of this amount represented U.S. contributions to technical cooperation programs carried out through international organizations like the United Nations and the Organization of American States. Of the total, however, $142 million was for bilateral programs set up by agreement between the United States and individual host countries. The following comments relate principally to the bilateral programs.

I have already expressed myself as being impressed with the inspirational aspects of technical cooperation. It provides people-to-people contact—an element which should be supplied but is generally lacking in other aspects of our foreign aid program. Military assistance programs all over the world serve to protect the freedom of countries and their citizens—but the impact of such programs is not felt directly by the people. Military hardware does not fill empty stomachs. Economic assistance dollars too often are used for monumental projects such as dams and roads—projects which are primarily dedications to national pride. Although over a long period of time they contribute to an improved economy, they have little or no significance in the here and now for the ordinary man. The only programs that immediately encourage and directly help the individual are those embraced under the point 4 concept—that is, technical cooperation. Through these programs, individuals are helped to better health, to useful and enlightening education, to a more adequate diet, and to improved sanitation and housing.

In the current year over 3,000 American technicians are working abroad in some 50 countries. Most of these technicians are working with their counterparts overseas in the fields of food production, public health, and education. These are basic areas for the improvement of living standards. Some programs have been broadened, in response to changing needs, to help solve problems of transportation, housing, industrial management, public administration, and community development.

AGRICULTURE

In many countries technical cooperation programs have shown the way to better methods of cultivation, improved plant varieties and breeds of farm animals. Through these and the application of fertilizer to crops, improved tools and implements, control of plant diseases and insect pests, the production of food for hungry and growing populations has been vastly increased.

Even slightly improved tools or better methods of cultivation often make immediate and striking improvement. In Iran, a demonstration of the advantages of using a moldboard plow instead of a pointed stick in sugar beet cultivation resulted in three times the yield. In Ethiopia, a simple change to row planting of corn instead of broadcast planting increased production from 18 bushels an acre to 30 bushels.

Agricultural vocational schools and colleges have been opened in a dozen countries as a result of technical cooperation.

Through agricultural extension activities, additional channels have been opened through which a continuous supply of scientific information flows to the farmers themselves in a form which they can understand and apply.

HEALTH AND EDUCATION

The original activity of technical cooperation in Venezuela was in malaria control. In 3 years, malaria dropped from third place to sixth among causes of death. In the Philippines, malaria incidence fell 68 percent as a result of DDT spraying. The malaria control program, in addition to its striking accomplishments toward better health, had the important side effect of tremendous expansion in food production—particularly in Indonesia and Iran. Mosquito control restored to cultivation much highly productive land which previously had been abandoned because of malaria.

The surge of interest in education in all newly developing countries is a phenomenon of the present era. In 1946–47 in Cambodia there were 38,000 children in primary schools; in 1955–56 attendance was 241,000. In Iran, since the U.S. technical cooperation program began in that country, school enrollment has increased from 20,000 in 1948 to 45,000 in 1955. The great need everywhere is for trained teachers, and technical cooperation projects in education have concentrated on filling this need, helping to give preservice training to more than 17,000 teachers and in-service training to more than 46,000.

I have given only a few examples to illustrate the operation of this program and the benefits it has produced.

Let us consider in more detail another example of accomplishment, in order to discuss the criteria applicable to a technical cooperation activity. In Chile, the Government had sought over many years to establish a satisfactory program of preventive medicine. As part of the U.S. technical cooperation program in the field of health, during the period from 1943 to 1953, five health centers were established and operated in strategic locations. These centers have since been turned over to the Chilean Government, which continues to operate them today. More important, using these original centers as a pattern, the Chilean Government has constructed ten additional health centers in Santiago Province alone and has made such centers the basic field unit in a reorganization of the Chilean National Health Service.

All the elements of a successful technical cooperation project were present in this case: (1) The project dealt with a problem which had been of concern to the host government; (2) it involved a demonstration of a method of solving the problem; (3) it resulted not only in an activity which could be and was turned over to the host government, but it stimulated expanded and continuing action by the host government in this particular field.

We have, as a matter of U.S. policy, sought to insure the presence of these elements by stipulating three conditions to be met in carrying out a technical cooperation activity. First, the host country must request it. Second, the host country must pay a fair share of its cost. Third, it must be related to efforts being made by the host country itself.

HOST COUNTRY REQUEST

These are wise provisions which, if adhered to with reasonable consistency, would guarantee that every program and project was a truly cooperative undertaking. If we conduct only those programs which the host country requests we can be sure that we are responding to a genuinely felt need; by the contribution of host country funds, local interest in a program's success can be both measured and sustained; and by establishing a relationships with other activities and plans of the host country not only can we contribute to balanced progress and development but the encouraging effect of our help can spread beyond the individual programs.

Unfortunately, in altogether too many instances, these sensible rules have been broken. Investigations by our subcommittee disclosed that some projects were being implemented where host country approval had been obtained through insistence by U.S. representatives rather than as a result of a bona fide interest in the part of the host government. To be sure, a formal request by the host government was on file, but it was little more than a piece of paper drawn up to meet technical requirements. Sometimes these projects originated simply because particular U.S. specialists were available and wanted to undertake them. In other instances, pressure from Washington was put upon U.S. field personnel to get certain types of projects underway. Almost invariably, as might be expected, such projects ultimately were financed almost entirely with U.S. funds. The interest of the host countries was as small as their contributions.

HOST COUNTRY CONTRIBUTION

The second requirement, that the host country contribute a fair share to the support of projects, has also been applied very unevenly. In one country we found that the United States has been paying over $1 million a year to support an agricultural program on the basis, not that the host country could not support it, but that it would not. In another, our technical cooperation funds were being used not to supply know-how but to underwrite a routine Government activity, which is not in the spirit of the technical cooperation legislation. In a third country; a major agricultural project was of such little interest to the host country that when the time came to put in its contribution it refused to do so, even though we had allocated more than three-quarters of a million U.S. dollars to it.

The proportion of local support for individual programs and projects varies widely even within a single country. What appears to emerge is that host country contributions have been made to some projects and not to others, depending on the extent of host country interest in them. This, of course, is why the fair share requirement was instituted in the first place, but it has not been fully or adequately adhered to by U.S. administrators.

The importance of the level of host country contributions cannot be overemphasized. It is not a matter of specific amounts of money, for these might vary considerably from country to country and even from time to time within a given country, depending on the local financial situation. What is crucial is that the most reliable index of a host country's interest in a program or project is not how much it is willing to have the United States invest in it, but how much the country itself is willing to contribute.

The heart of technical cooperation is the idea of self-help. There is little to be gained by imposing on others plans and ideas in which they have no interest. These programs are intended to be cooperative efforts. Unless the recipient country wants and believes in a project or program, enough to put its own funds into it at whatever level it can afford, the cooperation aspect is lost.

In this connection, reports given to the Congress on the extent of host country contributions have been more than a little misleading. These are usually expressed for comparative purposes in terms of equivalent dollars. Yet, by the use of par-value exchange rates which have no current significance, the contributions of some countries have been greatly exaggerated. We found, for example, one country where local contributions as presented to Congress had been magnified in this way by a factor of 20. In other instances, under a category called contributions in kind, a dollar value had been placed on a number of intangibles and everything conceivable has been counted as a host country contribution, including duties they had waived collecting on imports for the program. Most ridiculous of all was reporting, as a host country cash contribution, the local currency obtained by the sale of U.S. commodities we had given them.

As I have pointed out earlier, local contributions, when account is taken of the general financial situation of the host country, can be most revealing about local acceptance of programs and projects. I therefore believe that more effort must be made to adhere to the "fair share" rule than is now the case. I make this observation out of a conviction that the planning of programs, their day-to-day conduct, and their chance of achieving their ultimate goals will be improved thereby.

PROJECT PLANNING

The third requirement, that programs be related to efforts being made by the host country itself, brings up the question of planning. What seems to be absent in most cases is a realistic estimate of the situation. Projects are often initiated with only the most hazy idea of how extensive a problem is involved, without determining in advance the availability of the technical personnel who will be needed, and without fixing a goal by which progress toward completion can be measured. Few projects are based on the kind of preliminary survey and analysis which would determine how much of what kind of technical knowledge or skill needs to be and can be supplied over what period of time. In place of careful planning, the tendency is simply to initiate and to expand programs, in the words of one overseas U.S. program officer, "to provide facilities which haven't been provided heretofore."

It is this approach which leads to pressures from Washington and even from officials in the field to get projects underway, not so much because they are relevant to local needs, but because a similar activity is underway in some adjacent country. This is hardly a sound basis for relating programs to activities of the host country, and it has accounted for a number of notable failures. Fits and starts in other cases have occurred because the problem of recruiting technical personnel to carry out the work was not adequately considered. In Uruguay, for example, a program in health was delayed for more than a year after the chief of the program arrived because four or five technicians could not be supplied.

CONCLUSION

Reviewing these observations, it is clear that most of the faults in technical cooperation programs are matters of administration. Yet, paradoxically, some of them are at the same time tributes to the good intentions and zeal of the administrators who have been activated by a strong desire to obtain tangible results and impatient in their haste to reach ultimate goals. One can applaud enthusiasm—but not when it initiates action with inadequate planning and results in wasteful errors caused by hasty judgments.

A basic trouble, I am coming to believe, lies in a failure to appreciate the fact that there are significant limits to the rate at which technical knowledge and skill can be absorbed by an underdeveloped economy. As Americans we are attuned to a dynamic and open society in which technological change is rapidly assimilated. We must keep in mind the fact that the differing societies of many underdeveloped lands cannot now make use of all the skills we can offer them. First, some far-reaching changes must take place in the nature of the societies them-

selves. What I am referring to, of course, is the problem generally called cultural lag. For example, it may be possible in a given country to suggest improved methods of agriculture and yet have few of them adopted because to do so may require a revision of age-old traditions of land tenure and ownership and perhaps even of family relationships. Similarly, technical improvements in tax administration may require a totally different view of the role of government within a given culture. Such changes do not come about quickly nor do they result from the availability of technical knowledge. The need for improved skills may be apparent now, but the demand for them may require cultural changes which time alone can bring.

No one is better fitted to take such considerations into account than host country officials who, of necessity, are representative of their own culture. This is why the participation of the host government in planning and carrying out technical cooperation programs is of such paramount importance. This is why unilateral judgments by U.S. officials of what projects are to be undertaken should be discouraged.

It can, of course, be argued that adhering strictly to the rules might result in a reduction in the number and scope of activities now underway. This, indeed, might prove to be the case and in some instances it might be wise. It is also possible that sounder programs might result. In addition, there is a real possibility that when full account is taken of the limits imposed by cultural lag, to say nothing of administrative matters like the recruitment of adequate numbers and kinds of U.S. technical personnel, the seemingly modest level at which these activities are operating may turn out to be very nearly the maximum which is currently feasible.

I have not commented on the relationship of these programs to our more costly undertakings in the fields of outright economic assistance and military aid. Obviously they are related, since improved economies and greater military strength require added technical knowledge and skills. Conversely, the full use of such knowledge and skills may depend upon the addition of considerable amounts of physical capital.

Technical cooperation is basically education, and it is as an educational activity that it must be assessed. In my view, its fundamental concept is sound. The broad policy guides which have been set up for its conduct are inherently wise. If to the good intentions of the U.S. officials administering these programs there can be added sounder judgment, and a greater degree of commonsense, I believe we will more fully accomplish our purpose.

For its part, Congress, I am sure, will continue to give this activity its strong support. It is to be expected, however, that a careful congressional eye will be kept on technical cooperation operations, and that the sharpest criticisms will still come from those Members of Congress who most devoutly want these programs to succeed.

Teenage Boys Snatch Girl From G.I., Rape Her

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, September 10, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I wish to bring to the attention of the Senate an article appearing in the Washington (D.C.) Post and Times-Herald of September 9, 1959, entitled "Teenage Boys Snatch Girl From G.I., Rape Her."

Mr. President, this article relates how a group of Negro youths snatched a screaming 18-year-old white girl from her soldier companion and raped her in a wooded area near heavily traveled East River Drive in Philadelphia.

This is but another instance in the growing and mounting series of tragedies which are besetting the large cities of America where forced integration has become the so-called law of the land.

Mr. President, until the people of this country realize that integration can only exist peacefully in places where people voluntarily prefer it, we will continue to have incidents such as these and the thousands of others that have occurred and are occurring in New York, Boston, Chicago, St. Louis, and other cities I have mentioned recently on the floor of the U.S. Senate. There will be no end to such violence and disrespect for law and order so long as integration is forced upon unwilling people.

Mr. President, I ask that this article from the Washington (D.C.) Post and Times Herald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post and Times Herald, Sept. 9, 1959]

TEENAGE BOYS SNATCH GIRL FROM G.I., RAPE HER

PHILADELPHIA, September 8.—A group of Negro youths snatched a screaming 18-year-old white girl from her soldier companion and raped her in a wooded area about 100 yards off heavily traveled East River Drive.

Police said the attack took place late Monday afternoon in the city's Fairmount Park area. The victim said she was grabbed by a gang of 10 or 15 teenage boys.

She said she and her companion, Arthur Izers, also 18, were walking through the park when approached by the band of Negroes, all about 17 to 19 years old. She told Park Guard Frank Stewart that seven of the youths grabbed Izers, while the others pulled her behind some bushes, ripped off her blouse and shorts and assaulted her repeatedly.

Izers, an Army private, stationed at Fort Dix, N.J., finally broke loose and dashed for the River Drive. He hailed four motorists who followed him back into the woods. When they reached the scene, the youths fled into the woods.

Police and park guards arrested 25 suspects, but all were released for lack of identification.

Oceanographic Research

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, recently the American Legion in national convention assembled adopted a resolution endorsing oceanographic research. Since the Committee on Science and Astronautics, of which I am chairman, has had this matter under study, I commend this resolution to my colleagues for their consideration.

RESOLUTION 640 (CONVENTION COMMITTEE ON NAVAL AFFAIRS) OCEANOGRAPHIC RESEARCH

Whereas the knowledge of the scientific phenomena related to the world's oceans at present is extremely meager compared to their paramount importance;

Whereas the world's oceans cover three-fourths of the earth's surface and are daily increasing in importance to the destiny of the free world;

Whereas increased utilization of marine resources provide a promising food potential in the face of the explosive increases of the world's population;

Whereas the world's oceans provide a future source of atomic fuel, mineral resources, and fresh water supply;

Whereas there is an increased mutual interdependence of the nations of the free world for non indigenous strategic materials in view of expanding technological applications;

Whereas the United States and the free world depend for sea lift of 99 percent of all materials exported;

Whereas the United States depends largely upon utilization of the world's oceans by its naval forces for its capability to cope with limited war and international crises all over the world;

Whereas th threat of enemy submarine launched missile attack against the United States is now a reality; and

Whereas there is an urgent need to provide a comprehensive long range program for oceanographic research embodying an accelerated increase in oceanographic research and survey ships, laboratories, schools and scientific personnel: Therefore be it

Resolved, That the American Legion National Convention assembled in Minneapolis, Minn., August 24–27, 1959, indorses the overall 10-year plan for ocenanographic research as outlined in the Report of the Committee of Oceanography of the National Academy of Sciences and the U.S. Navy.

Judge Orel Busby Honored

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. STEED. Mr. Speaker, the Young Democratic Clubs of Oklahoma staged a dinner on August 29 at Ada, Okla., to honor Judge Orel Busby of that city as the founder of the Young Democratic Club movements in America.

This occasion was made more outstanding by the presence of America's most distinguished Democrat, the Honorable SAM RAYBURN, Speaker of the House. The remarks made at this occasion by Judge Busby were so impressive by virtue of their sincerity and profoundness that I believe our colleagues in Congress will find them of great and refreshing interest. Judge Busby's remarks follow:

Governor Nigh, and friends, all, in reality my part on this program tonight should be

only to say "Thank you," but I want to say a little more.

First, I appreciate that gracious and flattering introduction. After that introduction, I should probably—in courtroom language—rest my case before this court of public opinion. Surely anything I might say from this point forward will only decrease your estimate of me.

I addressed you as, "Friends, all." I consider that every person present falls in that category. Your printed history has on it—very much in evidence—my name. But you can readily understand that my real part in this program might be expressed in the words of the Roman philosopher who wrote, "A fly sat upon the axle of a chariot wheel and said, 'What a dust do I raise.'" Figuratively speaking, I am only the fly on the chariot wheel. The chariot wheel of this program, so to speak, is this distinguished audience and our distinguished guests.

But I would be less than human if I did not express to you my sincere appreciation of my part in this program tonight—even though I feel that my use of the English language is inadequate to express fully my feelings.

One's work in life is worth only so much as the things about which he busies himself. In the opinion of Oklahoma's young Democrats I must have busied myself in my youth about something worthwhile when I aided in the formation of an organization which might be considered Oklahoma's first political youth movement. From its humble beginning the youth movement of 48 years ago is now credited with making a lasting impression upon the political history of this State and possibly of the United States.

Shakespeare said, "All the world is a stage, and the men and women are merely players. They have their exits and their entrances, and one may, in his time, play many parts." Tonight's meeting pleasantly reminds me that in my early youth I made an entrance and played a small part on the political stage of Oklahoma. Also that the young Democrats of Oklahoma now believe that I am entitled to be awarded an "Oscar," so to speak.

The youth of 48 years ago were no different from the youth of today. They were idealistic—certainly they wanted to be recognized—and they were reformers as youth has always been, in all ages and in all times. But you can see the effect of these youth movements.

We had another youth movement at our last State election, and it resulted in the election of a youthful brilliant Governor, J. Howard Edmondson, who is honoring us with his presence tonight, and also a youthful and brilliant Lieutenant Governor, who is so ably presiding here tonight.

I see in the audience tonight many contemporaries who helped form the organization of young Democrats and who, in the early years of its existence, worked hard for its success and who deserve as much credit as I. Their presence brings me nostalgic memories of my college days and of my youth. These memories bring treasured emotions and sentiments. These Oklahomans here tonight can take pride in their accomplishments. They have been tall men. Refer to the printed history of the league and to the list—which is partial only—of those who worked hard the first few years of the existence of this organization to make it a success. And then look at the successful accomplishments, as Oklahoma citizens, of those listed as living. And I pause to pay tribute, with feeling, to those listed as dead and to their accomplishments.

Also in our audience tonight, I see many prominent Oklahomans who are leaders in business, professional, and judicial circles. I see prominent officeholders and men with whom I served on the supreme court. And I see a large number—youthful and mature—of very important persons in the Democratic Party in Oklahoma. These persons range from earnest party workers to a very able and a very distinguished U.S. Senator, Senator ROBERT S. KERR. BOB was born and reared here in Ada—and we Adans are justly proud of his great accomplishments.

And I see a few prominent Republicans, personal friends, for whose presence and friendship we feel grateful.

And as the capsheaf of this splendid audience, we have honoring us as the principal speaker, the Honorable SAM RAYBURN—not just a politician, but a lovable statesman of international stature, whose influence over world affairs is probably second only to that of President Eisenhower.

As I make my exit from the political stage—actually I made it in 1942—I make this observation to the many officeholders and prominent politicians present. When I was actively engaged in politics I received my share of the brickbats that come to the protagonist in the political arena whose interests clash with others. Now, at my exit from the political arena, it appears that flowers and not brickbats are coming my way. And I assure you, with feeling, that a few bouquets in your lifetime are worth a truckload on your grave.

But my wife warned me not to become too "drippy" in this response and not to give vent verbally to too many mixed emotions. She brought me back to earth with a definition she heard on TV—to the effect that mixed emotions are what a man feels when he sees his mother-in-law tumbling over a cliff in his new Cadillac.

As further appreciation of this occasion tonight, I want to thank again all the young Democrats who have made it possible. Special mention should be made of Jim Hamilton, Bob Ford, Bob Bennett, Henry Roberts, Daryl Cody, and the splendid group of young helpers, in whose minds the idea for this program was born, and who have worked untiringly to make this occasion a worthwhile success.

And I would feel remiss if I did not refer to the honor bestowed on this gathering tonight by the presence of five of our very able and very outstanding Congressmen from Oklahoma, CARL ALBERT, TOM STEED, ED EDMONDSON, TOBY MORRIS, and JOHN JARMAN. We are especially indebted to my lifelong friend, TOM STEED, and to our brilliant neighbor from McAlester, CARL ALBERT, for their part in obtaining Mr. SAM to lend his name, his prestige, and above all, his presence to this gathering.

Finally, special attention should be called to this beautifully presented history furnished us, and to those who made it possible. I shall cherish mine as a valued souvenir.

We are also indebted to the good ladies of the garden clubs of Ada, who have so beautifully decorated this room with flowers.

Again, and from the depths of my heart, I say—

Thank you, friends, all.

One Hundred and Seventy-fifth Anniversary of Montgomery County, Pa.

EXTENSION OF REMARKS

OF

HON. JOHN A. LAFORE, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. LAFORE. Mr. Speaker, today, September 10, 1959, Montgomery County, Pa., which is also the 13th Congressional District, celebrates the 175th anniversary of its founding.

On the occasion of this anniversary, it is with great pleasure that I join with my friends and neighbors, in extending birthday greetings.

This milestone in the county's history clearly demonstrates the ability and dynamic purposefulness of our citizens to work together for a cause that is beneficial to all. We are very proud of our county and its development over the 175 years of its existence, and I am sure that with high enthusiasm and will, bent on continued success, we can look forward with confidence to even greater things in the future.

Under leave to extend my remarks in the RECORD, I include a proclamation for Montgomery County Day, Thursday, September 10, 1959. Congratulatory communications from President Eisenhower, Vice President Nixon, and the Senators from Pennsylvania, Hon. Hugh Scott, and Hon. Joseph S. Clark as follows:

PROCLAMATION FOR MONTGOMERY COUNTY DAY, THURSDAY, SEPTEMBER 10, 1959

Whereas Montgomery County has reflected dynamic advancements in industry, government, health, commerce, transportation and communications during the development of our Nation; and

Whereas Montgomery County has ever encouraged self-reliance and fostered freedom of opportunity for its men and women; and

Whereas our citizens can take pride in Montgomery County's vast resources, her versatility and manifold attainments in industry, health, and her amazing diversity of products; and

Whereas it was on Montgomery County soil that the forces of Gen. George Washington withstood their most severe test in the Nation's successful fight for freedom; and

Whereas Montgomery County must look to the future, ever searching for new endeavors which will mean continued growth and prosperity; and

Whereas the occasion arises to appropriately observe our heritage and impress upon the world that it will be preserved in enriched form for generations to come: Now, therefore,

We, J. Walter Hammonds, Warren M. Cornell, Jr., and Forrest J. Henry, the Commissioners of Montgomery County, do hereby designate and proclaim Thursday, September 10, 1959, as Montgomery County Day to commemorate the 175th anniversary of the founding of Montgomery County.

We call upon our citizens to seize upon this opportunity to acquaint themselves more fully with the resources, development, history and potentialities of their county, and ask that the occasion be marked by appropriate exercises in the schools and by business, civic, religious, patriotic and fraternal organizations within Montgomery County.

THE WHITE HOUSE,
Washington.

Hon. J. WALTER HAMMONDS,
Hon. M. CORNELL, JR.,
Hon. FORREST J. HENRY,
Commissioners of Montgomery County, Courthouse, Norristown, Pa.:

Through Congressman JOHN A. LAFORE, JR., I have learned of the 175th anniversary of the founding of Montgomery County, and it is a pleasure to send greetings to all joined in the observance of this event.

Montgomery County, including the hallowed land of Valley Forge, enjoys a proud

history. Its people, strengthened by a tradition of enterprising and responsible citizenship, can face the future with confidence.

Congratulations and best wishes.

DWIGHT D. EISENHOWER.

OFFICE OF THE VICE PRESIDENT,
Washington.

COUNTY COMMISSIONERS,
Montgomery County,
Norristown, Pa.:

It is a pleasure to extend greetings to the citizens of Montgomery County, Pa., on the 175th anniversary of the founding of their county. The United States has expanded enormously since 1784 and in these 175 years Montgormery County has contributed much to the cultural, political, and industrial development of the Nation. I also know of the excellent reputation Montgomery County has for providing efficient and progressive government as well as a low tax rate. Your county could well be considered a model for all of us. With best wishes for the next 175 years.

Sincerely,

RICHARD NIXON.

Congratulations to Montgomery County on the 175th anniversary of its founding.

These days when our society devotes so much emphasis to those things which are changing, it is heartening to have people call attention to the things which have not changed—our heritage, and the principles which guided our forebears and continues to guide us today.

People who are interested in their own past, almost always are those who are also planning for the future. They live a fuller life and conduct their civic affairs in a manner which will make their children proud to inherit the community.

This has contributed to making Montgomery County so vigorous an area and one which is a credit to the whole Commonwealth.

U.S. Senator HUGH SCOTT.

Messers J. WALTER HAMMONDS,
WARREN M. CORNELL, Jr.,
FORREST J. HENRY,
Commissioners of Montgomery County,
Norristown, Pa.

GENTLEMEN: It is a pleasure to salute Montgomery County on its 175th birthday. I have many special reasons for particularly warm feelings for Montgomery—one being that my daughter attends Bryn Mawr; another than a key member of my Senate staff is from Conshohocken.

Your continuing prosperity and growth, your rich history, your diversity of resources and industrial development—all these make Montgomery a cornerstone on which the welfare of Pennsylvania is built.

Best wishes for 175 more years of steady progress.

Sincerely yours,

JOSEPH S. CLARK.

We Are Proud of Mercy Flights

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, an idea we would be glad to export from Oregon to other parts of the United States and the world flies under the name of Mercy Flights, Inc. It has been in operation for almost 10 years and its purpose is the transportation of the sick and injured, quickly and safely, to medical treatment. Its financial support comes from the community. The only remuneration paid anyone is in the form of expenses for the volunteer pilots.

Recently Mercy Flights made another outstanding contribution when it helped transport persons injured in the Roseburg explosion disaster.

Eric Allen, managing editor of the Medford Mail-Tribune, explains Mercy Flights, Inc., in the following editorial, included here under unanimous consent. It appeared in the Medford Mail-Tribune on August 20, 1959.

MERCY FLIGHTS' JOB

In the wake of the disastrous earthquake in Montana this week, the cry went up for airplanes—planes to transport the injured, planes to fly in emergency supplies, planes to spot marooned survivors, planes to bring in news reporters to tell the world about the event.

The same was true, to a lesser extent, after the Roseburg disaster, when the airport at the stricken town was humming with activity.

This serves to point out that Medford is lucky to be the "home base" of the only privately operated nonprofit air ambulance organization in the United States, and, so far as is known, in the world.

Mercy Flights, Inc., is now more than 9½ years old. Just 10 years ago this month the idea for such a service was conceived. During the late summer and fall and early winter months of 1949, the plans were developed, money solicited, the first plane and its rudimentary equipment purchased.

In January, 1950, the first "mercy flight"—a phrase we're now used to hereabouts—was made.

Since that time the number of patients carried by the planes has grown to an average of 150 each year—nearly three each week—and the total number of patients has gone over the 1,000-mark.

Mercy Flights, Inc.'s primary job is the transportation of the sick and injured, quickly and safely, to medical treatment—either from elsewhere to Medford, or from this area to the big hospitals of Portland, Seattle, or San Francisco.

But the job is not limited to that function alone. For instance, a Mercy Flights plane was the first emergency vehicle, other than fire engines, to arrive at Roseburg before dawn on the morning of August 7, carrying two doctors, three gas company repairmen, and a supply of blood.

On other occasions, the planes have been pressed into moving supplies for the Forest Service during fire emergencies.

But none of these other activities, worthwhile as they are, have been allowed to hamper the service's readiness to serve emergency patients.

Mercy Flights' support from this community (meaning not only Medford, but all of Jackson and the surrounding counties of northern Oregon and northern California) has been remarkable.

From the very first, when school youngsters gave their dimes and nickels to make the organization a reality, Mercy Flights has received the cooperation and support, not only of officials and organizations, but of people everywhere.

It has responded by standing by, around the clock, ready to perform its errands of mercy.

The organization's chief means of financial support comes from the prepaid subscriptions, which, for $5 per year per family unit, or $3 for individuals, entities one to free transportation in medical emergencies within a 400-mile radius, and low rates for other forms of ambulance service.

(Charges to nonsubscribers are lower than commercial air ambulance service for those living in Mercy Flight's service area, but it is the firm's policy not to compete with such commercial services.)

This service is operated without remuneration (other than expenses for the volunteer pilots) by local people. The best way to insure that it will continue is to take out a subscription to its service, or, if already a subscriber, to renew promptly when the subscription expires.

The address: Post Office Box 522, Medford.

—E. A.

Report to the People of the Second Congressional District of South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD my final report for the 1st session of the 86th Congress to the people of the Second Congressional District, South Dakota.

It is as follows:

Each year as the session draws to a close, I have attempted to supplement my regular monthly reports to you with a final report in which I endeavor to summarize what has been done by Congress, what should have been done, and the overall picture as it hangs in the national frame.

In sizing up the national picture, we should recall first that the Nation and the world are at peace. True—there are troubled spots—always have been and always will be—but international tension is lower today than at any time since I came to Washington over 8 years ago when a Korean war was in full bloom.

Historians marked the date last week as 20 years since Hitler had moved his armies into World War II. It was 21 years before then that the Kaiser moved his troops into World War I. Each war resulted primarily because the Allies had compromised their positions rather than taking a firm stand and backing up that position with strength.

Today at the end of the present 20-year period, the leader of the potential enemy has asked to come to our shores, not with armies, but with his wife and family, to visit a nation and to visit a President who, upon taking over the reigns of state, served an ultimatum from a position of strength and has refused to compromise one word of that ultimatum, one acre of that ground, or one citizen of that area.

A recent visit with that President convinces me this position will in no way be altered and none of the fundamental principles that have kept the peace will be compromised when the two men sit down across the table from each other to visit. President Eisenhower does not bluster and blow as the bulky dictator of the Soviet Union, but neither does he cringe from pressure or politics. Should anyone doubt that, they should read his record of holding the brakes on a spending-pledged, two-thirds Democrat majority in the 86th Congress.

No—the Khrushchev visit can do no harm—it could do good. He will return to his Communist empire with a firsthand knowledge of the strength of this country—

not just the military strength, but the economic and social and spiritual strength of a great, free, Christian Nation.

When I first came to Washington, I heard the then General Eisenhower make the statement that the military is only the cutting edge of the sword, that the strength of the blade back of that cutting edge is the economy of the country. A month ago I had breakfast with the now President Eisenhower and heard him relate the remarks of Ludwig Erhardt of Germany, who told the President the greatest fear of their people was not recessions, but inflation; that they had experienced inflation at its worst; that the worst kind of hard times comes when the housewife must take a market basket full of money to the grocery store to buy a purse full of groceries.

It is my privilege, as your representative, to cast your vote for you, and I have cast that vote not only to strengthen the President's hand in forcing a balanced budget, but to go even further than the President has gone in a determined effort to return fiscal responsibility to the Nation, thereby strengthening the blade back of that cutting edge and preventing the day when a basket full of money is required for a purse full of groceries.

I believe that fiscal responsibility is measured not only by a balanced budget, but likewise in seeing that the taxpayers get their money's worth for the tax dollar that is expended. I have opposed programs that will unbalance the budget, and I have opposed programs where I feel the taxpayer will not get his money's worth.

I hope you will read the enclosed remarks which I made on the House floor during debate on several issues. There I have pointed out some of my fears based upon the trends of the times. Space in this report prohibits more than just a summary, but in this summary I would remind you again that it is Congress which makes the laws, it is Congress which appropriates the money. When those laws are made, when those appropriations are passed, the President and the executive branch have no alternative but to execute the laws which Congress has enacted.

Representative CLARENCE CANNON, Democrat, chairman of the Appropriations Committee, recently pointed out that in each year since 1939 the value of the dollar has decreased with the exceptions of 1949 and 1955. I would point out that these two years followed the only two balanced budgets since 1939—the work of the two Republican Congresses, the 80th and the 83d. This is proof that it can be done, that the devaluation of the dollar can be stopped if Congress has the will to live within the national income.

It was to help strengthen the hand of the President and force a spending-bent Congress to live within the national income that I voted to sustain the President's vetoes in an effort to not only bring those particular bills more in line with national needs, but at the same time quell the overall thirst for drinking at the tempting spring of inflation.

It was to cut spending below the national income that I voted against such frills as a new congressional office building; public parking lots; Federal assistance to communities sponsoring sporting events; the unnecessary grant-in-aid programs for constructing business establishments at airport terminals; public housing; city slum clearance; area redevelopment; construction of city sewage systems; and a dozen other similar programs which could and should be financed by private enterprise or local governmental units.

It was to reduce similar programs abroad that I voted against the $3.1 billion foreign aid bill. I also opposed permitting the International Bank and Monetary Fund, as well as the Federal Aviation Agency and the Development Loan Administration, from drawing directly on the Federal Treasury to fund department expenditures rather than obtaining appropriations from Congress—a procedure known as "back door" spending that has cost the taxpayers almost $8 billion annually.

Our chickens are coming home to roost from another field. After going off the gold standard, a certain confidence was maintained in the dollar through the knowledge that large gold supplies were buried at Fort Knox. Because of inflation at home and the effect of the reciprocal trade policies, our gold supplies are slipping away. As of July 1, our gold stock stood at $20.5 billion. Of that amount, foreign governments and nationals owned $14.9 billion, leaving a domestic gold reserve of $5.6 billion. This is due largely to the fact that we have, for the first time in modern years, lost the balance of trade. We are buying more foreign goods and selling less abroad. I have urged a return to the gold standard to right this wrong.

The 86th Congress made history in adopting the Landrum-Griffin labor reform bill. Its passage was not a personal victory for the President, the Republicans, nor the conservative Democrats. It was simply an example of the people asserting their rights when sufficiently aroused.

The powerful and well-financed labor bosses could not have been overcome without the people demanding (1) that legislation be passed which would drive racketeering and corruption from the ranks of organized labor, and (2) that the rights of the individual union member be protected.

The new law does these things. It contains the McClellan "Bill of Rights" with criminal enforcement, then it adds protection to the public as well through the curbing of secondary boycotts, organizational and recognition picketing, and in settling the "no man's land" between State and Federal jurisdiction.

The 86th Congress designed "five rows of six and four rows of five" stars in Old Glory with the addition of Hawaii as the 50th State. It continued the interstate highway program through a 22-month increase in the gasoline tax; increased the interest rate on savings bonds; plugged loopholes in the law on obscene mail; exempted out-of-State companies from State taxation in certain cases; corrected "equal time," confusing regulations for radio and TV stations; etc.

General Romulo on Sugar

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. DINGELL. Mr. Speaker, the Philippine Ambassador to the United States, Gen. Carlos P. Romulo, is quoted in the McCarthy Sugar Report of September 4, 1959, as having given certain figures on Philippine sugar production of interest to this body.

Because of the fact that the Philippines is a country openly and courageously committed to the side of democracy and freedom and has fought communism successful, and because General Romulo is acknowledged as a true friend of the United States in war and in peace, I wish to bring the report to the attention of the Members of the House. Under unanimous consent to extend my remarks, I include it in the RECORD at this point:

REPORT NO. 12: THE MCCARTHY SUGAR REPORT OF SEPTEMBER 4, 1959

Philippine Production Potential Tremendous: In Report No. 10 we surveyed the Puerto Rican sugar outlook and concluded thatthe islands offer scant hope for production increases, when and if the United States decides to look beyond Cuba as the dominant source of supply.

The Philippine outlook, by contrast, is decidedly promising. It would be only a slight exaggeration to say that a telephone call today would get you 300,000 tons of additional raw sugar tomorrow. With an invitation from the U.S. Congress the Philippine growers could move up to 1,600,000 tons almost without effort.

But Congress hasn't issued any invitations to the Philippines, nor has it given the Philippines an even break in years.

In 25 years of Sugar Act legislation, the Philippines have never received an increase in their quota. Yet their people were our stalwart friends and allies in World War II in the struggle against Japan.

The Philippine initial quota this year is 980,000 short tons, raw value, tied as it is to the Independence Act, against 1,015,186 in 1934 when quotas were first adopted.

Compared with their competitors in the sugar business, this is the way the Philippines have fared since 1934, first year of the Sugar Act:

Area	Initial 1934 quotas	Initial 1959 quotas	Net change
Cuba	1,901,752	3,060,475	+1,158,723
Hawaii	916,550	1,115,479	+198,550
Philippines	1,015,186	980,000	−35,186
Puerto Rico	802,842	1,166,375	+363,533
Virgin Islands	5,470	15,905	+10,435
Full duty countries	17,000	248,025	+231,025
Beet processors	1,556,166	1,998,717	+442,551
Mainland cane	261,034	615,024	+353,990
Total	6,476,000	9,200,000	+2,724,000

Note the striking increase to Cuba and only modest increases to all other areas, and the actual decline of 35,186 tons for the Philippines.

In the postwar years, Philippine production has been moving forward at a healthy rate—from almost total disappearance as a result of Japan's occupation. In 1945–46 output reached its low point of 70,000 tons.

We asked Carlos P. Romulo, Philippine Ambassador to the United States, whether the Philippines could supply an additional 300,000 tons if it were requested of them suddenly, and this is what he said:

"My answer is yes, without any expansion in area already available for sugar cane production and without any additional equipment for the present operating sugar centrals."

Ambassador Romulo said that before the establishment of the U.S. sugar quota system in 1934, when Philippine sugar production was not restricted, the Philippines produced that year a total of 1,597,949 short tons of centrifugal sugar from an area of 755,861 acres, or a unit yield of approximately 2.19 short tons of sugar per acre. Under the U.S. sugar quota system, he said, Philippine sugar production has been under Government restriction and has been geared to the quantity of sugar allowed entry into the United States of 952,000 short tons, plus the Philippine quota to the world free market of 50,997 short tons, plus domestic consumption of approximately 300,000 short tons, and plus reserves.

In the past crop year of 1957–58, the Ambassador explained, the Philippines produced a total of 1,377,847 short tons of centrifugal sugar from an area of 452,131 acres, or a

unit yield of 3.05 short tons per acre. This production was allocated as follows:

	Short tons
Total 1957–58 production	1,377,847
Less:	
Domestic consumption	300,000
U.S. quota	952,000
World's quota	50,997
Total	1,302,997
Surplus and reserves	74,850

The Philippine Sugar Quota Administrator has recently announced that the Philippines are going to have a record postwar sugar production this season with an estimated centrifugal sugar crop for 1958–59 of 1,512,330 short tons. This will leave a total amount of surplus and reserves of 209,333 short tons, as follows:

	Short tons
Estimated 1958–59 production	1,512,330
Less:	
Domestic consumption	300,000
U.S. quota	952,000
World's quota	50,997
Total	1,302,997
Surplus and reserves	209,333

"It will thus be seen from the foregoing data," said Ambassador Romulo, "that the Philippines can provide additionally 300,000 tons of sugar to the United States without expanding the area now available for sugar cane production nor making any addition to the existing machinery and equipment of the operating sugar centrals."

He continued: "Obviously, a slight increase in the unit yield per acre would bring up production to around the 1,600,000 level. The 25 sugar factories at present milling have combined total production capacity of 1,600,000 short tons of sugar, thereby enabling them to produce the additional 300,000 tons quota to the United States should this be granted to the Philippines."

In his appraisal of the Philippine sugar production picture, Ambassador Romulo was not gilding the lily. Trade sources report that the potential for production there is unlimited. Vast virgin areas are contained within the boundaries of the Philippine Islands, and it is safe to say that given the proper encouragement, the Philippines could easily and quickly run production up to 3 million tons and, in fact—given time—to much greater heights.

Outlets for Philippine sugar other than the U.S. market are small. Under the International Sugar Agreement the Philippine quota is 27,558 short tons plus a special reserve of 24,251 tons.

Consumption in the Philippines is moving up, amounting annually to about 275,000 tons.

In 1956 when the Sugar Act of 1948 was last amended, the Philippines put up a strenuous fight to obtain an increased quota for the United States. This was denied. When the President of the United States signed the new amendments, however, he stated that the next time sugar legislation comes before Congress, the Philippines should be given consideration for an increase.

The Philippine-United States quota is statutory and is not increased when the overall U.S. quota is increased. But if Congress heeds the President a change may come in 1960—long overdue. Certainly, the Philippines should share in deficit reallocations.

What better time will there be than now to give the Phillipines the break they so vastly deserve. We say what better time because Cuba under the Castro regime has treated the United States with utter disdain and has, in fact, been so insulting to us that we can no longer look upon her as a friend. Further, we will find that we cannot depend upon her for one-third of our sugar requirements. The hatred expressed for the United States by Fidel and Raul and their followers clearly indicates that they would be weak sisters in time of need.

Resolutions Adopted by the 41st Annual Convention of the American Legion

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, I submit the following resolutions adopted by the 41st annual convention of the American Legion on August 24–27, 1959. I commend them to the Members of the House for consideration.

RESOLUTION No. 411, OPPOSE ANY CUTS IN NATIONAL GUARD OR RESERVE STRENGTH

Whereas the 85th session of Congress set a minimum strength of 900,000 men in our Regular Army, 300,000 Guardsmen and 400,000 Army Reserve; and

Whereas the House Appropriations Committee agreed to delete mandatory language from the defense appropriation bill, similar languages in the measure last year blocked an administration planned cut of 40,000 Guardsmen and 30,000 reservists; and

Whereas the Guards and Reserve are the Nation's second line of defense: Now, therefore, be it

Resolved, by the American Legion in National Convention assembled in Minneapolis, Minn., August 24–27, 1959, That we go on record as being opposed to any cuts in our Guards or Reserve strength.

RESOLUTION No. 594, GA., REAFFIRM STRONG READY RESERVE

Whereas there is no successful way to deal with Russia or its satellites diplomatically, politically, economically, or militarily except from a posture of the greatest possible strength; and

Whereas no trust can be placed in any oral or written agreement made with or promised by these nations; and

Whereas the fairest and most democratic method of sharing the staggering financial cost and heavy sacrifice of personal service is upon a universal basis; and

Whereas, the cold war will apparently last for the foreseeable future; and

Whereas we already have through taxation a method of universally sharing this staggering financial burden; and

Whereas the most economical and democratic method of providing the necessary posture of military strength is through a relatively small hard corps of professional Army, Navy, and Air Corps establishments and a large Ready Reserve of trained civilians, units, and machines prepared for instance action: Now, therefore, be it

Resolved, by The American Legion in National Convention, duly assembled in Minneapolis, Minn., August 24–27, 1959, That the traditional position of the American Legion which calls for a relatively small professional military establishment and a universal compulsory system of training and service in the Ready Reserve be and the same is hereby reaffirmed.

RESOLUTION No 352, 6-MONTH TRAINING PROGRAM

Whereas the 6 months' training program established and continued under Public Law 51 of 1951 and the Reserve Forces Act of 1955, has been accepted with very general approval by the trainees, and by the class A Reserve, including the National Guard; and

Whereas it has been of great help in providing basically trained personnel for the National Guard and other units of the class A Reserve; and

Whereas due to monetary restrictions and administrative orders imposed by the Defense Department only 44,000 trainees were included in this program for the last of 1958 and early 1959; and

Whereas when the present strength of the Regular Armed Forces is reduced it should be replaced by a commensurate number of ready trained replacements, whether members of a unit of the National Guard, other class A Reserves or merely retained in a pool of classified trained personnel: Now, therefore, be it

Resolved by the American Legion, That the Congress be called upon to provide the necessary money for including in the 6-month training program 110,000 trainees, and that the Defense Department be called upon to issue the necessary administrative orders to provide for the training of this number, and that this size of the 6 months' training program be constantly maintained: Now be it further

Resolved, That the American Legion in national convention assembled in Minneapolis-St. Paul, Minn., August 24–27, 1959, take the necessary action to see that the above objectives are accomplished.

RESOLUTION No. 101, INCREASING THE STRENGTH OF, AND THE MODERNIZATION OF WEAPONS AND EQUIPMENT OF THE U.S. ARMY

Whereas there now appears to be a nuclear parity between the United States and Soviet Russia; and

Whereas Soviet Russia has employed the tactics of limited war successfully during the past decade by the employment of ground forces; and

Whereas the ground forces of Soviet Russia appear to have qualitatively and quantitatively superior weapons and equipment; and

Whereas the U.S. Army has missions, which exceed its capabilities in both strength and equipment, as well as missions which cannot be accomplished by other than ground forces; and

Whereas it is agreed upon that American soldiers should not be equipped with inferior weapons or equipment: Now, therefore, be it

Resolved, by the American Legion in national convention assembled in Minneapolis, Minn, August 24–27, 1959, That there be a rapid acceleration in the modernization of weapons and equipment of the U.S. Army, and that the U.S. Army, Active and Reserve, be increased to more impressive, effective, and respected strength.

RESOLUTION No. 143—U.S. ARMY BE MAINTAINED AT A MINIMUM STRENGTH OF 900,000

Whereas a strong U.S. Army is indispensable to national security; and

Whereas the U.S. Army has a vital task of creating and preparing forces for sustained combat on land; and

Whereas, the use or threat of use of atomic weapons does not eliminate the need for a powerful Army in all-out war; and

Whereas the national security policy of the United States requires the peacetime stationing of Army garrison forces in European and other friendly nations; and

Whereas Congress has appropriated funds to maintain a 900,000-man Army which

funds have not been expended by the Pentagon; Now, therefore, be it

Resolved, That the American Legion in National Convention assembled in Minneapolis, Minn., August 24–27, 1959, support efforts to maintain the minimum strength Army of 900,000.

RESOLUTION No. 243—MAINTAIN STRENGTH OF ARMY AND AIR NATIONAL GUARD AT 470,000

Whereas the American Legion, traditionally, through the mandate of national conventions, has endorsed the Reserve military system as part of the Armed Forces for the security and preservation of our Nation; and

Whereas the Army and Air National Guard with a congressional authorized strength of 470,000 citizen soldiers organized in more than 5,500 units, trained and equipped, constitutes the Nation's largest and most ready military force; and

Whereas this Ready Reserve Force is dispersed in more than 2,500 communities in every State, the Territories, the District of Columbia and Puerto Rico, and by virtue of this dispersion would prove to be of inestimable value in assisting Civil Defense agencies during the period of initial recovery in the event of a successful massive air attack on this Nation; and

Whereas the National Guard represents the most fundamental American tradition of citizen soldiery at the grassroots level, offering the maximum national defense against attack from within as well as from without, and at the same time offering young men an opportunity to perform their military service in their own home communities; and

Whereas the National Guard has served the Nation, the States and Territories with honor and valor in times of peace and war and, largely by virtue of its own initiative and determination, has achieved a high degree of mobilization readiness, and is prepared to undertake more advanced type training, and to effect necessary reorganization within existing organizational structure to properly complement the active military establishments; and

Whereas the Department of Defense has proposed a reduction of 40,000 men from the Army National Guard and curtailment of funds for the Air National Guard which could bring about the elimination of many units of the Army and Air National Guard; and

Whereas such action is considered to be not in the best interest of national defense as it would reduce the capacity of the National Guard of the States and Territories to render assistance in the event of emergencies or disaster; and

Whereas such reductions of personnel or units of the Army National Guard would constitute a writeoff of many millions of dollars in Federal and State funds already invested in the National Guard and its existing facilities: Now, therefore, be it

Resolved by the American Legion in National Convention assembled in Minneapolis, Minn., August 24–27, 1959, That the National Legislative Commission petition the Members of Congress of the United States to take necessary actions to maintain the strength of the Army and Air National Guard of the United States at the 470,000 level; and be it further

Resolved, That necessary action be taken to assure procurement of the necessary personnel in order to sustain the Army and Air National Guard with young men capable and willing to undergo military training in the defense of their country.

RESOLUTION No. 302—MODERNIZE WEAPONS AND EQUIPMENT OF U.S. ARMED FORCES

Whereas the land forces of the Sino-Soviet bloc greatly outnumber the forces of the United States and its allies; and

Whereas a high percentage of the weapons and equipment currently available to and utilized by the U.S. Armed Forces was produced during World War II and the Korean War; and

Whereas the U.S.S.R., since the close of World War II, has extensively modernized its forces with weapons and equipment of new design, and has emphasized in the modernization process mechanization of its forces, electronics, and firepower of increased range, lethality and mobility; and

Whereas, the U.S.S.R. is producing modern ground equipment at a rate alarmingly greater than that of the United States, thereby permitting the U.S.S.R. to equip not only its own forces but those of its satellites and allies; and

Whereas a continuation of the current rate of modernization of the U.S. Armed Forces seriously impairs the capability of the United States to counter Communist aggression, whether limited or general in nature: Now, therefore, be it

Resolved by the American Legion in National Convention assembled in Minneapolis-St. Paul, Minn., August 24–27, 1959, That the U.S. Armed Forces shall be modernized at a rate and to an extent which will assure the United States qualitative superiority in all weapons and equipment.

Panama Canal and Caribbean Situation: Views of General Wedemeyer

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. FLOOD. Mr. Speaker, among the many letters that I have received concerning my addresses on the Panama Canal and Caribbean situation is one from Gen. Albert C. Wedemeyer, one of the Nation's most distinguished soldiers of World War II, in which he fully supports the position that I have presented to the Congress with respect to the Panama Canal and Caribbean situations and the Monrone Doctrine.

General Wedemeyer's letter follows:

THE ESTATE PLANNING CORP.
Washington, D.C., July 20, 1959.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Thank you so much for the opportunity of reading the addresses you made concerning the Panama Canal and the Caribbean question. I am in complete accord with your basic premise and I hope that your colleagues in the Congress will recognize the implications of developments in the Latin American countries. Unfortunately, if an individual is a little in advance of his contemporaries in thinking about a problem, he is not appreciated, in fact he is sometimes ridiculed. Often in the past 25 years many Americans have foreseen the difficulties that would be injected into the international arena by the fanatical, arrogant, and aggressive Communist leaders. However, the American people and many of our own leaders refuse to accept or to appreciate the analyses and judgments of those who would alert them to the dangers.

You are right, in my judgment, in stating that the Monroe Doctrine should continue to have a broad application, for it certainly was so intended by its proposers and supporters.

All good wishes for success in your worthy endeavors.

Faithfully,

A. C. WEDEMEYER,
General, U.S. Army (Retired).

Eisenhower's European Trip

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, every Member of Congress gets press releases from many of the various governments of the world whose embassies are located in Washington. In this connection, on yesterday each of us received the Bulletin, which is a weekly survey of German affairs issued by the Press and Information Office of the German Federal Government. An article which each Member of the Congress should read is "Significance and Implications of Eisenhower's Visit," by Felix von Eckardt, State Secretary and Federal Press Chief.

Mr. Speaker, being a member of the Armed Services Committee, and knowing the indispensable need for the existence of NATO and its continuation, and knowing so well that without NATO there would be no free Europe, I was impressed beyond words with the impact of the President's visit to West Germany.

As an American, I am proud of my President; as an American, I am so elated that my President took the lead and improved the stature of our Nation in the eyes of our allies in Europe. It is imperative that we keep West Germany on the side of the free world. The West German Government is a democratic government. It witnessed the man who brought a proud Germany to her knees returning as her friend and her protector. The Germans saw, in Eisenhower, one dedicated to peace and they read in his eyes one wedded to his mission, standing behind the sacred commitments of this Government against the threats of Russia to the free peoples of Europe. Mr. Speaker, I am convinced that President Eisenhower's visit to Europe has done more than all other emissaries before him have accomplished. He has helped the American cause in Europe. He has helped the cause of our allies. He represented this Nation with dignity and at great personal sacrifice. I, as an American, am proud of the fine job he did on his recent crusade for peace.

As a member of a military committee, I know the terrific stake America has in Europe. President Eisenhower did a job that needed to be done. The stature of Uncle Sam was diminishing until Eisenhower gave the freedom-loving people of Europe new hope and new respect for the greatest Nation on earth—the United States of America.

Under leave to extend my remarks, I include the article hereinabove referred to, and the press comments on the trip of the President:

SIGNIFICANCE AND IMPLICATIONS OF EISENHOWER'S VISIT

(By Felix von Eckardt, State Secretary and Federal Press Chief)

In Dwight D. Eisenhower there came to Germany not only the President of the United States but above all a man of honor, a politician whose real opinions correspond to his moral convictions. Perhaps that ex-

plains the overwhelming welcome afforded him by the population of Bonn and the surrounding districts. The common man is acutely sensitive to evidences of incorruptible political behavior which he grasps much more quickly than he does the endlessly complicated maneuvers of diplomacy. The radiative power of Mr. Eisenhower's personality is so strong that it even strikes deep into the heart of the Eastern bloc.

Mr. Eisenhower's reception in Bonn was absolutely unique. Anyone who kept his eyes open and noticed the places of origin of the many cars lining the streets could picture for himself the trouble taken upon themselves by the thousands wanting to see President Eisenhower, thereby making the close relations between the United States and the Federal Republic outwardly visible. It is almost superfluous to say that the Federal Government had no more to do with this reception the people gave the American President than to make known the program of the visit.

It is in accordance with Mr. Eisenhower's character, not only with his political convictions, that he feels the partition of Germany to be deeply immoral and unjust. It is simply not reconcilable with his ethical outlook. From his point of view one could perhaps say: Even a people which has brought a great deal of misfortune on the world cannot simply be torn apart; this cannot be just.

President Eisenhower will accordingly make every effort in practical politics to obtain a just reunification of Germany in peace and freedom. This we have long known. But his visit to Germany has fortified this belief and made it more concrete.

The politically decisive aspect of President Eisenhower's visit seems to me to be that it was made clear with complete unambiguity that the United States regards the North Atlantic Alliance as the foundation of its European policy. For the peoples of Western Europe this is a vital question, for without the support of the United States, NATO would be politically and militarily worthless.

It is safe to say that the American President—whose freshness and mental agility have surprised all who saw him in recent years—has now taken over John Foster Dulles' conception of foreign policy. After the death of the friend who was politically and personally closer to him than any other, he is continuing with the work.

The people of West Berlin can rest assured—if they ever had any doubts at all—that no "accident" will befall them. In the talks between the American President and the Federal Chancellor it was established without any doubt that the United States does not consider any abandonment of their basic rights in Berlin, unless a guarantee for the freedom of West Berlin is found which absolves the Western Powers of their rights and duties conclusively and without danger for the security of the West Berliners. Granted, such a state of diplomatic affairs does not seem attainable today or tomorrow.

This admission that not everything can be attained today or tomorrow also applies to the disarmament question. The American President and the Federal Chancellor were agreed that disarmament is the central problem of our time. On the other hand they are realistic enough to see that one must be modest, and that one must take the chance on a hopeful beginning such as might result from the visit of Mr. Khrushchev to Washington. In any case, in this respect, both of the statesmen showed the same interest and appraisal of the situation.

But one thing must not be overlooked in the evaluation of all the diplomatic details of President Eisenhower's visit. That is the strength of the evidence that the German people have mentally surmounted the quarrels and feuds of yesteryear. There is much talk nowadays of the "economic miracle." In economics there are no miracles. The miracle of our days is the complete disappearance of resentments. We have experienced this in the radical change in the relationship between France and Germany. It is noticeable in the popularity enjoyed by Sir Winston Churchill in Germany; and, above all, we could feel it in the welcome given to Eisenhower, the American general who led the armies of the Western Allies against Germany in World War II.

To me, this seems to prove that Hitler's aggression has long since been condemned by the German people. In 1914 the German people went to war in the belief that they were defending a good cause. The findings of the historians are of no importance from the psychological point of view. The enthusiasm of August 1, 1914, was a fact. September 1, 1939, however, was one of the gloomiest days in German history. Because the great majority of the German people have recognized that fact, the man who crushed Hitler's aggression is popular in the Federal Republic. Of course, it should not be forgotten that other very real feelings play their part. They center on the concepts of protection and security. The German people, for the first time in a long period, are immensely relieved to have a reliable ally, all the more so, that this ally is the greatest state in the world.

PRESS COMMENTS ON PRESIDENT EISENHOWER'S VISIT TO BONN

Hannoversche Allgemeine Zeitung (independent):

"Once again the truth has been confirmed that all the papers and documents exchanged between governments can be no substitute for sincere and open-minded friendship between the peoples themselves. From now on a stronger bond will unite America and Germany, and, in an era when political conditions have become so uncetrain, this fact is immensely important. * * *

"Exact agreements, of the kind that people are forever expecting to materialize at the very next corner, are probably very far off. But if even at this stage the American President is giving assurances that he will do nothing to weaken the German position or jeoardize the freedom of Berlin, this is worth a mountain of gold. On leaving Bonn, Mr. Eisenhower must surely have taken with him the certainty that his own loyalty is being answered with the fullest confidence and a loyalty no less great. * * *

"During these 2 days Mr. Khrushchev must have realized how completely he has failed in the attempt to paint Dr. Adenauer and the Federal Republic as the disturbers of the peace and to separate them from their allies."

Die Welt (independent): "The warmth with which Mr. Eisenhower spoke of the two nations' common dedication to freedom was not the technique of a diplomatist but the sincere expression of a strong and vital conviction full of vitality. That the two countries have this feeling in common is the basis of German-American friendship."

Hamburger Abendblatt (independent): "Dwight D. Eisenhower made it easy for all who wished to see him to give him such visible signs of their confidence in him. He won all hearts along the Rhine not alone through his great personal cordiality and charm. In addition, the fact that this man, who has so great a burden to bear, was so obviously in splendid health, in itself aroused confidence."

Berliner Morgenpost (independent): "With joy and great satisfaction the Berliners heard what Mr. Eisenhower declared concerning the situation of their city. It was the renewed promise to stand by Berlin under all circumstances. We have never had reason to doubt the American guarantees. However, Mr. Eisenhower, previous to the forthcoming East-West talks, apparently considered it important to demonstrate Mr. Khrushchev once more, in no uncertain terms, at which point the patience of the United States and the rest of the free world is at an end."

Christ and Welt (Protestant): "In the course of time many heads of government have come to Bonn for short visits of consultation, but none has ever been given so enthusiastic a reception."

Der Tag (independent), Berlin: "Mr. Eisenhower has given the proper answer to all speculation reckoning with weakness on the part of the Western nations and their proneness to be divided among themselves."

Neue Rhein-Zeitung (SPD): "That the West Germans cried 'We like Ike' during Mr. Eisenhower's visit was not due to any instruction from the top down. It was the expression of the German people's feelings toward a man who is using the weight of his office as well as of his personality to preserve peace. * * * Any political evaluation of the visit must take into account the jubilant public mood. The official outcome mirrors the scene on the streets: no conflicts, no problems, no disagreements—in short, harmony on both sides, confidence in Ike, confidence in Conny. Two countries, with but a single purpose."

Allgemeine Zeitung—Neuer Mainzer Anzeiger (independent): "Mr. Eisenhower clearly understood what was being so spontaneously offered him by his German ally—for at his press conference he said that by this welcome the German people showed the American people that the words 'liberty' and 'freedom' mean exactly the same thing to both."

Munchner Merkur (independent): "Whoever saw the reception that the Germans gave the American President cannot have failed to recognize the simple fact that in this enthusiasm of thousands of people there were demonstrated three basic elements of German foreign policy: the wish for security by means of a German-American alliance; the longing for national unity in freedom and in loyalty to the Western Alliance; and the deep desire to preserve the peace—not by capitulating but by the steadfastness that is inherent in patience."

Die Welt (independent):

"The hearty welcome afforded to President Eisenhower by the Europeans is by no means aimed only at his powerful position, nor even at the integrity of his personality. There are also certain expectations involved. * * *

"But Mr. Eisenhower cannot be assumed to have a magic wand. If we do not have the good will for reconciliation among ourselves, even he cannot help us. We ourselves must do our very best. However, Mr. Eisenhower even in World War II was known as an excellent mediator. We can hope that he will again give proof of this skill."

Rhein-Zeitung (independent):

"The West Germans are no longer inclined to gather in the streets to show enthusiasm—least of all for anyone connected with politics. This is due in part to the experience that has taught them to be sceptical of anything that seems to give the appearance of having political importance, and in part to indolence. Thus, the hearty almost stormy welcome that tens of thousands gave Mr. Eisenhower seems to prove that West Germans have, nevertheless, not lost their instinct for what is a really historic moment. * * *

"It is no mistake to assume that the inhabitants of Bonn and Bad Godesberg, as well as of the towns along the way from the airport, were acting on behalf of the entire people when they greeted the President with such overflowing cordiality and enthusiasm. They demonstrated that they decidedly approve of Adenauer's policy of firmly siding with the free West and that they have great confidence in Mr. Eisen-

hower. Wherever he appeared there was an immediate and uncommon rapport between these crowds and the man who appeared to them so very congenial and worthy of affection."

Suggestions for a More Sensible Farm Program

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. McGOVERN. Mr. Speaker, on Monday of this week I took the floor to discuss some of the problems which beset our farm families. On the following day I pointed out what I believe to be the weaknesses in the farm program which we are now following under the administration of Secretary Benson. Today, I want to discuss what I believe might constitute the rough outline for a more rational Federal farm program.

Anyone who searches for a satisfactory solution to the problems of agriculture is made keenly aware of the fact that there is widespread disagreement among farm organizations as to the proper remedy. This disagreement coupled with the sharp differences of opinion between the present administration and the Congress has delayed any acceptable solution to our agricultural problem.

Any major problem will produce differences of opinion, however, and we have not let such differences stand in the way of progress in the past. Indeed, we cannot afford as a Nation to delay much longer the establishment of an improved farm program. How can a great Nation ignore a condition which depresses the income of our food producers to a level only half that enjoyed by city dwellers? How can we ignore the pile-up of farm surpluses to the tune of $9 billion at an annual cost of $1 billion in storage and handling charges? How can we turn our backs on the outstretched hands of hungry millions overseas and our own undernourished here in the United States when vast quantities of food are deteriorating in Government bins? How can we close our eyes to the cost-price squeeze that is forcing farm families to sell out to corporation farm operators and integrated agriculture? How, for example, can my business constituents in South Dakota regard their future with security knowing that farm families are leaving the farms in South Dakota at the rate of one thousand per year for the past 5 years, many of them looking for work in the large cities where unemployment is already a problem. I feel a special concern for the young farmers who began farming after the Korean War when prices were high and their hopes for the future were even higher. These families were hit the hardest by the price depressing policies of Mr. Benson, tight money, and rising costs of operation. They did not have sufficient reserves to survive the squeeze between falling farm prices and rising costs of operation. What is our suggestion to these farmers?

To raise these questions is to recognize that the crisis in agriculture is more than an economic crisis; it is a moral crisis, as well.

GUIDELINES TO A BETTER AGRICULTURAL PROGRAM

More than a year and a half ago, the gentleman from California, Congressman ROOSEVELT, and I sent a letter to the Members of Congress in which we suggested four major factors which we believed any new farm program must recognize. I believe that those four guidelines are even more apparent today as criteria for an improved agricultural program. In setting forth the conditions of an acceptable new program, we said:

First. It must be of maximum benefit to the family-size farmers who makes up the great bulk of our rural population.

Second. It must not raise food costs to city consumers.

Third. It must not be unreasonably costly to the Federal Treasury as is the case with our present disorganized and poorly planned program.

Fourth. In view of our position as a leading world power, a Federal farm policy should be related to our opportunities and responsibilities abroad.

Mr. Speaker, it has seemed to me for years that the No. 1 weakness in our national farm policy has been our slowness in recognizing that agricultural abundance if properly used can be a great asset both at home and abroad. The amazing efficiency of the American farmer which is the envy of the world can be a mighty instrument in strengthening our economy at home and building good will and peace abroad.

I cannot believe that an all wise providence intended America to let her abundant agricultural production become a curse that depresses the income of the hard-working men and women who make that abundance possible. To do so is to ignore the parable of the slothful servant who was condemned by his master because he hid his talent in the ground.

We all know that in a world where most of the people are hungry, our chief adversary, Mr. Khrushchev would love to have control of America's food surpluses to use in his international operations. Why then have we been so slow to recognize the potentiality of our amazing farm production?

Early in this session of the Congress I introduced a resolution—House Concurrent Resolution 60—entitled the "Food for Peace Resolution," calling upon the Congress to make vastly greater use of our food reserves as an instrument of peace and freedom. We have made some progress in that direction under Public Law 480, but much more can be done in the months ahead. The following is the text of my food-for-peace resolution which I include at this point in the CONGRESSIONAL RECORD:

HOUSE CONCURRENT RESOLUTION 60

Whereas the abundance of food and fiber produced by the American farmer is the marvel of the world; and

Whereas most of the people of the world are undernourished; and

Whereas the American people historically have been concerned with the well-being of other peoples; and

Whereas in many nations of the free world vital economic development programs are retarded and political stability is threatened by an inadequate supply of food; and

Whereas the remarkable bounty of the free American farmer has resulted in accumulations of farm commodities for which there is insufficient domestic demand; and

Whereas the Congress seeks to reduce unnecessary expenditures, including, where possible, those for commodity storage and for foreign assistance; and

Whereas the Soviet bloc has publicly challenged the United States and her allies to economic competition in demonstrating before the world the viability of their respective economic system: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that an agricultural abundance is one of America's greatest assets for raising living standards and promoting peace and stability in the free world; and that Congress favors action to resolve the paradox of American agricultural surpluses and world food needs by more fully utilizing the resources of the American farmer as an integral part of the United States foreign assistance program.

SEC. 2. This concurrent resolution may be cited as the "Food for Peace Resolution".

There is also an urgent need for greater use of our farm surpluses here at home. Two-thirds of our schoolchildren are not included in the school lunch program and there are still 17 million Americans who are undernourished. One reason for the inadequacy of our domestic food use program is the fact that it is under the jurisdiction of the Department of Agriculture which is already under fire for its heavy budget. Actually our domestic food distribution program should be under the Department of Health, Education, and Welfare. This Department is not only better suited to carry on a humanitarian food distribution program, but it would eliminate some of the budgetary criticisms of the Department of Agriculture that are now hurting the farmer's chances for a stronger program.

The gentleman from Massachusetts, Senator KENNEDY, and I are the cosponsors of legislation—H.R. 7473 and S. 1884—that would transfer the food distribution program to the Welfare Department and expand the use of farm-produced foods among needy American families.

To accomplish the purposes of a comprehensive agricultural program designed to meet the needs of farm families and the Nation as a whole, the gentleman from Minnesota, Senator HUMPHREY, and I have cosponsored a challenging program—H.R. 8597 and S. 2502—which we believe is entitled to the thoughtful consideration of every American. Both Senator HUMPHREY and I were born in small South Dakota towns in the rural heartland of America. We have devoted a large share of our time and energy in public life studying the farm problem and talking with farmers in our home States and across the country. We believe that our legislation should be given full-scale hearings when the Congress returns next January and that it may point the way to a better agricultural economy in the best

interest of farmers and city dwellers alike.

There follows the full text of our bill which I strongly urge every Member of Congress and every citizen to study. I am most anxious to receive suggestions from my colleagues and from my fellow South Dakotans as to possible improvements in this legislation before we begin hearings next year.

Under unanimous consent to extend my remarks, I include the text of the bill at this point in the CONGRESSIONAL RECORD.

H.R. 8597

A bill to provide for the development of a comprehensive family farm program, to bring the production of agricultural commodities into balance with demand therefor, to enable farmers to secure fair prices, to better utilize agricultural abundance in the Nation's interest at home and abroad, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Family Farm Program Development Act".

TITLE I—POLICY OBJECTIVE

SEC. 101. The objective of this Act is to provide for the orderly development of a comprehensive family farm income and supply stabilization program that will (1) assure consumers in the United States an adequate, varied, and nutritious supply of food, fiber, and timber in the immediate future and in years to come, (2) bring the supply of farm products into balance with requirements for domestic use and export, (3) enable farmers who are willing to participate in and cooperate with orderly marketing and production adjustment programs for agricultural commodities to secure fair prices that will enable them to secure returns on their labor and invested capital comparable to earnings in comparable nonfarm occupations, and (4) better utilize the Nation's abundance of food and fiber products in support of United States international policies by assisting people in underdeveloped countries of the world to develop their economies, to modernize and expand their training and educational systems, and to avoid famine and malnutrition.

TITLE II—DOMESTIC FOOD AND NUTRITION PROGRAM

SEC. 201. (a) The Secretary of Agriculture (hereinafter called the Secretary) is authorized and directed to formulate annually and submit to the Congress on or before February 1 of each year a domestic food and fiber program for the United States, both immediate and long range, together with budgetary estimates for carrying out such program in the first year and in subsequent years of operation.

(b) Any food and fiber program submitted by the Secretary pursuant to subsection (a) shall include provisions for—

(1) expanding and liberalizing the national school lunch program (carried out under the National School Lunch Act) and the special milk program for children (carried out under the Act of July 1, 1958 (72 Stat. 276));

(2) a food allotment program under which the nutritional needs of low income persons, the unemployed, the aged, and the handicapped will be more adequately fulfilled; and

(3) a national security reserve of food and fiber products designed to protect people of the United States against charges of such products in the event of war or other national emergency.

TITLE III—INTERNATIONAL FOOD AND FIBER PROGRAM

SEC. 301. (a) The Secretary is authorized and directed to cause a study to be made for the purpose of determining the annual fiber, food, and nutritional deficiency in the world and submit a report of such study to the Congress annually on or before February 1 of each year. He shall include in such report—

(1) recommendations as to the fair and feasible share of that deficiency which should be met from food products produced in the United States;

(2) recommendations for making food and fiber products produced in the United States available to aid in meeting such deficiency; and

(3) estimates of the annual cost of carrying out such program.

(b) The program specified in subsection (a) shall be planned as a long-term program in order to facilitate the effective use of food products made available in the recipient countries. Such program shall be planned in such a manner as to be consistent with the international objectives of the United States and so as not to interfere with the commercial trading activities of friendly exporting countries; but planned so as to afford maximum economic benefit to the recipient countries.

TITLE IV—ADJUSTING SUPPLY AND DEMAND

SEC. 401. (a) Whenever the Secretary determines that the supply of any agricultural commodity exceeds effective demand at a fair price, he shall establish for each such farm commodity a farm commodity program development committee to be composed of representative producers of such commodity. Each such committee shall be composed of members elected from their own number by the producers of such commodity and shall be established and operated in accordance with regulations prescribed by the Secretary.

(b) Whenever any such farm commodity program development committee recommends it, the Secretary is authorized to conduct a referendum of the producers of such commodity to determine whether they favor a national marketing quota for such commodity as outlined by the Secretary after the consultation and guidance of the commodity committee. If two-thirds or more of the producers voting in any such referendum vote in favor of such a program, the Secretary shall submit to the Congress a national marketing program for the commodity concerned in conformity with principles hereafter outlined in this title, together with estimates of the annual costs of each such program.

(c) The national marketing quota for any marketing year in the case of any farm commodity for which a marketing program is effectuated pursuant to subsection (b) shall be an amount of such commodity which will move in domestic and foreign markets in such marketing year, as determined by the Secretary, at a fair price for such commodity, taking into account the amount of such commodity to be utilized pursuant to any program effected under title II and III of this Act.

(d) With respect to any national marketing quota program submitted to the Congress under subsection (a), the Secretary shall—

(1) establish the necessary production adjustment and orderly marketing control procedures for the commodities concerned, including the necessary incentives or penalties to effect compliance with the program;

(2) establish procedures for transferring sales quotas among producers in the same area, and among different areas; and

(3) utilize, as may be necessary for the effective administration of such program, any alternative income stabilization methods, individually or in combination, including but not limited to crop loans, marketing premium payments, marketing agreements, marketing orders, surplus diversion purchases, purchase agreements, export incentive payments, export equalization payments, stabilization pools, or income deficiency or compensatory payments direct to farmers, in order to achieve the fair price objectives of this legislation at the lowest possible cost to consumers and taxpayers: *Provided, however,* That in no instance shall any individual farm operator receive total Government payments of more than $5,000 for such purposes in any one marketing year, or more than $25,000 in crop loans.

(e) The term "fair price" as used in this section means, with respect to any commodity, the price which will yield returns on capital and labor (on representative family farms) comparable to nonfarm earnings, as determined by the Secretary on the basis of costs and returns collected and published annually by the United States Department of Agriculture for typical family-operated commercial farms.

(f) If the Secretary determines that the fair price for any commodity encourages competition from synthetics or tends to otherwise significantly reduce domestic consumption or export of such commodity, or in the case of oilseeds the products thereof, he may allow the commodity to move through the market at a competitive price and pay the difference between the competitive price and the fair price as a compensatory payment directly to the producer.

(g) Unless any such marketing program submitted to the Congress under provisions of this title is disapproved by joint resolution of the Congress after sixty days after submission by the Secretary, it shall be placed into operation; and all other previously existing price support provisions for such commodity shall be suspended for the period for which such program is in effect.

(h) The Secretary shall use funds of the Commodity Credit Corporation for the purposes of implementing this title.

TITLE V—LONG-TERM AGRICULTURAL PROGRAM

SEC. 501. (a) In order to facilitate the adjustment of the supply of agricultural commodities to the demand therefor and to effect a healthy and balanced growth in agriculture, the Secretary is authorized and directed to formulate and submit to the Congress, within six months after the enactment of this Act, a comprehensive program dealing with long-term adjustments in agriculture in the United States, together with a long-term budget setting out the estimated costs of carrying out such program.

(b) Any program submitted by the Secretary pursuant to subsection (a) shall include, but not be limited to—

(1) plans for an expanded agricultural resources conservation program, including incentives to encourage land-use adjustment and temporary retirement of land not needed for production;

(2) plans for a review and appraisal of the total research effort, public and private, in the field of agriculture with a view to determining the need for increased research in the production patterns, marketing, and uses of agricultural production.

TITLE VI—LOW PRODUCTION FARMS

SEC. 601. (a) The Secretary is authorized and directed (1) to review and report to the Congress the progress of the rural development program in solving the production and income problems of low production and low income family farms, and (2) to submit to the Congress, within six months after the date of the enactment of this Act, further recommendations for dealing more effectively and more rapidly with these problems, and

(3) to submit estimates of the costs of carrying out such recommendations.

(b) The Secretary shall, with respect to any recommendation submitted pursuant to subsection (a), consider, but not be limited by—

(1) the use of increased supervised credit to help speed farm reorganization and to help achieve more efficient sized and better organized farm units;

(2) the establishment of special services, including individual farm and home management guidance;

(3) the feasibility of payment of special grants to assist families with poor economic futures in agriculture who may desire to seek more gainful opportunities; and

(4) better protection for the benefit of families or persons who gain their living primarily as hired farm workers; and

(5) stimulation of further industrial development in underdeveloped rural areas; and

(6) the desirability of extending the United States Employment Service to rural areas and providing counseling service to people living in rural areas.

Abuses in the Automotive Industry Require Enactment of H.R. 880

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 880, to require certificates of fitness in the sale of automobiles. I have received many unsolicited letters from citizens throughout the United States stating that they are in favor of the bill and citing their own personal experiences as examples of why the measure is needed.

The latest of these letters is dated September 3, 1959, and comes to me from Anthony J. Cinelli, of Brooklyn, N.Y. It reads as follows:

BROOKLYN, N.Y., *September 3, 1959.*

HON. ABRAHAM J. MULTER,
House of Representatives,
Washington, D.C.

DEAR SIR: Your proposed legislatoin against misleading auto advertising is positively very much needed, especially to curb some deliberate lying, unscrupulous, and crooked dealers, salesmen, and possibly some irresponsible manufacturers.

I purchased a 1959 Ford from Four Star Motors, Inc., 1532 86th Street, Brooklyn, N.Y. On January 7 I received my car with the speedometer reading 2 miles. Five minutes after taking possession of this car I returned to the showroom to advise Mr. Weiner, the salesman, that the car pulled when brakes were applied. He told me to take it to their service department for brake adjustment. On January 8 I went to the service department, only to be told that they would not attempt to correct this "pull" until I had at least 1,000 miles on the car. This is a Ford Motor Co. regulation, so I am told. Therefore, I had no choice other than to risk my neck with defective brakes for 1,000 miles.

On February 22, 1959, after driving 1,047 miles, I returned to Four Star Service for the so-called 1,000-mile check, and to date I have returned 26 different times with the same trouble—pulling when brakes are applied—and still cannot get this corrected.

Mr. Cohen, the service manager, admits he is baffled. He has tried everything he knows to correct this condition and has also had Ford engineers on two different occasions without any success. He tells me it is the Ford Motor Co.'s problem.

The following has been done on my car by Four Star Motor's service department and still this dangerous condition has not been corrected:

1. Aligned front end three times.
2. Exchanged five sets of wheel cylinders.
3. Replaced six sets of wheel brakes.
4. In June, on the advice of engineer De Lisa, I am told that the entire brake system was removed from a new car and installed in my car—still no change—auto pulls.
5. Rounded wheels three times, the last time on August 13 at the request of Ford Engineer Evans—still no luck—still pulling and is about as safe as riding a missile.

To make matters still worse, during one of my many visits to Four Star service department, I learned from Joseph Testaverde, the foreman mechanic, that he personally road-tested my car and he advised Mr. Weiner, the salesman, that the car pulled but this unscrupulous individual's idea was to complete the sale first and worry about the trouble later. Needless to say, this ——— ——— denies that Mr. Testaverde advised him of this brake pull.

I wrote several letters to Ford Motor Co. but found this to be a waste of time. Apparently they are as irresponsible as this dealer. My letters are answered with letters of sympathy but they have never made any effort to eliminate this dangerous condition. I guess if I am involved in a head-on collision, causing several deaths, Ford Motor Co. will again send letters of sympathy. Maybe then I will not be in a position or mood to appreciate them.

You can be assured of my full support on your proposed legislation. If I can be of any assistance, please do not hesitate to call on me. Something must be done to protect a buyer. A poorly manufactured car, sold, and serviced by incompetent mechanics can very easily be the cause of a fatal accident. I know this quite well, I've had one or two close ones.

Very truly yours,

ANTHONY J. CINELLI.

Czechoslovak National Council of America Warns Against Khrushchev

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call the attention of my colleagues to a memorandum which has been prepared by the Czechoslovak National Council of America concerning the visit of the Prime Minister of the Soviet Union to this country. This memorandum has been sent to President Eisenhower, and it is my sincere and earnest belief that the administration should give serious consideration to the suggestions made in this memorandum.

The Czechoslovak National Council of America represents a substantial number of Americans of Czechoslovakian descent, who are serving the best interests of their adopted country when they display such deep concern about the visit to the United States by the Soviet Prime Minister. Even more important is the fact that the Czechoslovak National Council of America emphasizes with such clarity that the United States cannot wage a successful fight against communism on the one hand, and on the other hand, be inviting the world's No. 1 spokesman for communism to this country.

The Czechoslovak National Council of America quite appropriately points out the demoralizing effect on the people of the satellite nations that Khrushchev's visit to this country will have. There should be no question in anyone's mind about the close ties that have existed over the years between the United States and Czechoslovakia in the never-ending struggle against tyranny and oppression. It is for this reason that I hope not only the President, but also the Members of this Congress, will respond effectively to the eloquent pleas of the Czechoslovak National Council of America.

I am very happy that the Czechoslovak National Council of America has its national headquarters in Chicago.

The memorandum follows:

MEMORANDUM OF THE CZECHOSLOVAK NATIONAL COUNCIL OF AMERICA CONCERNING THE VISIT OF PRIME MINISTER OF THE SOVIET UNION, SUBMITTED SEPTEMBER 11, 1959

Mr. President, the Executive Committee of the Czechoslovak National Council of America begs leave to submit the following memorandum.

The present international situation is of paramount importance to the future of the United States of America and to the well-being of the now captive nations of Europe. Under these circumstances we consider it our duty to draw your attention to the anxieties and wishes of our members, tens of thousands of loyal American citizens of Czechoslovak descent, on whose behalf we speak.

We are prompted to take this step primarily by your decision to invite the Prime Minister of the Soviet Union to the United States and by your acceptance of his invitation to visit the Soviet Union.

The fact that the President of the United States extended an invitation to Mr. Khrushchev and accepted his invitation to the Soviet Union is being erroneously interpreted in Czechoslovakia—equally by Communists and non-Communists—as a major shift from a tougher to a softer U.S. policy toward the Soviet bloc.

The Communist authorities in Czechoslovakia seem to rejoice in this change of policy. They expect from it an increase of domestic and international respectability and they hope it will result in a weakening of the NATO cohesion.

The non-Communist majority of the people in Czechoslovakia appear to view this very change of U.S. policy with regret and apprehension.

The non-Communists seem to consider Mr. Khrushchev's invitation to represent a refutation of the previous line of U.S. policy toward the U.S.S.R., as it was often stated by the President and Secretaries of State and formulated most eloquently by the Policy of Liberation and recently by the Captive Nations Week resolution.

The people of Czechoslovakia seem to be so confused by the latest developments of U.S. foreign policy that they believe the exchange of invitations is to be a prelude to a new Munich agreement.

This wrong impression of a shift in U.S. policy may cause in Czechoslovakia and presumably in other captive nations a major deterioration of the psychological situation with adverse results for the future security of the United States.

Some consequences of this psychological change are feared to be the following:

A. A feeling that the United States is abandoning the people of Czechoslovakia and is giving up its hope and interest in an ultimate liberation of the captive nations;

B. An impression that the United States of America is accepting the status quo in central and eastern Europe as being just, desirable and lasting.

C. A stronger grasp of communism over the minds of the people;

D. A weakening of the spirit of resistance and western sympathies throughout the captive nations with all the regrettable consequences for the NATO forces in case of a future outbreak of hostilities, which we all fervently hope will never come to pass;

E. A loss of confidence in the integrity of American intentions and in the trustworthiness of American moral and legal pledges.

Against the backdrop of these premises we wish to recommend most urgently the following desiderata to your consideration.

Let it be made know to Mr. Khrushchev in a way which shall reach the hearing of the Communist government and the non-Communist people in Czechoslovakia:

A. That Mr. Khrushchev's invitation does not represent a basic change in the line of U.S. policy toward the U.S.S.R and their puppet governments in the captive nations;

B. That in consequence the United States does not accept now—any more than before Mr. Khrushchev's invitation—the status quo in central and eastern Europe as just, desirable and lasting;

C. That the cause of the captive nations shall be discussed by the President of the United States and his representatives with the Soviet Prime Minister and his representatives not only at the forthcoming visit, but at every future meeting or conference concerning itself with problems of European security, be it in the United Nations or elsewhere;

D. That the U.S. spokesmen shall insist on the restoration of independence and freedom to the formerly sovereign nations of central and eastern Europe, as was solemnly pledged by the United States and the U.S.S.R.;

E. That the United States shall insist on free elections under effective international control;

F. That, if a German peace treaty were to be discussed and if the Soviet government were to insist on the presence of representatives of the Communist governments of Prague and Warsaw, the U.S. Government shall invite such spokesmen as have a right to represent the true interests of free Czechoslovakia and free Poland;

G. That any European security pact will have to be preceded by the complete evacuation of all Soviet armed forces and other control organs from the territories of the captive nations.

In conclusion we wish to assure you, Mr. President, of the wholehearted support of any policy intended to alleviate the present hardship of our oppressed brethren and to accelerate the liberation of Czechoslovakia and all other captive nations.

Very respectfully yours,

CZECHOSLOVAKIA NATIONAL COUNCIL OF AMERICA,

JAMES HOVORKA, *President*.

U.N. Plan Would Aid Saboteurs

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. ADAIR. Mr. Speaker, in yesterday's RECORD, I included the first of two stories from the Indianapolis Star relating to apparent efforts of Communist sympathizers to obtain important information with respect to Latin America. Following is the second of these thought-provoking articles:

[From the Indianapolis Star, Sept. 6, 1959]

U.N. PLAN WOULD AID SABOTEURS—PERIL FOR LATIN AMERICA

(By Jameson G. Campaigne)

"Massive industrial sabotage" imperiling both the economic and military security of the entire Western Hemisphere will be made possible if a plan, not yet publicly revealed, by the United Nations Economic Commission for Latin America is carried out.

This will be charged in the September 11 issue of the magazine U.S.A. published by Alice Widener and to be mailed tomorrow. (U.S.A., Post Office Box 134, Lenox Hill Station, New York 21.)

The man directly responsible for this plan to gather secret industrial information from every power company in Latin America is a leftwing, Russian-born Argentine who was, in 1953, the subject of a demand by the U.S. Attorney General to the State Department that his accreditation to the United Nations be rescinded because of his constant contacts with Communists and fellow travelers.

U.S.A. magazine was able to obtain, through confidential U.N. sources, a thermofax copy of a letter from the U.N. Economic Commission for Latin America, sent to all Central and South American power companies, demanding, "without prejudice in writing you again," complete information about these companies' construction equipment, conveying and generating equipment, electric generators, auxiliary and safety equipment, control equipment, telecommunications equipment, structures and pole lines, cables, conductors, and transmission lines.

Information also was demanded on design of power plants, atomic reactors, and the costs of energy. In addition the power companies were told to "send us a list of the principal electric-mechancial materials and equipment you are purchasing or intend to purchase in your own country or Latin American countries, showing the corresponding supplier's name and address." I have a copy of this letter in my files.

American industrialists and specialists in the field of electric power say that there are two enormous dangers in making this sort of secret industrial information available to the U.N. commission.

Should this information fall in Soviet hands, the first danger is economic. The Soviets would know exactly who was selling power equipment to Latin American companies. They could then accelerate their economic penetration into Latin America by undercutting the prices of American and allied suppliers and at the same time send their technicians into Latin America along with the equipment sold.

But the second danger is even more disastrous.

In case of war Communist saboteurs, knowing exactly where the critical equipment was and what it was, could destroy transmission lines, poles, and power stations and, in a single stroke, paralyze all South and Central America.

Communist revolutionaries, carrying out Castro-like invasions of Caribbean or other Latin American countries, could, with this information, swiftly paralyze the entire Nation attacked and throw the economy into complete chaos. We have seen here in the United States the results of a partial power failure in New York just recently that threw half the city into darkness and paralysis.

Reached yesterday by phone, Kenneth Redmond, president of the United Fruit Co. which has vast interests in Latin America, was informed of the details of this U.N. questionnaire.

"No small businessman, much less a big power company executive, would divulge this type of information to any outside agency," he said. "Those industrial secrets are just as vital to the security of Latin America as any military secret no matter how important. Without power you could not move. If these secrets are revealed to the enemy, they would have an opportunity for the most tremendous industrial sabotage in time of war. It would be a great disaster if this information fell into the hands of the Soviet Union."

There is a real danger that South American governments, many of them Socialist oriented, will pressure private power companies into complying with this request from the Socialist-Communist-dominated Economic Commission for Latin America, not knowing the real dangers to their own economic and military security that are involved. Particularly since they are apparently not aware that the man responsible for the plan is considered an undesirable alien in the United States.

The letters sent to the private power companies in Latin America were signed by Adolfo Dorfman. Dorfman was born in Russia and is now a citizen of Argentina.

At one time he worked in the United States in the Office of Inter-American Affairs under Nelson Rockefeller. In 1952 he was chief of the Economic Development Section of the Division of Economic Stability and Development in the United Nations. In 1953, the U.S. Immigration and Naturalization Service in New York informed the Attorney General of the United States that it had derogatory information about Dorfman serious enough to make it necessary that the Attorney General request the State Department to ask that his accreditation to the United Nations be rescinded. Apparently the State Department acted, for Dorfman left the United States November 13, 1953, leaving his family behind.

I am informed that there is a classified file on Adolfo Dorfman at the U.S. Immigration and Naturalization Service in New York. The latest entry on that file is 1954.

Despite the fact that the U.S. Government declared Dorfman persona non grata, and asked that he be removed from the U.N., Dorfman turns up in Santiago, Chile, as chief of ECLA energy development and hydraulic resources program.

He works directly under the U.N. chief of regional economic commissions who is no other than a Communist-Polish national named Wladyslaw R. Malinowski.

How Dorfman came to be appointed to his present position is a mystery. So far the U.S. State Department has either not tried, or has failed to have this dangerous man

removed from his powerful U.N. position despite the fact that the U.S. taxpayers pay at least one-third of his salary.

When informed of these facts by telephone yesterday, Congressman ARMISTEAD SELDEN, Democrat, of Alabama, and chairman of the Inter-American Subcommittee of the House Committee on Foreign Affairs told me: "If the information that is contained in the Indianapolis Star story is correct, this is a matter that should be looked into carefully by the security authorities of the United States."

Senator STYLES BRIDGES, ranking Republican on the Senate Foreign Relations Committee, told the Star: "I am shocked by the information submitted to me by the Star. Certainly I am going to demand a congressional investigation."

How We Should Greet Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. CAHILL. Mr. Speaker, while some people are questioning the advisability of Khrushchev's visit to the United States, all of us are concerned with the way he should be greeted in the cities and towns he will visit. All Americans want to be courteous, yet do not by their good conduct wish to give approval of Khrushchev's past actions and the philosophies for which he stands. How then should we greet him? By cheers and applause, by boos and jeers? May I suggest that we as Americans should view Khrushchev's visit as an opportunity to show him and the world the unity, strength, and patriotism of the American people regardless of their ancestry, be it Polish, Hungarian, German, Italian, or Czech. Regardless of their religion, be it Protestant, Catholic, or Jew. And how do we do this and still carry the American tradition of fairplay, of courtesy toward visiting heads of States? By the simple method of displaying and waving the American flag. Hands that wave a flag need not applaud. This gesture would indicate welcome without approval; friendship without surrendering our own faith and beliefs—but above all, it would forcefully demonstrate the strength and unity of all Americans. It would also show to the world as a result of the photographs, television, and movies that are taken of Mr. Khrushchev, through the medium of a backdrop of red, white, and blue, that the American people, while holding the hand of friendship, also possess the fists of determination, unity, and strength.

I hope, therefore, that every factory and business, home and office, native and foreign-born citizen will display the Stars and Stripes in the cities and towns in America that are to be visited by Mr. Khrushchev. Let the steel companies and the pickets, the farmers and the factory workers, the corporations and the labor unions demonstrate by the symbolic display of the American flag the lesson that all of us want Khrushchev to learn, namely: that while we want friendship and peace, we are united behind the President of the United States and the Congress of the United States in their firm stand for justice to all people throughout the world.

Ron Clem, a Young Man Going Places

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McGOVERN. Mr. Speaker, the September–October 1959, issue of Goodyear News carries an inspiring story on the accomplishments of Mr. Ron Clem, of Yankton, S. Dak.

Ron is now in his second year as owner of Clem's Tire Service in Yankton, the city that was recently named as an All-America city. Ron is typical of the progressive businessmen who have brought Yankton favorable recognition both in South Dakota and in the Nation.

I include at this point in the CONGRESSIONAL RECORD the fine tribute paid to Mr. Clem by the editors of the Goodyear publication:

YANKTON DOODLE DANDY—RON CLEM HAS MANY ACCOMPLISHMENTS BEHIND HIM; A BRIGHT FUTURE AHEAD

Ron Clem is a young man going places.

A veteran of the tire business at 36, Ron is a remarkably successful businessman—a resourceful, ambitious and energetic person who has earned a terrific reputation in his community.

Ron is now in his second year as owner of Clem's Tire Service in Yankton, S. Dak., a prosperous community of 12,000 located on the upper Missouri River. Yankton is famous historically as the first capital of the Dakota Territory. It also points with pride to the fact band leader Lawrence Welk got his start there 25 years ago.

Back in 1944, Ron moved to Yankton from Sioux City, Iowa, as manager of a competitive tire sales outlet. What he believes was the turning point in his life came in 1948. Bob Lewis (he celebrated his 45th anniversary as a Goodyear dealer in 1957) hired Ron to actively manage the Lewis Tire Co. in Yankton. He did and with great business acumen. So much so that in January, 1958, after the death of Lewis, he purchased the business lock, stock and barrel.

Since his first year as manager of the dealership he's boosted his volume 400 percent. That's the way it has been all the way down the line—more and more profits. In 1958 he did 22 percent better than 1957 and for the first 6 months of 1959 his business was running 20 percent ahead of a corresponding period last year.

How does he account for soaring profits? When a customer enters the store, Ron makes sure he or another member of his sales force is there to greet him.

"You've got to talk to your customers to let them know that you take special interest in their individual needs," says Ron.

Outstanding services is another key to Clem's success. He says, "With good service sales come automatically."

Clem's Tire Service has been forced to expand its facilities several times in recent years to meet growing needs. The expansion includes two new additions and doubling of the service area.

Just recently Ron purchased adjoining property to provide drive-through service for customers. Now they no longer have to back out on the street after their cars have been serviced. There's parking for 20 cars.

Goodyear's identification division has come up with a modern, attractive front for the building. Present plans call for still further identification improvements.

Because of its location in the heart of a great agricultural area, farm tire sales and service are heavily stressed. Clem's Tire Service operates a full-time farm service truck and features a "loaner" service. A farmer who encounters trouble need only phone and within a short time the Clem service truck is on the scene with a replacement tire. This enables the farmer to continue his tractor and equipment operation without delay while his tire is being repaired.

In merchandising, Ron relies heavily on direct mail and this year is getting excellent results from Men magazine, Farm Progress and 4-Aces. Newspaper ads also are used regularly in addition to radio advertising.

Always on the alert to new sales possibilities, Ron has rung up additional sales through "baldie" spotting. An employee regularly checks parked cars in Yankton's business district for smooth tires. A card is left on the windshield of those cars with dangerous tires and invites the motorist to visit Clem's Tire Service to look over the complete stock of Goodyear passenger car tires.

Although recapping is not a major part of the business, Ron has equipment installed to give him a well-rounded operation.

Sales are where you find them. And Ron has found them in the most unlikely places. As a member of the Yankton Country Club (he was president in 1958) he sold several Goodyear batteries to the club for its fleet of new golf carts.

A shrewd businessman, Ron isn't a one-sided citizen. When the people of Yankton want to get something done they're likely to turn to Ron.

In his spare time (if that's what you call it), citizen Clem is up to his ears in the work and fun of the community which in 1958 was named an all-American city in recognition of its civic accomplishments. No small measure of credit belongs to Ron who has been one of the prime movers behind Yankton's civic betterment.

Chamber of commerce: As a member of the city improvement committee, Ron helped raise funds for a new senior high school (it cost over $1 million); a community swimming pool; and promoted the construction of Gavins Point Dam that has improved downstream navigation and bank stabilization, created unlimited recreational opportunities and benefitted fish and wildlife conservation.

United Fund: He is a director of the fund raising organization this year and has been active in its work since he came to Yankton.

Baseball: A rabid baseball town Yankton is proud of its "Terrys," a semipro team. Ron is on the local baseball commission.

Shrine Elks: Ron has been active in the various benefits sponsored by these organization. Through them much good has been accomplished for all the people of Yankton.

These civic activities give Ron an opportunity to get on a first-name basis with many of his customers; they in turn rate him as a solid citizen.

Ron was born in Alda, Nebr., the son of a Methodist minister, and moved frequently in his youth as his father took various pastorates in that part of the country.

He met his wife, Maxine, in Sioux City, Iowa, and they were married there. The couple has two children, Sherry Lee and Jacqueline.

On Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter written by Dr. Clarence Streit, president of the International Movement for Atlantic Union, offering a very interesting and appropriate suggestion regarding Khrushchev's visit to our country.

I would like to commend this letter to the attention of the membership of this body:

INTERNATIONAL MOVEMENT
FOR ATLANTIC UNION,
Washington, D.C., September 8, 1959.

To the EDITOR:

Much as I agree that since the President has invited Mr. K. we should be hospitable, I wonder if the traditional tickertape welcome would be appropriate. After all, Wall Street is the Communist hell. Worse, it makes the bear that symbolizes Russia symbolize a bleak future, while its symbol of a bright outlook is the bull that, at the mere sight of red, attacks.

Would it not be more hospitable to welcome Mr. K. by having Washington instead shower him with the tape for which it is famed? True, since this tape is in his favorite color he may misread this to mean that our Government is swarming with Communists. Yet, would not this danger be offset by the advantages gained from burying Mr. K. in redtape, instead of continuing to use it to choke practical efforts to defeat dictatorship without war—such as the Humphrey-Morgan-Zablocki resolution? This proposal to call a convention to explore how best to give the Atlantic community the strength that proverbially lies in union has been entangled in redtape ever since the recent Atlantic Congress unanimously urged that this convention meet before next spring.

What of New York, where Mr. K. will be on September 17 and 18, proclaiming in the U.N. communism's fervor for peace, its hatred of racism and imperialism, its self-sacrificing dedication to the protection of the weak from the strong? Some may find it tactless to have him appear there then.

On September 17, only 20 years ago, the Red Army began its part of the invasion of Poland—already blitzed by its Nazi partner—to secure its share of the spoils agreed on in the Nazi-Communist deal which set off World War II. And on September 18, 1939, the Red and Nazi armies fraternally met at Brest-Litovsk—where communism had previously stabbed freedom in the back by the first of its deals with German autocracy. To speak in the U.N. on this anniversary does not, however, seem to embarrass Mr. K.

President Eisenhower will no doubt have the good taste not to show his guest the monument our fathers raised just across the street from the White House to an earlier Mr. K. Yet, if we forget him entirely, the present Mr. K., who comes offering us the gift of peace, may think we neglect our noblest benefactors. To solve this dilemma, I suggest that our press take a bit of page 1 from him and devote it to our first Mr. K. on September 17. That day is appropriate, since this hero of our own Revolution later led a no less heroic struggle against a previous Prussian-Russian deal—the one of 1794—to invade, partition, and obliterate Poland.

Having been a reporter, I know why news standards count personalities as more interesting than principles, and live dictators as more newsworthy than dead liberators, and I do not complain, even though the space given Mr. K. serves willy nilly to build up the personal prestige of the most dangerous enemy of freedom of the press. All I suggest the press do is to keep alive the memory of the one who fought for our free principles—by publishing at least the last four lines of Campbell's poem which (as every schoolboy once knew) ends:

"And freedom shriek'd—as Kosciuszko fell."

On that same September 17 might not some of us Americans—including those who, like me, are not of Polish origin—who wish to express with dignity to Mr. K. the principles our Union, as Lincoln said, "lives by and keeps alive," say it with flowers * * * placed round the monument raised, across from the White House, to Liberator K.?

CLARENCE STREIT,
President.

Algeria to Albany, Oreg.

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, people of Oregon, and especially in my district, show a special interest in foreign affairs. Perhaps it is because our western boundary is the Pacific Ocean. Perhaps it is also because they are an intelligent, hard working, conscientious group of men and women who, like many others in the United States and throughout the world, yearn for peace.

As a consequence of this responsible attitude, we have many students and visitors from foreign lands coming to our homes and educational institutions. In the Albany Democrat-Herald for August 22 a story by Betty Mayfield tells of the arrival of a fourth-generation Algerian-born French girl, Nicole Rouxparis. Nicole will spend the year attending Albany Union High School, under the American Field Service exchange program. Her hosts for the year will be Dr. and Mrs. W. H. Alden, 1060 Lawnridge Street, Albany. She comes from an area where the French and the Arabs have been fighting for 5 years. When she leaves, she will no doubt leave with a better understanding of Oregon and America, and many Oregonians will have a better understanding and appreciation of France's problem in Algeria.

Under unanimous consent I am including hereafter the text of the newspaper article about Nicole Rouxparis:

ALBANY HIGH EXCHANGE STUDENT WITNESS TO FRENCH-ARAB STRIFE

(By Betty Mayfield)

A fourth-generation Algerian-born French girl arrived in Albany Friday to spend a year attending Albany Union High school under the American field service exchange program.

Sixteen-year-old Nicole Rouxparis will find the coming school term quieter than last year, when her Christmas holidays were interrupted by rebel Arab tribes sweeping in from the hills to attack her town, only to be repulsed by the 300 French soldiers garrisoned there.

Nicole, who will stay in Albany with Dr. and Mrs. W. H. Alden, 1060 Lawnridge Street, said that fighting between the French and Arabs has been going on in Algeria for 5 years.

"Last year the Arabs attacked very often, but now not so much," she said. "I think they will make peace eventually, but it will be very long before they do."

Nicole's father is mayor of Diderot, a town of about 1,000 population—200 French and 800 Arab. It is located near Tiaret, a city of 30,000, about 190 miles southwest of Algiers.

BORN IN ALGERIA

Her great-grandfather moved to Algiers from France, and her grandparents and parents were born in the African province, as well as Nicole and her older sister.

Nicole took her early schooling in Algiers, and for the last 2 years she studied at a school in Toulouse in southern France.

She would be eligible to enter the university this fall, but decided to spend a year in the United States instead.

After her year in Albany, she will return to France and attend the University of Toulouse, where she plans to train to become an English teacher.

Nicole has studied English for 7 years. She said that all students in her school were required to take two foreign languages—English and one other. She chose Spanish for her second study.

She traveled from Rotterdam to New York on a ship with 700 other foreign students from several European countries and then flew to San Francisco. A bus took the northbound students, dropping Nicole in Salem, where the Aldens picked her up.

VISIT PLANNED

Today she was to leave with the Alden family for a 2-week visit to southern California.

The Aldens applied to American Field Service for a foreign student last fall through the high school. They were the only Albany family applying this year.

The host family is responsible for the student's board and room and such things as school pictures, Mrs. Alden said, but the AFS takes care of medical expenses and provides the student with an allowance.

American students also go abroad under the AFS plan, but Albany was not entitled to send any this year, because no foreign students were quartered here last year.

Nicole will be accompanied to high school in Albany by two members of the Alden family, Georgia, a senior, and John, a freshman. The older daughter, Mary, queen of the year's Timber Carnival, will be a freshman at the University of Oregon, and the youngest son, Bill, is in sixth grade.

Although Nicole has not had time to do much sightseeing yet, she is looking forward to her year in the United States.

"I think I will enjoy it very much," she said, "and it will help me when I start to teach English."

The Late Honorable Edmund P. Radwan

SPEECH
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. SANTANGELO. Mr. Speaker, it is with deep sorrow that I learned of the

passing of my beloved and esteemed friend, Edmund P. Radwan. Our Maker called Mr. Radwan at the early age of 48 and we mourn his passing. I met Ed Radwan in 1947 when we served together as senators in the New York State Legislature. He was a senator from the great city of Buffalo where he was born and grew up. He was a dedicated servant and public officer. He was always vibrant, alive, and stimulating. His talents were recognized by his friends and neighbors who promoted him to Congress in 1951 to serve his country further.

Cities and places are just brick and mortar to be admired for their beauty and architecture. People give them meaning and make them come alive. On every occasion that I had a problem in Buffalo, I could always call upon Ed for assistance and he never failed me. Whenever I thought of Buffalo, I would think of Ed Radwan. During the past few years, Ed Radwan did not enjoy good health. He suffered, but made no complaints. When he realized that he could no longer render service to his people, he graciously stepped down to permit another more physically capable to take his place.

He was one of the most courageous men I ever knew. He suffered silently and stoically. He approached his Maker with composure and resignation. He has gone to the great beyond. Because on the way he touched me, I am richer in experience, I am wiser in judgment, and happier in thought. All who knew and met him on his journey through the corridor called "Life," share this feeling and sentiment.

He lives in the hearts of his wife, his three children, his friends, and his brother, Ralph. I extend to his family and those who love him my heartfelt sympathy.

A Constitutional Amendment To Establish Universal Suffrage

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. BRADEMAS. Mr. Speaker, I rise today to offer a joint resolution for a constitutional amendment to establish a free and universal franchise throughout the United States.

That thousands of Americans, citizens of the greatest free Nation in the world, are today denied the right to vote, a right sacred in any democracy, cannot be denied.

The most effective and equitable way to insure to every citizen of the United States, regardless of his race or color, this fundamental right is a simple constitutional amendment.

PRAISES CIVIL RIGHTS COMMISSION REPORT

Mr. Speaker, I believe that September 10, 1959, is a particularly appropriate day on which to make this proposal because it was only yesterday that the U.S. Commission on Civil Rights transmitted to the President its report. It is an excellent report and its title, "One Nation Under God, With Liberty and Justice for All," expresses the principle on which the constitutional amendment I am proposing is based.

HAILS FATHER HESBURGH AS ADVOCATE OF AMENDMENT

There is another reason I am particularly proud to urge the adoption of an amendment to establish universal suffrage in America. This amendment is advocated in the report of the Commission on Civil Rights by three members of the Commission. One of these members resides in the congressional district I represent. He is the Reverend Theodore M. Hesburgh, C.S.C., the distinguished president of the University of Notre Dame, and one of the most able and dedicated citizens of our country. In addition to his position as president of a great American university, Father Hesburgh is the permanent Vatican delegate to the general conference of the International Atomic Energy Agency, a member of the special studies project of the Rockefeller Brothers Fund, and a member of the Board of Visitors to the U.S. Naval Academy.

The amendment urged by Father Hesburgh is also advocated by two other distinguished Americans on the Civil Rights Commission, John A. Hannah, president of Michigan State University, and George M. Johnson, former dean of the Howard University Law School.

NOTES NEGROES DENIED RIGHT TO VOTE IN SOUTH

Mr. Speaker, the Civil Rights Commission report states that Negro registration in the South represents only about 25 percent of the nearly 5 million Negroes of voting age in the region in 1950. It will not startle anyone to learn that it is in the South of the United States that the denial of the right to vote is most widespread. Literacy tests and poll taxes are among the devices commonly used to keep Negroes from voting.

CITES INDIANA VOTING STUDY

But, Mr. Speaker, I do not for a moment claim that those of us who live in the North should be complacent or self-righteous. The Commission report declares that "there are de facto denials of the right to vote in northern areas that exclude or discourage Negro residnce altogether."

For example—

Says the Commission—

The report of the Committee on the Right To Vote of the Indiana State Advisory Committee stated that in 1946 it was found that there were no Negro residents in 30 of the State's 92 counties. The Indiana report added that—"in a number of the county seats and small communities in the counties signs are visible advising "Niggers don't let the sun go down on you here." Obviously, if one cannot establish residence in one-third of the State, he cannot meet the qualifications for voting."

PRAISES INDIANA EFFORTS TO SOLVE CIVIL RIGHTS PROBLEMS

Mr. Speaker, I am very glad to say that in my own State of Indiana and in my own congressional district, serious efforts are being made to study and act on the many problems in the field of civil rights. For example, the Chairman of the Indiana Advisory Committee of the U.S. Commission on Civil Rights, John A. Scott, of Elkhart, and Mrs. Scott, are providing fine leadership toward public understanding of civil rights issues. This fall, the Young Women's Christian Association of Elkhart is sponsoring a series of civil rights conferences in which community leaders from business, industry, labor, and the professions will hear addresses on various aspects of the civil rights problem and will join in discussions with the visiting speakers.

EXPLAINS HESBURGH UNIVERSAL SUFFRAGE AMENDMENT

Now, Mr. Speaker, just what will the Hesburgh amendment do?

The proposed constitutional amendment would give the right to vote to every citizen who meets his State's age and residence requirements and who is not legally confined at the time of registration or election.

Mr. Speaker, only those who do not believe in America can possibly object to this amendment. Only those who are opposed to the American principles of freedom and democracy can range themselves against this proposal. Only those who deny the Hebrew-Christian tradition of respect for the dignity of the individual human being as a child of God can deny to an American citizen the right to vote.

CALLS HESBURGH-HANNAH-JOHNSON STATEMENT BEST ARGUMENT FOR AMENDMENT

The best and briefest way for me to put the case for the universal suffrage amendment is to include at this point in the CONGRESSIONAL RECORD the joint statement, which is contained in the Commission report, of Father Hesburgh, Dr. Hannah, and Dean Johnson in support of the proposal.

The statement follows:

PROPOSAL FOR A CONSTITUTIONAL AMENDMENT TO ESTABLISH UNIVERSAL SUFFRAGE

(By Chairman Hannah and Commissioners Hesburgh and Johnson)

The Commission's recommendation for temporary Federal registration should, if enacted by Congress, secure the right to vote in the forthcoming national elections for many qualified citizens who would otherwise, because of their race or color, be denied this most fundamental of American civil rights. But the proposed measure is clearly a stopgap.

In its investigations, hearings, and studies the Commission has seen that complex voter qualification laws, including tests of literacy, education and interpretation, have been used and may readily be used arbitrarily to deny the right to vote to citizens of the United States.

Most denials of the right to vote are in fact accomplished through the discriminatory application and administration of such State laws. The difficulty of proving discrimination in any particular case is considerable. It appears to be impossible to enforce an impartial administration of the literacy tests now in force in some States, for where there is a will to discriminate, these tests provide the way.

Therefore, as the best ultimate solution of the problem of securing and protecting the right to vote, we propose a constitutional amendment to establish a free and universal franchise throughout the United States.

An important aim of this amendment would be to remove the occasion for further direct Federal intervention in the States' administration and conduct of elections, by prohibiting complex voting requirements and providing clear, simple, and easily enforcible standards.

The proposed constitutional amendment would give the right to vote to every citizen who meets his State's age and residence requirements and who is not legally confined at the time of registration or election.

Age and residence are objective and simple standards. With only such readily ascertainable standards to be met, the present civil remedies of the Civil Rights Act should prove more effective in any future cases of discriminatory application. A court injunction could require the immediate registration of any person who meets these clear-cut State qualifications.

The proposed amendment is in harmony with the American tradition and with the trend in the whole democratic world. As noted in the beginning of this section of the Commission's report, the growth of American democracy has been marked by a steady expansion of the franchise; first by the abandonment of property qualifications and then by conferral of suffrage upon the two great disfranchised groups, negroes and women. Only 19 States now require that voters demonstrate their literacy. Michigan, New Hampshire, Pennsylvania, Tennessee, and Vermont have suffered no apparent harm from absence of the common provisions disqualifying mental incompetents. With minor exceptions, mostly involving election offenses, Colorado, Maine, Massachusetts, Michigan, Pennsylvania, Utah, Vermont, and West Virginia have no provisions barring certain ex-convicts from the vote, and of the States which do have such provisions, all but eight also provide for restoration of the former felon's civil rights. In only five States is the payment of a poll tax still a condition upon the suffrage.

The number of Americans disqualified under each of these categories is very small compared with the approximately 90 million now normally qualified to vote. It is also small in relation to the numbers of qualified nonwhite citizens presently being disfranchised by the discriminatory application of these complex laws. The march of education has almost eliminated illiteracy. In a nation dedicated to the full development of every citizen's human potential, there is no excuse for whatever illiteracy that may remain. Ratification of the proposed amendment would, we believe, provide an additional incentive for its total elimination. Meanwhile, abundant information about political candidates and issues is available to all by way of television and radio.

We believe that the time has come for the United States to take the last of its many steps toward free and universal suffrage. The ratification of this amendment would be a reaffirmation of our faith in the principles upon which this Nation was founded. It would reassure lovers of freedom throughout a world in which hundreds of millions of people, most of them colored, are becoming free and are hesitating between alternative paths of national development.

Mr. Speaker, the opening lines of the Declaration of Independence contain the noblest utterance yet written in support of the proposition that free men should have equal rights in a free society:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness—that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.

The amendment to establish free and universal suffrage in America, Mr. Speaker, will help to make real for all Americans the bright promise of the Declaration of Independence.

Monsignor McGrath Predicts America's Doom Unless People Wake Up

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting article by Rt. Rev. William C. McGrath, S.F.M., P.A., reprinted from the Tablet, a weekly Catholic newspapers published in Brooklyn, N.Y.

The article follows:

PREDICTS AMERICA'S DOOM UNLESS PEOPLE WAKE UP—MONSIGNOR MCGRATH SEES FULFILLMENT OF LENIN'S PROPHECY THAT UNITED STATES WILL BE SOVIETIZED WITHOUT WAR

(By Rt. Rev. William C. McGrath, S.F.M., P.A.)

Ten years more, that's about all. Fifteen, maybe, at the outside. By then the Reds will have taken over America.

No war. No hydrogen bombs. No mass slaughter—till after the victory has been won.

The coup d'etat, in course of accomplishment even while you are reading these lines, will be engineered to final success by the entrenched and untouchable traitors in high places, aided and abetted by their strategically placed cohorts in the nerve centers of the Nation.

The men who sold 500 million Chinese into Communist slavery will finally betray America. The saboteurs who ordered ignominious defeat in Korea will at last achieve the utter destruction of the Nation that has too long stood between Russia's Communist leaders and a bloody Communist world.

It will be the fulfillment of the prophecy made by Lenin in 1923: "First we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

CITES FATE OF ANTI-REDS

Who are these traitors? In what key spots are they located right now?

Apparently we are not to know until it is too late. It is worse than useless; it is military or political suicide for any individual to attempt to track them down. For the end is ever the same: character assassination, disgrace or death.

From Patton to Forrestal to Wedemeyer; from MacArthur to Lawton to McCarthy our shores are littered with broken men, among them some of the greatest Americans of our generation.

McCarthy came nearest to success. He was dangerously close to pay dirt in his attempt to unearth the mysterious forces avowed to encompass our destruction.

That was why his disgrace had become an absolute necessity and would serve as a deterrent to the McClellans and Jenners and J. Edgar Hoovers who might be stupid enough to continue this exposé of treason.

That was why a petition against his censure, signed by 10 million Americans was brazenly ignored.

Public opinion must not be permitted to count any more, as witness the treatment accorded General MacArthur who was given the greatest public acclaim ever tendered to anybody in the history of the country and is now the forgotten man.

This grim prospect for America was given to us in strictest confidence by two outstanding experts on Communist tactics of subversion and whose names I may not reveal. They are firmly convinced that the Nation is doomed; that nothing really effective is being done or can be done to arrest the progress of the great betrayal.

Ten to 15 years they say, before the massacres in the streets and convents and churches and seminaries; before the brainwashing and diabolical torture and the boatloads of broken humans heading northward toward Siberia and death.

In China, since its "liberation" by the Communists, 15 million innocent people have been done to death. But in China, a Red officer recently told a departing missionary, they were not cruel enough. "We will be 100 times as cruel when we take over America."

Not only will this verdict of the experts not be generally accepted but it is virtually impossible today to convince people as a whole that America is even in danger.

So long have we been inoculated and anesthetized with subtle, sporofic party line slogans about peace and security and coexistence that the soul within us has died, the mere thought of resistance, even to the menace of Communist enslavement, has come to be regarded as a sort of treason to a peace-loving world.

North America today comprises in its population a truly alarming number of naive defeatists; of innocent lambs ready—"eager," one would be tempted to say at times—to be led to the Communist slaughterhouse.

Let anybody advocate a strong stand against Communist aggression and immediately there is a hue and cry of "warmonger." We must be realistic about the present last stand of freedom in Asia. Pay any price, for another cease fire anywhere on earth, even the price of handing the whole of Asia over to Red domination.

See to it that there never will be any further attempt to liberate the Chinese mainland. Eliminate the troublesome Chiang Kai-shek. Bottle him up forever on Formosa or, for that matter, in exile, and make use of the mighty U.S. 7th Fleet to insure the surrender of some of his vital offshore islands.

Invtie the murderers of priests and sisters and American uniformed men to the conference table and welcome them as respected members of the United Nations.

Condone. Appease. Pretend. But above all forever surrender.

Peace in our time, wherever we've heard that before. Bury your head in the sand while Russia enslaves the rest of the world and hope—oh, just somehow—that it cannot happen here.

SAYS CATHOLICS ARE ASLEEP

Thank Heaven not all people have given up. A few brave souls in America are trying to arouse the country from its sleep of death. Magazines like the American Mercury and the U.S. News and World Report. Columnists like Sokolsky, Lawrence and Budenz. Radio commentators such as Winchell, Fulton Lewis, Jr., and John T. Flynn.

I have before me an interesting letter from one such lecturer not perhaps so well known, a lady who has consistently spoken against the Communist menace, who has been hounded and persecuted and finally forced to sell her home and move out of her home State.

Hear what she has to say on this subject: "I believe the same diabolical plans will be duplicated in America, for the men who are dedicated to the worship of Lucifer are bound to crucify the followers of Christ. They are a bunch of sanctimonious, holier-than-thou hypocrites. Watch them crucify McCarthy.

"Yes, we do need many prayers. But let me ask you this. Do you think the general run of Catholics have any inkling of the dangers all around them? Is it not a fact that people do not pray for help unless they believe they need it?

"Despite all of Bishop Sheen's telecasts, the Fatima Crusade, the Rosary Crusade, etc., I do not find Catholics in general recognizing that there are serious dangers to their souls, their homes, their families, their way of life. When I try to draw their attention to what I know, they look at me with a blank, dubious stare. Human beings do not come to their senses until they suffer themselves. So I suppose we are going to have to suffer before there is an awakening."

I have heard Bishop Cuthbert O'Gara discuss this subject at length. He is distressed and deeply disturbed over the failure of people in this country to recognize the danger of the Communist threat. And Bishop O'Gara knows all about communism from firsthand experience. For he spent 24 months in solitary confinement in China in an old hut located between a pigsty and a latrine.

A recent interview he granted the Catholic press in Pittsburgh should do much to awaken those who still favor appeasement of Red China.

"The people of the United States," he stated, "do not appreciate the magnitude of the defeat the West has suffered since 1945.

"It is incredible that such a small group of pro-Communist pseudointellecutals should have effected in so short a time one of the greatest turnovers in the history of mankind."

QUOTES BISHOP O'GARA

Bishop O'Gara said that this defeat could not be blamed on stupidity but had been deliberately and coldbloodedly engineered.

"No group of Americans," he said, "could be that stupid. The deliberate throwing away of victory after World War II is confirmed by the whole list of stupidities since V–J Day. And these stupidities are still going on. Someone is still directing the sellout."

Apropos of what would happen in America should the Reds take over, I have before me at the moment a document that affords fruit for meditation. It is a list of 192 priests, some of whom I knew personally, who have been murdered in China and the list is admittedly incomplete. Read for yourself the nature of the treatment meted out to those martyred servants of God and then ask yourself if our fight today is not against principalities and the powers of darkness.

Father Charles Osnagui, buried alive, February 1942; Father Humbert Verdini, burned with some 30 Christians, July 1942; Sister Anne Chang, dragged to death, March 1948; Father Joseph Chang, dragged, beaten, shot, October 1947; Archbishop Cyril Jarre, O.F.M., died in jail, March 1952; Father Francis Hsiao, died after tortures, Good Friday, 1950; Father Seraphin Shih (and many of his fellow Trappists), head crushed between stones.

And so the story goes for all of the 192 who were done to death.

All this at the hands of the Red Chinese murderers who still hold some 900 Americans in their filthy dungeons and who, if our nitwit liberals have the final say-so, will be permitted to shoot their bloody way into the United Nations.

Truly—whom the gods wish to destroy they first make mad.

Good Samaritans Are Still With Us

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. EDMONDSON. Mr. Speaker, every once in awhile the newspapers carry a story that renews every man's faith in his fellow man.

Such a story appeared on September 5, 1959, in the Tucson Daily Citizen.

Because it concerned Oklahoma, it was sent on to me by my good friend and colleague, the Honorable STEWART L. UDALL.

I enjoyed reading the story, and I was proud to be reminded that the spirit of the good Samaritan is still alive in the State of Oklahoma.

The town of El Reno can be proud of the unnamed citizens who so cheerfully, extended the hand of friendship to a neighbor in distress.

They were true to the finest traditions of the Sooner State, where every stranger of good will is welcome.

Here is the story, as written by Leslie Ernenwein:

SHORTY THINKS OKLAHOMANS ARE O.K.
(By Leslie Ernenwein)

"You newspaper guys are always writing about oddballs and hoodlums," L. C. (Shorty) Longshore said. "But I could tell you a story that's different."

Such as what?

About the nice people in an Oklahoma town—a Samaritanville of a town named El Reno.

"Shorty," who works at a service station in Tucson, was on his way home from a vacation trip a week ago when his car broke down.

"Way out in the country. My heap suddenly sounded like a harvesting machine—made a terrible racket."

Just about that time another car, going in the opposite direction, passed him. "Shorty" drove off to one side of the road, and the other car turned around and came back.

Its driver said, "Sounds like you threw a rod."

"Shorty" agreed that it did, and was really beat.

The stranger said, "Don't let anything worry you, mister, I've got a chain in my trunk."

The Good Samaritan had "Shorty's" wife and grandson get into his air-conditioned Oldsmobile and towed "Shorty's" car into El Reno—a distance of 18 miles.

The stranger wheeled up to a garage and told the proprietor that "Shorty" needed quick service, that he was on his way home and had a long way to go.

"He took my wife and grandson to a motel and secured accommodations, then came back and told me where they were. I asked him his name, but he said he just wanted to help me, and drove off."

While the mechanic was investigating the damage to his car, "Shorty" went to a restaurant for a cup of coffee. Another stranger came up to him and handed him the keys to a new Buick.

"I hear you and your wife had a little trouble," the man said. "Perhaps you'll need a car while yours is being fixed."

Shorty said he couldn't afford to rent a car.

"I'm lending it to you," the man said. "Leave the keys in it when you get through.

Shorty was nonplussed.

"Thought I must be dreaming. These men were total strangers. I still don't know their names."

He used the new Buick to go to the telegraph office and wire for money, then went back to the garage.

The motor was ruined and would have to be replaced. A new one could be obtained in Oklahoma City, 30 miles away.

"I was shook up," Shorty said. "I figured the bill would come to $350 or $400. But I was stranded, so I said OK."

The garage man went to Oklahoma City, got the new motor and worked late Saturday installing it. Then he advised Shorty to drive it around some that night and bring it in for a final checkup in the morning.

"But tomorrow is Sunday," Shorty said.

"I'll open up. You want to get an early start?"

Shorty nodded. The new motor checked out OK and the man handed him a bill for $234.68.

"All the labor, a new motor, going to Oklahoma City, and opening up for me on Sunday," Shorty said, "I couldn't believe it. I asked him what I owed for all his kindness."

The garage man said, "Just a letter when you get home, telling me if you got there safely."

Shorty thinks Oklahomans are real nice people.

Agribusiness: The Plan of Big Business To Take Over Agriculture

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MACK of Illinois. Mr. Speaker, I have just read a very fine address by a constituent of mine, Mr. L. A. Schafer, of Springfield, Ill. Mr. Schafer gave this address at St. Louis University in St. Louis, Mo., June 22, 1959, during a panel discussion with outstanding leaders in agriculture to the students and teacher staff of the workshop in problems of economic education. Because of the widespread interest in this field I wish to include his address as part of my remarks. His address is as follows:

AN ADDRESS BY L. A. SCHAFER, GIVEN AT ST. LOUIS UNIVERSITY, ST. LOUIS, MO., JUNE 22, 1959, TO THE STUDENTS (EDUCATORS) AND TEACHER STAFF OF THE WORKSHOP IN PROBLEMS OF ECONOMIC EDUCATION DURING A PANEL DISCUSSION WITH OUTSTANDING LEADERS IN AGRICULTURE

Mr. Ogle, moderator, panel, ladies, and gentlemen, a short few minutes ago, I asked the moderator if any of the panel would tell us about the new, self-named superorganization who is working in the United States to take over ownership of our American farming land, and all of our American food.

I was surprised that three of our panel said they knew nothing of it. Mr. Ralph Bradley, president of the Illinois Farmers Union, representing the National Farmers Union, said he was not prepared to talk about it, but that he was most anxious to help the American farm family. He knew the contents of the book whose author was John

Davis, former Assistant to Secretary Benson. The title of the book is "Concept of Agribusiness."

I came to St. Louis this morning as a guest and do feel it out of place for me to be speaking to you from this platform, but I felt that it is of utmost importance that you know about the organization that is planning to change farm ownership and obtain control of our food and fiber.

First, I believe that I should, like Mr. Sikes, of Purina Mills, during your noon luncheon, also give you my biography. I was born on a farm in Gardner Township, in Sangamon County in Illinois; moved into Springfield, Ill., in 1904; started part-time work with my father and brothers in a feed and supply store for farmers and city folk in 1910; started full-time work in 1917, and have continued since, in the same business; I have held several terms as president of Illinois Hatchery Associations and have been director for many years; director 2 years in Sangamon County Junior Fair Association; moved on to and operated a small farm of my own purchase in 1952; became active member of Sangamon County Farm Bureau in 1952; held office as vice president 2 years and president 2 years of Springfield Township Farm Bureau unit; I am presently serving my second term as president; I have worked on committee assignments for our county farm bureau.

Most of my personal friends are independent diversified American farmers, and, to me, these are the most important people in the world. I have culled chickens and mated breeding stock on farms in Sangamon, Morgan, Menard, Christian, Macoupin, Cass, and Logan Counties in Illinois, and have visited with the families on these farms and have talked with them about their agricultural problems, and advised them about their management and disease problems in livestock and poultry.

Recently, Mr. Bradley accepted my membership in the Illinois Farmers Union, and, I am proud to be a member of a farmers' organization that realizes the need to help the American farm family against the present agribusiness superorganization.

I told you I came as a guest. I do not have a speech prepared and I am not a public speaker. When visiting Mr. Bradley last Thursday, he told me he was to represent Mr. Patton, president of the National Farmers Union, in a panel discussion at a workshop in problems of economic education in St. Louis on Monday. I did not tell him, that immediately that he told me of the school, I had a premonition that the workshop was planned to "train additional research workers and teachers for coping with agribusiness problems." And I believe I know the names of the steering committee who planned and arranged this workshop. I wanted to gain more information about agribusiness policy and progress, and I asked him if I may come with him.

Realizing the enormous changes that have taken place in agriculture, about 2 years ago I started out to find out who started the change, who is helping, and who intends to profit. I have made a very extensive survey and am glad to have the opportunity to tell you my findings.

The book, "Concept of Agribusiness," reminds me that history repeats itself again and again; there are always "little men" whose desire it is or has been to control the universe; others whose dream it is to control one or the other segment.

Before World War I, it was Kaiser Wilhelm's desire for power—something happened that ruined his chances.

Adolph Hitler gained by the mistakes made by his predecessor, and his determination was that no mistakes would be made. Hitler put his plans in book form under the title "Mein Kampf" known as the Nazi bible. The plan was for worldwide totalitarian rule—something happened that ruined his chances.

Most recent: you all know the story about Cuba. Farming land in Cuba has been taken from American capitalist owners and is being given back to Cuban farmers.

Now, in our United States, the present agribusiness plan took concrete form in 1944, when the president and fellows of Harvard College authorized the establishment of the Food Foundation under the administration of the business school. Donald David, while dean of the school, provided the inspiration for starting the program. In 1950, the basic idea gained new impetus when a generous gift of the late George Moffett provided an endowment for a professorship in agriculture and business. A major gift was made by Whitehall Foundation; other gifts from Southern States Co-op., Inc., the Cooperative Grange-League Federation Exchange, Inc., the Farm Bureau Cooperative Association of Ohio, and General Foods Corp.

Soon after he became Assistant Secretary of the U.S. Department of Agriculture, John H. Davis, another aspirant took over the project. Plans were reconstructed and completed in book form with the assistance of Ray Goldberg, officer and director of a Minnesota Seed & Grain Co., and Goldena Mills in North Dakota. The book, "Concept of Agribusiness," was published in 1957. The authors insist there must not be any mistakes this time, mistakes that were made in the past. The plan, according to the book, is to use the necessary measures to remove farm families from their homes and land.

I believe you are receiving the economic knowledge from the book and are being told how dynamic farming business is. The agribusiness approach is an evolutionary process which is geared to progress. The book is practically filled with facts and figures telling that farming is big business; but, the most important part of the book containing the plan is on pages 74 to 81 inclusive. I shall read one paragraph that is on page 77 so you can realize this barefaced and clear-cut statement of purpose:

"At least in the beginning stages, collaboration between groups probably can best take place informally, without any attempt to create a new superorganization. Coordinating committees, task groups, and ad hoc working parties can play an important role, provided due care is exercised in selecting leadership and provided the participating members actually desire to achieve results."

And another sentence:

"Among the items which need to be reappraised are such questions as * * * the responsibility of supply firms with respect to overproduction; and the responsibility of processor and distributors for market expansion and price behavior."

And a part of a paragraph:

"An important step in the direction of better research is closer teamwork at the university level between colleges and schools of agriculture and business administration. * * * An important duty of such experts would be the training of additional research workers and teachers for coping with agribusiness problems. In turn, agribusiness orientation should be given to the agricultural extension service, vocational agriculture, and similar programs."

It is intended that no stone be left unturned to remove farm families from their homes and land, and place the farming land, food, and fiber, into the ownership and control of capitalists, change the antitrust laws of the United States to "permit freedom from close restrictions for agribusiness," and to shift some or all of the responsibility of the U.S.D.A. to private enterprise.

You can know by the part paragraph that I read, why the American Farm Bureau, some farm advisors and vocational agriculture teachers are helping to remove farm families from their homes and land. Many very innocent career men and women, working under civil service for our State and National Government, principally USDA, also instructors in our public and private educational institutions, have or are helping agribusiness progress.

Apparently, depopulation of farms started with manipulation which caused the price paid to the farmer for cattle to be lower; many farmers lost heavily; many gave up trying to make a profit feeding cattle after 3 years of heavy losses. Hogs followed in line with cattle, also cotton. Then came broilers, milk, and presently eggs. I was feeding cattle and raising hogs and chickens when prices paid to farmers were declining, and I did not get back stock and feed costs. The prices received for grain have been gradually going down. After the farm products leave the farm, they make good profits for all groups, up to the consumer.

Cattle and hog prices paid to producers have increased greatly from the low, and contract-grower financers and the independent growers that kept on, have made a profit, but, according to recent USDA reports and warnings, one can expect another lowering of prices paid to farmers for beef and pork. No doubt, the agribusiness boys know there is another large supply of red meats that can be imported. It is my understanding that South American corn, ground, has been coming into the United States for years, duty free.

The farmer is told he is inefficient—that he must enlarge and raise more—and, he is told that too much is raised and there is a surplus, and, that is the reason the prices paid to him are low; too low, so he cannot make expenses.

Some months ago, Secretary Benson told farmers that "if you are not making money on your farm, then move off." Recently, he told chicken raisers that "if you are not making money in the chicken business, raise something else."

Mr. Sikes told you at noon today of the prosperous, happy contract growers in Georgia, all with fine buildings, modern homes with all the latest conveniences, furniture, appliances, television, and a good automobile. He did not tell you how much they owed on their financed deal—he did not tell how much equity the contract grower had left in his farm, and he did not tell how soon the farmer must leave his home and farm, if he would quit feeding.

Millions of dollars have been sent into different parts of our country through USDA to enlarge contract farming and as research, to smash the independent farm operator.

Independent growers have been receiving 14 to 15 cents per pound for broilers, which will not pay for the cost of chicks and feed when billed at legitimate prices.

We are told we farmers must increase our operations and raise more, so we will go broke or give up in despair sooner, and sell out to a ready buyer of our farm and home.

Six years ago the cattle raisers were storming Washington for relief; 5 years ago the hog raisers were there in large numbers; 3 years ago the broiler growers had their turn; presently, the egg producer. The papers are loaded with reports of meetings; next will be grain growers time—all the while the agribusiness boys keep working more aggressively—they "must not fail to act on opportunities open to them, opportunities which will be profitable to them."

George Washington's Military Birthplace, Cumberland, Md.

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. FOLEY. Mr. Speaker, on June 5, 1959, I introduced H.R. 7586, a bill authorizing the Secretary of the Interior to erect a monument at Fort Cumberland, Allegany County, Md., in honor of George Washington.

Very recently an article was published by Mr. J. William Hunt in his column, "Across the Desk," in the Sunday Times of Cumberland, Md., explaining in great historical detail the intimate association of George Washington with Cumberland, Md. Because of the unusual but little known historical events connecting our first President with Cumberland, I am including it in the CONGRESSIONAL RECORD as strong proof of the justification for H.R. 7586 and the monument at Fort Cumberland in honor of George Washington.

The article follows:

ACROSS THE DESK—POTENTIAL MILLIONS WOULD COME HERE TO SEE WASHINGTON MEMORIAL ON SITE OF HEADQUARTERS OF BRADDOCK EXPEDITION—AMERICAN SCHOOL CHILDREN INTRIGUED BY "BRADDOCK'S DEFEAT" AS BY "CUSTER'S LAST STAND"

(By J. William Hunt)

Much has been written concerning the events that projected Cumberland into world history in 1755. But to limit our consideration to the local happenings of 204 years ago is to fail to see the complete picture of the French and Indian wars of which the Braddock expedition was only a part.

In the effort to secure national support for a memorial here for George Washington, it is necessary to convince Congress that Cumberland's claim is based on more substantial grounds than a provincial desire to get a monument at Government expense.

A recently published novel based on the English-Colonial capture of Louisburg, far up on the Cape Breton (north of Halifax), makes much of the assumption that the campaign there marked the first united effort of the American Colonies in a military enterprise.

Louisburg, although captured in 1745 by New England militiamen in conjunction with a British fleet, was returned to French control by the Treaty of Aix La Chappelle in 1748, and was not finally brought under English rule until 1758, the same year that Forbes drove the French out of Fort Duquesne. In the 1745 campaign against Louisburg, it was largely Massachusetts militia that engaged in the effort, some Connecticut militia also participating. It must be remembered that New England (then consisting of four Colonies—Massachusetts, Connecticut, Rhode Island, and New Hampshire) was more or less homogeneous in racial stock, creed, and habits of thought and action. There was not the diversity of background that characterized Maryland, Virginia, Pennsylvania, New York, the Carolinas and other Colonies. Hence the assertion that Americans first united for military purposes in the 1745 capture of Louisburg from the French is not based on a correct appraisal of what colonial unity meant.

In that early effort against the French there were no colonial fighting men outside the homogeneous, compact militiamen from New England, mainly citizens of Massachusetts.

Four years before the second capture of Louisburg, Washington commanded troops from several Colonies with headquarters here, and a year later (1775) soldiers from seven Colonies were welded into a united force under Braddock and Washington while stationed at Fort Cumberland.

Braddock himself settled the question of the relative importance of the places from which attacks against the French were to be launched. He decided to take command of the main British-Colonial Army which would be based at Fort Cumberland for an attack on the French stronghold on the Ohio—Fort Duquesne.

Governor Shirley of Massachusetts was to lead an attack on Fort Niagara. Sir William Johnson was to strike at the French forts leading from north of Albany to the St. Lawrence, and a diversionary movement was to be launched against Fort Beausejour on the Canadian boundary.

Hence in the massed efforts of 1775 we find Braddock and Washington choosing Cumberland for their base of operations, assembling here the greatest British Army ever seen up to that time on the North American Continent.

This place, therefore, deserves national recognition for these basic reasons:

1. It was field headquarters for the Braddock Expedition. Every schoolchild has heard of Braddock's defeat, and potential millions of tourists would come here to see where that famous expedition had its headquarters.

2. It is the military birthplace and "West Point" of George Washington, according to his own words.

3. Here the Colonies first put into practice military cooperation, and learned (through Braddock's defeat) that British troops were not invincible. Many young Colonial soldiers were emboldened to fight for American independence 20 years later because of their experience at Fort Cumberland.

4. Washington's first public service started here in 1753 when he joined Christopher Gist and began his wilderness trek to the French commander on the Ohio.

5. Washington was first elected to public office while commanding troops at Fort Cumberland.

6. First designation of Washington as "commander in chief" came to him while he was on duty here. It was only commander in chief of Virginia Militia, but it presaged his later similar title as head of the Continental Army.

7. Washington's final appearance as commander of troops in the field was in Cumberland in 1794 when he was President of the United States.

These are but a few of the substantial reasons why a national memorial should be erected here to George Washington. And the ideal site, as Judge Morgan C. Harris has pointed out, is in the vicinity of the Allegany County Courthouse, which is located on a part of the land once occupied by historic Fort Cumberland.

No Business Like Show Business

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ROBISON. Mr. Speaker, as we approach the end of a tedious session, I think all of us could use a smile. With that in mind I include a recent column by Tom Cawley, popular columnist for the Binghamton, N.Y., Press:

SO WHAT CREDITS YOU GOT, SAM?

(By Tom Cawley)

The ultimate in funnybone politics has been reached. Politics always has been funny, but the Democrats have now retired the trophy.

They've hired a clutch of Hollywood producers to put on their 1960 convention in California, by way of television.

The guy who is going to produce the spectacular is George Seaton, who writes and produces movies.

We can hear the rehearsals now.

The scene is the Coliseum in Los Angeles, 4 days before the convention is brought to order.

DIRECTOR. OK, OK., where's the bird we open on? Hey, you. What's your name?

MAN. RAYBURN. SAM RAYBURN.

DIRECTOR. RAYBURN? What credits you got? "Playhouse 90?" "Beat the Clock?" "Continental Classroom?" What's your best side?

RAYBURN. What?

DIRECTOR. Never mind. Stand there. No, not there. There. Now—lift that gavel. Not that high. You're killing the birdseye spot. Whattaya want, shadows all over? Whattaya think this is "Camera Three?" Look, buster, this is a political convention, and——

RAYBURN. I quit.

DIRECTOR. Sorehead. He's not tall enough, anyway. Are all Democrats that short? Hey, MANNY, get me a tall Democrat.

MANNY. Where do I get 'em? The casting office said you got to take your chances with these guys. There's one with a haircut from Massachusetts that takes full flat lighting, with two spots with barn doors, and there's a guy named JOHNSON from Texas who's never gonna make it 'cause he's as bald as Eisenhower and who can light Eisenhower. I mean, you seen them crumby lighting jobs from Washington, and that Montgomery's supposed to have something on the ball. No wonder they dropped his option, and I understand this Eisenhower's option is up, too, and——

DIRECTOR. Never mind, just get me somebody up here who can understand a cue. What's your name? Stevenson? OK, Stevenson, stand over there, where the chalk marks are. Not there. There. Now, just stand there while MANNY fixes the lights. Stop fidgeting.

STEVENSON. My name, sir, is Adali Stevenson, and, sir, while I appreciate the qualities of risibility in a situation like this, it does seem to me, that, as Kafka noted in one of his earlier pieces, that darkness always appears to be the warmest part of light, if you know what I mean——

DIRECTOR. Another wise guy (sighing). Some day, I'm going back to adult westerns.

Better Utilization of Water Resources in the Belle Fourche Irrigation District

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. McGOVERN. Mr. Speaker, the following resolution, sent to me by the directors of the Belle Fourche Irrigation District, merits in my opinion the care-

ful consideration of the Congress and the U.S. Bureau of Reclamation:

Whereas the water supply for irrigation of Belle Fourche project lands is becoming more limited each year; and

Whereas runoff records show reduced watershed yields; and

Whereas the amount of available water to the project lands during the past several years has been insufficient to produce crops on the project in quantities to justify increasing water assessments to the water users to meet increasing operation, maintenance, and replacement obligations of the district; and

Whereas the United States claims all waters as defined in article 33 of contract No. Ilr-1555, and that this water can possibly be put to further beneficial use on presently irrigated project lands: Therefore, be it

Resolved, That the board of directors advise the Bureau of Reclamation of their concern over the seriousness of the water shortage that exists on the project, and that they recommend that the Bureau of Reclamation make a study to determine methods of better utilizing the water resources presently available. This study to include possible use of runoff in natural streams running through the project, return flows in drains and natural channels, underground water, improved efficiencies in water deliveries, possible changes in project operations, and a review of possible transdiversions from other watersheds.

Dated at Newell, S. Dak., this 4th day of August 1959.

By order of the board of directors of the Belle Fourche Irrigation District.

WM. A. YUILL,
President.

R. W. MELBERG,
PRESTON L. HILL,
RODNEY J. LARSON,
JOHN M. CAMPBELL,
FLOYDE V. RIGGS,
DAVID LUNGREN,
Directors.

Attest:

FLORENCE T. HEDMAN,
Secretary.

Deficiencies in the National Defense Program in Alaska

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. RIVERS of Alaska. Mr. Speaker, this is to follow up my previous comments in regard to deficiencies in the national defense program in Alaska. We must remind ourselves time and again that Alaska's strategic location as the corridor between Asia and North America must be fully utilized in terms of modern weapons capable of neutralizing the missile potential of the Russians found in their many military bases and missile sites in Eastern Siberia. Leaving Alaska vulnerable could result in its falling into the hands of the enemy, and in turn being used as a platform for easy range nuclear missile attacks against all our principal cities.

The point I make is well expressed in a recent editorial in the Anchorage Daily Times, from which I quote, as follows:

The defense forces in Alaska have always been inadequate for the job assigned to them.

Alaska has only recently acquired its first Nike installations. These ground-to-air interceptors were installed around many of the major cities of the 48 States before any were assigned here.

The use of the first Nike facilities certainly would have been more effective had they been placed in a strategic area such as Alaska.

Today the Nation's first facilities for intermediate range ballistic missiles are being built far from this important part of the world. The one nearest to Alaska is at Spokane, Wash. Because of the distance from Spokane to China and Russia, the short-range missiles will have relatively few important targets within shooting distance.

The same missiles located in the Aleutian Islands and on the Arctic shores of Alaska would have hundreds of important targets within their reach.

The Nation has yet to decide where launching facilities will be placed for the intercontinental missiles which are now approaching operational status. Will they be in Alaska where they can cover every major target in both China and Russia? Or will they be located farther south despite the fact that the number of available targets will be less?

This is alarming to Alaskans who recall the neglect that marked the approach to World War II, before they had full representation in Congress.

While the world was building up strength for the struggle that was imminent, Alaska saw virtually no defense activity. As a territory, the people saw their area neglected to the point where about 200 infantrymen at Chilkoot Barracks were the only strength here.

Alaska's Delegate in Congress made speeches about it, but the Nation ignored them. It was only when the crisis was at hand that action was taken. The Nation then spent a billion dollars under crash conditions, wasting funds and manpower and material in a frantic effort to catch up.

This should not happen again. The strategic importance of Alaska is known. The national leaders have learned to look at maps of the Polar projections instead of the old distorted maps invented by Mercator.

Dirty Money From a Desperate Dictator

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, last February I was informed that Trujillo had just arranged to spend $1 million to assist his public relations, then as now at a very low ebb, in the United States. My informant promised to tell me the names of the persons to whom money was to be given but because of fear for her life, which I well understood, she declined and left the United States for a country she regarded as safer.

On September 2 it was revealed that the Dominican Republic did indeed spend $750,000 with the Mutual Broadcasting System, that is, with certain gentlemen who are no longer associated with the Mutual Broadcasting System but who at that time were in charge.

Whatever else may be disputed in the criminal case which the Federal Government has filed against these gentlemen, it is a fact that the money was spent and that the Dominican Government is now suing these gentlemen for the return of the money.

I believe it is only a question of time until Government investigators or an alert journalist will discover where the rest of this $1 million was spent in Trujillo's desperate effort to make Americans think he and his Government are worthy of respect.

Under a previous consent I include an item from Printer's Ink dated February 27, 1959, and an article from the New York Times of September 2, 1959:

[From Printers' Ink, Feb. 27, 1959]

NEW BUSINESS FROM TRUJILLO?

Representative CHARLES O. PORTER, Democrat, of Oregon, long a foe of Latin American dictators in general and Gen. Rafael Leonidas Trujillo, of the Dominican Republic, in particular, is now hard at work to link Trujillo money with six American advertising agencies. According to PORTER, Trujillo is financing an advertising campaign in the United States with a $1 million gift presented to him by Fulgencio Batista, the deposed Cuban dictator, now in the Dominican Republic.

Sources close to Dominican matters say that PORTER's theory is highly unlikely. Batista and Trujillo are old enemies, and Trujillo has little need of Batista's money. In addition, Trujillo, who closed down his public relations account with Harry Klemfuss Associates last December, has never renewed this business, which he thinks is a waste of time and money. International agency people here point out, moreover, that a $1 million account split six ways and tied to a dictator would interest few agencies.

Nevertheless, PORTER insists that his information comes from reliable sources and that it is only a matter of time before the whole matter will be out in the open. In the meantime, several Government departments are making their own investigations, according to the Congressman.

[From the New York Times, Sept. 2, 1959]

GUTERMA AND TWO AIDS INDICTED AS TRUJILLO AGENTS IN RADIO DEAL

(By Anthony Lewis)

WASHINGTON, September 1.—Three former officers of the Mutual Broadcasting System were accused today of having accepted $750,000 from the Dominican Republic to broadcast its propaganda.

A Federal grand jury here charged that Alexander L. Guterma, Hal Roach, Jr., and Garland L. Culpepper, Jr., had not registered as foreign agents after making the deal. The indictment was announced by the Attorney General, William P. Rogers.

Mr. Guterma, who bore the reputation of a financial wizard for some years, was indicted just last week by a Federal grand jury in New York in a stock fraud scheme said to have netted him $1 million. Two other fraud indictments have also been returned against him.

Mutual was bought in September 1958 by the Guterma-controlled Hal Roach Studios. Mr. Guterma became president of the network. Later Mr. Roach took the post of board chairman, and Mr. Culpepper, a New York lawyer, became vice president and secretary.

Messrs. Guterma and Culpepper resigned from Mutual on February 12. Controlling

interest in the network was sold to Mr. Roach. He dropped out on March 22, and control went to Malcolm E. Smith, Jr.

Last July the network filed a bankruptcy petition showing assets of $579,607 and liabilities of $3,195,207. Robert F. Hurleigh, a Mutual newscaster, obtained 100 percent of the stock and took over as president under court orders.

Today's indictment sounded at times like a fictional tale of international intrigue.

It brought in the names of Generalissimo Rafael Leonidas Trujillo Molinas, dictator of the Dominican Republic, and Porfirio Rubirosa, the playboy-diplomat who was once married to Barbara Hutton. Mr. Rubirosa was Dominican Ambassador to Cuba at the time of the alleged events. He is now Ambassador to Belgium.

The incident charged that on or about last January 30 Mr. Guterma and Mr. Roach met in the Dominican Republic with Otto Vega, a Dominican official.

At that and other meetings, the indictment charged, the Mutual officers agreed to become publicity agents for the Dominican Government and to disseminate within the United States political propaganda on behalf of and favorable to the Dominican Republic.

The indictment said the defendants had agreed to feed propaganda on to the Mutual network under the guise of bona fide and genuine news items concealing the fact that such political propaganda was to be actually provided by the Dominican Government and that $750,000 was to be paid.

According to the indictment, Messrs. Guterma and Roach received the promised $750,000 from Mr. Vega on or about last February 6 in the Dominican Republic.

Whether the Trujillo government got its money's worth was not made clear in the allegations. The indictment said in one place that Mutual made certain broadcasts last February, but these were not identified. Mr. Guterma was out of Mutual 6 days after the alleged payment.

The indictment accused the defendants of conspiring to avoid registration as foreign agents and of actually not registering. The Government will have to prove that the defendants were in fact Dominican agents.

Mr. Roach and Mr. Culpepper asserted their innocence today in public statements. There was no comment from Mr. Guterma, who is reported to be in Florida. The Dominican Embassy here also declined to comment.

Mr. Roach, in Los Angeles, said:

"I am not now, have not been in the past, and would never be an agent for a foreign government. I am absolutely confident that I will be cleared of the charges when the facts are presented in court."

Mr. Culpepper's denial came through an attorney, Jacob L. Rosenblum, in New York. Mr. Rosenblum said "from the facts available to me I am confident that Mr. Culpepper has not violated any law and will be exonerated."

NO CONNECTION WITH MUTUAL

Mutual's current president, Mr. Hurleigh, said neither the present management of the network nor its employees had "any knowledge of or connection with the matters" charged.

There were three counts in the indictment. The first accuse Mr. Guterma and Mr. Roach of failing to register. The second charged that all three defendants with not registering Mutual as an agent. The third alleged a conspiracy by the three to avoid registration.

Each count carries a maximum penalty of $10,000 and five years' imprisonment.

Mutual, which calls itself "the world's largest network," does not own any stations. It contracts with independent radio outlets to handle its programs.

Last winter the network was reported to have 453 stations connected by 24,000 miles of telephone lines.

It was reported here today that the leads to the asserted deal with the Dominican Government came from the Securities and Exchange Commission investigation of Mr. Guterma's affairs.

OTHER INDICTMENTS

Mr. Guterma is under other indictments in Federal courts here. He was indicted last March on charges of having tried to defraud the Government and investors by failing to file necessary reports with the Securities and Exchange Commission about the financial status of the F. L. Jacobs Co. when it was under his control.

He was also indicted last March on charges of fraud against the Bon Ami Company when under his control.

Last month Mr. Guterma and Lowell M. Birrell, another financier, were indicted on charges of fraud in stock schemes when they controlled the United Dye and Chemical Corporation, now known as Chemoil Industries.

Mr. Guterma has denied all the charges. Mr. Birrell is a fugitive from justice in Brazil.

Order of Sisters of Sts. Cyril and Methodius at Danville, Pa., Observe Golden Jubilee Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Times-Leader of Tuesday, September 8, 1959, which reports the golden jubilee observed this week by the Order of Sisters of Sts. Cyril and Methodius at Danville, Pa.

[From the Wilkes-Barre (Pa.) Times-Leader, Sept. 8, 1959]

ORDER MARKS ANNIVERSARY—4,000 ATTEND SERVICES AT DANVILLE

The Order of Sisters of Sts. Cyril and Methodius at Danville climaxed its golden jubilee yesterday with a day of prayer highlighted by two high masses. Some 4,000 persons from throughout the eastern United States visited the St. Cyril Academy.

Both masses, one in the morning and the other in the afternoon, were celebrated outdoors. The morning mass was said in Latin and the afternoon mass in Slavonic. It was reported to be the second time in the history of the hemisphere that a mass was said in Slavonic.

Rev. Michael C. Bernat, pastor of Sacred Heart Slovak Church, North Main Street, city, and Sisters of the Sts. Cyril and Methodius Order who teach in the parish elementary school, were among the thousands in attendance. Reverend Father Bernat was honorary subdeacon for the afternoon mass.

Celebrant of the first mass was Bishop George L. Leech of Harrisburg. Bishop Leech gave the English sermon and Rt. Rev. Michael C. Polcha gave a sermon in Slovak.

Bishop Andrew G. Grutka of Gary, Ind., celebrated the afternoon Roman-Slavonic Pontificial high mass and gave the sermon. Message of greeting from Pope John XXIII was read. Another greeting came from Most Rev. Egidio Vagnozzi, apostolic delegate.

Final event of the year-long celebration will come Friday when the third and final Roman-Slavonic mass will be celebrated by Rev. Michael Lacko, S.J.

Order of Sisters of Sts. Cyril and Methodius was founded 50 years ago and a Wilkes-Barre young woman was among the first three to take its vows. She was Mary Pauly, who became Sister M. Emmanuel, and who served as the second superior general of the order.

First motherhouse, located at Middletown, Pa., was moved to Danville in 1919 with the purchase by the order of a former Danville mansion. Half the newly acquired building was reserved for a high school for the education of girls, and the cornerstone of the present St. Cyril Academy was laid in 1929.

Chapel was added in 1939 and in 1957 the structure which houses St. Methodist Convent for the Sisters, and St. Philomena Residence for students, was dedicated.

There are 397 professed members in charge of 36 schools, including the elementary school on North Main Street. The order also conducts a reading clinic in Sacred Heart School.

Resolutions by Committee on Aeronautics and Space of the American Legion

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, the 41st annual convention of the American Legion met at Minneapolis-St. Paul August 24–27, 1959. I was privileged to attend this convention and participate in its deliberations. The following resolutions emanating from the committee on aeronautics and space were adopted, and I commend them to the thoughtful consideration of my colleagues:

RESOLUTION NO. 637, CONVENTION AERONAUTICS AND SPACE COMMITTEE—INVESTIGATE NAVAL AND COMMERCIAL USES OF THE AIRSHIP, RIGID AND NONRIGID

Whereas the American Legion, pursuant to mandates of national resolutions adopted unanimously by the 39th national convention of the American Legion, at Atlantic City, N.J., September 18, 1957, and again, unanimously, at the 40th national convention at Chicago, Ill., September 1, 1958, did call upon and strongly urge the Congress of the United States, the Department of Defense, and then by redirection, the Department of the Navy and the Department of Commerce, to thoroughly investigate the potential and uses of the airship, rigid and nonrigid, in the defense and commerce of this Nation, and that they implement their findings with legislation, organization, and funds necessary, which resolution originated with the national security commission at the conventions noted; and

Whereas these mandates have been called to the attention of the directees in said resolutions; and

Whereas we have been unable to obtain any specific information which would indicate that such thorough investigation is being made; and

Whereas the Department of Defense and the Navy Department particularly have been

reemphasizing the dangers to this country from atomic-missile-equipped submarines of a possible attacking power; and

Whereas airships thoroughly demonstrated their ability as antisubmarine apparatus during war one, and again with added effectiveness in war two; and

Whereas this Nation is the only one presently known to have the manufacturing facilities, the nonflammable helium gas necessary to efficiently and safely operate airships and the organization of trained military and commercial personnel capable of operating and maintaining airships; and

Whereas all of these unique lighter-than-air assets are being dissipated and diminished because of the apparent lack of interest of the governmental activities having cognizance thereof; and

Whereas a further widening use of this unique weapon, namely a nuclear-powered airship with a consequent wider application in the defense of this country, and particularly in antisubmarine warfare, has been submitted to the governmental agency having cognizance for consideration.

Now, therefore, in view of the above, and the particular danger to this country from missile-equipped submarines, be it

Resolved by the American Legion in national convention assembled in Minneapolis, Minn., August 24–27, 1959, That the resolutions passed at the last two conventions be forcefully called to the attention of the Congress of the United States, the Department of Defense, the Department of the Navy, and the Department of Commerce, and be it further

Resolved, That because of the inaction, lack of interest, or other unknown reasons, resulting in the lack of the investigation requested by the American Legion over the past 2 years, or any reasonable or specific information thereon, and because of the imminent danger from the submarines noted, and because of the apparent possible widened value from a nuclear-powered airship, and be it further

Resolved, That this resolution be directed to the President of the United States for his attention, and our respectful plea for action so that the investigation called for herein will go forward promptly and fully, and that the findings will be implemented with legislation, and such organization as may be necessary and with the funds that may be required.

RESOLUTION NO. 635, CONVENTION COMMITTEE ON AERONAUTICS AND SPACE—PROMOTE USE OF HELICOPTERS

Whereas the helicopter has proved itself a useful and versatile vehicle for both military and peaceful uses; and

Whereas there is need for increased emphasis on the many services the helicopter offers to enhance our way of life: Now, therefore, be it

Resolved, That the American Legion in national convention, assembled in Minneapolis, Minn., August 24–27, 1959, does reaffirm the principles and objectives of Resolution 639 adopted by the 40th national convention to the end that we promote and encourage the development and use of helicopters and the passage of necessary ordinances and regulations as will permit their efficient operation.

RESOLUTION NO. 80—MASSACHUSETTS—ARM ALL MILITARY PLANES FLYING IN OR NEAR A RADIUS OF COMMUNIST-HELD TERRITORY—THIS CONSOLIDATES RESOLUTIONS NO. 371, NEW YORK, AND NO. 609, LOUISIANA

Whereas American aircraft flying on routine assignments near Communist-dominated countries have on occasion been fired upon resulting in injury, loss of life and valuable equipment; and

Whereas our Government has documented the deliberateness of some of these unwarranted attacks: Now, therefore, be it

Resolved by the American Legion assembled in national convention in Minneapolis, Minn., August 24–27, 1959, That all American aircraft required by their official duties to fly in the vicinity of Communist-dominated countries be adequately armed to properly defend themselves or that they be escorted on such flights by properly armed escorts.

Mr. Speaker, the following resolution from the Naval Affairs Committee:

RESOLUTION NO. 638 (CONVENTION COMMITTEE ON NAVAL AFFAIRS) ANTISUBMARINE WARFARE

Whereas the danger to our national survival posed by the Soviet submarine force increases daily; and

Whereas our control of the world's oceans would isolate the enemy to his own land mass, giving us access to 85 percent of the earth's surface insurance and maintenance of the free world's vital sealanes of communications; and

Whereas an entirely new antisubmarine defense requirement has arisen with the ballistic missile launching capability of many of the Soviet submarines in the foreseeable future; and

Whereas in this event no point in the United States would be outside the range of missiles launched from unpredictable submarine-launching sites; and

Whereas the security of our Nation is increasingly dependent upon the U.S. Navy's ability to successfully combat the enemy submarine threat, of approximately 500 submarines: Now, therefore, be it

Resolved, That the national convention of the American Legion assembled in Minneapolis, Minn., August 24–27, 1959, etc., support whatever legislative and executive action be required to insure that the Navy is provided with competent personnel, capabilities, equipment, ships and weapons to counter successfully this threat to our Nation's survival.

Prohibition's Ally

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. HÉBERT. Mr. Speaker, at the very outset of these remarks I want to get one thing straight—I am not a prohibitionist.

Perhaps it is not necessary for me to reaffirm my strong antiprohibition sentiments but I wanted to repeat them to make certain that what I am going to say will not be distorted or misinterpreted. It is because I am so strongly opposed to prohibition that I am compelled to bring to the attention of the House the things which I am going to say as a warning not to allow prohibition to sneak up on us on our blind side as it did once before.

There were those before the advent of the "noble experiment" who thought it couldn't happen, but it did happen.

There are those now who think that prohibition cannot happen again, but it can if those of us who are so strong against it do not recognize what is going on about us and do something about it.

When Oklahoma recently went wet it was pointed out that only one State in the Union, Mississippi, remained "legally dry."

A real eye opener would be to tabulate the counties of the several States and find out how many are "legally dry" especially in some recognized wet States and have become so since the repeal of prohibition.

The prohibitionists have never ceased their fight to return this country to the dry calendar. They are still about their business and are taking every advantage of situations and conditions which will lend themselves to an argument in favor of the return of prohibition, first on a local option basis and then on a nationwide scale.

Let us look the facts right straight in the eye.

I, personally, make no secret of the fact that I consider myself a pretty fair "country two-fisted drinker" and have demonstrated it on many an occasion through the years. The fact that I can hold my own is something with which I had nothing to do. I just happened to be born that way. I am not allergic to alcohol but there are many things to which I am allergic and to which other people are not allergic.

Some people are allergic to the effects of one of the greatest miracle drugs of times—penicillin. They had nothing to do with it, they were born that way.

Some people are allergic to dust through no fault of their own; others to weeds or grass or vegetables.

And some people are simply allergic to alcohol.

Let us be sensible about this whole business and face the facts of life and do something realistic about it.

Recent developments here in the District of Columbia cause me to wonder whether the words of an old epigram of unknown authorship which reads "God looks after fools, drunkards, and the United States" are being taken too literally. My particular concern at this moment is with the measures which are being taken in the District to effect the scientific treatment and rehabilitation of alcoholics. Some of you will recall that I was the author of a bill to establish an alcoholic clinic in the District of Columbia to do something to help and rehabilitate excessive and compulsive drinkers here in Washington. This bill—Public Law 347—was approved by the 80th Congress on August 4, 1947. Now after nearly 12 years have passed, I am dismayed to find that we are still a long way from accomplishing the purposes of this act which had the unanimous approval of the Congress. I beg your indulgence for a few moments to bring you up to date on the problem of alcoholism generally and specifically in the District of Columbia; to tell you something about the shortcomings and weaknesses in the District program for the alleviation of alcoholism, and to outline for you some further steps which must be taken to strengthen the alco-

holic rehabilitation program and increase its effectiveness.

In spite of the fact that there is some lack of agreement as to the exact size and nature of the problem of alcoholism no one disagrees that it is a serious problem here and elsewhere in the United States. Some consider it a sin, others a vice, and there are those who think of it as a disease or a symptom of a disease. In some circles there is no distinction made between so called social drinking on the one hand and outright "alcoholism" on the other. Most people agree that there are "problem drinkers." The more precise definition of such individuals in terms of the psychiatrists and the behavior scientists is a person who has a chronic behavioral disorder manifested by repeated drinking of alcoholic beverages in excess of his dietary needs and the social standards of the community and to an extent that interferes with the drinker's health or his social or economic functioning.

Applying a definition of this kind, it has been estimated that there are nearly 5 million alcoholics in the United States, only a small proportion of which are found on skid row. For instance, it has been estimated that there are 1½ million alcoholics employed in business and industry. It has been estimated that alcoholism results in an annual economic loss to industry of $1 billion through accidents, work spoilage, and absenteeism. In the District of Columbia it is said that there are nearly 50,000 alcoholics, for an average of 7.8 percent of every 100,000 adults. It has been definitely proven that the sale of alcohol in the District of Columbia is over twice the amount per capita as elsewhere in the country. Here it is 4.6 gallons per capita per year. In the country as a whole it is less than 2 gallons. These are some of the facts which have caused medical authorities to recognize alcoholism as a major public health problem.

Happily, experience has shown that alcoholics can be helped and rehabilitated. The integration of scientific knowledge and treatment techniques into community programs offers a means of controlling and preventing this devastating condition. During the past 15 years, 38 States and the District of Columbia have enacted legislation authorizing specific programs on alcoholism and establishing provisions to attack the problem through research, treatment, and education. Thirty-two of these programs have specific services for treatment and rehabilitation, and the District of Columbia is among these. These programs operate a total of 122 alcoholic clinics. In 1956 these agencies expended over $3 million on a total of nearly 23,000 cases. Unfortunately, many programs have been hampered by inadequate funds.

Now, let us take a brief look at the alcoholism picture here in the District. More than 1,600 chronic alcoholics are admitted to the psychiatric service of the District of Columbia General Hospital each year. These patients remained in the hospital for an average period of three days. Each year, about 1,000 alcoholics voluntarily share the limited resources at the Alcoholic Rehabilitation Clinic which is operated by the Department of Public Health. Perhaps the most grievous figure is that of the number of persons who are arrested by the Metropolitan police for intoxication. For instance, in the year 1956 there were 40,000 arrests for intoxication, 16,000 of which resulted in prison commitment. Consider for a moment that the average daily drunk population in the District prisons exceeds 1,200.

I have it on good authority that if one totals up the cost of handling chronic alcoholics by police, courts, prisons, the Clinic and hospitals, in the District, it is found to be nearly $2 million a year. The saddest part of the whole business is the inadequacy of present methods. Obviously, a program which spends so much on arresting and jailing alcoholics offers little to the so called "social alcoholic" who, when arrested, ordinarly forfeits collateral and is released to his family, going unnoticed until he is again arrested. By the same token, a program of this kind has little to offer the "skid row chronic alcoholic" who has no home, family or other social ties in the community and whose rehabilitation requires intensive treatment rather than imprisonment. As presently managed in the District, alcoholism results in overworked police and courts, overcrowded prisons, and only very limited treatment and rehabilitation. There is no better indicator of the ineffectiveness of the program than the high rate of recidivism among those arrested for intoxication. One study showed that 68 percent of those arrested were repeaters, many having a record of 12 prior arrests for the same offense.

Unfortunately, very little has been done to reverse the growing trend of drunk arrests so that the problem of alcoholism in the District continues relatively unabated. All of this is a source of grave personal disappointment to me since I had high hopes that the passage of Public Law 347 would offer some relief from this unsatisfactory situation. You will recall that this act provided that the Commissioners of the District of Columbia be authorized and directed to establish clinic and hospital facilities for the treatment and study of chronic alcoholics who become known to the Municipal Court for the District of Columbia. As originally conceived, the alcoholic clinic established by this act was to have resources and personnel to enable it to carry on an effective treatment, rehabilitation and education program, and to permit it to effect close liaison with the courts, hospitals and other agencies concerned with the management of alcoholism. The act stipulated that 10 percent of the annual fees for licenses for the manufacture or sale of alcoholic beverages were to be permanently appropriated to carry out the purposes of the act.

Now I must report to you the sad fact that we have fallen far short of realizing the constructive and vitally important aims of the act. For some time now, the Alcoholic Rehabilitation Clinic, which is the keystone of the program, has been severely handicapped by lack of funds and personnel. Although the 1958 annual report of Public Health Service Advisory Council for the District of Columbia indicates death rates from cirrhosis of the liver—which is correlated with alcoholism—was much higher than for several diseases including tuberculosis, the investment of funds for combating alcoholism remains pitifully small compared with money spent on these other ailments. The clinic program, which opened in 1950, with a budget in the neighborhood of $100,000 has subsequently had its funds drastically reduced when the portion of the license fees allotted for its operation was cut to 6 percent.

Although more than $10 million was collected in taxes on liquor in 1958 in the District of Columbia, less than $70,000 was devoted to salvaging the victims of alcoholism through the clinic program. It seems almost inconceivable to me that an alert Board of Commissioners and the public could have permitted this to have happened. I am even more concerned about the apparent apathy which permits this most unsatisfactory arrangement to continue. I ask you, How may a program of this kind be expected to grow and increase in effectiveness when its appropriations are so drastically reduced?

Let me tell you how this has affected the staffing pattern at the Alcoholic Rehabilitation Center. I am advised that its full-time staff now consists of two psychiatrists, three social workers, three clerks, and one psychologist. Physical examinations are conducted by a physician who visits the clinic on a part-time basis. Since there is no provision for an administrative officer, one of the full-time psychiatrists must devote a good portion of his time to the purely administrative responsibilities of the clinic. In addition, the clinic does not have any health educator on its staff nor does it have any nurses or occupational therapists.

It is only through the dedicated spirit of this limited staff that any good results are obtained with the thousand or so patients seen annually by the clinic. To give you an idea of the kind of results obtained at the clinic, I would like to tell you about one of their cases. This man, who voluntarily applied for treatment, was 40 years old at the time of his admission. He was married and had a young son. Employed as a taxi operator, this man was known to be an intelligent and capable person who was strongly critical of himself because of his lack of achievement. His drinking began as a teenager and he observed that it helped him to overcome his timidity when with other people. By the age of 29 he had had an episode of delirium tremens during which he attempted suicide. When he came to the clinic, he had reached the point that he was unable to control his drinking which caused him to be incapable of working nearly a third of the time. In spite of his wife's effort to supplement the family income, they were hard pressed to meet their obligations.

At the clinic, this man participated in group therapy sessions and also under-

went treatment with the drug antabuse. Although he showed some improvement under these treatments, he did not attain continuing sobriety until he was placed under individual psychiatric treatment. This treatment enabled him to gain a better understanding of himself, enhancing his confidence in himself and enabling him to deal with his underlying fears and anxieties without returning to the excessive use of alcohol. The clinic staff points with pride to the fact that this man has now remained completely sober for the past 5½ years. His homelife with his family is greatly improved and he is employing his leisure time in constructive activities. His wife is grateful to the clinic for their help and the patient is finding new happiness in his increased self-esteem and self-confidence.

It should be readily apparent that increasing the number of psychiatrists, psychologists, and social workers will permit the treatment activities to be expanded and will also permit more intensive efforts with those who come to the clinic for help. It is doubtful that the clinic will accomplish much in the way of education and the promotion of temperance until at least one health educator is placed on the staff.

But these are only some of the immediate needs of the program. In addition, the inpatient hospital facilities for alcoholics must be expanded. The present practice of hospitalizing alcoholics for a brief 5-day-or-so drying-out period and then sending them out into the streets withoutany followup accomplishes very little in the way of rehabilitation. Expansion of the clinic staff and facilities would make it possible to offer followup treatment to alcoholics after they have been discharged from the hospital. This should greatly improve the results obtained.

Under present conditions, the clinic often must improvise arrangements for the care of alcoholics who are in need of hospital care, which is not available. More hospital beds for alcoholic patients are urgently needed to remedy this unsatisfactory situation.

The establishment of a halfway house facility would also add greatly to the strength of the program. Such a facility would provide a situation for the continued care of patients who are well enough to be out of the hospital, but still require some degree of formal supervision.

Let me emphasize again my belief that we have a grave responsibility to take some action to increase the resources for the treatment and rehabilitation of alcoholics in this city. We must insure adequate clinical facilities for their diagnosis and treatment. When adequate facilities for the medical diagnosis and treatment of alcoholism are available, the stigma of alcoholism will no longer be a problem; public support will have been gained. Adequate facilities must include resources for education and for the dissemination of information and the coordination of all of the various agencies and activities which are, and should be, concerned with this problem. We must enlist the complete cooperation of the medical profession as well as that of the law enforcement people and all social agencies concerned. Also, expansion of treatment facilities should go hand in hand with research. A treatment program incorporating all that we know will be the best place in which to learn what we do not know and what more we need to know. Research should follow such an activity and, in fact, be a part of it.

In urging this action I am not speaking as "teetotaler" or a "blue nose" or "killjoy." I am simply presenting for the attention of Congress and action by the District Commissioners an inescapable health problem demanding attention and constructive action. Here is a case where "one man's meat is another man's poison." Senseless efforts to sweep it under the rug spell only disappointment and disaster. Let us begin to chip away at it straightforwardly and intelligently. We have appropriated this year upward of $221,584,000 for cancer, heart disease, mental illness, and a dozen other of mankind's killers. I am all for that but also I am for making at least a token effort to do something about a public health problem as baffling and widespread as any for which we have appropriated so much.

Future at Stake

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I am submitting herewith an excellent editorial on the highway legislation, written by Mr. Verne McKinney of the Hillsboro Argus, of Hillsboro, Oreg.:

FUTURE AT STAKE

Will 3 years of progress come to a halt? The Interstate Defense Highway System, which has pumped so much new lifeblood into the veins of Oregon's economy, will halt unless something is done about it.

Now, the public is faced with superhighways that end in plowed fields, with continued use of present cramped and obsolete roads and with increased auto fatalities and property losses every year.

Contracts totaling $138 million have been awarded to low bidders, most of whom are Oregon contractors. Furthermore, contracts totaling $38 million are ready to be let when money again becomes available. Oregon's economy has grown with the program and the State is prospering, driving is safer. This is the progress of the 3 years. Now, because of the lack of positive legislative action, funds for new roads are not available.

Can this be afforded? Unnecessary loss of life and property will increase. Manufacturers, supplying roadbuilders and using the vital transportation arteries, will lose production. Contractors will be out of jobs, facing large equipment losses. A vast throng of skilled production workers will be idled. The rising economy will be blighted with everyone sharing in the loss.

To help avoid this loss, you can write or wire now to your Congressman and Senators. Urge them to reorganize and reestablish the sources of revenue to keep the Interstate Defense Highway System under construction at the present pace.

The House Ways and Means Committee has approved a 1-cent increase in the gasoline tax, but this still must pass the House and Senate. An improved highway system, not only makes for safer driving, it also saves wear and tear on automobiles to make up for the extra gas tax.

The Great White Fleet Proposal Gathers Public Support

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McGOVERN. Mr. Speaker, as one of the sponsors of the Great White Fleet proposal, I am most gratified by the continuing support which this imaginative idea has been given by my fellow South Dakotans.

This proposal for utilizing our farm surpluses and medical and technical capacity in conjunction with a world-wide mercy fleet, composed of idle naval vessels, could dramatize with great effectiveness the peaceful intentions of the American people.

It is obvious that such a fleet supported by voluntary contributions could not solve the enormous problems of poverty, disease, and ignorance in the underdeveloped areas of the world. The White Fleet mission, however, would have a mighty impact upon world public opinion. It would go a long way in providing greater foreign policy initiative for the United States.

In an earlier speech on the House floor, I summarized some of the supporting statements which I have received from South Dakotans relative to this humanitarian project. Since that time, many others have written me. There follows brief excerpts from some of the letters my constituents have written on this matter:

"I am sure the people of foreign countries, who are sick and hungry, will remember doctors, food and clothing much longer than the American dollar" (Henry Dertien, Jr., Platte, S. Dak.).

"Very good indeed" (George Malone, Porcupine, S. Dak.).

"We should do less muscle flexing and more heart stretching" (Dave Pearson, Brookings, S. Dak.).

"Put the White Fleet into service" (William Dafnis, Aberdeen, S. Dak.).

"Pleased" (Joe Johnson, Sioux Falls, S. Dak.).

"Hope that you and your fellow Members of Congress may be instrumental in getting it started" (Clifford Grant, Redfield, S. Dak.).

"Deserving of unanimous support" (Ralph Rogers, Sioux Falls, manager of Lakeside Dairy Co.).

"It sounds good" (Marvin Norling, Jr., Mitchell, S. Dak.).

"A wonderful idea" (Ruth Herdliska, Sioux Falls, S. Dak.).

"Wonderful. It makes more sense than most foreign aid" (Clark and Marguerite Newman, Aberdeen, S. Dak.).

"The best idea to come before the public in a long time" (Richard and Grayce Johnsen, Redfield, S. Dak.).

"We pray that it will indeed become an actual reality" (Mr. and Mrs. E. T. Keeler, Lead, S. Dak.).

"A splendid and bold proposal for peace" (Mrs. Clarence Long, Mr. and Mrs. Arne Matteson, Mr. and Mrs. John Taylor, Terraville, S. Dak.).

"Highly in favor of" (Clarence Biggs, Deadwood, S. Dak.).

"We think it would be wonderful; we have been talking to every one about it" (Mr. and Mrs. Harry Carlson, Pollock, S. Dak.).

"I believe the quotation about 'bread cast upon the waters' would apply here and present a strong appeal to all peace-loving nations of the world" (E. N. Tullar, Lennox, S. Dak.).

"A wondeful idea" (J. A. Swan family, Fort Pierre; H. C. Tompers, New Underwood; John Mickel, White River).

"Only way of reaching many of the hungry people" (Carl T. Wright, Rapid City).

"It can capture the imagination of the world's people" (Rev. Richard Moberly, Doland).

"The help would come from all the people of America" (I. T. Kolbu, Red Owl, S. Dak.).

"Highly in favor of" (Carrie and Albert Olsen, St. Lawrence).

"An idea that we Americans should wholeheartedly and enthusiastically support" (Lloyd Hardy, Brookings, S. Dak.).

"Our obligation to the underfed populations of the world" (Mrs. W. G. Frederick, Sioux Falls).

"A good idea" (Milber Keller Chamberlain; Delmar Farming, Sioux Falls).

"I am in thorough agreement with the idea" (T. A. Overby, Aberdeen).

"The worthiest motives prompted the plan" (Cliff Cook, Sturgis).

"It doesn't make sense for us to be burdened with overproduction when part of the world is starving" (E. S. Heglin, Beresford).

"Much more sensible to confront starving peoples with food, clothing, and medicine, than to go parading our outmoded war paraphernalia" (Rev. Reuben Tanquist, Highmore).

"Will do more good than furnishing them arms to fight with" (Henry Briscoe, Gettysburg).

"I agree with you 100 percent" (William Butzow, Aberdeen).

"We favor the proposal" (Mr. and Mrs. Gerrit De Young, Sioux Falls).

"Brotherly love and going the second mile will do more to further peace than hate and atomic war" (Mr. and Mrs. Tom Mani, Milbank).

"A wonderful thing" (J. H. Cotton, Huron, S. Dak.).

"Hope you will use all efforts to put it into effect" (Marjorie Radabaugh, Fulton).

"We should move this food to our starving brethren" (Johnnie Miller, Flandreau).

"A most noble cause to which any thinking citizen would subscribe" (Rudolph Brown, Parkston).

"The finest thing your newsletters have ever contained" (W. E. Bishop, Sioux Falls).

"A great demonstration of Christlike service" (Mrs. Rosa Sell, Springfield).

"The idea has exceptional merit" (Thomas Roby, Watertown).

"A great idea" (Arvid Anderson, Erwin).

"Keep plugging for this" (John W. Smith, Eureka).

"Would give proof of the qualities for which this Nation was founded" (Mr. and Mrs. Edwin Symens, Claremont).

"I hope that the project will find favorable response" (Rev. Harvey Sander, Rapid City District Superintendent).

"I am sure there are enough good men in Government to put it into action" (Mrs. Ann Rutan, Chamberlain).

"Very effective in combating communism" (Maude Linahan, Sioux Falls).

"The most important task of mankind is to build a world where peace can be maintained with honor and dignity" (H. P. Chilson, Webster, president, Elevator Store Co.).

"The real challenge is to 'do unto others as we would like to have done to us' if we were in the same pitiable predicament" (Pastor E. W. Haygeman, Garretson).

"I think this is a wonderful thought, to let people know we are trying to help them instead of destroying them" (Mrs. O. P. Corcoran, Miller).

"An excellent proposal" (Elmer Cwach, Spearfish).

"A wonderful step forward" (Guy Varns, Sioux Falls).

"Could we have the wonderful motto 'In God We Trust' on these ships to show other peoples from whence we get our inspirations and strength?" (Mrs. J. J. Keegan, Aberdeen).

"Terrific idea" (S. R. Polus, Sioux Falls).

"I am very much in accord with feeding the hungry (Elmer Howell, Leola).

"I made an announcement in this regard at our church services last Sunday and I want to express my own support of this bold and imaginative move" (Pastor Johan Thorson, Aberdeen).

"The best idea for peace yet. Boys in the service could get their later training manning the ships and passing out the help. This could give them compassion and world understanding that no army camp could do, besides giving them friends around the world" (Mr. and Mrs. Decil; Cecil and Della Bartholow, Huron, S. Dak.).

House Sustains Veto of Rivers-Harbors Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. BROOMFIELD. Mr. Speaker, the need for item veto power by our President was never more clearly demonstarted than it was today in the vote on the public works appropriation bill.

There is no doubt about the feelings of the watchdogs of governmental procedures, our newspapers, which have performed such a worthwhile service throughout the Nation.

May I call the attention of my colleagues to an editorial which appeared recently in the Pontiac Press on the dire need for such changes to permit our President to delete objectionable items in appropriation bills. Its editor and publisher, Mr. John Fitzgerald and Mr. Harold Fitzgerald, have shown a great deal of courage and foresight in their news columns and editorial pages in keeping a large number of my constituents informed of happenings which directly affect their readers. There is no doubt of the effect of the House action today. It will either mean more taxes or less purchasing power for those who are footing the bills for us here in Washington.

Following is the editorial:

HOUSE SUSTAINS VETO OF RIVERS-HARBORS BILL

By a matter of one vote the House sustained President Eisenhower's veto of the public works "pork barrel" appropriation bill. The measure now goes to the Senate.

This is the third time in 3 years that the President has refused Congress' first try at slipping through a padded list of river and harbor projects with something for everyone.

The vetoed bill would have appropriated $1.2 billion for Army Engineers and the Bureau of Reclamation. No doubt many of the projects are needed but Congress included funds for 67 unbudgeted new ones in 32 States. Last January Mr. Eisenhower pointed out that many civil works already were in progress and that there was no need for more new starts.

The 67 unbudgeted items would have cost $50 million the first year ($30 million more than the budget message had proposed) but would ultimately cost $800 million. This, the President warned, is a built-in future budget boost and an abandonment of fiscal responsibility.

Unfortunately the President hasn't any power of item veto. He cannot delete objectionable parts of an appropriation bill. It's all or nothing. Politicians don't want him to have this power. It would interfere with the narrow interests of their constituents.

Edmund P. Radwan

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. OSTERTAG. Mr. Speaker, we have been saddened by the passing of a former Member of this body who served here with great distinction and credit to himself, his State, and our Nation. I am speaking of Edmund P. Radwan of Buffalo, N.Y., who entered the House of Representatives with the 82d Congress and served until illness caused him to retire last year. He was a sincere, energetic and devoted servant of his constituents and of the Nation. We regret exceedingly his untimely passing and extend our deepest sympathy to his wife and family.

Under unanimous consent I insert in the RECORD the following editorial which appeared in the Buffalo Evening News of Tuesday, September 8, 1959:

EDMUND P. RADWAN

Ill health last year compelled the retirement of Edmund P. Radwan after four terms in Congress. His death now at the age of 47 writes a sad epilogue to a brilliant career cut short just as it was reaching its prime.

Mr. Radwan had served in public posts at all three levels of government. Starting as village attorney in Sloan, he was elected to the State senate in 1945 while serving in the Army. After 5 years at Albany, he entered Congress in 1950. His ability as a votegetter increased apace with his years of service; though hospitalized throughout his final campaign in 1956, he was re-elected to the House by a plurality of more than 44,000.

Voter confidence in the young Congressman was not misplaced. For several years he served with distinction as a member of the Veterans' Affairs Committee. Later as a member of the Foreign Affairs Committee, he proved one of the mainstays of support for the Eisenhower foreign policy. With the two other Buffalo representatives in the House—Representatives PILLION and

MILLER—he was a member of one of the best teams ever to speak for this area in Congress. Working in close harmony, they compiled a legislative record of unusual productivity and effectiveness.

Mr. Radwan's voting record showed a flair for independence throughout his legislative and congressional career. He was thoroughly devoted to the well-being of his constituents and did not lose sight of their needs even while striving to serve the interests of the Nation as a whole.

It is a loss to both the community and the Nation that a kinder fate did not spare him for the even more important years of congressional service that surely would have been ahead.

Resolution by Polish National Relief Fund Committee

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the RECORD a resolution adopted by the delegates to the Eighth Annual Conference of the Polish National Relief Fund Committee, which was held in Detroit, Mich., on September 5, 6, and 7, 1959:

Whereas on September 1, 1939, Poland took upon herself the entire burden of armed opposition to the totalitarian forces in their march to world conquest; and

Whereas the Polish Government established itself in exile after Poland had been overrun by the military might of Nazi Germany and Soviet Russia and dedicated the country's remaining resources and its manpower to the defeat of the enemy; and

Whereas Poland is the only member of the winning team to have lost in the war while Germany and Russia, whose attack upon Poland precipitated the bloodbath for the whole world, are destined to be the greatest beneficiaries; and

Whereas Germany, the perpetrator of the greatest crime in history, ironically is recognized as free and sovereign, except for the part known as East Germany, dominated by the Russians; while Poland, the first ally, is a Soviet satellite, not free, and ruled by a government subservient to the views and wishes of Moscow, backed by Russian troops on Polish soil; and

Whereas the spontaneous outpouring of good will and the greeting which Vice President NIXON received from the people of Warsaw was proof positive that Poland's spirit of freedom still lives on; and

Whereas the invitation to Nikita Khrushchev to visit the United States extended almost simultaneously with the announcement of a week of prayer for all nations oppressed and enslaved by Soviet Russia is incompatible with democratic principles of justice and could result in irreparable moral damage and lower the prestige of the United States; and

Whereas Poland's only free spokesman in the free world, the Polish Government-in-Exile, functioning on English soil, headed by President August Zaleski, the same government recognised by the whole world until July 6, 1945, has withstood the sinister challenge of the Communists for 20 years: Now, therefore, be it

Resolved, That we, the delegates to the eighth annual conference of the Polish National Relief Fund Committee of the United States and Canada, being held at the Hilton Statler Hotel in Detroit, Mich., September 5, 6, and 7, 1959, respectfully request His Excellency, the President of the United States, and the Honorable, the Congress of the United States, to revise their attitude toward the Polish government in exile, a true symbol of all that we in this country, in our hearts, hold near and dear; and recognize that the Polish nation is being wronged when its only constitutional governmental body is denied a voice and whose just postulates are not duly considered.

Adopted and attested to by unanimous vote September 7, 1959:

Resolutions committee:

J. Bartosiewicz; K. Bonislawski; A. Buczek; S. Dybek; S. Kozlowski; B. Kwiatkowski; A. Lyczak; S. Lyczak; S. Lesniewicz; Dr. T. Rosol; M. Szymanski; N. Zbyszewski; Z. Nowicki, chairman; Lucian Pruszyneki, convention chairman.

Attested:

MITCHELL S. JACHIMSKI,
President, Michigan Division.

Special Prayers for Peace as Mr. Khrushchev Comes to Washington

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. DOYLE. Mr. Speaker, heretofore you and all of my other distinguished colleagues in this great legislative body have granted me unanimous consent to extend my remarks and I, therefore consider it a privilege to insert for the information—and I trust inspiration also—the text of what seems to me as a very appropriate editorial which appeared the other day in the Los Angeles Daily Examiner in which the distinguished Father Francis Cardinal McIntyre named in the editorial reminds us all that the President of the United States has designated October 7, 1959, as the National Day of Prayer.

Mr. Speaker, it is my firm belief and conviction that the observance of such day in accordance with the language thereof suggested by the distinguished Catholic cardinal will be most appropriate and, no doubt, magnificently strengthening to the attitude and activities of the American people who recognize the need of divine guidance and who pray accordingly.

Following is the text of the editorial:

SPECIAL PRAYERS FOR PEACE

The action of James Francis Cardinal McIntyre in ordering special prayers for peace by 287 Catholic pastors in this area for 10 successive Sundays could prove the spark which will light a great universal prayer crusade.

The prayers will petition for divine guidance for the Nation's leaders in their search for a just peace for the world.

It is timed to span what may become one of the most important periods in the world's history, covering the weeks of President Eisenhower's visit to western European countries and the coming visit to the United States of Soviet Premier Khrushchev.

The Cardinal notes that President Eisenhower has designated October 7 as a national day of prayer, and he also says:

"We all must recognize the need of divine guidance for those who labor in search for a just and permanent peace. * * *"

We know the power of prayer. We can all join in prayer in this time of especial need for world peace.

Oregon's Umpqua Valley as Seen and Described by Gladys Workman

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. PORTER. Mr. Speaker, Oregon is proud of its new nationally known author, Gladys Workman. The author of "Only When I Laugh" comes from the beautiful Umpqua Valley in my district. With her husband Norman and her nephew, also a Norman, Gladys has carved a fine niche in the valley.

She is a hard-working Oregonian by adoption. She has put together some of the family experiences and related them in readable fashion in her book. Her descriptions of the valley, its people, its wildlife, and its never-ending glorious scenery will undoubtedly entice many people to Oregon.

The Workmans would make the visitors want to stay forever. They and their neighbors are that kind of people.

My wife and I have the privilege of knowing the Workmans personally. A good deal of their warmth, affection and humor shines from the pages of "Only When I Laugh."

Editor Lowell Anderson, of the Drain (Oreg.) Enterprise, a fine weekly newspaper published near the home of the Workmans, has made this comment:

She has a knack for not taking herself seriously—yet she takes life seriously. Her story, built out of what was not always a happy experience, is told in the warmly hilarious tradition of "The Egg and I." It is the tale of how she got her neighbors to become her friends.

If one is to pick a few samples of the writing to quote I would suggest bits like the following:

Sometimes the rain comes in gusty squalls and the fists of the storm bang against your house and make the flames in the fireplace shudder. At such times, the electric wires are blown down or sag beneath the weight of fallen boughs, and the telephone usually loses its voice for hours or days. But this morning, there were no theatrics. Just the soft, tiny droplets, making the road a ribbon of black sateen, turning the great trunks of firs into porphyry columns, polishing the leaves of the willows and graying the mountains into watery invisibility. After an hour or so of this hypnotic rain, the eaves begin to drip and a thousand rivulets carve their way to the river. From the kitchen I watched the Umpqua, far below, running slowly under a steamy white blanket of mist.

There is humor in "Only When I Laugh" like:

Susie was a city cat, used to central heating, electricity, television, intimate candle-

lit dinners, and the bright chatter of cocktail parties. In a word, Susie was neurotic. The wilds of the Umpqua scared her to death.

Susie soon adjusted, though, as Gladys points out, thanks to the help of an Umpqua swain named "Sammy."

For instance, there was Sammy the cat. Sammy was a rake and a roamer with a wild eye and a devil-may-care tilt to his gray head. He belonged to a neighbor, but he appointed himself general superintendent of construction at our place and watched every move Claude and young Norman made. Sammy was also a great comfort, in his gruff way, to Susie and the other cats we brought from El Monte.

There are fine descriptions of people:

Blacky was the biggest man ever seen in the valley, stacking up near 6 feet 6 and weighing close to 300 pounds. He was fantastically strong. Blacky was a high climber and, with all his strength, was the gentlest fellow in the woods. He always took a dozen sandwiches into the forest for lunch, and sometimes a couple of pies, but he did not eat all that. He'd wander away from the rest of the crew and seek out birds and squirrels and he would eat with them. Gentle Blacky, like an oversize St. Francis, would sit on a log and open his lunchpail to the whole forest. Deer and skunks—and not any of your deordorized skunks, either—squirrels and jays, would settle down for the meal, picking daintily at the morsels Blacky offered. Even the humming birds ate out of Blacky's hands.

Or—

I'd look at Emma Hedden in her store, with her steel-colored hair wrapped around her head in a single braid, dabs of rouge on her cheeks, reading a letter for a man who couldn't read for himself, or helping someone send off a letter to the mail-order house (and probably lending him the money), and it was hard to see her in the role of giant killer. Now I know Emma Hedden is one of the strongest women ever fabricated. I have no doubt that Emma Hedden could run General Motors if she put her mind to it, and it's probably a good thing for the Ford Co. that she prefers to run her little store in Scottsburg."

Or—

If the Grange had no other reason for existing in the Umpqua—and there are thousands of good ones—its Christmas parties would justify it forever. The Christmas parties unify the valley, tying it together in the softest bonds of Christian charity and love. Then the hills and canyons empty, and lonely people, who may not see one another for months at a time, gather around the old grandfather stove (amidst the mob hysteria of the children) to talk of old times and new wonders. The talk at Christmas parties is the gentle, rambling conversation of old friends gathered in warmth to smile and watch the children and think of children of other years.

And Mrs. Workman writes crisply. A particular example of a sharp vignette—not particularly small or dainty, just excellent—follows:

In shared joys and sorrows, in all our moods, the party line tied us together. None of us will ever forget the black day when the line carried the omnious warning against a tragedy which could not be avoided. Pappy and I were standing outside talking to the driver of a logging truck when we heard the phone ringing sharply and incessantly. "Something's wrong," said the driver. "You can always tell when it sounds like that." We ran inside and picked up the phone. At first there was a mixed babble of voices:—"He looks like he's drunker than a lord."—"Can't anybody stop him?"—"Where is he now?" And then the chilling fact: "There's a guy coming up from Reedsport driving one of those big gasoline tanker rigs all over the road. Unless he kills himself first, he's going to kill someone else just as sure as you're born. Get the children away from the highway and stay away yourself." The log truck driver with us hastily ran his truck into our field. Traffic through the valley, never heavy, slowed to a halt. The party line shouted bulletins: "He just barely got through Scottsburg," someone reported. "One of the double wheels got in that ditch in front of Emma's house. He was clear over on the wrong side of the road and it's a wonder he didn't turn over there and burn up the whole town." The tanker roared past the Lewises, past Paul Applegate's place and avalanched through Green Acres, the new trailer and gas station settlement. Now we could hear the approaching rumble. There was nothing to do and nothing to say. We just watched silently as the wavering tanker thundered past our house and disappeared. We listened for a while, listened for a crash we all expected as the tanker slammed up the highway toward Elkton and Drain. "He's just come by here going like a bat out of hell," Sawyer's Rapids reported. Then there was another period of waiting. Silence. Surely, we all thought, there has been time for him to clear the valley. When the phone rang, we jumped to our feet. It was Grandma Butler. "That tanker tangled with a car just before it got into Elkton," she said. "All I know is two people are dead."

These are a few sample from the book. I hope it will be possible for the Members of this House to explore the whole book one of these days.

Under leave to extend my remarks in the RECORD, I include an article about Gladys Workman which appeared in the May 9, 1959 issue of the Coos Bay, Oreg., World:

GLADYS WORKMAN TO LAUNCH NEW BOOK

The city of Scottsburg will be observing the centennial year Sunday, May 17, with an old-fashioned family picnic. Emma Hedden, whose parents pioneered the area and established its general merchandise store, is asking everyone to join in the celebration. Scottsburg was founded in 1850 and was the second post office in the State.

A principal feature of the day will be the launching of a book, "Only When I Laugh," by Gladys Workman, a Scottsburg resident, who writes about her life and her neighbors in the Umpqua Valley. She will be in the Hedden store to autograph copies of the book and to visit with her many friends.

Mrs. Workman's most recent endeavor in the bay area was to spend an evening at Mercy Home instructing the residents in ceramic art for which she is noted throughout the Nation. Many severely handicapped persons in California as well as Oregon have found a joyful hobby and gainful employment through Gladys' teaching "Ceramics for Fun."

She is an honorary member of the bay area Zonta Club.

Her book deals with her roller coaster-paced experiences since leaving a thriving business in Los Angeles to make a new way of life in a shack in Oregon's backwoods.

Gladys made up her mind that the fresh air and peaceful life of the woods was what was needed to restore her husband's health. Ignoring such problems as where to live and how to earn a living, she packed up her husband and nephew and left for Scottsburg, a remote spot in the Umpqua River Valley—a warm, fertile stretch of land tucked in the southwest corner of the State, less than 20 miles from the Pacific Ocean.

Gladys has appeared on Ralph Edward's "This Is Your Life" television program and broke up the show when she couldn't stop laughing at her incredible string of misfortunes.

With gumption on their side, plus an abounding humor that was to bounce them over the direct crises, the Workmans launched their new life in a construction shack Gladys found. Though the new home was minus doors, windows, electricity, water, and facilities, Gladys felt compensated by her surroundings. For a front lawn she had a river stocked with 20-pound leaping salmon; the air came straight from the ocean, the land was a deep rich green and all about them, dwarfing the one-room shack, was a forest of soaring Douglas-fir trees.

At the age of 46, Gladys found herself confronted with such country triflings as floods, snakes in the kitchen, bears on the porch, a broken neck, cops and robbers, sleeping sickness, a runaway tractor, and a raging forest fire.

But perhaps her biggest obstacle to adjusting to the new life was a collection of plain speaking, uninhibited neighbors. She thought them to be full of ornery cussedness; they were certain she was dangerously mad.

Country folks didn't take to a woman falling asleep while fixing meals and nearly burning down the house, who didn't get out of bed until 10, who kissed the men and called them "darling." Gladys' first big gesture at being a good neighbor gave her another black mark when the town learned she had served her guests poisoned clams and a variety of physics.

The local people believed their suspicions confirmed when Gladys' husband revealed he had spent their life savings on 6 tons of daffodil bulbs. (Neither knew which end of the bulb to stick in the ground.) With the arrival of planting season, Gladys contracted sleeping sickness and couldn't stay awake to help plant the 90,000 bulbs; word spread that she was too stuckup to help in the fields.

Still losing every round in her passive war against the ways of the valley, Gladys turned from daffodils to ceramics, which she tried to teach the local ladies and thus win their friendship.

There was a change for the better when her husband helped improve the valley daffodil industry. Neighbors invited them to join the grange, which was also the center of social activities. Encouraged, Gladys increased her winning ways. At this time, doctors started showing up at the Workman house about like milkmen at other homes.

Gladys lost her voice, Gladys broke her neck, Gladys had heart palpitations, Gladys nearly choked to death, but she never lost her laugh or her optimistic view of the future.

She has a knack for not taking herself seriously—yet she takes life seriously. Her story, built out of what was not always a happy experience, is told in the warmly hilarious tradition of "The Egg and I." It is the tale of how she got her neighbors to become her friends, why and how she stayed in the Umpqua, and why now, neither she nor the valley will ever be the same.

West Virginia Is Getting Shortchanged: XIII

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. HECHLER. Mr. Speaker, for the third time in as many days I wish to pro-

test the fact that the State of West Virginia has the scales weighted against it in an unfair way.

I have previously pointed out that West Virginia, on a per capita basis, ranks 50th among the 50 States in employment of Commerce Department personnel. I have further explained how this actually can inhibit industrial expansion, in a State which needs such growth badly, by denying valuable Federal assistance and advice and by making helpful Federal officials inaccessible.

The expression "the rich get richer and the poor get poorer" is best remembered as a phrase characteristic of the cynical atmosphere that pervaded this Nation during the depths of depression. Yet, it would appear that this is the very policy that governs placement of Department of Commerce facilities.

Previously I presented figures to show that West Virginia had but 37 employees of the Commerce Department in the entire State, and these included only employees of the Weather Bureau and Bureau of Public Roads.

Coastal States and other strategic areas have natural advantages for certain Commerce activities, but two inland States, Idaho and Colorado, have geographical characteristics similar to West Virginia's; yet one (Idaho) has 5 times as many Commerce employees, while the other (Colorado) has exactly 10 times as many.

I am puzzled as to why Idaho needs 42 Weather Bureau employees to serve 588,637 population while West Virginia has only 10 to serve 2,005,553. Or why the Weather Bureau has 73 employees in Colorado, with 1,325,089 population.

I also marvel that West Virginia can get along with only 27 employees in the Bureau of Public Roads, while 166 persons are employed at Boise, Idaho, and 297 at Denver, Colo.

I must admit that the figures I have presented on Tuesday are subject to change. In fact, I have a graphic illustration of that—but it only serves to accentuate the Commerce Department's discrimination against West Virginia.

For example, my Monday figures list Indiana as having a total of only 504 Commerce employees. But today, on Thursday, I received statistics from the Commerce Department itself indicating that a Census Bureau installation suddenly has started to employ a whopping total of 1,256 persons at Jeffersonville, Ind.

On further inquiry, I learned that this installation is handling the processing of data gathered in the 1958 Business, Manufacturing, and Mining Census on a national basis, supplanting the Washington office to some extent in that field. I also found that this same office will be a central point for processing information gathered in the big 1960 population census, and will probably employ many times its present personnel figures again on a national basis.

Now, I ask you, Mr. Speaker, does this not appear to be discrimination of the rankest sort to locate such a facility in a State where unemployment is relatively low, below the national average, and overlook a State which has the highest level of unemployment in the entire Nation?

I should like to submit statistics to show that the State which has been most neglected by the Department of Defense—I have dwelt at length on this Department in previous statements—and the Department of Commerce, has the highest unemployment percentage in the country?

Does there not seem to be a correlation here? Is there not some way in which West Virginia can be assured a fair break, so that the rich no longer get richer while the poor get poorer?

The following State-by-State unemployment figures cover the number of insured unemployed. Leading statisticians estimate that the insured unemployed figure represents only about 60 percent of the total unemployed, which would mean that West Virginia's total unemployment remains, as it has for months, more than 13 percent of the total work force, or one out of every eight of our citizens.

State	Total insured unemployed (except railroad), week Aug 22, 1959	Percentage which insured unemployed relates to insured total work force (based on average of 12-month period ending December 1958)
West Virginia	26,959	7.9
Michigan	107,399	6.4
Pennsylvania	165,718	5.7
Maine	9,000	4.9
Alabama	24,599	4.8
Alaska	1,309	4.7
Kentucky	20,059	4.7
New Jersey	58,818	4.0
Louisiana	21,386	3.9
Mississippi	9,812	3.9
Rhode Island	8,919	3.9
Washington	23,081	3.9
Arizona	7,775	3.8
Delaware	4,705	3.8
Maryland	24,707	3.8
Tennessee	23,346	3.8
New York	179,721	3.7
Connecticut	25,667	3.6
Florida	29,081	3.5
Arkansas	8,551	3.4
Georgia	23,345	3.3
Oklahoma	11,175	3.1
Massachusetts	43,427	3.0
North Carolina	24,531	3.0
Utah	4,736	3.0
California	100,760	2.9
Nevada	1,891	2.9
New Hampshire	4,155	2.9
New Mexico	4,046	2.7
Missouri	24,076	2.6
South Carolina	10,247	2.6
Wisconsin	21,572	2.5
Indiana	24,251	2.4
Illinois	58,911	2.3
Texas	39,020	2.3
Kansas	7,456	2.2
Ohio	52,011	2.2
Vermont	1,466	2.2
Idaho	2,218	2.1
Montana	2,281	2.1
Hawaii	2,331	2.0
Oregon	7,372	2.0
Virginia	13,331	2.0
Minnesota	12,865	1.9
Colorado	4,754	1.6
District of Columbia	3,747	1.5
Iowa	4,184	1.0
North Dakota	647	1.0
Wyoming	544	.9
Nebraska	1,649	.8
South Dakota	456	.6
National totals and average	1,294,668	3.4

Mr. Speaker, we see from the foregoing figures that West Virginia ranks far and away the first in the Nation in the percentage of unemployed, yet ranks last in the nation in Department of Commerce employees within West Virginia. And not a single one of the paltry 37 Commerce Department employees in the State is assigned to work on those phases of Commerce Department activities designed to reduce unemployment through industrial development and services to business.

Labor's Contributions to America

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. HECHLER. Mr. Speaker, many statements were made on Labor Day throughout the Nation, but I believe that few could equal the sentiments of the president of the Huntington (W. Va.) District Labor Council, Mr. Summers I. Dean. What makes Mr. Dean's remarks so timely is the fact that he has taken a constructive position on the great contributions which organized labor has made to American society, culture, and economy.

No truer words were spoken than when Mr. Dean says: "To weaken the labor movement is to weaken America itself." He points out the numerous ways in which American labor has strengthened our whole country, and how the improvements in our standard of living have benefitted millions of people who were never members of a labor union. It is this type of unselfish service for the betterment of every group in the Nation which marks the labor union movement as a great and constructive force.

Under unanimous consent, I include the following statement by Summers I. Dean in the RECORD:

LABOR: PART OF AMERICA, GOOD FOR AMERICA

(Statement by Mr. Summers I. Dean, president, Huntington (W. Va.) District Labor Council)

On this 77th Labor Day we of the AFL–CIO take a serious look at ourselves and the present position of organized labor in the United States.

We find that it has almost become a national pasttime to attack organized Labor or at least demand stringent, punitive legislation against it.

This well organized vicious attack is a deliberate attempt by big business and other vested interests to mislead many well meaning Americans, in order to nullify the gains won after many years of struggle and sacrifice by the American worker.

The McClellan hearings in Washington have shown that while some crooks and racketeers did exist in the ranks of labor, the vast majority of organized labor consists of dedicated hard working people like you and your neighbor.

The AFL–CIO acted promptly. It expelled racket infested unions, and then supported corrective legislation in the U.S. Congress. This is unique in modern history. No other social or economic group has ever supported legislation to regulate itself.

Yet despite these efforts, selfish interests made use of the McClellan disclosurers and started a hysteria that led one Washington Congressman to state during the labor bill debate that this is a field day for demagogs.

We urge our fellow citizens today to reflect for a moment and consider the vast contributions of organized labor. The shorter workweek, more leisure time, health and pension plans and safety programs are some of labors contributions to the American way of life.

The merchant should think of the consumer dollars spent in his store.

If sweatshops and company stores still existed, workers could not afford all the things that make America the best dressed, best housed, and best fed Nation in the world.

The pensioner is secure because organized labor fought for social security program in the thirties. The unemployed benefit from unemployment insurance a law advocated and backed by labor.

The Federal minimum wage of $1 may soon be raised because organized labor recognizes the need for greater spending power of the American worker, and therefore petitioned the Congress for such an increase.

The AFL–CIO participates in Huntington community affairs. Its members and leaders sit on the boards of the United Fund, the YMCA, the hospitals, and other groups. They not only donate money but hundreds of hours of their time for the welfare of the community.

We are not a separate group. We are part of Huntington. We are part of America. To weaken the labor movement is to weaken America itself.

We look proudly at our achievements. On this Labor Day we pledge ourselves again to the great job ahead; the improvement of the standard of life for all workers. We are convinced of the justice of this course.

As Americans we put our trust in God and the great democratic ideals of our country. On this day the Huntington District Labor Council AFL–CIO extends its greetings to all citizens of Huntington.

Congressman Wolf Says United States Has Much To Show Khrushchev

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. BOWLES. Mr. Speaker, the newspapers have been full of various comments on Mr. Khrushchev's pending visit to the United States. One of the most intelligent comments I have seen on this subject appeared in the Waterloo (Iowa) Courier for September 3. In a guest editorial in that paper, our vigorous, young, and effective colleague, LEONARD WOLF, discusses the prospects for the Khrushchev visit and the opportunity that is facing us.

Under leave to extend my remarks, I include his editorial as follows:

WOLF SAYS UNITED STATES HAS MUCH TO SHOW RUSSIA'S KHRUSHCHEV

(By Representative LEONARD G. WOLF, Second Iowa District)

The contemplated exchange of visits between Khrushchev and Eisenhower this fall has raised the hopes of the American people and the peoples of the world. This optimism has not decreased although many people after a second look question the good that can come from such an exchange of visits.

It is, of course, unreasonable to expect too much from such an exchange of visits. For even powerful leaders such as Eisenhower and Khrushchev do not have it within their power to turn back the tide of the cold war which has been raging for at least 12 years. The philosophic differences are great between the two nations. Much misunderstanding and mistrust on both sides have resulted in great ill feeling. Each country is committed to great armaments and military spending. These drawbacks cannot be expected to be overcome by two men who will visit each other's country for, at most, 2 weeks.

This does not mean that such visits are wrong or cannot accomplish any good end. Winston Churchill once pointed out that it is "better to jaw-jaw than to war-war." And he is right. The costs of war today are prohibitive. All rational men know this. The world would possibly be destroyed or at least civilization would be turned back to the darkest cave man days.

Consequently, discussion and negotiation are welcomed so that the chances of fighting an atomic war are lessened.

Many people in the United States will not take kindly to the coming of Khrushchev. This is quite understandable. The record of Khrushchev is, to say the least, not spotless. He has on his hands the blood bath of Hungary and the cruel and unexplainable murder of two heroes of Hungarian freedom, Pal Maleter and Imre Nagy. This is not something that can be forgotten and should not be forgotten. The Russian advance in science by putting sputnik in the air does not wipe out the cruelty of the Soviets in Hungary.

We should not forget the threats of Khrushchev and his saber-rattling, nor his reckless playing with destruction over the question of Berlin.

On the other hand, the President of the United States has invited Khrushchev in an effort to lessen tensions in the world and the Russian leaders at least seem more amenable to reason and negotiation. And the Vice President has shown us that the Soviet people themselves want peace and are very friendly to the United States. Thus, it is the duty of the American people to do all in their power to impress on the Soviet leader two ideas: That the American people want peace, and that the American people love freedom and are willing to fight for it and have the capability of fighting for it.

We must not try to cover up the shortcomings that we have. But we can show great and hitherto unparalleled progress in such areas as human relations in which people of different backgrounds live together in harmony. We can show Khrushchev our great economic wealth in which, because of our free enterprise system governed by societal responsibility, the people have reached economic heights that are unparalleled in the history of man. We can show Khrushchev our great strides in culture in which our artists are free to paint and write what they please without fear of Government interference as was the case, for example, with the great Russian writer, Boris Pasternak.

I do not fear a visit from Khrushchev. We have a great civilization. Certainly the greatest since the Athenian civilization over 2,400 years ago. We have much to be proud of. And we must rid Khrushchev of his appalling conceptions of American life and the great misrepresentations of our policies which the Soviet Government feeds the Russian people. These misunderstandings and misconceptions must be corrected lest Khrushchev make a serious mistake and plunge the entire world into an atomic holocaust which the Russian people and the American people surely do not want.

Our Lady of Czestochowa Parish Celebrates 50th Anniversary

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. CONTE. Mr. Speaker, on Sunday the 30th of August I had the great privilege of being present as a speaker at the Golden Jubilee Banquet of Our Lady of Czestochowa Church in Turners Falls, Mass.

Under leave to extend my remarks, I wish to include the text of my remarks in the RECORD:

I want you to know how greatly honored I am to have been asked to participate with you in the 50th anniversary of Our Lady of Czestochowa. How proud all of you must be to see how wonderfully this parish has flourished, and the fine group of men and women who today call it their own. For half a century now, your church has served the people of this wonderful community as a house of worship and a spiritual home. In times of trouble and sorrow it has been a source of strength and a beacon of hope; in times of happiness it has been the center of rejoicing for family and friends; and throughout each year, it has added understanding to life and provided a guideline for true Catholic living.

As you know, I come from another heritage than yours. My family came from Italy and your families from Poland. But in many ways, I feel a real brotherhood with each and every one of you. My parents, like yours, came to America and lived in great hardship during their first years in a new country. Both my parents and yours learned what a wonderful blessing it is to enjoy the fruits of American liberty. Both my parents and yours brought with them a fervent religious tradition which enabled them to go through the hardest years and finally vanquish the difficulties in their paths.

Let me say to you today that the 50 years of service and growth of this church are a tribute to the religious devotion of you, its members and clergy, and to the deep faith of the Polish people and Americans of Polish descent. Wherever the Polish people have settled in America they have brought their great faith with them, building new churches with priests of Polish descent and following their time-honored customs. This deep-rooted religious faith and conscientious fulfillment of religious obligations, together with your love of family and willingness to work long and hard, are the chief among the reasons that you have become such a vital and beloved part of America.

It is the same deep faith demonstrated by the 50th anniversary of this church which has sustained the Polish people in the old country through the many wars and partitions to which their land has fallen victim. For many centuries there have been many invasions, occupations and partitions, but no matter how determined the aggressors, they have not been able to suppress the freedom-loving spirit of the people of Poland. Never has this been more vividly illustrated than in the Poland of today, and never has religion played a more important role in the defense of Polish freedom than it does now.

Today Poland suffers under perhaps the cruelest tyranny of the many which have afflicted her over the centuries. But the Communist government imposed upon the Polish

nation by Russia has had a difficult job in stamping out the liberties of the Polish people. In many other parts of the Communist world, all freedom of speech, all freedom of religion have been stamped out. But not in Poland. The Polish love of freedom, strengthened by religious convictions and guided by the clergy, is simply too strong to deal with so quickly and easily.

A few weeks ago we saw a wonderful demonstration of the true will and feeling of the Polish people. Admiral Rickover, who was along on the trip made by Vice President NIXON, told our committee in Congress that the people of Warsaw lined the streets, tears in their eyes, to welcome the American party. The welcome given Khrushchev a few weeks before was meager in comparison. The Nixon visit gave the people of Poland an opportunity to demonstrate once more their great and unquenchable love of freedom.

The people of Poland are in a difficult position today. To the east stands Soviet Russia, with the mightiest land army in the world, ready to crush the Polish nation once more if a dangerous rebellion begins. To the west is the Soviet puppet regime in East Germany, where almost 400,000 Soviet troops are stationed. The people of Poland must steer a careful course, or Russian tanks will once more rumble through their streets and they will suffer the cruel fate of the people of Hungary.

One of the most important factors aiding the Polish people to maintain their spirit and resist communism is the church. In their worship the Polish people continually assert their support of a cause greater and finer than that of the Communist empire.

A key figure in this great struggle is Cardinal Wyszynski. He symbolizes the important role of the church in the fight to keep liberty alive. A priest since 1924, Cardinal Wyszynski's first work was among the labor unions. I am sure that his close association with the working people and economic problems gave him special insight which would later help him to see through the Communist myth and fight it effectively.

In 1946, at the very time that Communists were making intense efforts to remake Poland in the image of the Soviet Union, this man became Archbishop and Primate of Poland, and 4 years later, he received the red hat. No sooner had he become Primate, however, than the Communist government in Poland moved to take all economic and political rights away from the church, seizing much of its property and creating no end of hardships for the church. For years the Cardinal fought against these violations of the rights of the church. The government never lived up to its agreements. Instead, Catholic papers were closed down. Priests were arrested. The church's great charitable organization was taken over. And the Communists even tried to set up an organization known as PAX, a practical competitor to the church, trying to divert the faithful from the fold.

This train of events culminated in September 1953 when the state secret police appeared in the courtyard of the Cardinal's residence, and for the next 3 years held him virtually as a prisoner.

But the Communists miscalculated. They did not understand the real spirit of the Polish people. Unrest began to mount throughout the land. It was clear that the old regime was fighting a losing battle to keep control of the people. In the famous month of October 1956, Gomulka returned to power and Cardinal Wyszynski was released. The Communists realized that in order to prevent a great uprising they must grant liberties, particularly to the church.

No one can say that the people of Poland are enjoying full and real liberties today. But they are enjoying a few more liberties than the people of most of the other satellite nations. The reason is that they have frightened the Communist powers that be into letting them have those liberties and religious freedom.

Cardinal Wyszynski is not deceived about the basic struggle between catholicism and communism. He has said that because communism, like an evil cancer, is dangerous to all parts of man's life, it must be combated by the united efforts of the whole society. He believes, that someday there must be a decision between Christianity and communism, and that the whole Polish nation and the whole world must prepare for that final decision.

Nevertheless, this brave cardinal also wishes to keep Russia from using turmoil in Poland as an excuse for intervention. He wishes to keep the church alive. In this difficult task I know he has the prayers of peoples of all religions throughout the free world, and especially of those, like yourselves, who have Polish ancestry and love the land of Poland so much.

As for the Communist leaders in Poland, they realize that the teachings of the Catholic Church contradict all that they claim, and that Cardinal Wyszynski is their mortal enemy. In the past year they have made repeated efforts to suppress the church, but with limited success. In fact, there is much evidence that the Communists are fighting a losing battle, especially in the town of Czestochova for which this church is named.

For more than 300 years a picture of the blessed virgin, believed to have been painted by St. Luke, has hung in the monastery of Jasna Gora at Czestochowa. As you know, this is the holiest shrine of Polish catholicism. Every year in August there is a great pilgrimage to this monastery to celebrate the assumption of the virgin. These pilgrimages have continued throughout the Communist reign. The city of Chestochowa has become a symbol of the great and lasting influence of the church in Poland and a great spiritual center.

Last year, just before the time of the annual pilgrimage, the sanctuary of Yasna Gora was searches by police for the first time in its history, supposedly to halt the printing of what were called illegal publications in the Pauline Brothers Monastery. Following the Yasna Gora raid the smoldering conflict between church and state flaired into the open. The government barred nuns, monks and priests who belonged to religious orders from teaching religion in the schools.

Nevertheless, the pilgrimage took place as always. On August 15, from every part of Poland, pilgrims journeyed to Chestochowa on foot, on bicycles, by bus and by train. This, my friends, is the deep and lasting type of devotion which the Communists cannot suppress as long as the Polish people have life and strength to express their deep will.

It is the same type of deep and lasting faith which has made this parish here in America so successful during its first half century. I am confident that this same abiding religious faith will be a source of rebirth for the Polish people even in times of deepest despair. It will continue to bind the faithful in Poland with the faithful here in America and other nations, in eternal dedication to common ideals and the great common belief. It will be the inspiration for wisdom and courage until the shackles of Communist tyranny are thrown off—not only in Poland, but wherever they may exist in our world.

Once more, my friends, my warmest congratulations to you on this great anniversary. May the good Lord continue to bless your wonderful undertaking in the years ahead, just as he has during the first glorious half century of our lady of Chestochowa here on American soil.

The Passport Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. BARR. Mr. Speaker, on September 8 I answered "no" when my name was called on the passport bill. Eighteen Members voted with me in opposition to this measure, and 371 Members voted for it. My "no" was a protest against bureaucratic tyranny, and I am submitting the following editorial from the Indianapolis Star to demonstrate to the Members of this Congress and to the Nation what tough, Midwestern thinking is on this subject:

[From the Indianapolis (Ind.) Star, July 5, 1959]

DON'T FENCE ME IN

The power of the Government to say to what parts of the world Americans may be permitted to travel has been upheld by the Federal Court of Appeals for the District of Columbia. The court found that the right to travel is protected by the Constitution, being a part of the right of liberty. But it concluded that it is legitimate for the Department of State to limit this right, as an extension of the President's power to conduct foreign relations. Travel of an American in a foreign country may, the court decided, so affect foreign relations as to be part of them.

This is a case involving a general ban on travel in the Communist portions of China, Korea, and Vietnam, and in Hungary. It is different from the question whether a passport can be denied to an individual on grounds of personality, which has been decided by the Supreme Court in favor of the individual citizen's right to travel without discrimination. There is no question here of saying which persons may travel. It is a question of saying where any American may travel.

There is little likelihood that this ruling would be upset by the Supreme Court, except on the exceedingly slim chance that it might disagree about an individual's travel being a part of foreign relations. In the controversial treaty cases of past years the Supreme Court has bluntly stated its unwillingness to apply the test of constitutionality to anything which is done in the name of foreign relations. While not so clearly stated, the same reluctance can be found in this ruling on travel.

Great danger of abuse lies in the logic by which a private citizen's travel to a foreign country is made an instrument of the Nation's foreign relations. By applying this rule a State Department which was so minded could decide that travel by Americans anywhere outside the country would disturb foreign relations. Thus Americans could be effectively fenced within the national borders. Of course such a possibility seems inconceivable now, but the power to do exactly that has been confirmed by this court decision.

Americans almost universally proclaim it to be an evil thing that the Communist nations pen their citizens within their own national borders. Would it not be equally evil for the United States to do it? If the act would be evil, then the power to do it is also evil.

This line of logic also offers the point on which legislative remedy could hinge. As one of the reasons for refusing a passport in the case before the court, the State De-

partment said that "the official approval" of the presence of American citizens in the barred areas—that is, their presence there with a passport—would impede the execution of foreign policy.

It is exactly this point—the claim that possession of a passport indicates official approval of the citizen's travel—which should be eliminated. The right to travel is a part of liberty and is protected by the Constitution. Therefore the citizen's travel does not require any official approval. The use of the passport as a device for implying such approval merely opens the door to the withholding of that approval.

A passport should be identification and nothing more. Its issuance should imply nothing except the establishment of the citizenship of the owner and documentation by photograph, fingerprints, and physical description. This passport, denoting nothing but identification, should then be available at any time to any citizen upon satisfaction of the identification requirements, and without question as to where the citizen may plan to travel.

The State Department should, of course, continue to designate areas which, in its judgment, should be avoided by American travelers. But these designations should be advisory, not binding. The designation should merely mean that protection of the American flag is not offered in those areas. The citizen should be free to go to such areas at his own risk, if he chooses. At the same time, the protection of the flag in areas of normal travel should be made more meaningful. It has become rather empty in recent years.

The right to move about is an essential element of individual liberty. It has been seriously curtailed by a government which, as in other matters, has become far too preoccupied with shielding the individual against the possibility of making mistakes and exposing himself to hardship or harm. A new generation of Americans, reared in this spoon-fed atmosphere, is in danger of losing the spunk on which freedom must feed. Let's give every American room to move.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Both Houses overrode President's veto of public works appropriation bill.

Senate passed 62 measures on calendar call, and passed numerous other bills, clearing several for White House.

House passed housing bill.

Conferees reached agreement on agricultural trade development extension.

Senate

Chamber Action

Routine Proceedings, pages 17341–17365

Bills Introduced: 8 bills and 3 resolutions were introduced, as follows: S. 2673–2680; S.J. Res. 140–141; and S. Res. 190. **Pages 17343–17344**

Bills Reported: Reports were made as follows:

S. 2230, to amend the National Cultural Center Act with regard to disposition of certain donated funds (S. Rept. 991);

H.R. 8035, designating Dyberry Dam and Reservoir, Lackawaxen River Basin, Pa., as the Gen. Edgar Jadwin Dam and Reservoir (S. Rept. 992);

H.R. 616, designating the dam across the Lampasas River, Tex., as Stillhouse Hollow Dam (S. Rept. 993);

H.J. Res. 80, providing for the erection of a memorial tablet at Garden Key, Fla., in honor of Dr. Samuel Alexander Mudd (S. Rept. 994);

S. 743, to amend the Federal Coal Mine Safety Act in order to remove the exemption with respect to certain mines employing no more than 14 individuals, with amendment (S. Rept. 995);

S.J. Res. 103, authorizing the National Geographic Society to erect in the State of Virginia a memorial to Rear Adm. Richard E. Byrd (S. Rept. 996);

S. 2673, to provide for appointment of additional circuit and district judges, with amendments (S. Rept. 997);

H.R. 2982, to fix the official station of retired judges assigned to active duty (S. Rept. 998);

H.J. Res. 310, to authorize designation of period from October 17–24, 1959, as National Olympic Week (S. Rept. 999);

H.J. Res. 317, to change the designation of Child Health Day from May 1 to first Monday in October of each year (S. Rept. 1000);

H.R. 6809, 2068, 7640, 7935, and S. 609, private bills (S. Repts. 1001–1005);

S. Res. 183, authorizing printing of additional copies of part 3 of the Second Interim Report of the Select Committee on Improper Activities in the Labor or Management Field (no written report);

S. Res. 184, to print additional copies of part 4 of the Second Interim Report of the Select Committee on Improper Activities in the Labor or Management Field (no written report);

S. Res. 186, to print as a Senate document the study entitled "Tensions in Communist China" (no written report);

H. Con. Res. 405, to print additional copies of hearings entitled "Hospital, Nursing Home, and Surgical Benefits for OASI Beneficiaries" (no written report);

S. Res. 190, authorizing the printing, as a Senate document, of the proceedings of the 39th biennial meeting of the convention of the American Institute of the Deaf (no written report);

S. Res. 173, commending the National Jaycee Community Development Program (no written report); and

H. Con. Res. 404, to print additional copies of "Compendium of Papers Submitted on Revision of Federal Income Tax Laws" (no written report).

Pages 17342–17343

Bills Referred: Two House-passed bills were referred to appropriate committees. **Page 17387**

President's Communication: Communication from President was received transmitting proposed supplemental appropriations to pay claims for damages and a judgment rendered against the U.S. in amount of $323,629, together with indefinite interest—referred to Committee on Appropriations and ordered to be printed as S. Doc. 56. **Page 17342**

Call of Calendar: On call of calendar, 62 measures, of which 35 were private, were passed as follows:

Without amendment and cleared for President:

D.C. life insurance: H.R. 7145, relating to the regulation of the business of life insurance in the D.C.;

Appendix

Arms of Friendship, Inc., a Constructive New Force for Peace

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, prepared by me, relating to the reduction of tensions between the United States and the Soviet Union.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SCOTT

The subject uppermost in everyone's mind these days concerns the reduction of tensions between the United States and the Soviet Union. It is with this highly commendable objective in mind that our State Department arranged for our American exhibit in Moscow and for Soviet citizens to visit our country under the cultural exchange agreements. It is the reason for President Eisenhower's visits to Germany, England and France, and for the exchange of visits with Mr. Khrushchev. I approve and applaud these efforts and all of us hopefully look for a more favorable trend of events so we may no longer live under the threat of war.

It is true that a possible nuclear war would bring frightful disaster and losses to both the United States and the U.S.S.R. It is true that international communism is committed to ultimate world domination and that the leaders of this cult are acknowledged atheists, uninhibited by moral codes. Let us also remember that through politics, propaganda, and a Machiavellian version of public relations, 800 million of the world's population and one-fourth of the earth's surface has vanished behind the curtain of Communist domination in the past 40 years. We cannot afford to disregard lightly the threat posed by that aggregation of men, money, and technique. All of our people—on the farms, in the cities, and in industries need to remember that the Soviet dangers have not ended merely because the Iron Curtain has been lifted just a little bit.

We seek new solutions to the existing impasse with the Soviet Union, to find, if possible, a fresh and sound approach which can change the pattern of our diplomatic stalemate and which can be a constructive new force for peace. I have been informed of such a program, based on years of study and already justified by its first fruits. I am especially happy that it is not a Government plan but one supported and carried out by private individuals. Such a plan has many advantages, since it can act directly, rapidly, avoids long delays, can be positive, flexible, and handled in a personal manner by a small group.

I refer to the organization named Arms of Friendship, Inc., of Philadelphia, which was organized by friends of mine after detailed and exacting research at Temple University under that distinguished educator and president of that institution, Dr. Robert L. Johnson. A few of the other outstanding Pennsylvanians who have helped in the creation of this organization are Mr. George D. Widener, Mr. Henning W. Prentis, Jr., Mr. Walter D. Fuller, Mr. John A. Diemand, Mr. William T. Carter, Jr., Mr. C. Mahlon Kline, Mr. Edgar Scott, as well as city officials. The organization grew out of concern over U.S. activities in the cold war. The basic question researched was whether or not private citizens could, through intelligently planned programs, help reduce existing tensions with the Soviet Union. This was before President Eisenhower initiated his people-to-people program which has been so well received, but the conclusions reached are in accord with the President's ideas.

The research explored in great detail the conduct of American-Soviet relations. The seminars and discussions held and the testimony and evidence gathered gave a clear picture of the problems confronting our people. Synoptically stated, the conclusions were that a real need exists for private individuals actively to seek out personal contacts and establish friendship with individual Russians. This was concluded to be a practical down-to-earth method of helping reestablish the trust and understanding that appears to have been lost between Americans and Russians. This type of effort was concluded to follow a positive and constructive path to lasting peace. The frightening alternative to such efforts is, ultimately, war.

The research brought out many facts to which few of our people have given much thought. The Russian people suffered much from the disasters of war. Hence, they desire peace just as we do. They are motivated by the same aspirations as we are. The same fears, hopes, and longings influence their lives. Their family ties are close. Like all people in all lands, the Russian parent wants his children to enjoy a happy and successful life. The Russian people are patriotic. They love Mother Russia and they have legitimate reasons to be proud of their land, their culture, and their science. They would like peace in their time, and they look to the future for continued improvement in their living standards.

The considerations on which Arms of Friendship was founded are obviously true. Some of the existing differences with the U.S.S.R. have undoubtedly resulted from the distances that separate us and lack of information of each other. How could this problem in understanding be solved? Was it possible that, at this date in history, new conditions exist which could change the past pattern of diplomatic debacles? Was it possible that the time is approaching when diplomats who fail to achieve their ends by logic or before a court of world opinion, such as the United Nations, may no longer be able to use as the final act of diplomacy the threat of force? That marching men, roaring cannon, and atomic weapons may one day no longer be available to the whim of despotic and uncontrolled leaders? The research conducted by Arms of Friendship concluded that that day is coming swiftly, and that real peace can be brought closer and ultimately realized by creating better understanding, closer ties, man-to-man contact, respect, trust and friendships between Americans and Russians, particularly ex-servicemen, combat veterans, reserves, retired, and other such military men of the United States of America and the U.S.S.R. It maintains that the similar experiences and knowledge of war of such men and women make possible a mutual understanding and desire for peace which transcends differences in language, nationality and ways of life.

Unless ingredients of conflict are replaced by feelings of understanding, trust, and friendship between Americans and Russians, war is almost certainly the ultimate outcome. And just as the winning of war requires the coordinated effort of most of the people of the Nation, the preservation of peace is concluded to be a responsibility of the people.

Now these conclusions reached by the studies conducted at Temple University are certainly challenging. After all, it is not wealth or wheat, steel, oil, or our vast facilities of transportation and communications that is the most important product of any country. It is the people, and if they get to know each other it seems to me that the problems that lead to war might be resolved.

The basic theme and concepts of Arms of Friendship are in accord with the views of the late Honorable John Foster Dulles. Speaking in behalf of people-to-people efforts of this nature he made the following significant statements: "The individual should be the basic source of the movements, the efforts, the trends that take place in the world. We all know how problems become readily soluble if you are operating in a favorable climate and favorable atmosphere. You (our people) have got the job of making it clear throughout the world that freedom is the preferable form of society. And if you by your works make that clear, then the problems that come up day by day will be soluble by your government. If you can't make that clear, then they will become insoluble and all the things we have stood for since our Nation was founded will go down." And while speaking of the need to liberate the forces of freedom through individual effort, he emphasized that "the process must be made one of evolution and not one of violent revolution."

In evaluating the worth of efforts of this nature we should remember that the people of the Soviet Union are created by the same God that we worship. They have the same capacity for recognizing right and wrong that we do, and possess the same instincts and aspirations. Unfortunately, they have been cut off from the rest of the world for some 40 years. They have been denied free knowledge of other countries, and the resulting ignorance could lead to disaster. There is an obvious need for us to convey to the people of Russia the truth about our country, our people, and our objectives as we seriously seek to eliminate the dangers of war.

Arms of Friendship is facing the problem realistically. Its positive efforts include a travelers' program, letter-writing contacts, a plan for the exchange of meaningful gifts and a program for the dissemination of useful information concerning the rehabilitation of disabled veterans. It has initiated forceful and effective people-to-people contacts between veterans of the United States and veterans of the Soviet Union. The limitation to veterans has been made in order that the activities being undertaken may be most effective and yet be kept within manageable proportions. After all, the veterans of both nations had similar war experiences, readjusted to civil life at the end of the conflict, and are now coming to posi-

tions of increased responsibility in the economic, scientific and civic areas of both countries.

Arms of Friendship recently sent two groups of veterans to Russia to explore the practicality of their efforts. The travelers included a senior retired general and an admiral, two past commanders of the American Legion, the national commander of the Jewish War Veterans, the national commander of the AMVETS, the past commander of the Disabled American Veterans, and a past commander of the Catholic War Veterans. These men represented without portfolio several million of our fellow Americans. The groups were accompanied by four Russian-speaking veterans, which enabled them to move about without dependence on Intourist guides, and in this fashion they were able to sample public opinion. They brought back convincing testimony of the need for concentrated effort to reach the average Russian with the truth. The following extract from Mr. Lewis K. Gough's report concerning his trip—forwarded from Europe—is synoptic of the views of all who made the trip: "I was amazed that the people have retained as much friendliness and receptiveness toward us as they have, in view of the propaganda techniques to which they are subjected. Their strong basic friendly feelings give me higher hopes for peace than before I went to Russia. Russia is not black or white and those who emphasize either the very good or the very bad, do us a disservice. Talking to them may prevent fighting them in a war in which there could be no winner, and they must understand the alternative as we do, and the world at large."

The evidence seems clear that there is a job to do and that the programs of Arms of Friendship are practical. The average Russian has heard only Soviet propaganda that the U.S.S.R. wants peace and that the United States is for war. They need to know how we live and that we would like to see them enjoy the same surplus of consumer goods that is available here. They need to learn the facts about other countries they are denied knowing by restrictions on radio programs and news media from the outside world. The groups of veterans that I mentioned brought back many examples of the insatiable appetite for honest factual information. In one city an intelligent, highly trained, Russian master carpenter asked Mr. William Gill, past national commander of the Catholic War Veterans, if it was true that American carpenters could earn enough money to own their own automobile. Such ignorance is both pathetic and dangerous. The only way to fill this vacuum is through direct people-to-people contacts.

Arms of Friendship has been granted tax exemption in recognition of the objectives being undertaken, and the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the Jewish War Veterans, and the American Veterans of World War II have all passed resolutions supporting the efforts of this organization. To the best of my knowledge, it is the only private nongovernmental organization that is contributing practical help toward solving our differences with the U.S.S.R. Given the proper financial and moral support, it can make a tremendous contribution toward stemming the flood of communism across the world and preserving peace with honor. In these days of back-breaking military budgets, which must inevitably get increasingly heavier with the evolution of weapons, efforts of this nature which are sponsored by men of unquestioned integrity deserve widespread public support.

The primary office of Arms of Friendship, Inc., is located at 4150 Henry Avenue, Philadelphia, Pa., and its board of directors is headed by Gen. Jacob L. Devers (retired), who commanded the 6th Army group during World War II; Gen. John E. Dahlquist, Gen. Charles L. Bolte, Adm. Richard L. Conolly, Adm. H. Kent Hewitt, Lt. Gen. Ira C. Eaker, and Lt. Gen. Williard S. Paul are typical of the military representation.

Mr. James A. Farley, Dr. Robert L. Johnson, Mr. George D. Widener; Mr. Colby M. Chester, Mr. Henning W. Prentis, Jr., Mr. William L. Clayton, the Honorable Richardson Dilworth, mayor of Philadelphia, three past commanders of the American Legion, and Miss Chloe Gifford, president of the General Federation of Women's Clubs, indicate the type of civilian leaders lending their support.

In conclusion I want to emphasize my support of people-to-people contacts such as those being carried out by Arms of Friendship. In this changing world it seems to me the benefits of peace may be within our grasp. If people can get to know each other, they will discover they have more of common interest than differences justifying quarrels. They are certain to seek methods short of war in resolving their conflicting interests. As President Eisenhower said a short time ago, "The problem is for pepole to get together and to work out not one method but thousands of methods by which people can gradually learn a little bit more of each other. What we must do is to bring the family of Russia closer into our circle. * * * In this way, I believe, is the truest path to peace. All of the other things that we do are merely holding the line while constructive forces of this kind take effect. There is no more important work."

Public Comment on the Interest Ceiling for Federal Bonds—No. 1

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 1 of the series:

[From Life magazine, Sept. 7, 1959]

HOW BOND RATES AFFECT YOU

Nobody in his right mind thinks that Congress would ever imperil the national defense by refusing to pay the Pentagon's bills. And if it did so there would be such an outburst of indignation that Congress would get cracking.

But the reverse of this is happening. The management of the public debt is also of vital concern. Yet Congress is refusing to give the Treasury the powers it needs to manage the public debt in a sound and orderly way. There has been no outburst of public indignation because the issue is difficult for laymen to grasp.

They had better grasp it, for it affects the value of their savings and the security of their future. By its failure to act, Congress is driving up interest rates and adding to inflationary pressures. Here are the simple facts:

The dead hand of the past—a World War I measure passed in 1918—puts a ceiling of 4¼ percent on long-term Government bonds and savings bonds. It is these bonds, bought by insurance companies, trust funds, and the savings of individuals, which should carry as much as possible of the public debt because they check inflation by taking savings out of the scramble for goods.

This 41-year-old ceiling on bond interest makes it increasingly harder for the Treasury to sell new bonds. Institutions and individuals, since they can get better rates from other securities, refuse to buy them. Since 1946, for example, life insurance companies have reduced their holdings of Government bonds from 45 percent of their assets to a mere 7 percent. Many individuals cash in their savings bonds.

Instead of putting out long-term bonds with interest rates high enough to make them marketable, the Treasury has been forced to raise the needed money by short-term paper (e.g., 91-day notes), which are bought chiefly by commercial banks. Since they are virtually the same thing as cash, these notes can be used by the banks to expand their loans. They can lend $5 of new money for each $1 of Treasury notes they own. This has an immediate inflationary effect.

Furthermore, this monetizing of the debt tends to drive up interest rates as the Government competes with other borrowers for scarce money. In the last fortnight, for example, the rate on 91-day notes has just risen to 3.8 percent, the highest level since the bank crisis of 1933. If this trend continues, even short-term interest rates may soon exceed the 4¼ percent ceiling on long-term bonds. This freakish result is made more likely by Speaker RAYBURN'S anouncement last week that Congress won't act this year on the President's reiterated request for lifting the interest ceiling. Such inaction undermines the dollar by raising doubts abroad as to its soundness and damages the Government's credit, just as it does the economy itself.

Some leaders are urging the President, on his return, to take the issue to the voters as he did on labor reform. If Congress adjourns without action, the President may call it back in special session. But voters themselves can help speed the necessary action by letting their Congressmen know that they back the President. He has stated the issue very clearly:

"The vital interests of all Americans are at stake because excessive reliance on short-term financing can have grave consequences for the purchasing power of the dollar. * * * Let me state as plainly as I can that this is not legislation to increase interest rates. * * * We always seek to borrow as cheaply as we can. * * * To prohibit the Treasury from paying the market price for long-term money is just as impracticable as telling the Defense Department that it cannot pay the fair market price for a piece of equipment. The result would be the same in either case: the Government could not get what it needs."

Nuclear Disarmament and Testing

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. MANSFIELD. Mr. President, in the Christian Science Monitor for September 9, we find "A Capital Interview With Senator Clinton P. Anderson," on the subject "Nuclear Disarmament and Testing." The article was written by Courtney Sheldon, and describes a very interesting interview which he had with

the distinguished and knowledgeable Senator from New Mexico, the chairman of the Joint Committee on Atomic Energy. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NUCLEAR DISARMAMENT AND TESTING—A CAPITAL INTERVIEW WITH SENATOR CLINTON P. ANDERSON

(By Courtney Sheldon)

WASHINGTON.—Senator CLINTON P. ANDERSON, Democrat, of New Mexico, outspoken chairman of the Joint Congressional Committee on Atomic Energy with a crucial watchdog and idea-suggesting role in shaping the country's atomic policy:

Questions whether, if an agreement on nuclear weapons testing is not reached with the Soviets before January, we are likely to reach any significant agreement at all.

Feels that if an agreement is not reached, "the United States should continue its test ban on atmospheric shots which are the sole source of radioactive fallout contamination, but, if the Government believes as I do that some further underground shots may be necessary, it should thereafter resume underground testing. I would reserve for the present a decision on high altitude shots."

Are you in agreement, generally speaking, with the way the administration has handled Geneva negotiations with the Soviets over a nuclear weapons test-ban treaty?

"No one likes to be critical of the way his Government has handled a conference with other nations. However, I would have been happier if the United States had not apparently switched its position during the conference.

"We started out trying to reach an agreement which involved the establishment roughly of 180 inspection stations and the complete ban of all types of nuclear testing. We amended our position when we reevaluated certain underground experiments held last fall.

"I would have been better pleased if at the outset we had taken the position the President took on April 13, which was to put the agreement into effect in phases or stages beginning with a prohibition on nuclear weapons tests in the atmosphere, but permitting for the present underground testing and high altitude shots.

"I think the President was on sound ground in making that change and I support his recommendation. It was proper for the President to seek some initial agreement eliminating atmospheric tests and thereby eliminating the fallout hazard. If that preliminary agreement succeeded, we might by successive stages have reached other agreements and eventually arrived at whatever goal this country felt was desirable."

Was it a wise move, in your judgment, for the President to extend the U.S. voluntary test ban beyond the October 31 deadline he set earlier?

"Yes, I think it was a wise move. The decision to continue beyond October 31 was essential in order to keep the Geneva conference from folding. We can now try again."

If no significant progress is made between October 31 and January 1, would you favor resumption of testing in a restricted form—underground, above atmosphere, or limiting testing within the atmosphere?

"If we cannot reach an agreement by January 1, 1960, I question if we are likely to reach any significant agreement at all.

"I think the United States should continue its test ban on atmospheric shots which are the sole source of radioactive fallout contamination, but, if the Government believes as I do that some further underground shots may be necessary, it should thereafter resume underground testing. I would reserve for the present a decision on high altitude shots."

Would it be necessary to do an extended amount of testing to develop the type of small, tactical, limited-war nuclear weapons the military feels it needs?

"On some types of small tactical weapons useful for limited war purposes, I do not believe much more testing is necessary. However, for other more advanced weapons of this nature I believe more testing is essential. Furthermore, there may be concepts of weapons essential to our national defense that have not been even conceived that may require testing as our brilliant scientists from Los Alamos and Livermore discover them. We should not want to tie our hands in this field."

How far ahead would you say the United States is in the development of nuclear weapons generally?

"I would not say. We tested our first atomic bomb in 1945 and the Russians were years behind us. We tested our first hydrogen bomb in 1952 and on that the Russians were only a few months behind us. If they can close one gap that rapidly, they may by now have closed other gaps.

"This is not, however, to imply that our own weapons program is not an excellent one. I believe we are still in the lead. I believe we will maintain that lead, but I do not want to close my eyes to the possibilities that the Russians have also made excellent progress."

Have we maintained our readiness to test well enough so that there would be little lost time if the Soviets suddenly made large scale tests?

"I think so. I believe the teams from Livermore and Los Alamos and elsewhere could swing into action very quickly. Our scientists know what technical problems they want to solve. I think they could proceed rapidly with the solution of them."

Do extensions such as the President has ordered in the test ban increase the likelihood that a suspension of tests will be achieved without a formal treaty; in other words, that neither side will risk affronting world opinion by being the first to resume?

"I am not able to predict what Russia will do when it comes to affronting world opinion. They broke the test ban on November 1 and November 3 of last year by conducting two tests beyond that period. In Budapest they displayed conduct which world opinion did not approve. My guess is that they will resume or not resume when and where it suits their convenience, not the opinion of the rest of the world.

"On our part, however, we can win favorable world opinion by running our tests in a manner that does not further contaminate the atmosphere or further increase the danger and damage from fallout."

What other countries besides France do you feel could achieve the capability of exploding nuclear devices in the next decade?

"The easy answer is how many industrial countries want to do it. We could help a few. Russia could help a few. Some other countries could go it alone. After all, Klaus Fuchs in now in East Germany at Deputy Director to the Central Institute for Nuclear Physics. He could design for East Germany a nuclear device that would explode even though it might not be the last word in destructiveness."

Are you reasonably certain that the Soviets are not now conducting sneak atomic explosions? How good is our detection system in the absence of an international one?

"How can we be certain? The best answer to this question might be the exact words used by the President himself when he announced we would extend the moratorium to the end of the calendar year. In his statement he pointed out that to the best of our knowledge the Russians have not conducted any tests since November 3.

"We have thus far learned that no detection system is perfect in the absence of an inspection team which can examine all occurences to determine whether they are earthquakes or atomic blasts. We can detect atmospheric shots rather accurately. If those are banned, there won't be too many sneak explosions. Those in the ground would be permitted and hence not violations."

The Publishing of Federal Regulations

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. ALBERT. Mr. Speaker, the January 1959 issue of the American Bar Association Journal carried an article, by Norman J. Futor, styled "Searching the Federal Regulations: 47 Steps Are Too Many." Mr. Futor outlined a type of looseleaf system for the publishing of Federal regulations, and he proposed that such a system be substituted for the present Code of Federal Regulations and Federal Register.

In order to encourage consideration and discussion of this matter, I include—under leave to extend my remarks—a "Detailed Evaluation" of Mr. Futor's proposal which was written by the Director, Office of the Federal Register. Appended as a footnote thereto is a statement of March 18, 1959, which is a condensation of the "Detailed Evaluation":

DETAILED EVALUATION

(By the Director, Office of the Federal Register)

Mr. Futor suggests that the daily Federal Register and the Code of Federal Regulations be discontinued and replaced with a centrally published looseleaf system, each portion of which would be under the name of the issuing agency or division.

Such a change would, of course, require legislation amending the Federal Register Act, and the suggestion is therefore beyond the power of the Office of the Federal Register to approve. Apart from this, however, there are a number of considerations which indicate that the present system is better than that proposed by Mr. Futor.

The idea of a looseleaf promulgation system has been examined and discussed many times since 1938 when the Codification Board considered various possible systems, including looseleaf, in developing the structure of the Code of Federal Regulations. During the past 20 years, the advantages and disadvantages of a looseleaf system have been reexamined from time to time as improvements in printing and publication techniques have become available.

However, we have not been able to find a substitute for the general system of bound volumes and bound supplements, principally because the element of absolute reliability always remains as our prime responsibility.

No looseleaf system yet devised has this element. Every user of a looseleaf publication is at the mercy of those who inserted the leaves. No matter how good the filing instructions, no matter how pressing the need for accuracy, and no matter how conscientious the person filing, the user has no abso-

lute assurance of completeness and accuracy. There are simply too many chances for human error involved.

The legal status of the Code of Federal Regulations ultimately depends on its official character. Present legal presumptions, so necessary to the conduct of Government, could not be maintained where the basic integrity of the text rested on the actions of innumerable nonofficial parties engaged in filing pages and removing other pages from a looseleaf service.

A looseleaf system has the further disadvantage of weakening the integrity of individual documents having the force and effect of law. Under Mr. Futor's suggested method, the amended text of a regulation would be separated from the general recitals as to the nature of the agency action. The important statements relating to background and effectiveness thereby would be more difficult to coordinate with the amended text.

Since many regulations are effective 30 days following publication, this separation would also result in the removal from the looseleaf binders of currently effective provisions and the replacement of them with provisions having future effectiveness. The consequent jeopardy to individual rights, privileges, and immunities would be indefensible.

While a looseleaf service may be valuable in some areas as a working tool, we do not believe it would meet the needs of majority of the users as well as the Federal Register-Code of Federal Regulations system. Convenience of reference is indeed important in a publication of this sort, and we are always looking for ways and means to improve this element. But it is more important that the user be able to rely on the accuracy and completeness of the codification as of its cutoff date. We believe that the present format meets this requirement more effectively than would be a looseleaf system.

We also believe that the need for determining the precise language at a given time in the past is at least as great as the need for knowing the current status of a regulation. Under Mr. Futor's system the replaced leaves would soon become too voluminous and cumbersome to be readily used for determining the past status and too uncertain to be depended on.

Although costs could never be the deciding factor in a matter of this importance, the relative expense of various methods of promulgation deserve thorough evaluation.

The present system of Code of Federal Regulations bound volumes and supplements requires the printing of approximately 18,000 pages a year, most of which are printed with type picked up from the Federal Register without resetting. A careful study of the regulations published in the Federal Register during a recent typical week reveals that the 65 pages in the daily issues would have resulted in 441 looseleaf pages under Mr. Futor's suggested system. Projected to a year's total, this would equal over 22,000 pages.

Greater additional costs, however, would result from increased editorial activity. Many documents prescribe miscellaneous amendments which cut across the entire body of basic regulations and would involve complex copy preparing operations which would raise costs greatly and would have the further disadvantage of delaying publication unduly.

Such delays could not be tolerated since many urgent agency actions and programs become effective upon publication of the implementing documents. Under the present format these documents are filed promptly upon submission and are published in the immediately following issue.

Besides proposing a looseleaf publication for the Code of Federal Regulations, Mr. Futor suggests grouping regulations strictly by the name of the issuing organization. There are specific situations in which this is advantageous. In more general situations, however, there is greater advantage in a functional grouping. The Code of Federal Regulations uses a combination. Generally speaking, the titles of the Code of Federal Regulations cover broad functions, while the chapters within each title correspond to the names of the issuing agencies. This combination benefits from both concepts without imposing the rigidity of either.

Thus far we have discussed only the category of rules and regulations. Documents promulgating these comprise approximately 40 percent of the Federal Register. The larger portion of the daily issue consists of notices of proposed rulemaking and other notices, orders, and statements not affecting the Code of Federal Regulations. Mr. Futor suggests discontinuing the daily Federal Register but makes no provision for publishing these very important and necessary documents.

We agree with Mr. Futor that there is much room for improvement in the publication of Federal Regulations. However, we do not agree with some of the methods he would use to attain this improvement. We are in the course of carrying out major improvements in the Federal Register system under plans drawn up last year. Under these plans, any actual difficulties cited by Mr. Futor have been or will be corrected on a progressive basis.

The new program is designed to bring the Federal Register system in line with present-day needs and to keep it flexible enough to anticipate future nedes. We expect to be able to complete substantial improvements during this calendar year.

Under this new program, Mr. Futor's 47 steps have already been cut down to 7 or less. This was done by revising the codification guide system to provide for better and faster cumulation.

Currently planned improvements include more rapid supplementation of the Code of Federal Regulations as required, the progressive substitution of rapid offset printing for the slower letterpress; improved agency procedures for drafting and submitting documents, and the possible introduction of a supplementary loose-leaf service where it is practicable and really needed.

(NOTE.—The following statement of March 18, 1959, by the Director, Office of the Federal Register, is a condensation of the detailed evaluation:)

Mr. Futor suggests (a) discontinuing the daily Federal Register and the Code of Federal Regulations, replacing them with a centrally published loose-leaf system, and (b) regrouping regulations strictly by name of issuing organization. He finds that 47 steps must be taken to locate current regulations under the Federal Register-CFR system.

Some of Mr. Futor's criticism is valid. The system he offers as an alternative however, would not be an improvement. We believe it is better to improve the present system than to abandon it—which could not be done without a revision of the law, and should not be done in any case except after congressional hearings.

We have reviewed many suggestions for a loose-leaf promulgation system during the past 20 years and have reexamined the advantages and disadvantages from time to time as improvements in printing and publication techniques have become available.

However, we have concluded that, while a looseleaf service may be valuable in some areas as a working tool, it would not meet the minimum requirements for an adequate official publications service for Federal rules and regulations. It would be too unreliable, providing too many chances for human error, and leaving the user with no absolute assurance of completeness and accuracy.

It would have many other disadvantages: Loss of integrity of individual documents through separation of general recitals as to nature of action from amended text in order to provide looseleaf replacement leaves; removal from binders of currently effective provisions and replacement with provisions having future effectiveness; increased difficulty in determining precise language in effect at a given time in the past; greatly increased editorial operations which would delay publication.

In addition, discontinuance of the daily Federal Register leaves no publication system for documents other than rules. These comprise about 60 percent of the daily Federal Register and consist of the very important and necessary notices of proposed rulemaking and other orders, statements, and notices not directly affecting the Code of Federal Regulations.

With respect to regrouping regulations by organization name, there are specific situations in which this is advantageous. In general situations, however, there is greater advantage in a functional grouping. The Code of Federal Regulations uses a combination. Generally speaking, the titles of the Code of Federal Regulations cover broad functions, while the chapters within each title correspond to the names of the issuing agencies. This combination benefits from both concepts without imposing the rigidity of either.

The Office of the Federal Register is in the process of carrying out major improvements under plans drawn up last year. In a memorandum to the Administrator dated October 16, 1958, the Archivist presented plans for an improved program for the Federal Register activity. These recommendations were approved by the Administrator November 25, 1958. Under these plans, any actual difficulties experienced by users have been or will be corrected on a progressive basis.

Under this new program, Mr. Futor's 47 steps have already been cut down to seven or less. This was done by revising the Codification Guide system to provide for better and faster cumulation.

Currently planned improvements include more rapid supplementation of the Code of Federal Regulations as required, the progressive substitution of rapid offset printing for the slower letterpress; improved agency procedures for drafting and submitting documents, and the possible introduction of a supplementary looseleaf service where it is practicable and really needed.

Former Senator Henry Fountain Ashurst

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 11, 1959

Mr. PROXMIRE. Mr. President, yesterday Mr. George Kennedy, in his very delightful column published in the Washington Evening Star, wrote an article in which he said:

The most wonderful man the Rambler has met in his years in Washington is Henry Fountain Ashurst.

Mr. President, former Senator Ashurst is a man I have never personally known, but a man whom I know many Members of the Senate do know. This is such a delightful article that I ask unanimous consent to have it printed in the Appendix of the RECORD.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. HOLLAND. I noted the same article and had intended to insert it in the RECORD this morning. I am glad that the Senator from Wisconsin has done so.

I associate myself with his statement and with the article mentioned as to the wonderful qualities of Senator Ashurst. We live under the same roof at the Sheraton Park Hotel. He is one of the most inspiring persons I have ever met. Frequently I seek his advice and counsel. Also, I find him to be the most delightful raconteur of historic events in the political history of the United States it has ever been my chance to know.

I am glad the distinguished Senator from Wisconsin is making this article available to his Senate colleagues and to the general public.

Mr. PROXMIRE. I thank the Senator from Florida.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Wisconsin?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RAMBLER NOTES IMPORTANT DATE

(By George Kennedy)

Well, let's get this on the record.

The most wonderful man the Rambler has met in his years in Washington is Henry Fountain Ashurst.

Webster, Haine, Clay, Calhoun, Blaine, Conklin, La Follette, Norris, and Borah are just names to him. But Henry Fountain Ashurst is a reality. This writer has heard him speak.

But not in the Senate Chamber, a matter of regret.

It was at an Alfalfa Club picnic at Dr. Eddie Thomas' farm on Braddock Heights in the saddle of the Catoctins west of Frederick. (He died a few days ago.)

A tall, distinguished man in a white suit arose and gave the address. It was a difficult assignment. The club is named after the legume that sends its roots farther than any other to get a drink.

Everyone was having a good time.

But the orator silenced and fascinated them. This was in the summer of 1952. Henry Fountain Ashurst had been out of the Senate since 1940 after serving there for 28 years, the first Senator to represent his State. He took his seat in 1912 when Arizona was admitted to the Union.

It was a presidential year and what he said (the writer has checked his report from the clips) seems worthy of repetition. Another presidential year is coming up. The clipping reads:

"With a deferential reference to his host, a Frederick physician and surgeon, Mr. Ashurst offered to outline some of the symptoms of the worst disease that can attack the politician, 'presidentialitis.'

"Irritability was the first of the symptoms.

"Thirst was the second.

"The third was loss of sleep and suspicion of all other politicians.

"'The disease,' he said in describing the fourth symptom, 'attacks the vocabulary to a point of reducing it to a single pronoun, the personal pronoun, I.'

"'It is progressive,' he said. 'The terrible thing that happens to the victim is a complete metamorphosis of the backbone into India rubber.'"

All this is occasioned by a telephone call from a mutual acquaintance the other day.

"Henry Fountain Ashurst," the caller said, "will be 85 years old Sunday. You might want to do a piece about him."

Do a piece about him? He's something of a challenge. Quoting him makes much better copy than writing about him.

The Rambler called on him last evening in his Sheraton-Park apartment.

He was fit as a fiddle. He did not seem to be disturbed about the current situation in the Senate—1 man [Senator MORSE] against 99.

He is better at quoting the bard than any Washingtonian in the writer's acquaintance.

But Shakespeare is not his only playwright. He quotes Aeschylus, Sophocles, Aristophanes, Moliere and Shaw.

The remarkable thing about all this—is that his formal education was very limited.

He was born September 13, 1874, in Nevada. His father, a Kentuckian, was looking for gold or silver.

His schooling ended at 13. He was a cowboy for 6 years. And then as he approached his 20th birthday, he got a sedentary political job. He was appointed turnkey at the county jail. That gave him an opportunity to read.

He can quote. And he can roll his own. Samples:

"Those who object to long sentences are usually the criminal classes."

"I prefer a man who is hardboiled to one who is halfbaked."

He has a million of them and 85 candles on his cake.

Happy birthday, Henry Fountain Ashurst.

Public Comment on the Interest Ceiling for Federal Bonds—No. 2

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 2 of the series:

[From the Journal of Commerce, Sept. 3, 1959]

WHO'S BEING HURT?

What is most ironical about the congressional efforts to keep interest rates low by refusing to lift the ceiling on long-term Government bond interest rates is that these fighters for low interest rates are actually hurting the people they are trying to help.

It is not large corporations or other major borrowers that Congress is helping when it fights in this curious way for lower interest rates. Rather it is the small business borrower and the individual installment purchaser.

In effect what the congressional action has been to switch Federal borrowing from the long-term into the short-term market by refusing to raise interest ceilings on long-term borrowing.

No congressional action was taken to reduce spending or to raise taxes. Consequently the Treasury is left with the responsibility to finance its deficit in the open market despite the limit on interest cost payable. And the refusal of Congress to act on the ceiling certainly did nothing to make potential investors and lenders decide to accept a lower interest rate just because the Treasury couldn't meet the market.

All that happened was that the Treasury had to switch from the possibility of long-term borrowing to heavy short-term borrowing, where the ceiling is not in force.

And it is in the short-term sphere that the Treasury's credit needs come into direct clash with those of the small borrower.

It is not long-term investment funds that the small shopkeeper or moderate sized business needs. It wants working capital and short-term loans to cover inventory and operation. Yet the Treasury's inability to borrow on the long-term market turned the Government into a direct competitor with the small businessman. Similarly, the individual looking for installment credit to finance a car or some appliance purchases is also finding that the Treasury's sopping up of short-term funds is making it more expensive for him to get the credit he needs.

At the same time, the large corporation, if willing to borrow for a longer period of time, sees far less of a squeeze on its credit sources than does the small man; for the lack of competition from the Treasury in the long-term market makes it that much easier for the large corporation to obtain funds.

Naturally, it could be questioned whether the ability of the large corporations to obtain funds while the small man must suffer from the credit squeeze is the result of favoritism on the part of the financial institutions. But this is not the case. The favored position of the corporation results simply from the structure of the financial system itself.

Insurance companies, savings institutions, and other institutional investors still have their steady flow of funds coming into their offices for placement, and this is money that must by its very nature be placed into longer maturity securities.

This means that large corporations, willing and able to undertake debt obligations for a long period of time, do not have too much trouble obtaining investment funds. The smaller firm seeking money for only a moderate period of time finds these institutional investors are not interested in this type of offerings. Meanwhile, those investors who would ordinarily take shorter maturity debt securities find the high rates the Treasury must offer to sell its bills, notes, and certificates attracting their funds away from the small borrower's securities.

The inflationary effects of the interest rate ceiling have been explained in this newspaper numerous times and do not require further repetition now. Nor is it necessary to state again how much the stature of the dollar and the strength of the economy would be improved if the Treasury were able to borrow the funds it needs from these institutional investors instead of having to rely on short-term credit creation by the commercial banking system.

But these facts have been pointed up by this and other newspapers, independent economists, and others for quite a while without effect on congressional opinion.

An examination of who is being hurt both by tight money and by the inflationary effects themselves then might change a few minds in Congress where appeals to economic reasoning have not done so.

Meet Wisconsin's FFA Star Farmer

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 11, 1959

Mr. WILEY. Mr. President, across the Nation the Future Farmers of America—

FFA—program is making a most constructive contribution to training our young folks for careers in farming. As we know, the FFA program includes: Developing competent agricultural leadership, assisting individuals in making intelligent choices of farm occupations; providing practical experience in carrying out special projects; developing creative attitudes, knowledges, and training by which individuals can cope with and resolve problems; and in other ways improving the individual's ability to making a contribution to the economy.

In 8,993 chapters across the country, there are 377,000 youths engaged in these constructive activities. In Wisconsin, for example, we have more than 14,000 members participating in a wide variety of constructive programs to improve the ability of our young farm folks to plan and make a success of a career in agriculture.

Recently, the Wisconsin Agriculturist published an interesting article entitled "Meet Wisconsin's FFA Star Farmer," by Doug Sorenson. The article outlines how LaVerne Frambs, of Barron County, won the FFA star farmer award for his work in farm management on the 750-acre home farm. Illustrative of the kind of program that is contributing to broadening the opportunities for our young folks to make a success of a career in farming, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, Sept. 5, 1959]

MEET WISCONSIN'S FFA STAR FARMER—LAVERNE FRAMBS, BARRON COUNTY, WON THE FFA STAR FARMER AWARD FOR HIS WORK IN FARM MANAGEMENT ON THE 750-ACRE HOME FARM

(By Doug Sorenson)

One of the biggest honors than can go to a young farm boy is the FFA star farmer award. And it couldn't go to a more deserving fellow than LaVerne Frambs, the young Barron County farmer who won the award this year for Wisconsin.

The handsome, husky lad of 19 is already well along the road toward successful farming. The story of how he earned the coveted award is a story of enthusiasm, hard work, and a dynamic vo-ag program.

Just out of Rice Lake High School last spring, LaVerne Frambs is already doing a big job of farming in partnership with his older brother, Harold, and his father, Otto Frambs. Together they work 2 farms totaling 750 acres in the fertile land of northern Barron County.

STARTED BUILDING HERD AT 7

LaVerne's progress toward the star farmer award began a dozen years ago. When he was only 7 years old his father gave him a calf as a start toward future farmownership. Today LaVerne owns 32 head of holsteins, 14 of them in the milking line. He's working toward a purebred herd and today has two cows, a bull, and a bull calf that are registered.

The Frambs' herd of 52 cows is a good one, averaging 386 pounds of butterfat and 4 percent test.

When LaVerne entered high school 4 years ago he was well on his way toward the star farmer award. Because of their father's heart condition, he and his brother had been doing the heavy farmwork for several years.

LaVerne began his FFA farm project with a cow and a calf. It wasn't long until he was deep into FFA activities.

During two of his high school years he was vice president of his local chapter. And during the 4 years he served on practically every chapter committee.

He was active in the corn-grain-hay show which his chapter puts on every fall. Grain from his own farm made good showings at some of the shows. The best was his 85-bushel yield of corn. "I've been close to being a top winner," he says, "but I never quite made it."

The county fair was always a big event and you'd always see some blue ribbons on LaVerne Frambs' exhibits. He showed hogs, dairy cattle, and handicraft. When he was a sophomore, he carried home 16 blue ribbons.

Registered Hampshire pigs are another of his projects. Today he has 10 purebred sows which started with a bred gilt that he got through an FFA gilt ring several years ago. "I had good luck with her," says LaVerne, "and I've still got her in my purebred herd. She's never had a litter smaller than 10 pigs."

LaVerne also raises some feeder pigs. And this summer he brought home 10 ewes and 10 lambs to start a sheep project.

But livestock projects are not the only ones that LaVerne has been successful in. The farm shows evidence everywhere of good soil management and conservation. The Frambs have grassed their waterways, limed the fields, strip cropped, and plowed down green manure crops. LaVerne tests the soil on the farm every 2 years to determine its fertilizer needs. Ten acres of pasture have also been renovated.

LaVerne likes to keep up on the latest developments in farm chemicals, too. This year his farm has test plots for different types of weed sprays. Also there is a plot showing how different varieties of grain perform.

Each year LaVerne and Harold clear a little more woods to make new cropland. In open areas of the woods they have conducted extensive pine reforestation.

How did LaVerne Frambs accomplish all this while maintaining a high scholastic record at school? It took a lot of hard work and planning. A daily schedule on a weekday looked something like this:

"I got up at 4:30 in the morning," says LaVerne. "After I did the milking and some of the chores I was off to school and in class by 8:30. I was able to make arrangements for transportation so that I could be home by 3:15 in the afternoon for chores. Often I worked in the fields until dark."

Work was so pressing at the time of the FFA convention, where he got the award, that LaVerne had to help plant 120 acres of corn before he was able to get away.

"I had no time for school sports," he says. "But I spent a little time hunting, which is a favorite sport of mine. Last year I got 52 coons."

BUILDING UP MACHINERY TOO

Although LaVerne's part of the Frambs partnership is mostly livestock, he is building up some machinery too. He bought a new tractor this year.

LaVerne knows that his success in farming this far is not all his own doings. "I had a lot of help from my parents," he says, "and my school advisers and the FFA chapter have been a constant inspiration."

LaVerne's advisor is Donald Triebensee, who is making something of a record for himself as an instructor, too. Last year's Star Farmer Award also went to a Rice Lake boy. This year several other boys in the chapter got top FFA awards.

"There is nothing about the modern farm these Frambs boys cannot do well," says teacher Triebensee. "They are Samsons when it comes to work."

To be sure, LaVerne Frambs is off to a good start as a successful farmer. But this is only the beginning. Right now he is talking of working more land and enlarging the family dairy herd.

Address by Hon. James A. Farley Before International Association of Printing House Craftsmen

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. DELANEY. Mr. Speaker, without communication there could be no civilization. In our time, we have seen the development of such new media of communication as radio and television. However, these have supplemented, rather than replaced printing, which continues as the chief medium of communication.

I am sure that the following address, delivered by the Honorable James A. Farley at the golden anniversary luncheon of the International Association of Printing House Craftsmen, Inc., will interest all who value the contributions that printers have made to society:

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE BOARD, THE COCA-COLA EXPORT CORP., AT GOLDEN ANNIVERSARY LUNCHEON, INTERNATIONAL ASSOCIATION OF PRINTING HOUSE CRAFTSMEN, INC., STATLER-HILTON HOTEL, NEW YORK, TUESDAY, SEPTEMBER 8, 1959

Mr. President, distinguished guests, members of the International Association of Printing House Craftsmen, ladies and gentlemen, I am doubly indebted—to you and my longtime friend, Gus Giegengack—for your kind invitation to be here today. Firstly—because I wish to pay my respects to a great craft which has been for too long taken for granted. Secondly—if I may be permitted a selfish motive, what I say here today is designed for a secondary audience—my grandchildren—in the years to come.

It is a convenient classification of anthropologists that the acquisition of the skills of pottery distinguish a barbarian from a savage, and the acquisition of a language makes the beginning of the elevation of the barbarian peoples to a tribal society.

To this I wih to add my own observation that the acquisition of the skills of the printing press—mark the beginning of the rise of tribal states into civilized society. Not only are the printing arts the cornerstone of civilization, they are its lifeblood. It is impossible to conceive of the evolution of modern society without it—or to imagine it continuing for 24 hours in its absence. I am, therefore, honored to be here today—to pay tribute to that greatest developer of arts, which in its powers of transmission to others, miraculously developed into a great art in its own right.

Its effect is more pervasive, but as an American, I want my children and grandchildren to know—that the very independence of our country was born of the most explosive combination ever known to bigotry, tyranny, and ignorance—the free air—freemen breathe—and the smell of printer's ink.

Thomas Jefferson, Thomas Paine, and John Adams would have been novices in the wilderness—except for the presence of the

man who knew the alchemy of a printing press—Benjamin Franklin. He knew that what a printer etches on metal, reason and honor engrave on men's souls. He knew that the massed armies of Europe could neither crush nor outflank an idea in men's souls—nor could any cavalry—or for that matter, any modern jet—outspeed the God-given ability of men to recognize the truth of the printed word.

I feel sure that if the first and greatest Postmaster General under the Continental Congress—Benjamin Franklin—were here today, he would express the thanks of the Republic for your magnificent past service and your present incredible usefulness. Since by reason of matters over which I have no control—Mr. Franklin cannot be here, as one of his successors as Postmaster General of the United States, I am sure he would not count it amiss if I thanked you, on behalf of all of us for your great contribution. Where there are printers, there will be ideas—and in the end—the strength in men's souls can break any chains the ingenuity of tyrants—from Genghis Khan to Josef Stalin—can design for men's wrists. The Liberty Bell may well be the symbol of liberty—but the printing press is the armory of freedom.

It is most appropriate that your convention is being held this year in the city of New York, where the craftsmen movement was started just 50 years ago this month with the founding of the Club of Printing House Craftsmen of New York.

A few days ago I was privileged to see some of the printed chapters of your golden anniversary commemorative book, "Printing Progress: A Mid-Century Report." In my opinion, it is one of the most handsome examples of your handiwork—of the printer's art—that I have seen in a long time. You are to be congratulated upon its production; you are fortunate in having such a valuable and beautiful permanent memento of the great organization to which you belong.

While admiring the book as a book, I was especially interested in one of its chapters—the history of your organization by its first president, the late Perry R. Long, who, I understand, attended every one of your 39 conventions including the one last year in Detroit. Unfortunately, he passed away shortly thereafter and missed what would have been a rare pleasure and honor for him—to have been here today on the occasion of the 40th anniversary of the international association which he helped found and the 50th anniversary of the craftsmen movement.

Although I never met Mr. Long, the eloquence with which he told the story of the craftsmen organization—its ideals, its accomplishments, its goals—is evidence that he must have been an unusual personality who loved his industry and was an inspiration to those employed in it.

I am amazed at the growth of your organization—from one local club 50 years ago to a federation of 113 clubs with 16,000 members in the United States, Canada, and overseas. I don't need to be told that your organization with its "share your knowledge" ideal has contributed immeasurably to the advancement of the printing industry and its technology.

In my opening remarks I made a reference to my good friend Gus Giegengack, who is one of your past presidents and who is also president and general manager of the great Graphic Arts Exposition now at the Coliseum. If I mention Gus once or twice again in the course of my remarks, it is because through him I have come to know something about the printing industry in general and about the Printing House Craftsmen in particular. Twice in the past 25 years I was able to be of some assistance to Gus, who, among other things, is an expert compiler and presenter of petitions.

The first time was in 1933, when Gus was a candidate for Public Printer. As you know, an appointive position of this kind requires political assistance and endorsement. Gus came to me with one of the most handsomely bound volumes of petitions I have ever seen. It contained letters of endorsement from important printing industry organizations and individuals prominent in your industry. It's been many years since I have seen the volume, but I do remember how voluminous it was. It was so big that I suspect it contained letters not only from prominent printers, but also from their uncles and their cousins and their aunts.

I was happy to have been in a position to help Gus in a small way that time. I say a small way—because Gus was his own best advocate. I suspect that I don't need to tell this audience that Gus didn't need help from me or anybody on how to be a politician.

The next time Gus and I cooperated on a project connected with the printing industry was in 1939, when the postage stamp commemorating the 300th anniversary of the introduction of printing in colonial America was issued. Since this month marks the 20th anniversary of the issuance of that stamp, and because the craftsmen, among other organizations, were so closely identified with it, I believe the story will bear retelling now.

The story starts in 1938 with a man named August Dietz in Richmond, Va. Mr. Dietz submitted to the Post Office Department, when I was Postmaster General, a design for a stamp commemorating the 300th anniversary of the arrival of the Stephen Daye press in Cambridge, Mass. The design carried a drawing of the press. The stamp was not seriously considered by the Post Office Department at that time.

Then one of your leading trade periodicals, Printing magazine, picked up the idea and ran the Dietz stamp design on the cover of its March 1939 issue. The magazine started a campaign to promote a 300th anniversary commemorative stamp, to be issued September 25, 1939, the day the Fifth Educational Graphic Arts Exposition was to open at Grand Central Palace. Printing magazine invited leading trade associations and printing trades unions to address letters of petition to me as Postmaster General.

The campaign was successful. A total of 63 letters of petition from printing industry groups sent to Printing magazine, which encased them in a handsome green morocco cover for presentation to me. Gus Giegengack, then Public Printer, agreed to make the presentation on behalf of your industry.

A hitch developed. The Post Office Department discovered that 1938 appeared to be the true anniversary—the year the Stephen Daye press arrived in America. Ernest F. Trotter, editor of Printing magazine, made a search, learned that John Clyde Oswald, a noted graphic arts historian, had written a book which claimed that, while the press was set up in late 1638, its first products, the "Freeman's Oath" and the "Bay Psalm Book" were not printed until early 1639. Although some historians still disagreed, the Post Office Department was convinced the preponderance of evidence was in favor of 1639. The stamp was authorized, a design prepared which prominently displayed the Stephen Daye press, and an order placed with the Bureau of Engraving and Printing for 65 million stamps to be ready for the date of issuance, September 25, 1939. As those of you who attended the 1939 Graphic Arts Exposition will remember, the Stephen Daye press itself was brought down from Vermont under armed guard and placed on exhibit at the exposition.

Clark Long, one of your past presidents who, in 1939, was Assistant Director of the Bureau of Printing and Engraving, said that the bound collection of letters of petition for the stamp was "the most elaborate and attractive presentation portfolio that had ever been offered" for such a purpose, so far as he could recall.

Your industry's petition for a commemorative stamp reached sympathetic ears in the person of the then Postmaster General. I like stamps, and needed only to be convinced there was a legitimate reason for issuing one. The printing stamp was the first truly commemorative stamp ever issued to honor an industry, and the second stamp identified with any industry. The first one was issued in 1901, as a salute to the transportation industry, in connection with the American exposition in Buffalo.

My interest in stamps has led me to be accused of starting a philatelist spree which kept the Bureau of Engraving and Printing stamp presses running around the clock. That is a little exaggerated in my opinion, but you must remember that, during that period, I was employed by a stamp collector—who lived in the White House.

I am sure that the printing stamp, and its use on mail during the months that followed its issuance, was of major public relations value to your industry. That leads me to comment on one of the outstanding accomplishments of your organization.

Except for my brief encounters with your industry which I have mentioned, I probably know no more about printing than the average citizen. We are inclined to take printing for granted—like food, clothing and shelter—or anything else so basic to our daily lives. At least that was true until the craftsmen started Printing Week. Originated about 15 years ago by your own Perry Long, and now observed nationally under the sponsorship of craftsmen clubs and employer organizations, it has come to be a major public relations event for your industry.

Every January, appropriately during the week of the birthday of Benjamin Franklin, the patron of American printers, you do an excellent job of telling the public about the contributions of your great industry to the cultural and economic welfare of the Nation. No citizen who reads can any longer be unaware of the importance of printing, thanks to the craftsmen organization and Printing Week.

I am impressed by another facet—the most important facet in my opinion—of your craftsmen organization. It is less tangible than Printing Week, but nonetheless significant and far-reaching in its influence. It is related to the craftsmen slogan "Share Your Knowledge" and the educational nature of your activities. Perhaps I am impressed because you craftsmen have discovered a secret shared by those of us who have spent most of our lives in public service and politics. To paraphrase the late Colonel Stoopnagle, of Stoopnagle and Budd radio fame, "People are more important than anybody." You as printing plant executives—foremen and superintendents, and top management, too—know that your success depends upon your ability to get work done through people.

Up at the Coliseum this week you have on display the newest mechanical and electronic marvels of the age designed to produce printing faster and better. Wonderful as these machines are, they are as naught without people—without you and the men under your supervision to operate them. Through your "Share Your Knowledge" program, you keep yourselves and your fellow craftsmen informed on changing methods and new techniques. More than that, you keep ahead of the parade, and I suspect that much of the technological progress represented by new machines and devices at the exposition was stimulated by your thinking—by your informed awareness of the need for better tools to do your job.

The major emphasis of your convention program this year, I understand, is on an evaluation of the new things you are seeing at the Graphic Arts Exposition. That is fine—your industry no doubt needs improved machinery and methods if for no other reason than to keep pace with the rapid technological strides that are being made in all industries these days. You have to move forward technologically to keep competitive in our free economy.

But along with this emphasis on the industry's new technology, I see that you have found time to schedule "Human Relations" as a subject for discussion at your Golden Anniversary Clinic Number Four tomorrow morning. And I am told that some of your local clubs pioneered in conducting classes on human relations in industry and that several thousands of your members have taken the foreman-management courses sponsored by Printing Industry of America.

Any industry with the foresight and leadership to sponsor programs of that nature is just bound to progress. You are to be congratulated upon your key part in the program.

Not the least important part of your educational program and one of the major accomplishments of the craftsmen is the series of graphic arts expositions—of which the one at the Coliseum this week is the seventh.

Although it is now conducted by a corporation with representatives of several trade organizations on its board of directors, it was you, the craftsmen, who initiated the idea. The exposition corporation has always been headed by a craftsman; all the expositions have been managed by a craftsman.

I am told that your last exposition was held 9 years ago, and that it has been 20 years since one was held in New York. A lot of things have happened since 1939. At that time the country was just coming out of a major depression, and soon thereafter World War II started. Both of these disasters slowed progress in many things. But since the end of World War II the tempo of technological change, in printing as well as other industries, was accelerated tremendously.

Things are being done automatically today, by electronic controls and other devices, that were done tediously by hand and not always accurately, 20 years ago. Human judgment, however, has not been replaced by machines. Rather, it has been freed to be more creative, which is important in an industry like printing whose business is primarily the communication of ideas.

I know practically nothing about the mechanics of your industry, but I can imagine it would be an interesting exercise to make a list of what is being shown at your exposition this week and compare it with a list of what was shown at the 1939 exposition at Grand Central Palace 20 years ago. There must be many things now that were not even imagined, or at least not on the drawing boards, then.

Many wonderful things have happened in this country, and in your industry, in the past 20 years. I have been told there have been more changes in your industry in the past 15 or 20 years than in the whole 500-year history of the printing industry. What about the next 20 years? Speculation is anybody's game, but one can at least predict that, with the accelerated pace of research and development in all industry, a graphic arts exposition 20 years from now will put this one "in the shade" more than your 1959 one does the 1939 exposition.

You've all heard the story of the Washington taxi driver taking a visitor down Pennsylvania Avenue past the Archives Building. The passenger, seeing the inscription on the building, which says "What Is Past Is Prologue," asked the cabdriver if he knew what it meant. "Sure," said the cabbie, "it means 'You ain't seen nothin' yet.' "

Whatever new is to be seen in your industry 20 years from now, I'm sure that the craftsmen with their "Share Your Knowledge" zeal will be "with it." Nay, more than that, they'll be largely responsible for bringing it about.

Thank you.

Forthcoming Eisenhower-Khrushchev Talks

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, September 11, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD selected editorials which have appeared in Chinese newspapers in Taipei. These articles express varying degrees of doubt on the forthcoming Eisenhower-Khrushchev talks, and fear of a Yalta-style compromise on the Far East. It is difficult to reassure these people in the face of full-scale Communist aggression in Laos and renewed shelling of the islands in the Formosa Straits. The views expressed are not necessarily my own, but I thought they warranted consideration.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the China Daily News, Taipei, Aug. 8, 1959]

CAN THE EISENHOWER-KHRUSHCHEV TALKS SETTLE PROBLEMS?

Appeasers in the international set are again obsessed in their illusions since Washington and Moscow announced simultaneously the exchange of visits by President Eisenhower and Premier Khrushchev. They say this is a great change in America's policy toward Russia as well as the beginning of the unfreezing of East-West relations. Two London papers described President Eisenhower as a new man who has become a fully responsible President, and asserted that John Foster would be shocked if he were still alive. These statements of appeasers have betrayed their illusion that all existing problems will be settled once the leaders of the two powerful countries meet.

But can the talks between Eisenhower and Khrushchev settle problems? Khrushchev's replies in his August 5 press conference were a good answer to this question. He reiterated Russia's stand that the Western allies must leave West Berlin, that West Berlin must become a free city, and that the wartime allies must sign separate peace treaties with both West Germany and East Germany. In iterating this stand which his spokesman Gromyko had repeated again and again in the Geneva foreign ministers conference indicated that he would try to attain the goal which he failed to attain in the Geneva conference. In other words, the Communists must annex West Berlin and the West must recognize Germany's division and the enslaving of the satellite regimes in the Eastern European countries.

The West firmly rejected these peace terms during more than two months of the foreign ministers conference. If it is said that the Ike-Khrushchev talks can settle these problems, then President Eisenhower must give grounds by buying peace from Khrushchev with the freedom of the people of West Berlin and of Germany. We very much doubt this possibility.

We believe that the Ike-Khrushchev talks not only will not settle the problems but also will create more troubles. Regarding the Berlin and the German problems, a Yalta-style story may not be repeated. However, available signs show that plotters in the Kremlin appear to be forcing a Yalta conference for the Far East. It is very possible that the present Lao Communist rebellion is a part of this plan. Possibly, Peiping's intensified military activities in the Chinmen-Matsu area are an important move in the International Communists' global strategy. There was a hint in Khrushchev's press conference. The Russian Premier said that the United States should be friendly not only to the Soviet Union but also to Russia's allies. For this reason, the Chinese Communists may create new crises in the Taiwan Strait and the Indochinese Peninsula so that a background for a Yalta-style compromise will emerge when Eisenhower meets Khrushchev. As the atmosphere of appeasement becomes rampant in the United States and abroad, it may force the United States to become friendly to Russia's allies.

Of course, this trap is only the wishful thinking of the Kremlin. Reports from the United States said that both the American Government and the American people are waiting for the Ike-Khrushchev talks with a prudent and vigilant attitude. The New York Times, other papers, and Congressmen are warning against excessive optimism and pointing out that as long as the Communist goal of world conquest remains unchanged, any optimism will be baseless. It is particularly gratifying to learn that the American Congress also is planning a negative boycott on Khrushchev's visit by advancing its date of recess so that Khrushchev will not be invited to address it as other visiting chiefs of government have been. We hope that all these public opinions will serve to raise Eisenhower's vigilance so that he will not fall into the trap laid by the Red dictator.

[From the Hsin Sheng Pao, Taipei, Aug. 8, 1959]

A WAR UNDER THE COVER OF ATMOSPHERE OF PEACE

Although many farsighted people are viewing the exchange of visits by President Eisenhower and Premier Khrushchev with a reserved, suspicious, and worried attitude, a group of appeasers and neutralist countries already are entertaining great expectations of the Ike-Khrushchev meeting thinking that the cold war will be unfreezed and that the dream of peaceful coexistence will thus become true. Yet, right at this moment, in a tiny corner of the world about which very little is known to the world at large, a war, genuine though small in scale, has broken out.

As a matter of fact, the Communist rebellion in the northeastern part of Laos began quietly in the middle of last month. It became intense when the provinces of Sam Neua and Phong Saly were captured by the Communists. The Communists rebels have announced their plan to capture Vientiane within 3 to 4 months. If Vientiane falls, then a half of Laos will be gone. Even if this Communist dream fails to become true, the rebels will at least set up their border base and thereby turn Laos into a second Vietnam. It is clear enough that it is because of the supply of manpower by the Vietnamese Communists and the supply of arms by the Chinese Communists that the Lao Communists have been able to launch this counter offensive. Besides, they did launch the offensive from North Vietnam. Thus, it is not a civil war but 100 percent aggression.

Some people may feel it strange for the Communists to choose this moment to start

a local war since Khrushchev has launched a full-scale peace offensive to lure the United States. Will his goal be damaged by this war as other people may doubt his sincerity for peace? Practically speaking, choosing this moment to ivade Laos is very delicate. We should know that whatever change may take place in international situation, the Communists will never give up their final goal of world conquest. Since they are at present yet unable to start a full-scale war, they can only conquer the world by gradually encroaching upon it. In invading Laos, they are using the atmosphere of peace prevailing the world to carry out their aggression.

It may be said that the Western governments can protest to Khrushchev or demand that he restrain the Chinese and the Vietnamese Communists. But Khrushchev can brush the protest aside by saying that it is Lao's civil war or by saying that it is not his business but the affairs of Ho Chiminh or Mao Tze-tung.

The Chinese Communists have a further political goal in their invasion of Laos. In view of the unclear attitude of the free world after Laos brought the case before the United Nations, we can hardly expect the free world to give open support to Laos. On the contrary, the Lao crisis will be used as an excuse by the neutralists such as Nehru who will say: "If the Chinese Communists had been admitted to the United Nations, the Lao crisis would not have happened." Thus, by invading Laos, Peiping not only has expanded its influence but also has created a hope of breaking into the United Nations.

Having known the Communist plot of starting local encroachment under the cover of atmosphere of peace, we must raise our vigilance. The Communists will not start a war for Berlin, nor will they invade Taiwan and Penghu because these actions will become too big a stimulation to the free world. But it is highly possible that Peiping may try to seize our offshore islands at this moment. We are not scared however. So long as we do not slacken our vigilance, our own strength is capable of crushing Peiping's plot. We only hope that anti-Communist countries, particularly those in southeast Asia, can apprehend the Communist intrigue and support Laos to succeed in suppresing the Communist rebellion at an early date.

[From the Ta Hua Evening News, Taipei, Aug. 5, 1959]

THE END OF "U.S. CENTURY"

The whole world was more than astonished when the exchange of visits between Khrushchev and Eisenhower was announced simultaneously in Washington and Moscow. Unlike Khrushchev's visit to the United States, which had been brewing for quite a long time, Eisenhower's sudden decision to visit Moscow was rather a surprise that would adversely and vitally affect the world beyond all precedent. British newspapers called it a miracle of 1959, but we would like to consider it an unfortunate miracle to the whole world.

Since World War II, the President of the United States never has made a state visit to any friendly nation outside the Western Hemisphere. But now Eisenhower feels a particular interest in a state visit to Soviet Russia. What this indicates is U.S. tacit recognition of Soviet Russia as her equal in leadership, the beginning of United States-Soviet coexistence, and the affirmation of a long-range tragedy of mankind.

Khrushchev's coming into power has created two outstanding changes in the Soviet Communists' foreign policy; emphasizing peaceful coexistence and constantly visiting other countries, one working in coordination with the other. During the last few years, Khrushchev has been willing to visit any country where his visit was not rejected, even a satellite as small as Albania. It is no wonder that he should have desired to visit the United States. In our eyes, it is strange that the United States should be willing to receive him, but more strange is that Eisenhower should agree to return his visit by calling on him in Moscow.

Some may interpret this as an international courtesy. In fact, however, the U.S. President has never made a state visit to any of the friendly nations in Europe and Asia except his visits to the neighboring Mexico and Canada and several trips to Europe to participate in various international conferences. Now that Eisenhower has decided to visit Moscow, we may conclude that the United States is thinking much of her enemy—the Soviet Union—even if she is not thinking little of her allies.

We still believe, however, that the United States will not sell out any of her friendly nations during the exchange of visits, and that she will stand as firm as ever toward practical questions. Nevertheless, Eisenhower's visit to Moscow obviously implies the shaking of U.S. leadership in the world. The "U.S. Century" and "Eisenhower Era" that have fascinated the Americans since World War II would have to give way to a "United States-Soviet Century" and "Ike-K. Era." The U.S. policy of liberating the Iron Curtain would soon have to be replaced by peaceful coexistnce, and vanish for good following the institution of "Captive Nations Week." The tragedy that mankind is half free and half enslaved would last forever, and irrational disruption and occupation would be legalized. For future historians who might endeavor to find an epoch-making sign, Eisenhower's visit to Moscow would serve to mark the end of the "U.S. Century" and the beginning of a "Coexistence Era."

[From the Central Daily News, Taipei, Aug. 4, 1959]

REPORT ON KHRUSHCHEV'S VISIT TO THE UNITED STATES

Washington and Moscow announced simultaneously yesterday that President Eisenhower and Khrushchev will exchange visits this fall. Our view on this event is that Khrushchev will exchange visits this fall. Our view on this event is that Khrushchev has long entertained this hope. He repeatedly expressed this desire to American visitors and has received favorable reaction in certain quarters in America. So, although President Eisenhower said that the exchange of visit was his suggestion, it is probably the result of internal pressures.

Secondly, why has Khrushchev been so anxious to visit the United States during the past year? In the first place, this will greatly bolster his personal position at home; in the second place, the visit will cover the failure of the foreign ministers conference, and lastly, the effect of the Captive Nations' Week will be offset if he can pay a visit to the United States as the captive nations will unavoidable doubt the sincerity of the United States in launching the movement.

We shall not discuss the substantial contents of the future Eisenhower-Khrushchev talks, but thew isdom of making such contacts is doubtful. To say that Khrushchev will give up his aggressive ambitions after he has seen America's true might is a wishful thinking because it has underestimated Khrushchev's ability. Beside, if he should do so as expected, he would not be a Communist after all.

If it is imperative for President Eisenhowevr to extend this invitation, we only hope that he will not disappoint America's friends and make the enemy happy by allowing Khrushchev to make use of him.

[From the Hsin Sheng Pao, Aug. 3, 1959]

Reports from Washington and Moscow show that a visit to the United States by Russian Premier Khrushchev has now become an irresistible situation.

The Western European countries have already felt uneasy because of these reports. They feel that they have been excluded and describe this "back door meeting" as a surrender to Khrushchev's aggressive ambitions. At present, voices opposing the Khrushchev visit can already be heard in the United States but they are fragmentary and weak. We also are not in favor of the visit because it will not be in the interest of the United States and her allies.

As we pointed out before Khrushchev probably was more interested in visiting the United States than in holding open meetings. He fully understands that in order to make gains in any field, he must first shake America's stand. Once he succeeds in doing so, he can march on unobstructed to the goal of world conquest because no other country is capable of resisting Russia's pressures.

Should the reports on Khrushchev's visit become true, two effects would be produced. Firstly, the feeling of the Western European powers that they have been "excluded" will be aggravated. Consequently, they will suspect America's policy and stand. Moreover, the same feeling will brew in America's Asian allies. Finally, the unity and mutual trust between the free allies will become shaky. So, when President Eisenhower uses one hand to greet Khrushchev, his other hand will launch the movement splitting allied unity. Gradually, the United States will be isolated.

Secondly, the influence of appeasement in the United States and the free world as a whole will be bolstered. The greater the influence of appeasement is, the more will the difficulties to the American Government be.

We fully share the view that to invite Khrushchev to visit the United States is tantamount to a surrender to Khrushchev's aggressive ambitions. The Western powers must see one point very clearly. All the actions of Khrushchev are themselves a kind of cold war. If he has prevented the foreign ministers conference from solving existing problems, he will not allow the "back door meeting" to solve them either. As far as his strategy against the United States is concerned, basically, he is not interested in the Eisenhower administration which he knows will definitely not satisfy his ambition. His visit to the United States and his demand for a summit meeting are designed to soften the stand of the Eisenhower government for his own expansion. Based on these observations, we are of the opinion that to invite Khrushchev to visit the United States or to hold a summit meeting will at the same time invite trouble for America herself.

[From the United Daily News, Aug. 4, 1959]

Khrushchev's visit to the United States can be reviewed in two respects. The first is that whether or not the free world needs such a visit. In other words, will this visit change the present cold war situation? Will it lead to a true peace? The second is that in accepting the invitation, does Khrushchev consider that he can lightly attain the goal which he has failed to attain by his intimidating and delaying tactics?

In the first aspect, the answer must be sought for in the existing Berlin issue. Moscow wants to swallow this city so that the gap in the Iron Curtain can be closed. So the key to this issue lies in the determination of the Western allies. If they decide to give up West Berlin, then Khrushchev's visit to the United States will provide them an opportunity to save their faces. On the con-

trary, if they decide to retain that city, then, the settlement of the problem cannot be benefited in the least by inviting Khrushchev to pay a visit to the United States because the difference on this issue between the two sides is too great. If the United States knows clearly that this visit can render no help to the settlement of the problem and yet she still has extended the invitation, we can only describe the action as "childish and naive."

It may be said that in inviting Khrushchev to visit the United States the latter hopes that the visitor may reduce his belligerent spirit after he has seen America's true strength. This statement is unreasonable. Khrushchev has his agents all over the new continent and thus he cannot be ignorant of America's might. Moreover, all Communists have a prejudice. They are convinced that the United States is a typical capitalistic country and the No. 1 enemy of communism. To say that Khrushchev will change his mind after his tour of America is no less than daydreaming.

We want to say frankly that America's invitation to Khrushchev to visit the United States and the latter's acceptance of the invitation will bring every damage and no advantage to the free world. The regrettable part is that this judgment has to be confirmed by future facts instead of being foreseen by the wisdom of the present Western statesmen. So, when we learned of the reports on Khrushchev's visit, we could but deplore the dark future of mankind.

Public Comment on the Interest Ceiling for Federal Bonds—No. 3

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 3 of the series:

[From the Hartford (Conn.) Courant, Aug. 23, 1959]

BLOW AGAINST THRIFT

Early last week a duly constituted committee of Congress decided to disdain the repeated pleas of the administration for permission to raise the ceiling on interest rates for Government bonds. Whether or not this was the final word of the 86th Congress on this subject, it was a serious economic mistake. Of greater interest to most Congressmen, probably, is the fact that it eventually may prove a political boner as well.

The decision to cling to an outgrown ceiling affected, in the first place, all new issues of marketable bonds of more than 5 years maturity—those intended for such institutions as banks and insurance companies and for big individual investors. By refusing to lift the top rate beyond 4¼ percent, Congress has greatly handicapped Secretary Robert Anderson in managing the ever-growing public debt with the least possible stimulus to inflation.

But that is not the whole story. More significant to the average citizen is the fact that the resounding congressional no will prevent the Treasury from raising the long-outdated interest rate on E and H savings bonds. And these are securities that one administration after another has been persistently trying to sell to the American public for some 18 years.

In the past the Treasury has succeeded in winning from Congress occasional modest increases in the interest it can pay on savings bonds, to keep the return roughly commensurate with that available from other conservative investments. On E-bonds held to maturity, for example, the yield has inched up over the years from 2.9 percent to 3.26 percent. Meanwhile however, the rate paid by commercial banks has risen as high as 3 percent. Savings banks have gone to 3¼ percent and within a few months some will step up again to 3½ percent. Some savings and loan associations for their part are paying 4 percent.

Yet the U.S. Government, by decree of Congress, is unable to keep pace. The inevitable result has been a steady cashing in of savings bonds by their holders. The Treasury has just disclosed that cash-ins of E and H bonds had outrun sales for 12 successive months through July. For the first 7 months of this year, redemptions outstripped sales by $613 million. Furthermore, Treasury officials said that unless the arbitrary ceiling is lifted, the whole savings bond program is in danger of collapse.

It could be. Most Americans bought these bonds in the first place out of patriotic zeal, and a desire to back the boys on the firing line in every way possible. When the guns fell silent, many persons continued to buy them, as a form of regular savings, for their safety, and perhaps even for their steady if unspectacular yield. But with the continued march of inflation all that has changed. Few savers are going to put money into Government bonds that pay a scant 3¼ (and that only if held to maturity), when other institutions offer higher rates along with a Government guarantee of the principal. Under today's circumstances, moreover, saving in any form has become a dubious procedure. Hence the popularity of the high-flying stock market, as a possible, if risky, hedge against the rising cost of living.

If it is to halt the ravages of inflation, Washington must act forcefully on several fronts. But it surely will not succeed if it persists in penalizing the saver. That is exactly what Congress is doing by clinging to an interest rate that was adequate 10 years ago, but is clearly inadequate now.

Danger Seen for North in Housing Segregation

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I note with deep interest an article appearing in yesterday's Washington Post and Times Herald entitled "Danger Seen for North in Housing Segregation."

Joseph D. Lohman, former chairman of the National Capital Planning Commission, is reported to have said in a speech Wednesday that segregation in housing in the North may be the forerunner of increased racial violence and political conflict in the North. He is directly quoted in this article as stating, "The violence which confronts us in the South is as dust in the wind compared to the prospects of violence in the segregated metropolitan areas which are now developing."

Mr. President, I do not know where Mr. Lohman has been in the past several months, but I am quite certain he must not have been reading the morning and afternoon papers from around the Nation, and particularly the ones from the North. Mr. Lohman is apparently oblivious of the fact that violence and political hatred and racial conflict are now at an alltime peak in the North where integration has occurred. To the contrary, we do not find any violence in the South where segregation exists, and we do not find violence in the North wherever segregation may exist.

Contrary to Mr. Lohman's comments to the annual conference of the National Urban League, the violence which he anticipates will only come wherever integration is forced upon people.

If Mr. Lohman fears violence because of segregated housing in the North, or anywhere in this country, I wonder if he would but name one place where violence has occurred in these United States on account of segregation.

Mr. President, Mr. Lohman and the other supporters of the National Urban League are shooting in the dark and are making such illogical statements in an attempt to take away from the terrific impact violence in integrated areas of this Nation is having upon our people.

It is ridiculous for anyone to argue that segregated housing is going to cause violence in any part of this Nation. As I have repeated before, it is only where integration is forced upon people that violence occurs. People do not segregate against their will, but they are more often integrated against their will. We would not have segregated suburban areas in the North, or anywhere in the Nation, unless is was desired by the people who buy the homes.

Mr. President, in order that everyone may have the benefit of Mr. Lohman's ridiculous views, to which I take sharp exception, I ask that this article from the Washington Post and Times Herald of September 10, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DANGER SEEN FOR NORTH IN HOUSING SEGREGATION

(By Luther P. Jackson)

Joseph D. Lohman, former Chairman of the National Capital Planning Commission, declared yesterday that segregation in housing may be the forerunner of increased racial violence and political conflict in the North.

"The violence which confronts us in the South," he said, "is as dust in the wind compared to the prospects of violence in the segregated metropolitan areas which are now developing."

Lohman, now State Treasurer of Illinois, spoke at the annual conference of the National Urban League which ends today at the Sheraton-Park.

Lohman's comparison of violence in the South and North was criticized at a press conference by League President Theodore W. Kheel, of New York. Kheel said such state-

ments give support to Senator JAMES O. EASTLAND, Democrat of Mississippi, and other foes of integration.

Lester B. Granger, executive secretary of the league, added that there is generally less racial tension in northern cities than there was 40 years ago. He said the press has made the public more alert to racial incidents.

Lohman later commented that "violence is inexcusable," but added that "rigid housing segregation represents a framework for violence."

In his speech, Lohman asserted that the "true pillar of segregation in America is residential segregation." He said there is more of this type of segregation now than ever before and that unless corrective measures are taken, there will be still more by 1975.

Lohman said all-white suburban communities are developing because private builders are allowed to build large subdivisions using the old ethic of segregation.

In contrast, he said, efforts are being made to renew the cities under the "new ethic" of integration as spelled out in laws and court decisions. He said Negroes are forced to accept inferior housing within the cities while whites have a free choice.

Lohman said a political conflict between cities and suburbs could result from Negroes taking over old city political machines. "It would be poetic justice," he added, "if Negroes used their new political power to bring about changes."

Labor Reform Legislation—the Public Desire—the Real Need and True Objective

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I am submitting herewith an excellent editorial entitled "The New Labor Bill," appearing in the Danville (Ky.) Advocate, of which a good friend of mine is the editor.

For long as Mr. Swain's paper been a keen student of public affairs and Government. Its acuteness respecting the pulse of the folks has long been recognized. Its analysis of the needs in the field of labor reform legislation, as well as his notions concerning just what the general public was seeking, is one of the most accurate and to the point statements I have seen in the mass and welter of editorials, propaganda, and so forth, with which we all have been besieged in recent months. I am sure the article will be most refreshing to the majority of us:

THE NEW LABOR BILL

The long haul is over. After many delays and maneuvers, legislation to bring organized labor under firmer control in the public interest is assured. The bill finally agreed upon by a Senate-House conference committee obviously does not satisfy everyone, and some labor leaders consider it unduly harsh. There is little doubt, however, that in approving a labor reform bill Congress was implementing the wishes of the great majority of Americans.

The measure, as finally approved by the conferees, is much closer to the Landrum-Griffin bill which the House passed than it is to the milder Kennedy-Ervin bill passed by the Senate. It sharply limits organizational picketing, secondary boycotts, and hot-cargo contracts. Under terms of the new bill, the first major labor legislation passed in 12 years, States will be empowered to deal with smaller labor dispute cases which the National Labor Relations Board refuses.

It was such provisions as those which were the source of the greatest controversy. And, ironically, it was those provisions which aroused the least public interest. The public was concerned mainly about reforms to guard against the sort of corruption the McClellan committee had been revealing. In this respect the House and Senate bills were quite similar. There was little dispute about them, and they promise a tight rein on corrupt labor leaders in the future.

That is good. That is what the American people wanted. As to other parts of the new legislation, the test of their fairness and wisdom will come. If some provisions appear to be punitive, as some labor leaders contend, they may be revised in time. The main thing is that the Federal Government now has a powerful weapon to wield against corruption in labor. All of us, including labor, will benefit.

The Late Zygmunt B. Dybowski

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. LAUSCHE. Mr. President, the citizens of Cleveland, Ohio, and Polish-Americans of the Nation, have been saddened by the passing of a notable Polish-American who served the cause of democracy with great distinction and credit to himself, his State, and Nation. I am speaking of the late Zygmunt B. Dybowski, teacher, author, and editor.

I have known Mr. Dybowski and his family for many years, and his courage, his intellectual integrity, his humanity, and his endless devotion to the cause of democracy and liberty will ever remain as an inspiration and memorial to all those who knew him.

As I extend my condolences and sincere sympathy to his widow and his son, Lt. Col. Eugene Dybowski, U.S. Air Force, I am sure that Polish-Americans throughout America join with me in sorrow and regret at the passing of Zygmunt B. Dybowski. We, however, who count ourselves among his friends, are certain that his life has left an impact that will long be remembered by those who knew him.

I ask unanimous consent to have printed in the Appendix of the RECORD a biographical tribute to Mr. Dybowski.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Mr. Dybowski was born January 20, 1896, in Tarnow, Poland and received his primary education there. However, in 1913, he came to the United States and studied at the American International College at Springfield, Mass., from 1914 to 1917. When World War I began, he broke off his studies before graduation and served in the 51st Infantry, although at that time, he was still an alien.

Later, he completed a course in journalism at Columbia University and began his journalistic career with the Telegram Codzienny in New York City. Ever interested in the affairs of his homeland and with a dedication to freedom and liberty, he collaborated with A. Debski and B. Kolabowski in preparing a memorandum to President Woodrow Wilson suggesting the proper boundaries of the newly created Republic of Poland after the war.

In 1923, he became managing editor of the Polish Daily News in Cleveland, which position he held until his death. As editor, he spoke out boldly to our Polish-American friends and through the medium of his newspaper interpreted American ways and beliefs so that our newly arrived immigrants would understand more fully our American way of life.

Mr. Dybowski not only preached Americanism through the channels of his paper, but taught the Polish language in South High and Lincoln High Schools in Cleveland from 1929 to 1935, and beginning in 1935 until his death, instructed citizenship classes in Cleveland.

He was the past national adjutant of the Polish Legion of American Veterans, a member of the Selective Service Board No. 9 of Cleveland, a member of the PNA, and other civic and fraternal organizations. He was constantly active in social and civic affairs.

Aside from his own paper, he wrote articles on Polish questions in many foreign language newspapers. Among his published works are "Artolagta Poesji," "Astatnia Pewia," "De Profundis," "Dzwne Opowiesci," and "Imigranci."

His public service was given recognition in 1925 when Marshal Josef Pilsudski presented Mr. Dybowski with the Krzyz Legronowy (Legionaire's Cross), and in 1935 the Polish Academy of Arts and Sciences bestowed the Srekrny Wawrzyn Akademicki (Silver Wreath) upon this noted author.

Public Comment on the Interest Ceiling for Federal Bonds—No. 4

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 4 of the series:

[From the Philadelphia (Pa.) Bulletin, Sept. 3, 1959]

INTEREST-RATE BOOMERANG

The cost of borrowing money went up sharply on Tuesday, with most of the larger banks throughout the country posting an increase of one-half percent in the rate to their best credit risks.

The results are likely to be unpleasant. One immediate effect will be that many companies will take a new look at plans for expansion.

There is real irony here. A major reason for the rise is that some Congressmen, rais-

ing a phony cry of "keep interest rates down," have blocked action on President Eisenhower's appeal for a rise in the 4¼ percent ceiling rate now fixed on marketable U.S. bonds.

The Treasury, contrary to whatever these Congressmen may think or say, does not set the pattern of interest rates. Like any other borrower, it has to meet the market price or it cannot sell bonds.

With interest rates rising, the Treasury can't sell bonds at the fixed rate of 4¼ percent and has been forced into short-term borrowing. This has now helped push up the rates for everyone.

If Congress is awake to its responsibilities it will recognize the warning and take prompt action to give Secretary Anderson the power he needs for efficient handling of the Nation's debt.

Miss South Carolina

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. JOHNSTON of South Carolina. Mr. President, this week in Atlantic City, N.J., 54 beautiful women from all over America are vying for the title of Miss America and among them is Miss Nettie Adelaide Dennis, of South Carolina. Miss Dennis is a 19-year-old sophomore at Columbia College, Columbia, S.C., but is a native of Moncks Corner, S.C. Miss Dennis was recently honored by her hometown of Moncks Corner with a Tootsie Dennis Day. State and civic leaders from all over South Carolina came to Moncks Corner on this occasion to honor Miss Dennis, who holds the title of Miss South Carolina.

South Carolina is indeed proud of Miss Dennis and naturally hopes she will win the Miss America contest in Atlantic City. Miss Dennis has held 15 various beauty crowns including the title of Queen of Hearts at Moncks Corner High School, which was the first title she ever won. The latest title she holds is that of Miss South Carolina.

I ask that an article entitled "Miss South Carolina" from the Berkeley Democrat of Moncks Corner, S.C., of September 9, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISS SOUTH CAROLINA: TOOTSIE DENNIS

This is the week that Moncks Corner will be making history in Atlantic City. The reason is the blonde, blue-eyed Tootsie, Miss South Carolina, who left Sunday from the Charleston Municipal Airport for that point to compete with 53 other State choices for the title of Miss America, 1960. Tootsie was accompanied by her official chaperone, Mrs. Dan Read, and was joined at the airport by 30 Moncks Corner citizens who were on hand to wish her bon voyage and success in the forthcoming contest. Mrs. Evelyn Waldrep, of Columbia, hair-stylist, also accompanied Tootsie to Atlantic City, at her own expense.

Tootsie's mother, Mrs. Nettie C. Dennis, left early Monday to join her daughter and Mrs. Read.

On Tuesday, Mr. and Mrs. Ed Guy also left for Atlantic City. Mr. Guy is president of the Jaycees, who were responsible for Miss Dennis' opportunity to represent Moncks Corner in Greenville and win the coveted title of Miss South Carolina.

When Tootsie left the Charleston airport she was wearing a two-piece suit of Navy blue linen, printed with gold flowers, a gold beaver hat, beige shoes, and a mink stole. It was reported that her luggage (six pieces) topped the limit by 80 pounds.

Leaving Friday to attend the rest of the festivities are Tootsie's younger sister, Adah, and her two brothers and sisters-in-law, Mr. and Mrs. David Dennis, and Mr. and Mrs. R. L. Dennis, and an aunt, Mrs. Annabelle Dennis Parker (Miss Moncks Corner, 1939, by the way), of Charleston.

Tootsie's talent will include her song, "I Enjoy Being a Girl," from the "Flower Drum Song," a Broadway musical. She has taken vocal 1 year; dancing, 6 years; and piano, 8 years.

Monday morning, Miss South Carolina registered together with the 53 other State beauties. Tuesday was for swim suit posing (incidentally Tootsie won the swim suit competition in Greenville). Tuesday night there was an illuminated parade, and each day was planned to include a pageant rehearsal. Priminary judging begins tonight (Wednesday) with the finals Saturday night. It is expected that the top 10 will be televised on Saturday night.

A Tribute to an American Composer

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. IRWIN. Mr. Speaker, just less than a month ago the New York Philharmonic, directed by Leonard Bernstein, gave Moscow one of the most exciting, tradition-shattering concerts the Soviet capitol has seen in its recent musical history.

The New York Times, in a Moscow-datelined article on August 25, declared:

One of the most unexpected events was a rousing demand by the cheering, stomping, clapping throng for a repeat performance of an unusual little piece by one of the first American composers of modern ideas, Charles Ives:

This composition, "The Unanswered Question," had never been heard in the Soviet Union. Mr. Bernstein broke another tradition by giving a little talk explaining Ives' philosophy and his theory of accidental music in which several themes in different tempos are woven together and cross each other accidentally at unpredictable times.

I am delighted, Mr. Speaker, that Charles Ives is, at long last, beginning to receive the recognition he so richly deserves.

It is to be regretted that such recognition comes after his death.

Five years after his death at the age of 80, 40 years after he virtually stopped composing, 12 years after he received the Pulitzer prize for a symphony he had written 40 years previously, Charles Edward Ives appears to be attaining fully to that recognition so long withheld from him—the recognition that here is an authentic American genius, in all probability one of the greatest composers American has produced.

In my hometown of Norwalk, Conn., further recognition of Mr. Ives will be given by the Norwalk Symphony Society which will present a Charles Ives Birthday Festival concert.

This concert will be given on October 19, the eve of Mr. Ives' 85th birthday, and it will consist entirely of Ives' music in several of the forms in which he worked—orchestral, piano, and songs both for solo voice and chorus.

It is quite proper that this tribute to Mr. Ives should be made by a Connecticut symphony society, for Charles Ives is a native of my State, having been born in Danbury, and having lived for many years in Redding.

He was a highly successful insurance man who composed as an avocation, producing a large body of musical work during the years from 1900 to 1920 which was ahead of its time, and long went virtually unplayed.

American should learn more about its own composers and it is hoped, Mr. Speaker, that the recognition accorded Charles Ives' music in Moscow several weeks ago, and which will be accorded it on October 19 in Norwalk, Conn., becomes contagious.

All American should learn to enjoy and love the music of Charles Ives—a great American composer who had a full measure of the gift of compassion and laughter, and translated them into music.

Interest Rate Ceilings on Government Bonds

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. BRIDGES. Mr. President, the New York Times, in an editorial, entitled "The Interest Ceiling Issue," which appeared in its August 27 edition, presents a very careful study on President Eisenhower's request to Congress that the interest rate ceilings on Government bonds be removed or modified.

In its usual thorough manner, the Times offers a clear picture of the need for such a move. I believe this editorial is worthy of the attention of all the Senators and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE INTEREST CEILING ISSUE

President Eisenhower at his news conference Tuesday renewed—and in the most emphatic manner—his request first made to Congress on June 8 that the existing ceilings applying to interest rates on Government bonds be removed or liberalized.

The ceiling on marketable securities is 4¼ percent, and applies to issues with maturities of 5 years or longer. This legislation is in the nature of an anachronistic accident. It has no logical relationship to present conditions in the bond market. It was enacted in 1918 in connection with the second Liberty loan financing of World War I, and was based on conditions then contemporary but today purely history.

What makes this legislation imperative is that the Treasury must raise vast sums in the months ahead in order (1) to fund a constant procession of maturing obligations, and (2) to raise new money to pay for the appropriations voted by Congress and not covered by taxes. As much as possible of such financing should take the form of securities designed to appeal to savers since, when money is raised through savings, it has no inflationary effects. In practice this means that, broadly speaking, it should be raised through the sale of long-term securities. But with business in a boom phase at present, the demands of borrowers of all categories in the money market are extremely heavy. These demands, competing for a comparatively limited supply of funds have driven interest rates sharply upward. With the market rate on comparatively long issues above 4¼ percent the Treasury finds itself in a position in which it has no alternative but to raise its funds through the sale of short-term paper, a procedure inflationary in its implications because it involves the creation of bank credit or expansion of the money supply.

The present ceiling on savings bonds, from which the President has also asked relief, is roughly 3¼ percent, a rate that makes it impossible for the Government to compete actively with other available outlets for savings. This is not only a grave injustice to the 40 million patriotic holders of savings bonds in the Nation, but it is a potential threat of the most serious kind to the whole Government savings bond program, itself a major bulwark against monetary inflation.

Savings bonds outstanding total $50.5 billion. That figure exceeds by $2 billion the total of all publicly held marketable issues of the U.S. Treasury with maturities of 5 years or longer. Every dollar that is withdrawn by a savings bond holder is a dollar that the Treasury will have to replace, and that, so long as present interest limitations remain in effect, it will have to replace by raising the money through methods highly inflationary.

Public Comment on the Interest Ceiling for Federal Bonds—No. 5

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 5 of the series.

[From the Wall Street Journal, Sept. 9, 1959]

AN EMPTY TRIUMPH

The Members of Congress who are blocking President Eisenhower's request for an end to the 4.25-percent rate ceiling on the Government's longer term bonds have managed to push the rates on such obligations lower than they might otherwise be. But not in the way they think.

A glance at the list of quotations and yields on Federal bonds available each day on the fourth from last page of this newspaper shows the highest returns on the short-term issues and the lowest returns on the long-dated bonds. For instance, on one recent day bonds due in 1961 yielded 4.89 percent, those due in 1966 4.58 percent, those due in 1980 4.25 percent, and those due in 1995 3.9 percent.

In contrast, bonds offered the same day by the State of Connecticut and the County of Allegheny in Pennsylvania showed the opposite trend. The Connecticut yields ranged from 2.6 percent for 1961 obligations, up to 3¾ percent for those beyond 1982. The Allegheny yields ranged from 3 percent for 1961 to 4.3 percent for 1996. Of course, the lower overall ranges of yields on these issues than on the Federal bonds are due to the fact they are tax-free, but this freedom doesn't affect how the yields vary with maturities.

What affects how the yields vary with maturities is the market's demand for various dated bonds. The range of yields on the State and county bonds reflects accurately what investors want. At present they want a bigger return when they lend their money out for many years than when they lend it out for just a few years. We know this to be true because there is no artifical rule or law governing the variation of yields on those non-Federal issues. If investors wanted the ladder of yields to lean the other way, the bonds would be offered to them that other way.

But the Federal yields do slant the other way because the legal ceiling forces them into that pattern. This law succeeds in doing so because the U.S. Treasury cannot sell any bonds that come due in 5 years or more. Investors know, therefore, that the supply of such issues is going to be limited so they pay a premium on any such issues now outstanding, by accepting lower yields on them than on shorter issues.

Some might suggest that since the 1995 Federal bond is at a 3.9 percent yield the Treasury can issue bonds of that maturity below the 4.25 percent rate ceiling. The answer is that, if the Treasury even hinted it might offer such bonds, their potential supply would be increased, their price would fall and their yield would rise up to or past the ceiling.

Thus the congressional preservers of the ceiling have, it is true, richly succeeded in keeping down the rates on the longer term issues of the Government. But it's an empty triumph, because Uncle Sam can't take advantage of the low rates. Indeed, his borrowings, at present confined by the law's prohibition to short-term issues, cost him more than 4.25 percent.

It is still the market, not Congress, that dictates Uncle Sam's borrowing costs.

Special Interest Power Opens Campaign To Destroy Public Power in America: False Advertising Draws Ire of Clyde Ellis

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. YARBOROUGH. Mr. President, the special interest companies of America have recently launched a massive, vastly expensively, new Madison Avenue type advertising campaign aimed at discrediting and, if possible, destroying public power in America.

In full page advertisements in Time magazine, the Saturday Evening Post and other publications, special interest companies are waging a propaganda campaign based on half-truths to brainwash Americans into opposing public power.

This insidious propaganda campaign, while purporting to be in the public interest, is in truth simply a slick move by special interests to pull the wool over the eyes of the American people. Certainly, all of us would defend private power companies' right to prosper and grow, make a reasonable profit, and to present their case to all Americans, through advertising in all media, and in any other proper way.

But it becomes a matter of great concern to every thinking American, when special power interests base such a campaign on distortions and half-truths. One advertisement alleges that "Federal Government electric power systems have already cost the Nation's taxpayers $5½ billion." Yet private power company officials know that public power systems simply amount to a vital investment in national development by loans which will be repaid, an investment which private power could not or would not make at the time it was needed. What is more, these projects are paying for themselves through the sale of electrical power, much of which is purchased by private power firms.

The advertisements, while citing the $5½ billion investment in public power, fail to mention that private power has received the benefit of $10 billion in taxes by way of accelerated depreciation certificates and easier depreciation practices—in other words, fast tax writeoffs—that the working people do not get.

From these advertisements, it is obvious that the private power companies are producing more than electrical power—they are turning out powerful propaganda slanted to their special objectives. It is clear that the advertisements they are paying so much to print are in the private interest and not in the public interest. Are they adding the costs of these advertisements to the consumers' bills?

I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received from Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, dated September 8, 1959, which discusses this problem, and copies of two advertisements which private power published in the Saturday Evening Post, August 8, 1959, and Time, June 29, 1959.

There being no objection, the letter and advertisements were ordered to be printed in the RECORD, as follows:

NATIONAL RURAL ELECTRIC
COOPERATIVE ASSOCIATION,
Washington, D.C., September 8, 1959.

Hon. RALPH W. YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR RALPH: Adolph Hitler wrote at page 313 of "Mein Kampf": "In the size of the lie there is always contained a certain factor of

credibility since the great masses of the people * * * will more easily fall victims to a great lie than to a small one."

The attached advertisement, entitled "How Much Is 'Public Power' Costing the People of Your State?" is good evidence of how "America's Independent Electric Light and Power Companies" are applying Hitler's philosophy.

But even Hitler discovered that falsehoods do not change facts. Similarly, no amount of nationally circulated falsehood can alter the fact that Federal power projects do not cost the Nation's taxpayers. Their entire cost is repaid by the rural electric co-ops, power districts, municipally owned systems, commercial power companies, and Federal Government agencies which purchase the wholesale power from them. Furthermore, it seems doubly wrong for these investor-owned electric utilities to make such statements when they have been granted over $10 billion in Federal tax subsidy by way of accelerated depreciation certificates and through liberalized depreciation practices available to them since 1954.

As to the ability of these companies to provide all the low-priced electricity the Nation needs—without depending on taxes, the events which transpired in New York City on August 17 may indicate a possibility that America's Independent Electric Light and Power Companies could advantageously spend more time building their own business and less trying to destroy the work of others.

It seems unconscionable to us that the customers of these specially privileged cost-plus corporations should be required to continue financing this malicious, unjustified attack on a national resource policy which has been approved by Congress for half a century and upon which the member consumers of 450 rural electric systems depend in part for a decent living standard.

We hope Congress can find some way to at least make absolutely certain that such untruthful attacks are financed 100 percent from corporate profits and not by a levy on customers.

Sincerely,

CLYDE T. ELLIS,
General Manager.

[From the Saturday Evening Post, Aug. 8, 1959]

HOW MUCH IS PUBLIC POWER COSTING THE PEOPLE OF YOUR STATE?

Alabama	$51,700,000
Arizona	28,600,000
Arkansas	24,200,000
California	564,850,000
Colorado	52,250,000
Connecticut	123,750,000
Delaware	32,450,000
District of Columbia	36,300,000
Florida	125,950,000
Georgia	68,750,000
Idaho	14,300,000
Illinois	400,400,000
Indiana	132,000,000
Iowa	63,800,000
Kansas	51,150,000
Kentucky	57,200,000
Louisiana	67,100,000
Maine	23,100,000
Maryland	103,400,000
Massachusetts	194,150,000
Michigan	273,900,000
Minnesota	90,750,000
Mississippi	23,100,000
Missouri	127,050,000
Montana	16,500,000
Nebraska	35,750,000
Nevada	11,550,000
New Hampshire	17,600,000
New Jersey	242,100,000
New Mexico	19,250,000
New York	752,400,000
North Carolina	72,050,000
North Dakota	$10,450,000
Ohio	338,800,000
Oklahoma	50,050,000
Oregon	50,050,000
Pennsylvania	396,550,000
Rhode Island	30,800,000
South Carolina	33,000,000
South Dakota	12,100,000
Tennessee	63,250,000
Texas	235,400,000
Utah	19,250,000
Vermont	9,900,000
Virginia	91,300,000
Washington	85,250,000
West Virginia	41,800,000
Wisconsin	114,400,000
Wyoming	9,350,000

(Amounts (to nearest $50,000) figured on the percentage of all Federal taxes collected in each State. Current tax collections used as basis.)

Every American is taxed to pay for Federal public power, and the cost to people in your State has run into millions of dollars.

Federal Government electric power systems have already cost the Nation's taxpayers $5½ billion. The list above shows about how much was collected in each State.

If the public power lobbyists succeed in their plans for getting the government still deeper into the electric business, the cost will soar to $15½ billion. The cost to your State will be almost tripled.

Yet this spending for more and more Federal public power is completely unnecessary. America's hundreds of independent electric light and power companies are ready and able to provide all the low-price electricity the Nation will need—without depending on your taxes.

These are the companies that have doubled the supply of electricity in the past 10 years, and will double the present supply in the next 10.

Federal public power keeps growing because most people don't realize they are paying for it. But informed Americans can put a stop to it.

Will you help spread the word among your friends and neighbors? When enough people understand, something surely will be done to halt this unnecessary spending.

When public power wins—you lose. Every time another Federal public power proposal goes through Congress, you are taxed to pay the bill.

AMERICA'S INDEPENDENT ELECTRIC LIGHT AND POWER COMPANIES.

[From Time, June 29, 1959]

WHEN PUBLIC POWER WINS, YOU LOSE

Every time another Federal public power proposal goes through Congress, you are taxed to pay the bill.

Most people, according to national opinion polls, don't want the Federal Government in the electric business. Yet everybody, including you, is taxed to pay for such Federal public power.

Already $5,500 million of tax money from you and other Americans has gone into this Federal public power. And now the public power promoters are pushing hard for $10 billion more.

Is there a need for all this tax spending for more and more public power? None at all—for America's hundreds of independent electric light and power companies are ready and able to provide all the low-price electricity people will need—without depending on your taxes.

These companies have doubled the supply of electricity in the past 10 years, and will double the present supply in the next 10.

Spending for more public power goes on because most people don't know about it. The best way to stop it is to tell your friends and neighbors what's happening. As soon as enough people understand, you can be sure something will be done to halt this unnecessary spending.

AMERICA'S INDEPENDENT ELECTRIC LIGHT AND POWER COMPANIES

Tribute to Edwin E. Smith, a Truly Great Teacher for 40 Years at Classical High in Springfield, Mass.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BOLAND. Mr. Speaker, when the bell at Classical High School of Springfield, Mass., sounded the start of the school year this week, for the first time in 40 years, Edwin E. Smith was not there to greet some of the old and the new students. He had retired last June of 1959 after giving a lifetime to the teaching profession. During his long service in the Springfield school system he had become a tradition. To accomplish this, he must, of necessity, have been endowed of unsual talent and personality. Ed Smith was so gifted.

Thousands of eager youngsters came under his spell. Beyond his great capacity to impart knowledge of English literature to his students, he advised and counseled them with marked effect. Seldom have I ever met or known of anyone in the teaching field who was so genuinely loved by the boys and girls who sat in his classes. He had a real personal interest in their efforts, their success and their future. Indeed, he epitomized to the fullest the best in the great teaching profession.

English literature was Ed Smith's forte and in this field, he contributed notably to the famed reputation of the Springfield school system and particularly Classical High School. The thousands of his students that went on to higher education in the colleges of the land appreciated how well and thoroughly he taught them. Many of them received top honors in the colleges of their choice. He had a remarkably easy, convincing and persuasive way of impressing young minds of the worth of education and how to use it. He was richly endowed with the wisdom, the temperament and the determination necessary in the educational field. He was not anxious for the bell that tolled the end of the school day and I know that his students lamented the end of his classes. Ed Smith felt and knew that he had a job to do in the very best way he knew to do it. His efforts spoke for themselves as he was heartened by the successes in life that many of his boys and girls attained. He, indeed, was an artist as he worked with the precious clay of unfolding youth.

Edwin E. Smith was born in 1894 in White River Junction, Vt., and graduated from Dartmouth College in 1917. After

a brief teaching spell in Vermont, he came to Classical—Central—High School in Springfield, Mass., in 1919. There he remained for 40 years to retire in June 1959. His educational achievements were many. He carried a master of arts from Harvard in 1929; pioneered in accelerated courses for the gifted child—a program that was started in the high school in 1935; coauthored with Ralph Boaz the texts, "An Introduction to Literature" and "Enjoyment of Literature." The latter textbook has been widely used and accepted by teachers and pupils since it was first published in 1934. In 1954–55, Ed Smith was chosen president of the New England Association of Teachers of English and held membership in the New England Association and the National Association of Teachers of English.

Recognition and honors have come his way from associates, his students, and from his community. The executive board of the New England Association of Teachers of English conferred a plaque for outstanding contributions and service of over 30 years. A memorial in Ed Smith's name was given by the Classical High School Alumni Association to the school library. The memorial consists of an alcove dedicated to him with a gift of money for books to be purchased in his name. His portrait will grace the alcove as a constant reminder of the fruitful years he spent in the truly hallowed halls of Classical.

At this past June graduation exercises, a moving tribute was paid to him by His Honor Mayor Thomas J. O'Connor, of Springfield, in expressing the gratitude of the city for the great teacher service he had given.

Ed Smith no longer will be an active teacher in our school system but his dedication to his profession will never be forgotten. Whenever or wherever any of his former pupils gather, they will retell again and again of their years under his tutelage. They will talk again of him and recount why he measured to the fullest their ideal as a great teacher and a good friend.

One of his former students and presently a teacher at Ed Smith's beloved Classical puts it simply and beautifully:

Ed's deep interest in and understanding of all his pupils, his ability to teach them to think and to appreciate good literature, his brilliant intellect coupled with genuine humility have made him a truly great teacher. No wonder they love him so much.

Mr. Speaker, as one who knows him, I join in this tribute to Ed Smith and express the wish that he will be around for a long time to continue to contribute his talent and his counsel to those who yearn to learn and to his community.

Advice and Consent

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. MANSFIELD. Mr. President, in the September 17 issue of the Reporter, there appears an article entitled "The Advice and Consent of J. WILLIAM FULBRIGHT," written by Sidney Hyman. I believe the article is worthy of the attention of the Senate; it gives the views of the distinguished chairman of the Foreign Relations Committee vis-a-vis those of the committee and, for that matter, those of the Congress and the executive branch, on questions of foreign policy. It emphasizes, once again, the keen sense of responsibility which has always actuated the thoughts of Senator FULBRIGHT in his relations with the executive branch of the Government and his feelings on the separation of powers. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ADVICE AND CONSENT OF J. WILLIAM FULBRIGHT

(By Sidney Hyman)

Several of the newspapers I read have compared the hero's welcome President Eisenhower received at various stops on his European trip with President Wilson's experience there 40 years ago. In view of what the U.S. Senate did, after Wilson's return, to deflate his personal triumph among the Allies, it seemed worth whole to discuss President Eisenhower's present standing in Congress with a central figure in that relationship, Senator J. WILLIAM FULBRIGHT, Democratic chairman of the Senate Foreign Relations Committee.

Given the fact that FULBRIGHT has little in common with Henry Cabot Lodge, a repetition of the 1919 debacle is obviously unthinkable; so I began by asking the Senator if he felt that the President's hand was greatly strengthened in foreign affairs by the support he can count on from Congress, even though it is controlled by the opposition party. With a wry smile, the Senator conceded that it might make some difference. But he went on to say that he has a pretty clear idea of the limits of his own power and doesn't expect any applause for not exploiting the nuisance value of his job. For Senator FULBRIGHT, the principal concern is how to get things started, not how to stop them.

Unlike many other Senators caught for an interview at day's end, FULBRIGHT has the grace to remember that he is not addressing a vast congregation. He actually converses with his interviewer and, above all, he respects the fact that the simple declarative sentence is the greatest invention of the human intellect. This, then, is a report on the uses to which he put that singular invention in an hour of twilight talk.

THE SENATE'S JOB

Senator FULBRIGHT finds some grounds for comfort in the fact that Christian Herter, a trusted friend, now sits at the head of the State Department, ably backed up by another trusted friend, Under Secretary of State C. Douglas Dillon. But he is disturbed by the degree to which these good and generous men are hemmed in by a set of distinctly parsimonious policies—policies that proceed largely from a passion for economizing and a timid interpretation of the Nation's economic potential. The decline of American power since 1953 has not been arrested. The self-inflicted national wounds resulting from a wrong order of national values and priorities have not been healed. The strains within the Grand Alliance have not lessened, while the Soviet Union, with Communist China hot on its heels, daily grows in strength.

But Senator FULBRIGHT's most pressing day-to-day problem is how and where to draw a frontier line between the powers of the Executive and the Senate, so that our national-security policies can be formulated and executed in a way that is both responsible and responsive to the needs of the Nation.

Unlike some of his predecessors, FULBRIGHT is convinced that the Senate is not structurally equipped to play any major role in the day-to-day management of foreign affairs. When it tries to do that, especially under modern conditions of coalition diplomacy, it only multiplies disarray at home and confusion abroad. The management function, he feels, is by its very nature executive in character. The Senate therefore must not only place itself under a self-denying ordinance when it comes to the mechanics of diplomacy, but must help arm the executive with competent means and authority to bargain, to maneuver, and to seize any fugitive opportunity cast up by the shifting tides of world events.

The Senate, by keeping its distance from the executive, can be an effective instrument of public education; it can define and clarify the zones of the feasible, the areas of the negotiable, thereby assuring that the executive, when it decides to act, has the fullest support of public opinion. On its own, moreover, the Senate can bring its social inventiveness into play by formulating the policy objectives to be pursued around the world, while leaving the executive complete freedom as to the timing and tactics. In other words, the function of the Senate, and of the Foreign Relations Committee in particular, is to try to be the conscience of the executive—without in any way indulging in the frivolous delusion of coequality.

Here is how the theory has worked out in practice recently. Senator FULBRIGHT was not informed before the public announcement that President Eisenhower and Mr. Khrushchev had agreed to an exchange of visits. Nor was he informed in advance that President Eisenhower meant to go to Europe. Nevertheless, as Senator FULBRIGHT had himself previously contributed to the climate of opinion which made these events possible, he felt no affront to his personal dignity when events unfolded as they did. Things would surely have been very different if a man like Arthur Vandenberg—or even Tom Connally or Walter George—had not been sent word in advance.

THE VETO PRESIDENT

None of this is to say that Senator FULBRIGHT feels that the President, now billed as "the new Eisenhower," is without fault or flaw. "In domestic matters," FULBRIGHT remarked, "what passes under the adulatory name of the 'new Eisenhower' is really the old one whose essential strength lay in not initiating new things, but in stopping the new things others tried to put in motion. He has been the veto President all along; only now, instead of exercising the veto behind the covering screen of men like Secretary of the Treasury George Humphrey, Sherman Adams, or the successive budget directors, he is compelled by circumstances to do it in his own name."

Senator FULBRIGHT adds that a veto President is not inherently better or worse than a prime mover President. Changing times and cases may call for one and not the other. "What is misleading," he says, "is the polemics of the current case. The administration is trying hard to pin a 'won't do' tag on the present Democratic Congress, as if it were just like the Republican-controlled 80th Congress President Truman successfully anathematized. The two are really as different as day and night. The Republican 80th Congress vetoed or scaled down the proposals for comprehensive domestic legislation involving such matters as inflation control, tax revision, and the liberalization of minimum wages and social security benefits. All these measures had reached Congress on the initiative of President Truman. In the present Congress, the proposals for

comprehensive legislation in domestic matters are coming from the Democratic Members, only to be knocked down or scaled down by a vetoing Republican Presidency. If the 'won't do' label in domestic matters is to be stamped anywhere, it ought to be on the White House."

In this connection, Senator FULBRIGHT believes that the administration is guilty of something more than mislabeling. He feels that by citing the danger of inflation as a ground for vetoing all moves toward a stepped-up rate of economic growth, it is crippling the Nation's power to attain the diplomatic goals that the administration itself has set: "If we assume that the cold war is moving into a new dimension where the grounds of battle will be economic in character, then the domestic economic strength of the parties to the conflict and the priorities they assign to their productive resources may be of decisive importance. To the extent that the administration fails to increase its sources of revenue either through taxes or through an expansion of the economy, to that extent will it prejudice the Nation's chances of victory in the new dimension of the cold war which seems to lie ahead."

Turning from the domestic to the oversea background for the "new Eisenhower," Senator FULBRIGHT paused to recall how the Republicans indicted President Franklin D. Roosevelt for having practiced the same brand of personal diplomacy. "I am not at all sure what the phrase means," he said, "except that I know it was invested with a full quota of sinister significance. Now, of course, we are treated to the spectacle of President Eisenhower being hailed in the act of practicing personal diplomacy. I don't think it is the next worse thing to original sin. Quite the contrary, I have long favored the sort of personal exchanges now underway. My point is merely about the ironies of the situation."

And he continued: "When you stop to think about it, isn't it also an ironical commentary on the disarray within the NATO alliance when responsible leaders of European powers should need a reassurance from a President of the United States that he will not deal behind their back in his meetings with Mr. Khrushchev? But leaving irony aside, I welcome all evidence that in the field of foreign affairs we are seeing not a 'new Eisenhower' but the 'Ike' of pre-1952 Republican convention days. The 'Ike' of those days embodied in his person the whole spirit of what NATO was meant to be. He was the prophet of warning and encouragement, the negotiator of operating agreements where each member nation could see that its own national interest was best served in the context of a security arrangement that served simultaneously the national interest of every other member. His renown was vastly augmented by that fact. And if now he returns to the scene and source of the accomplishments which carried him into the White House, and if he there sets in motion the material programs necessary to restore the integrity of his earlier accomplishments, the actions which will add luster to his name will also add strength to the Grand Alliance."

TAKE HIM TO OUR LEADER

When the fact of Mr. Khrushchev's impending visit came into the conversation, Senator FULBRIGHT observed how often democracies are inclined to invest their dictatorial rivals with omniscient powers. When Adolph Hitler was at the height of his harassing business, for example, the belief took hold among his intended victims that everything he did was thought out to the last chapter, and subject to his personal control at every step along the way. He had played everyone on an automatic chess board, and everyone must inevitably move according to a master plan of his own design. Only afterward, when the Nazi war records were available for study, it became clear that he was often swept along by events that caught him by surprise and carried him in directions he had no intention of going. It also appeared that he was an incredible blunderer.

"It would be well to remember," FULBRIGHT said, "that Mr. Khrushchev too can be swept up and carried along by external forces over which he has no control. He can also fall into gross errors of judgment. It is quite possible that what he thought would happen when he precipitated the Berlin crises was very different from what actually did happen. In any case, it is as much to our own interest as it to his to keep open the avenues on which we may move toward tenable positions that are alternatives to war."

Nevertheless, the Senator felt that the advance buildup given to the impending Khrushchev visit in the press might serve to activate what is always a latent danger in a democracy that has been subjected to a long period of stress. The danger is that the public, impatient for quick relief, will make its impatience a source of embarrassing pressure on its leaders when actual negotiations take place.

"It is important to bear in mind," he said, "that the impending visit has not altered a single item in the quotients of world power. It is the beginning of a procedure for protracted conversations, and nothing more than a procedure. It does not mean that we no longer need a strong and versatile Military Establishment. Much less does it mean that we can do without an aggressive, articulate foreign-aid program.

"What we urgently need, if there is to be any continuity in that kind of program, is long-term planning. What we now have is a system of appropriations on a hand-to-mouth basis that is both wasteful and inefficient. When this comes to the notice of the American public, it is followed by a great outcry against the whole concept of foreign aid. This is rather like putting hobbles on a horse and then beating him because he won't run faster."

In the coming parleys with the Russians, Senator FULBRIGHT, as always, is firmly convinced that only the Executive, and in this case the Chief Executive, can speak for the Nation. To be sure, the chairman of the Senate Foreign Relations Committee may prod the Executive to move in certain areas, as he did recently with his declaration about the need for new policies in the Middle East. But the Senator already insists—and this is particularly important for foreigners who may have heard just enough about Wilson and Henry Cabot Lodge to develop a profound misunderstanding of our balanced system of Government—that it is up to the Executive to assume the actual burden of conducting foreign affairs, whether they be mere conversations or serious negotiations. The job Congress has to do is big enough, and it has nothing to gain or to contribute when it tries to act like a back-seat driver or a camp follower.

Public Comment on the Interest Ceiling for Federal Bonds—No. 6

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today I said I was going to put in the RECORD some recent comments o nthe subject of removing the interest ceiling on long-term Federal bonds. This is No. 6 of the series:

[From the Baltimore (Md.) Sun, Sept. 4, 1959]

A PARTIAL RESPONSE

On Tuesday the leading New York banks raised their prime commercial rate to the highest point since 1925. A jump in the Federal Reserve discount rate follows inevitably.

It was no accident that on Wednesday Speaker RAYBURN announced a belated effort to put through a bill increasing the interest rate on Government "E" and "H" savings bonds, and that it has now begun to move. These savings bonds are the ones now held by some 40 million small investors who bought them on the assurance that they were buying a good investment. Not to keep the yield in line with that from other forms of prudent investment is to break faith with these small investors. And there is a practical as well as a moral consideration (assuming the two don't always coincide). The Government raises substantial amounts of money through these bonds. The holders of them, if they don't get a fair shake, will stop buying them and will not reinvest them when they mature.

When is Congress going to apply the same practical test to the administration's request for raising or removing entirely the statutory limit on the interest rate for regular Government securities? True, the interest of 40 million small investor-voters is not involved. But when the banks raised their own prime interest rate on Tuesday, outstanding Government securities promptly fell to a new low. Under the present statutory limit, it becomes more difficult than ever—all but impossible—to market any new medium- or long-term Government securities. The only way left for the Government to borrow money in the market is by way of short-term bills, which are only one step removed from printing-press money. Without relief from the interest-rate limitation, the Treasury is quite unable to handle the national debt in an orderly and anti-inflationary way.

Congress has been consistently mulish about granting this needed relief. If it doesn't do so during this session, it will almost certainly be called back into special session for the purpose later on, when Members of Congress would much rather be home politicking. The sensible thing to do is to grant this relief during the present session.

Red China's Aggressions

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. BRIDGES. Mr. President, recent acts of aggression by Red China in Asia have provided further evidence that this Communist regime is not worthy of representation in the United Nations. Red China has presided over the Tibetan slaughter and has aided and abetted the uprising in Laos. And now in a surprising turn on a friend, the Chinese Communists have acted with military violence against the territory of India.

It is particularly surprising that Red China should stir up violence along the northern frontier of India in light of

Prime Minister Nehru's consistent plea that his Red neighbor be admitted to the United Nations. An editorial which appeared in the Washington Evening Star of August 31 comments about this turn of events in Asia, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial to be printed in the RECORD, as follows:

NEHRU AND RED CHINA

There can be little doubt that Prime Minister Nehru is engaged in an agonizing reappraisal of India's policy toward Red China. Throughout the years of the cold war, he has been the chief voice of neutralism and nonalinement in Asia. Walking a kind of mystical tightrope between East and West, he has held his government aloof from the opposing military blocs, and he has seemed at times—even to his own countrymen—to be naively tolerant of the sins of international communism.

More particularly, having in mind the geographical location of India, Mr. Nehru has spared no effort over the years to cultivate friendly relations with the Mao Tze-tung regime in Peiping. To that end, for example, he has consistently taken a leading role in advocating Red China's admission as a member of the United Nations, and he has done numerous other things in behalf of the Chinese Communists. But now his past generous attitude toward them has been gravely shaken. This is so because they have gone out of their way in recent months to push him off his neutralist tightrope. Not content with their slaughter of Tibet (the Asian Hungary), or their pressures against the states of Bhutan and Sikkim, or their support of the rebels in Laos, they have committed acts of military violence against Indian territory along the disputed northern frontier.

Mr. Nehru himself has branded these acts as aggression in a continuing form, and although he has discounted the possibility that they may presage an all-out invasion, he has made clear that India will defend its territory (and Bhutan and Sikkim as well) against any attack. More than that, suiting the action to the word, he has ordered the Indian army to move into appropriate positions for that purpose. He still hopes, of course, that he will be able, through diplomatic representations, to persuade the Chinese Communists to withdraw from the areas they have entered, but he has indicated a vast sense of disillusionment about their good faith and intentions. His position on the tightrope thus has become exceedingly precarious, and some of his country's most influential newspapers have begun to suggest that he ought to abandon "neutralism" and aline his government with the defenses of the free world.

Perhaps the most baffling question involved in all this has to do with why the Chinese Communists have thus repaid Mr. Nehru's many kindnesses with moves that seem deliberately calculated to alienate him. Certainly, if they push him too far, or if their frontier aggression against India becomes a major territorial violation, he will have no choice but to condemn them without his usual equivocations. In that case, the whole of neutralist Asia would be profoundly affected, and hardly to Peiping's advantage.

Football Frankenstein

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the Washington Post this morning printed an editorial setting forth some very pertinent remarks concerning the tragic death of two young men following football practice sessions. The Post quite correctly points out that the major share of the blame for these tragedies rests upon the inflation of football from a game to a national obsession.

Like most Americans, I enjoy an occasional football game. It is a fascinating sport and deserves a place in our school extracurricular activities program. But these tragedies certainly underscore the degree to which football has changed from a form of amusement to a big business. This is every bit as true of high school and college football as it is of so-called professional football. This overemphasis on competitive sports is one of the reasons I have opposed legislation to single out high school athletic coaches for salary increases above and beyond the salaries paid their academic colleagues on the high school faculties. Such recognition for the extra work put in by coaches, it seems to me, is simply an extension of the overemphasis on competitive sports which has detracted so seriously from the real job of our educational institutions. Science and foreign language and history and English teachers also put in extra time and extra effort that deserves equal recognition. Let us raise all salaries to the level that is just and fair.

Let us put football back in the place where it belongs in the high school program as the following editorial suggests:

FOOTBALL FRANKENSTEIN

Two young lives have been snuffed out in the past fortnight—needlessly and senselessly—as a result of heat exhaustion induced by football practice in summer weather. A 17-year-old high school boy in North Carolina collapsed after a practice session on August 28 and died in a hospital the next day. And a 19-year-old Maryland University sophomore died in Baltimore 4 days after a prolonged workout on the playing field September 2. The coaches involved in these two tragedies cannot, of course, escape a share of the blame; grown men ought to have had more simple wit than to put boys wearing heavy football equipment through the fatiguing paces of practice on hot and muggy days. But to make scapegoats of the individual coaches would be at once foolish and unjust. And it would be to ignore the underlying responsibility of a society which has inflated football from a game to a national obsession.

Football has its place as a team sport for school and college youths. But it has been lifted entirely out of its place by a mystique which has made the winning of games a matter of transcendent importance and which has made it a tradition to be willing to die for alma mater. College teams which are in all essential respects professional rather than amateur in character draw vast crowds; and in order to keep their stadiums filled colleges feel obliged to extend the professionalization of this sport by starting practice long before the opening of school and by making a grueling business out of what is supposed to be a form of play. The plain truth is that college football, and to a considerable extent high school football, no longer has anything whatever to do with cultivation of the health, character, and sportsmanship of students. It is a ruthless contest for big money in which victory is equated with virtue.

More tragic than the occasional loss of life and less occasional injury from this kind of football is the debasement of values which flows from it. Parents can, if they will join hands and voices, put football back in the place where it belongs.

Ike Inspires Trust Abroad

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a most interesting and perceptive article by William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, commenting upon the recent visit of President Eisenhower to Europe.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE INSPIRES TRUST ABROAD

(By William Randolph Hearst, Jr., editor in chief, the Hearst newspapers)

SAN SIMEON, CALIF., September 5.—My contact with the goings on in the world has been chiefly through the most reliable and satisfying of all media, daily newspapers. (Advertisement.)

Seriously though, you don't get the news from them at a given hour when editors are ready—but the papers are waiting a quick onceover or thorough perusal when you are ready.

Also, if you didn't quite get the point the first time you can reread the piece or paragraph. You can't get any place saying, "how's that again"? to a radio or TV voice.

Meanwhile back at the ranch I have been following the travels of President Eisenhower in Europe. And as he rests this weekend in the 16-room apartment in Culzean Castle, which the Scottish people gave him for life-time use in affection and gratitude after World War II, there isn't any doubt at all that he has most successfully accomplished his mission.

I don't think any other leader in the world today could have done as well. No one else could have inspired the trust of the peoples of the various and different countries and won the confidence of their statesmen.

Why?

People speak of the Eisenhower charm. He has charm all right, but it is more than that. President Roosevelt had charm, too. He was loaded with it. Yet to take one example of immediate interest, Mr. Roosevelt was never able to charm General De Gaulle into either liking or respecting him. But this remote, self-centered, difficult and dedicated Frenchman has extended President Eisenhower his admiration since their first encounter in the days of the last war.

Charm alone would not have moved the people of West Germany, whose land he had crushed as a conqueror, to give Mr. Eisenhower their overwhelming greeting now as commander in chief of peace, and to sum up their feeling for him in a banner that read: "Germans trust Eisenhower."

There, it seems to me, is the key word: "trust." The Eisenhower charm is a manifestation of an inner sincerity and an innate good will. These are the qualities he displayed in the dramatic setting of the world stage in Bonn, London, and Paris and that have earned him the esteem of his fellow Americans at home.

There has at times been disagreement with his views and doubt of his policies. Our papers have not always concurred in everything he has done. But we have never questioned the sincerity of his beliefs nor the integrity of his character. Nor, as it is now apparent, do our allies.

While Mr. Roosevelt was loaded with charm, our man from Abilene is loaded with character.

An instance comes to mind in my leisurely horseback review of the President's trip. It is not an example of world-shaking significance but more like a bit of byplay in the midst of great events.

It is the party the President gave in London to old friends of World War II, first and foremost among them Sir Winston Churchill, whom I am pleased and proud to count as my friend, too. Among those present on invitation of the President and somewhat to his own astonishment, was Field Marshal Viscount Montgomery, General Eisenhower's Deputy Commander of Allied Forces in Europe during the war.

You may recall that Lord Montgomery published his memoirs last year. In them and in a television interview he criticized General Eisenhower's wartime strategy and his postwar political leadership. The Viscount does not mince words, and it is no secret that his words burned and hurt.

No demands of social protocol compelled the President to invite Lord Montgomery to the party. Nevertheless he did and welcomed Lord Montgomery with the same hearty friendliness with which he greeted the others. I gather a good time was had by all.

A small episode? Yes. But it illustrates my point. It takes a man of character to overlook criticism that disparaged his conduct of the massive exploit climaxing his military career.

To return to the big picture, Mr. Eisenhower's meeting with doughty old Chancellor Adenauer resulted in complete understanding and removed whatever doubts the Chancellor may have had that the President might give way on our obligations to the free people of West Berlin or West Germany. In fact, it appears that the meeting did more.

As a result of it, Chancellor Adenauer moved over to the peace offensive in calling on Premier Khrushchev for hard negotiation on controlled international disarmament.

The talk with the President also seems to have been behind the Chancellor's dramatic gesture of amity toward the Polish people—not their Communist government—in a broadcast admitting the guilt of Hitler's Germany in invading Poland 20 years ago and offering the hope of friendship from the new Germany today. The fact that the offer was cynically rebuffed by the Polish Communist Premier reflects on him, not on Adenauer.

In Britain there were once more tumultuous crowds and the delightful scene of the welcome by Queen Elizabeth and Prince Philip at Balmoral Castle, but the big show was the informal TV and radio chat of the President and Prime Minister Macmillan.

Once more the President's sincerity and character showed themselves when he said he will not be a party to a summit meeting "that is going to depress and discourage people—we must have some promise of fruitful results."

His reiteration of his position—which I fully endorse—showed that he could not be moved from it in an atmosphere of adulation any more than he would be in one of threats. The British would like a summit as soon as possible, on the premise that the Foreign Ministers meeting at Geneva narrowed areas of disagreement enough to warrant one.

The President does not go along with this. To continue his figure of speech, the fruitful expectations at Geneva were green and sour. We must have a far more ripened expectation of accomplishment from Premier Khrushchev before we go to a formal summit. The differences between the British and us are not critical and I do not think the President will have much difficulty in persuading them, when the matter comes to decision, to play it our way.

In Paris there was more pomp than in Bonn or London. The Parisian crowds managed to convey their sentiments with shouts of "Vive Ike." And the President, after beaming and waving along the boulevards and the Champs-Elysées, managed to convey his when he stretched out his arms to the people and said, "Je vous aime, tous" (I love you all). (I couldn't help wondering when I read it if he said it in a south of France accent.)

There was no pomp and more substance in his unexpected appearance at NATO headquarters where he gave the alliance a succinct prescription for peace. "If we are firm among ourselves," he said, "if we refuse to retreat one inch from principle, if we remain flexible so far as tactics are concerned, if we give NATO the same patriotic deep devotion we give to each of our own nations, then there will be no war. Then there will be peace."

It is to be hoped President De Gaulle marked the words, for his dedicated desire to restore France to her former grandeur—with which we must sympathize in principle—has been a disruptive influence on NATO—for which he deserves no sympathy at all.

The De Gaulle regime has demanded our support of its policy in Algeria, which is impossible unless, as has been hinted, the General is ready to accept the principle of self-determination as the eventual solution of the problem.

The President was wise in withholding comment on this until General De Gaulle makes his position formally clear, as he is expected to be by the time the UN meets September 15. Mr. Eisenhower could not endorse in advance a policy that has not been firmed up.

Nor can we agree to French control over our nuclear weapons on her soil, nor for a United States-British-French directorate of NATO. There is good reason to expect that the President, by his attitude of cordiality and firmness, has persuaded De Gaulle to recede from these untenable positions. As concerns a NATO triumvirate, the President pointedly remarked that all NATO nations are equals.

While we await clarification of these issues, we do not have to wait to sum up the President's mission to Europe as far more successful than anyone had anticipated.

I hope he enjoys his rest in Scotland, and that the American people will give him a big welcome when he comes home. He has earned both.

The Passport Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. BARR. Mr. Speaker, it is my honest opinion that the passport bill, which the Congress passed on Tuesday, the 8th of September, was not as simple and harmless as it seemed. I voted "no" on this bill, and I am inserting two editorials from the Indianapolis Star of June 28, 1958, and December 10, 1958, setting forth some of the arguments against this type of legislation:

[From the Indianapolis (Ind.) Star, June 28, 1958]

WIDE-OPEN EXIT

The State Department has decided to stop trying to prevent American citizens from leaving America and coming back. Henceforth passport applicants will no longer be required to answer form questions about Communist Party membership. The change represents a State Department decision to go all the way in conforming to a recent Supreme Court opinion.

It is too bad the passport matter had to get fouled up with the Communist issue. It is too bad the State Department had to wait for prodding by the Supreme Court. The principle involved should not be confused with communism or with the Court's past tendency to twist law and logic to favor Communists. By the law of averages, the Court has to be right sometimes, and this is one of the times. The State Department is wise to surrender.

There never was any legislative authority by which the Federal Government could restrict the travel of American citizens for political reasons except under wartime conditions. Neither the State Department nor any other branch of Government has ever had the right to make of the United States a jail which some of its citizens cannot leave. A citizen who advocates violent overthrow of the Government can and should be prosecuted and imprisoned under antisubversive laws. That is the proper punishment for his guilt. The denial of his freedom to travel when he has not been legally detained is pure oppression.

The State Department's misuse of its passport functions has been based on the dangerous theory that the Government has the right to use private individuals as tools of diplomacy. The idea has been that the movement of individuals can be restricted and regulated in line with what officials conceive to be the national interest. There has never been a more subversive idea accepted on high levels. The American Government exists to protect the freedom of the individual, including his freedom to refuse to take an active hand in Government policies. It does not exist to shanghai the individual into becoming an active agent of policies with which he may disagree.

Without hindrance by his own Government, an American who is not under criminal detention should be free to go anywhere in

the world where he will be accepted. If other governments want to keep us out of their countries, that is their privilege, as it is ours to keep their people out of the United States. But it is not the right of our own public servants to tell us as individuals where we can and cannot go. If we want to risk our necks in dangerous places, they can and should disclaim responsibility, but they have no right to keep us from going.

Now that the State Department has admitted it has not the power to withhold passports for reasons of belief or association, it should not wait for a Court decree to take one other vital step. It should immediately abandon the policy of trying to keep Americans who do have passports from visiting blacklisted countries. If an American wants to visit Communist China, or any other place on the face of the earth, and is willing to do so at his own risk, the American Government should not be able to deny him the right.

An Iron Curtain is possible only where a government exercises complete authority over the movement of its citizens. We don't need that kind of government here, and we don't want it.

[From the Indianapolis (Ind.) Star, Dec. 10, 1958]

LET'S KEEP THIS FREEDOM

It is gratifying to find the State Department alarmed about the activities of American Communists and Communist supporters. But it would be wrong to give the Department the power to deny passports to such persons. It is questionable whether the denial of passports is a very useful tool against the Communists. The exercise of such power in the past has done great violence to the American ideal of freedom, and it would do the same again.

During 6 years previous to last June, when the State Department was operating under a power to deny passports which it had simply assumed for itself by regulation, by its own count passports were "tentatively or finally" denied to "more than 300 persons" because of records indicating that they were supporters of the Communist movement. A few of these cases involved persons of prominence, and in these cases the Department succeeded in causing a considerable uproar. The prominent ones stayed home if they didn't get their passports. But the traffic in forged papers is too widespread and too well known to admit of any supposition that persons whose travel was important to the Communists were kept at home by denial of bona fide passports.

Roderic L. O'Connor, administrator of the Bureau of Security and Consular Affairs, said in a recent address that "we can very seriously hinder the effective operation of the Communist Party here and abroad by making it difficult for the supporters of that party to depart from the United States." On the basis of the experience of the 6 years during which the Department exercised the power, that statement requires a lot of substantiating.

Unquestionably, however, the Department could very seriously hinder the activities of persons who are essentially law abiding if it held the power to deny people of a particular philosophic viewpoint the right to depart legally from the United States. If the precedent is established now to forbid the departure of supporters of communism, tomorrow the precedent could be used to forbid the departure of the supporters of free trade, or prohibition, or anything else which the makers of the regulations might regard as a dangerous philosophy.

The fact that control of travel can be used to hinder the development or operation of a political or philosophical idea is the very reason that the right of the individual to move about is basic to human freedom. The right of the American citizen to leave the country and go wherever in the world he wants—as far as American Government control is concerned—is just as vital as the right to move about inside the country. When the Government begins to close the travel gates to persons with "dangerous" ideas, the Government takes control of the communication of ideas.

Freedom is not protected against the Communists by adopting the tactics of the Communists. Making it hard for the supporters of other systems to leave the country is one of the basic methods of the Communists. After all the argument Americans individually and the United States officially have made against the policy of the Iron Curtain, it would ill befit the United States to take up that policy.

It is true that Communists and their supporters in America are dangerous. Stronger laws are indeed needed to control their conspiracies against the security of America. The teeth should be put back in the Smith Act and the power of the States to defend themselves against sedition should be restored. If security requires still further restriction of Communists, it should be done directly and not through such devious measures as travel regulations which would set the precedent for hampering the freedom of all Americans.

Acquisition of Real Property by the Federal Government

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, September 11, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter of transmittal and resolution adopted by the Board of County Commissioners, Renville County, N. Dak., relating to the acquisition of real property by the Federal Government.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

RENVILLE COUNTY, N. DAK.,
September 2, 1959.

The Honorable WILLIAM LANGER,
U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR LANGER: Upon direction of the Board of County Commissioners of Renville County, N. Dak., I am enclosing herewith a copy of their resolution with regard to S. 910 and H.R. 5731 and H.R. 6073. You are probably aware that Renville County has lost tens of thousands of acres from the tax lists as a result of the Upper Souris Game Refuge, which loss has been a heavy burden upon the remaining taxable territory. It appears that if the legislation above referred to is passed, that considerable benefit could be derived by this county and a number of other counties in the same situation.

We hope that you will see fit to give this proposed legislation your full support.

Very truly yours,

ESTHER HOCHSPRUNG,
County Auditor.

EXTRACT FROM THE MINUTES OF THE PROCEEDINGS OF THE BOARD OF COUNTY COMMISSIONERS OF RENVILLE COUNTY, N. DAK., ON SEPTEMBER 1, 1959

Commissioner Vendsel introduced the following resolution and moved its adoption:

"Whereas Renville County and other municipalities and governmental jurisdictions have been in the past and are at present severely affected by the loss of tax revenue resulting from the acquisition of real property by the Federal Government; and

"Whereas there have been introduced in Congress S. 910 and H.R. 5731 and H.R. 6073 which, if adopted, will assist in alleviating the situation referred to: be it therefore

"*Resolved*, That the Board of County Commissioners of Renville County go on record as supporting the said proposed legislation and of urging the Senators and Representatives from the State of North Dakota to do all in their power to bring about the passage of said legislation; be it further

"*Resolved*, That the county auditor be directed to send to Hon. WILLIAM LANGER, Hon. MILTON R. YOUNG, Hon. DON SHORT, and Hon. QUENTIN R. BURDICK copies of this resolution.

"Upon vote, all commissioners voted "Aye" and none voted "Nay", and the resolution was adopted.

"Dated at Mohall, N. Dak., this 1st day of September 1959."

ESTHER HOCHSPRUNG,
County Auditor.

An Editor's Views of Current Developments in Central America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following series of four articles written by Mr. Anthony Harrigan, associate editor, the News and Courier, Charleston, S.C., during his recent trip to Central America and the Caribbean area. I found Mr. Harrigan's articles extremely interesting and highly informative and I commend them to the attention of my colleagues and others interested in the important developments taking place in that part of the world:

OUTLOOK IS GLOOMY IN CASTRO'S CUBA

(By Anthony Harrigan)

HAVANA, CUBA.—Castro's bearded, long-haired soldiers in olive green uniforms stand guard with loaded submachine guns outside the Presidential Palace. They are stationed along the Avenida de las Misiones, in front of this White House of Cuba. They are in the park at the rear of the building, walking among the baby carriages and the lovers. Every few minutes a truck or jeep, loaded with soldiers, dashes along one of the nearby streets.

Castro's forces are arresting "counter-revolutionaries." The estimates of numbers vary by the hour.

GOVERNMENT JUMPY

The government is jumpy. The city is full of rumors of Batista-Dominican landings on this island.

Fidel Castro is an elusive figure moving rapidly from place to place. He carries the Cuban government in his hat.

"Castro is Cuba," a veteran Havana journalist told me. "He decides everything."

This able American writer, who knows Cuba inside out, stressed the chaotic nature of the Castro regime, its leftist character,

and its unrealistic approach to Cuba's problems.

"Castro," I was told, "is not a Communist. But he is doing everything the Communists want."

My informant told me that a leading Communist editor had made this statement in private conversation. The so-called agrarian reform, which is the principal program of the revolutionary government, has long been an objective of Communists in Cuba.

"They will destroy the sugar industry," my journalist acquaintance said. "They haven't the capital or the ability to operate it.

NO MANAGEMENT

"As for their plan to create cooperatives, no organization in Cuba could manage such an enterprise.

"They actually want to destroy the sugar industry. They have the idea they can sell vegetables and cattle to the United States. They don't understand that Cuban beef is marked fourth class in the United States and that the last thing Americans need is more agricultural commodities."

My informant held out no hope that a moderate element exists within the Castro government.

"Recently," this journalist told me, "Castro appeared before a group of newspapermen. He said: 'I am appointing my brother Raul commander in chief of the armed forces, and if I die, he will become head of the government. If you think I am radical, then you don't know my little brother Raul.' "

This writer said there wasn't any evidence as to whether Raul Castro is or is not a Communist. "But for years," said my source, "he has been soaking up leftist and communist ideas."

What concerns this American journalist is that Communists are filing all the second echelon posts in the Castro government.

Cited as an example was the education ministry. Though Armando Hart, 23-year-old education minister, is not regarded as a Red, the entire staff charged with the preparation of new textbooks for Cuban schools consists of persons with ultra-leftist and Communist backgrounds.

I was told that Castro can't understand that Cuba must stay in the good graces of the United States in order to survive economically. Cuba depends on sugar for its cash, and the world price of sugar is below the cost of producing it in Cuba. The only part of the sugar crop that Cuba profits from is that part which is sold to the United States at the special high price which the United States is willing to pay.

Though Castro professes not to understand why Americans don't like his regime, he continually whips up anti-Americanism. He attempts to promote new trade ties for Cuba. In recent months, the Japanese have been dickering with the revolutionary government. But as my source explained, these exploratory efforts aren't likely to get anywhere. The Japanese want to sell textiles to Cuba, and inasmuch as Cuba has textile mills, protests are made every time the government talks textiles with the Japanese.

As to the future of Cuba under Castro, my informant was pessimistic. The word that I received was that things are likely to go from bad to worse.

"Castro is destroying the upper middle class," I was told.

And for a nation that hopes to prosper, such an action is a virtual guarantee of continuing poverty.

THE HONDURAN ECONOMY

(By Anthony Harrigan)

TEGUCIGALPA, HONDURAS.—Fires blazed on eroded hilltops as our plane neared the capital. Oxen are pulling carts in the city streets. Students in crumpled gray cloth suits lounge outside a rundown university building. These are signs and symbols of Honduras, a poverty-ridden country.

Honduras is so poor that even the police, a privileged class in most Central American countries, wear shabby uniforms.

The national budget of Honduras is $42.5 million a year. Money is tight. When President Villeda Morales took office 2 years ago, there was only about $40,000 in the national treasury. The government finds itself in a jam when it needs an extra $10,000 for specific purpose.

This mushroom-shaped country the size of Tennessee is the second largest of the six Central American Republics. It has a population of 1.8 million.

A few additional facts:

At last report, Honduras had only 24 miles of paved highway.

The only railroad facilities are feeder lines for banana divisions operated by the United Fruit Co. and the Standard Fruit Co. These are on the north coast far from the capital city.

Almost 90 percent of Honduras is mountainous.

Honduras has less electric power than any country except Haiti.

The country lacks the rain needed for good agricultural production. U.S. agriculturists do not believe that food crops will flourish on land that receives less than 20 inches of rain a year. The annual rainfall in much of Honduras is only 17 inches.

Only on the northern coast, where there is rain and bananas can be grown for export, is there a truly productive agricultural enterprise. The United Fruit Co.'s banana division there, with its piers and railroad facilities, represents one of the few solid properties in the country. Taxes paid by the United Fruit Co. are the mainstay of Honduras. Without these taxes, the country would be in a desperate financial condition.

The country's assets, in addition to the United Fruit Co. banana lands—which are the result of heavy investment by U.S. citizens—include a pleasant climate and some of the most superb mountain scenery in the world.

Tourist trade is negligible, however. Though good air service exists, few American travelers enter this country. The tourist trade is one that this poor country should cultivate but most probably cannot afford to promote in expensive U.S. news media.

American travelers who ask only for natural beauty, and not for luxurious accommodations offered in some international hotels, would enjoy this magnificient country. Not only are the mountains and valleys spectacular, but here are buildings of interest to students of history and architecture. The Cathedral of St. Michael the Archangel, in downtown Tegucigalpa, is one of the finest Spanish churches I have seen on this journey.

In the 138 years of its existence, Honduras has had 138 revolutions. An unsuccessful revolt took place only recently. But Americans should not make too much of such political upsets. They aren't much more than changes of the guard—affairs involving small forces, and usually resulting in few major changes.

One has to remember that the best business in Honduras is government. For the able people of this country, the Government is the only source of income and influence. Business enterprises are virtually nonexistent.

I am told that the present Chief Executive is a good man but unable to effect any real changes in this country because of a lack of funds.

The United States puts roughly $1.5 million a year into Honduras through a variety of agencies. The money is spent on health, education, and agricultural projects.

Since 1947, the United States has been spending an average of $1 million a year.

Private investment, except for the big operations of the fruit companies, is negligible. Bulk Carriers, Inc., and the Crown Zellerbach Paper Co., have under consideration a $40 million pulpwood plant. Private Honduran investment is modest.

In the city of Tegucigalpa, such prosperity as exists is reported to stem from the expenditures of the sizable North American colony. Hondurans rent homes to North Americans for as much as $250 a month. Many of these private homes are lovely indeed. They are built of white and pink stone quarried in the neighborhood. The majority of streets in front of houses in new sections—Tegucigalpa's suburbia—are unpaved.

The basic problem in Honduras is food. There simply isn't enough of it to go round. Available supplies are sold at exorbitant prices. A head of lettuce can be sold in Tegucigalpa for $1. Corn sells for two and one-half times the price in the United States. A jar of strawberry jam costs 90 cents.

While food is the greatest need of this country, the news here is that the U.S. Government is about to embark on a major new health campaign in Latin America. If this is so, it can only mean greater suffering in a country such as this. Why? Because improved checks on malaria and better water supplies will mean a lowering of the death rate and more mouths to feed. Better health will simply upset the balance of nature in Honduras and similarly situated Caribbean countries.

It is impossible to openly oppose better health and longer life, but the end result of humanitarian measures is increased suffering.

Of pressing importance is the production of more foodstuffs—field crops such as corn, rice, and beans. These are the crops that provide the greatest amount of nourishment for the greatest number of people. Later, when there is enough basic food to go around, the country can concentrate on cattle and vegetables.

But agricultural production is slow to increase. Much of the land is worthless for farming. Skilled farmers are few. An especially serious problem is the credit necessary for a farmer to prepare new lands and carry his operation through the first year.

Money is difficult to borrow in Honduras. Interest rates range from 8 percent a year to 3.5 percent a month. There is a national central bank in Honduras and one private bank, plus money lenders. The London and Montreal Bank will commence operations in October. As private banking facilities become more numerous, interest rates may be competitive.

One should not imagine that this is a city without people of affluence. There is money here. Profits are high in many Honduran enterprises. But people with money are likely to stash it away in banks in the United States and in Switzerland. They fear political turmoil and confiscation.

What are U.S. objectives in Honduras? That's the question Americans must consider carefully.

For one thing, U.S. citizens and companies have a big stake in this country. Thus our Government should do whatever is reasonable to protect U.S. investment.

The United States has a big stake in the status quo in that it has no desire to see a Communist regime installed in any Central American country. Red infection might spread throughout the Americas and the Soviets might seek to establish satellites and military installations in this hemisphere.

Then there is the attitude that the United States should help a neighboring republic which lives on the brink of chaos.

Whether U.S. aid is sufficient to help Honduras solve its tremendous problems, this writer can't say. But if it prevents the economic collapse which might be a prelude to a Communist regime, it is money well spent. After all, the annual bill for aid to Honduras comes to less than half the cost of a single ballistic missile.

LATINS LOOK TO UNITED STATES FOR LEADERSHIP

(By Anthony Harrigan)

GUATEMALA CITY.—Five years ago a U.S. Ambassador, the late John E. Peurifoy of South Carolina, walked the streets of this city with an automatic pistol tucked under his belt. The Colleton County man spoke openly of what sort of leaders the United States did or did not want in Guatemala. Though Ambassador Peurifoy's personal role in the Guatemalan liberation movement of 1954 is still not wholly clear, the fact is that the pro-Communist regime of Jacobo Arbenz was ousted from power.

Today the role of the United States in Guatemala is a quiet one. The administration of President Miguel Ydigoras Fuentes is friendly to the United States. Nevertheless, the U.S. Embassy and information service operation here is one of the biggest in Latin America. Guatemala bears close watching, as indicated by the fact that a leftwinger, Dr. Luis F. Galich Lopez, recently was elected mayor of Guatemala City.

Potential danger stems from the attitude of many university students. The present generation of students received primary education during the period when the Reds controlled this country. Many students had their thinking colored by doctrines they heard during their formative years.

A complicating factor, I have been told, is that many Guatemalans associate the early days of the Arbenz regime with national reform. It was not until the 1940's after the ouster of a rightwing dictatorship, that Guatemala received its first social legislation designed to help the poor.

While the United States is properly alarmed about Communist penetration in Central America, citizens of these countries are not greatly disturbed.

"The Latin attitude," I was told, "is doubt that the Communist menace is serious but that if it is, then the United States will take care of it."

The importance to the Communists of having a Red regime in Latin America cannot be overestimated. When Communists controlled Guatemala in the early 1950's, world communism could say to people in Europe and Asia: "See, the United States is so weak it cannot keep up out of its own backyard."

The principal U.S. diplomatic device in this and other Central American countries is economic aid, both direct and indirect. The United States has spent about $80 million in Guatemala since the Red regime was overthrown in 1954.

In addition, the Government knows that inasmuch as the United States is the principal supplier of funds to the World Bank, it has a big say in how loans are made. The U.S. Ambassador is influential because his views may determine how much aid is available.

As in other Central American countries, poverty is a friend of leftism and an enemy of the United States. For a nation to respond to the policies of a capitalist country there must be sympathy for for capitalism and expectation of sharing in its fruits. So long as Guatemala has great poverty, the danger of Communist political exploitation is present.

While Guatemala has made great strides in recent years, it also has much poverty to overcome.

Guatemala City has many blocks of beautiful homes that represent a blend of international architectural styles and the Indian traditions of this country. Streets, public buildings, hotel and airport facilities are excellent. But Indian women with babies on their backs sleep in the entranceways of stores. Many people seem to have no homes but the sidewalks.

This is a city that is making real progress, but it also is a city of conspicuous misery.

Everywhere one travels in Central America one sees the misery of the present and the promise of the future. Certainly Guatemala, a beautiful land of lakes, mountains and ancient ruins, will draw increasing numbers of American tourists in the years ahead.

In this and other Central American countries the Germans, Japanese, and British are alert to trade opportunities. The British, for example, dominate tractor sales in this part of the world.

These Latin countries abound in opportunities for shrewd investors and smart traders. They need everything that an industrial economy produces. If U.S. citizens are awake to the opportunities, they will arrange credits so that they get the business.

With some notable exceptions, U.S. business seems to be slow to grasp the opportunities of selling to the middle class market in Middle America. This is unfortunate for the United States, inasmuch as history tells us that trade ties lead to political ties. If we fail to develop, we may lose the other. One day soon the Communist world may enter the trade war in this region.

Everywhere one travels in Central America, one realizes the extent to which people look to the United States. They seem not to look so much for dollars as for U.S. leadership.

Americans at home don't begin to appreciate their Nation's farflung power and influence. The people of Central America expect us to deploy our national strength in various ways. They often overestimate the alertness of the United States to its own needs, imagining that we are bolder in foreign policy than we actually are.

Clearly, the United States has a great future in Middle America if it wakes to its opportunities. We should realize, however, that each country is different and requires different handling.

It is important to understand that these countries are not ratholes for foreign aid. U.S. citizens and companies can and should do more business in these countries. One North American corporation, the United Fruit Co., has been doing busines in these lands for more than half a century. Though political conditions have altered radically and may change even more in the years ahead, this company believes it can continue to do business on a profitable basis.

The United Fruit Co. has a flexibility of approach that stands it in good stead. The U.S. public should recognize that the changing world of Central America, which is characterized by intense nationalism, requires this sort of flexibility.

The United States will remain strong and influential in this hemisphere if it learns to be flexible in bringing its power to bear; if it assigns able young businessmen and diplomats, and if it rediscovers the business drive that made fortunes for Yankee traders 100 years ago.

A VIEW OF COSTA RICA

(By Anthony Harrigan)

SAN JOSE, COSTA RICA.—The most overworked description of this country is that Costa Rica is the Switzerland of Central America.

But that's the right description. I shall use it.

This is a country, which as seen from San Jose, the capital city, high in the mountains, is a land of republican simplicity, dignity, and decency. The President, Mario Echandi, drives his own automobile to work. The presidential palace is an unpretentious structure. There are more teachers in Costa Rica than policemen—a remarkable thing in Central America. Equally remarkable to the visitor is the evident unwillingness of Costa Rican administrations to build huge Government palaces at the expense of the people. National ministries are housed in a variety of modest structures, which though freshly painted and kept in good repair, would not be accepted by empire-building bureaucrats in many a U.S. county seat.

Another sign of the Costa Rican way of life are the schoolchildren in simple blue and white uniforms. And most extraordinary of all, the young girls—the teenagers in school attire—don't wear lipstick or cosmetics or in any way attempt to appear as though they were 25 or 30.

Costa Rica is a good Catholic country. A huge throng of worshipers filled the San Jose cathedral during midmorning mass Sunday. It was a cross section of humanity in this city—the young and the old and the well dressed and the shabby. They were in the cathedral again early Monday morning—men in overalls and torn shirts and businessmen in expensive suits—fashionably dressed women and old crones in drab black dresses, moving on their knees down the long aisle toward the high altar.

This is not a spectacular city like Havana, but one well worth raving about, for it offers the kind of life to which all Central American countries should aspire.

To understand Costa Rica, one has to know that since Spanish times it has had many small landowners and few holders of vast estates. It is more of a white nation than any country in Central America, having a large population of pure Spanish origin. The country's original Indian population received the same treatment as the Indians in the United States. Furthermore, Costa Rica welcomed large numbers of European immigrants in the last century.

I talked today with the descendant of one of the immigrants who came from Germany in the 1800's. He is Hubert Federspiel, one of San Jose's leading young businessmen. Though he bears a German name, he is completely a Costa Rican in thought and manner.

Mr. Federspiel permitted me to tour the magnificient department store and printing plant that he owns in downtown San Jose. Carlos Federspiel & Co. which is the name of the establishment opened my eyes to the advanced state of Costa Rican business enterprise.

Elsewhere in this part of the world many dry goods stores seem to be 30 years behind the times, with little understanding of modern packaging and sales techniques. But Federspiel's could teach most small city U.S. enterprises many a lesson.

The accounting department at Federspiel's has the most modern equipment and sales and credit data systems. Management receives a daily inventory report on every item in the store. The lines of radios, TV, tape recorders, typewriters, etc., offered for sale,

are as fine as anything in U.S. communities. The book store which the company operates has everything from the complete works of Descartes to cut-out books for children. The company has a lithographing shop that turns out labels for Costa Rica beer, the jackets for all the cigarettes made in San Jose, Petty-style calendars in full color, plus the national lottery tickets. The print shop is equipped with the latest German presses and paper cutting machines. The company's canteen offers better facilities for a pleasant coffee break than most U.S. business places. The employes have the use of real china, not paper cups. And the entire sales and manufacturing operation is under one roof, with delivery assured anywhere in Costa Rica.

Federspiel's is an example of the best of Latin business.

What about U.S. business? According to Mr. Federspiel who learned merchandising in Chicago, U.S. businessmen are lagging behind the Europeans and the Japanese. Though his company buys quantities of U.S.-made goods, the Germans and other foreign business groups are making the big gains in the expanding Costa Rican market.

These national groups, according to Mr. Federspiel, don't mind spending time to sell their goods. They come into the city, learn the wants, needs and capabilities of a store, and carefully and graciously work with the store management to get a sales order that will be satisfactory. The U.S. salesman reportedly rushes in and offers what he has on a take-it-or-leave-it basis, ignoring some of the little polite usages here which mean a lot to Latins. The abundance here of European and Japanese products (the latter have sold a great many jeep-like vehicles in this country) indicates that U.S. companies need to study their sales operations in Latin America. They will have to become more competitive if they don't want to lose the growing middle class market of middle America.

Though this country is unique in Central America, it is not without problems. The Communists are at work here as elsewhere in the world. Legally banned, they nevertheless issue a newspaper that whoops it up for the Soviet Union and Cuba's Fidel Castro. The country has an unfavorable balance of trade, and must increase its exports.

Socialism is a problem in this country. Certain existing laws hamper economic growth. At the present time, for instance, liberals in the national legislature are pushing a pay plan which would require employers to pay their workers an extra month's salary as a bonus.

But there are conservative Costa Ricans who are fighting this and other schemes which would slow the country's progress.

I talked this afternoon with Guido Fernandez, an able, articulate young businessman, who is the executive secretary of ANFE, the national association for economic development.

This is a private group devoted to the advancement and protection of free enterprise in Costa Rica. It wars with socialist-minded officials who want government to run every sort of business. ANFE conducts a vigorous campaign in the Costa Rica press, buttonholes legislators, issues a magazine devoted to free enterprise, and even sponsors free enterprise committees in the national university.

ANFE also is active in bringing new business to the country. Mr. Fernandez was making plans today to hold a luncheon for a plane-load of Baton Rouge, La. businessmen, who have been invited to fly down here and investigate investment opportunities.

Wherever one looks in San Jose, one sees a bright future. This is a politically healthy stable country which is friendly to the United States and whose friendship the United States should value highly.

Overseas Tour by President Eisenhower and Forthcoming Visit of Premier Khrushchev

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. BRIDGES. Mr. President, in a column which appeared in the Boston Sunday Herald of August 30, entitled, "Trip Is Great Adventure," George Minot presents a revealing analysis on the importance of President Eisenhower's overseas tour.

Mr. Minot also touches on the pressing problem of Premier Khrushchev's forthcoming visit to this country and he stresses the need of our displaying to the Soviet Premier our unity of purpose and our dogged determination to protect our way of life. I ask unanimous consent that this penetrating commentary be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIP IS GREAT ADVENTURE

(By George Minot)

President Eisenhower is spending the weekend at the country home of Prime Minister Macmillan outside London. Tomorrow night the two of them will go on British television for what has been characterized as an informal talk. The purpose of it, of course, is to show the world that they stand side by side in combating the common menace.

Apparently the President is having the time of his life on this his greatest adventure. It is the kind of thing he does best. You remember that before the invasion of Europe in wartime our allies and our own generals were split from hither to yon. In those divisions, and in those that followed until the end of the war, it was Eisenhower who soothed the angry, calmed the impatient, prodded the laggards, and—if you pardon a hackneyed term—got the team pulling together.

HOPE, FOREBODING, AND CUROSITY

So it is little wonder the entire world—free and slave—is watching this adventure with a peculiar fixture of hope, foreboding, and curiosity. Its potentialities for good are almost boundless. Possibly it will result in an uneasy peace for years to come. It could have dangerous consequences—even be the forerunner of war. It may lift the world into an ecstasy of hope and confidence. Just as easily it could cast the earth into a slough of despair.

If you have been reading any of the great columnists, you may think that this is a new Eisenhower who is testing his personal diplomacy on our allies and who next month is to receive Premier Khrushchev to these shores. Walter Lippmann, for instance referred to the President as a man who "has for years been throttled down by diffidence, by a lack of confidence in his own political know-how."

That, of course, is nonsense. Lippmann forgets quickly. It was know-how, political as well as military, that produced unity during the war, and, that ended the mess in Korea later. It was Eisenhower's confidence and courage that kept this country on a level keel when all around him cried for crackpot schemes to end the recession.

The New York Times, in a lead editorial, the other day paid tribute to Eisenhower's new leadership and to his determination to do his utmost for peace before leaving office. For heavens sake, what do they think he has been doing the last 6 years?

NEVER A TRIP LIKE THIS ONE

Nobody knows how such myths start, but none is more ridiculous than the one that Secretary Dulles was absolute boss of our foreign policy for years and that the President didn't show much interest or participate fully in great decisions until after Mr. Dulles' death. In private conversations in the last few weeks, Mr. Eisenhower has exhibited considerable surprise and annoyance at this talk of his new leadership.

It is no new Eisenhower who this last week has been conferring with Chancellor Adenauer in Bonn and who will follow up his London meetings with others in Paris. Then, returning to Washington to meet Khrushchev he will prepare to be off again on a return visit to Soviet Russia and then later still for an East-West summit meeting. He may fail in this great mission but if he does the whole world will know that responsibility for the failure rests elsewhere.

In any event, it isn't an exaggeration to say there never has been a trip like the one Eisenhower now is on. Civilized statesmen never have dealt with men like Khrushchev and his predecessors before. It is one thing to meet with power-mad autocrats, and quite another with demons who raise problems not to settle them but to make sure they are not settled, with dedicated zealots who threaten, blackmail, and denounce but who have no idea of honestly negotiating.

DE GAULLE INTERESTED IN FRANCE

It is, of course, too early to say positively that Eisenhower has appeased the uneasy and bitter Adenauer. At least he feels no longer neglected and if he is sure of anything now it is that the President and Secretary Herter are walking the same path as did Mr. Dulles. And he knows, if he didn't know it before, that we never will sell out the people of West Berlin.

DeGaulle also is bitter. He doesn't want to talk about Khrushchev, the Reds, Berlin or much of anything else except France. He wants Eisenhower to persuade the Allies to give France a bigger voice in world councils, help her in Algeria and give her more secrets of the atomic bomb than she has. If Eisenhower resists these demands, DeGaulle is ready to threaten he'll pull out of the NATO alliance.

Eisenhower will have little trouble with DeGaulle, no more than he is having with Macmillan this week end. Our British cousin is willing to go along with us on almost anything as long as he will get some of the credit if it is successful, but none of the blame if it turns out badly. The "German problem" doesn't bother Macmillan very much. Like the French, the British don't care if Germany is divided for years. As long as he gets to a summit meeting Macmillan will be happy.

MUST SEE US AS WE ARE

Home again, the President has another big job. Somehow, he's got to show Khrushchev a people and a country not only happy and free—as he has already said—but a country and a people who are tough and strong, who hate tyrants and tyranny, who loathe what the Communists stand for, who possess a huge arsenal of arms and can turn out implements of war in thousands of plants from the Atlantic to the Pacific—and who will fight—to their last drop if thugs and murderers push them too far.

Khrushchev must not leave these shores without understanding that he and his gang cannot continue to threaten and insult us. He must not get the idea Americans are so wallowing in comforts and so engrossed in

earning good livings, and so satisfied with their schools and hospitals and industrial plants that they stand any amount of pushing around.

He must be made to understand that the rights and liberties of human beings mean more to a free people than their own material possessions, that big business does not dominate us and that we stand firmly behind the President on great issues like Berlin. If he goes home knowing these things his trip will be vastly worthwhile to him and to us. Mr. Eisenhower has no bigger job than to see that he does.

I Didn't Raise My Boy To Be a Babysitter

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. KOWALSKI. Mr. Speaker, I would like to call to the attention of my colleagues a letter I have received from a former officer in the Air Force.

He has some interesting observations to make on the misuse of personnel in the Armed Forces, a field which is now under study by the Manpower Utilization Subcommittee of the House Armed Services Committee.

Here is the letter:

ALBUQUERQUE, N. MEX.,
September 5, 1959.

The Honorable FRANK KOWALSKI,
U.S. Representative from Connecticut, Washington, D.C.

DEAR SIR: For some time I have been reading with profound interest the proceedings of the investigation into the manpower abuses by the military establishments, and I must say that such an investigation appears to be long overdue. The American people should be apprised of the manpower policies being pursued by the Armed Forces, particularly when we are footing the bill of several million dollars per year to provide lackeys and personal servants for the families of the general and flag officers of the services. This is to say nothing of the servants provided some of the lesser lights in the military profession.

Ever since World War II the corps of lackeys and personal servants for officers' families has been growing until it has reached almost astronomical proportions. At the same time the services have been pleading for more people to accomplish their respective missions—a paradox by any manner of reasoning you wish to employ.

An officer of the Armed Forces, regardless of rank, is paid an adequate salary to provide for his needs and I am sure that it was never intended by Congress or the taxpayers that any officer should be provided with a retinue of lackays in addition to his salary. The use of such euphamistic titles as "administrative assistant," "aide to the commanding general," and "orderly" does not extinguish the fact that a man who washes dishes in the home of an officer, baby sits for his wife or daughter, or chauffeurs his family, is performing personal services not intended to be provided by the Government. A civil servant of like responsibility does not enjoy such a ridiculous windfall. (I am sure that your allowances as a Representative do not include this type of authorization.) I have heard some individuals who are opposed to the draft singing the song "I Didn't Raise My Boy To Be a Babysitter."

During my 25 years' service I was always chagrined when I received those TWX's from higher headquarters directing that we screen the records for an aide-de-camp for a certain general. By the time we read the qualifications we usually wound up looking for a Phi Beta Kappa who would be willing to serve as a lackey for a general's family.

I sincerely hope that you and your colleagues will pursue your investigation with the resolution and vigor you have shown in the past and that you will introduce appropriate remedial legislation in the Congress.

Respectfully,

HOWARD W. JESSEE,
Lieutenant Colonel, USAF (Retired).

Why Shouldn't We Honor Santa Fe With a Commemorative Stamp?

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial dated August 17, 1959, which appeared in the New Mexican, published in Santa Fe, N. Mex.:

Santa Fe's request for a special stamp to commemorate its 350th anniversary has been turned down by a Post Office Department screening committee on grounds that the event is of only regional interest.

Evidence to the contrary is beginning to build up. In Sunday's edition, we reprinted an editorial from the Dallas Morning News—one of the biggest and most influential newspapers in Texas—which reflected the interest of our big neighbor to the southeast concerning the committee's ruling.

Below you'll find the opinion of our big neighbor to the north—an editorial entitled "Don't These Guys Read History," from the Denver Post:

"A citizen's committee which makes recommendations to the Postmaster General regarding the issuance of commemorative postage stamps has—believe it or not—turned thumbs down on a request that a special stamp be issued next year in honor of the 350th anniversary of the founding of Santa Fe, N. Mex.

"The reason given for the committee's action was that it is contrary to established policy to issue stamps in celebration of events which are of only local or regional interest.

"Do tell.

"Isn't it a matter of national interest that Santa Fe is the oldest seat of any government in the area now comprising the United States?

"We believe it is—except, perhaps, to a few provincial easterners who think of the Alleghanies as the western border of civilization.

"Isn't it a matter of national interest that Santa Fe has the oldest public building in the United States—the Palace of Governors, built in 1610, which housed public offices under Spanish, Mexican, Confederate and U.S. jurisdictions?

"We believe it is.

"Isn't it a matter of national interest that Santa Fe was an established capital a decade before the Pilgrims arrived at Plymouth Rock?

"We think so.

"It isn't a matter of national interest that Santa Fe was the terminus of the oldest highway in North America—the Turquoise Trail, the original trade route between Mexico City and New Mexico.

"Of course it is.

"Among special stamps issued by the Post Office Department recently were those commemorating the completion of Mackinac Bridge in Michigan, the 200th anniversary of the establishment of Fort Duquesne and the 50th anniversary of the founding of the Missouri University School of Journalism.

"We have no quarrel with any of these issues but we can't understand why those events should be worthy of special stamps if the founding of Santa Fe is to be brushed off as a 'local event' of no national significance.

"We understand Mayor Leo T. Murphy of Santa Fe is protesting the decision of the citizens' stamp committee to Postmaster General Summerfield, who has authority to overrule the committee. He should do so."

Mr. Speaker, we have been making every effort to convince the Post Office Department of the genuine merit of commemorating the 350th anniversary of Santa Fe, also known as the Royal City of the Holy Faith of St. Francis de Assisi, but we have been unable to gain or to get a sympathetic ear although, as the above editorial points out, the Post Office Department has seen fit to issue commemorative stamps for bridges, schools and I do not know what all, over the past few years.

I think this honorable body knows, Mr. Speaker, of the importance of Santa Fe in the history of this great country, and I do not believe that our request is untoward or unfounded in merit. Certainly, such a stamp would have profound historical significance.

Public Comment on the Interest Ceiling for Federal Bonds—No. 7

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 7 of the series:

[From the Washington (D.C.) Daily News, Sept. 5, 1959]

SAVINGS BOND INTEREST

Obvious intention of Congress to raise the interest rate on E and H savings bonds won't give the Treasury the help it needs in management of the public debt. But it is an act of ordinary justice.

These bonds are bought, in large measure, through the payroll deduction plan. Some buy them out of patriotism—in the belief they should help the Government. And they are a convenient method of regular saving for people of relatively small means.

These people are entitled to a rate of interest which at least is comparable to what they can get at the building and loan.

It is a shame Congress will not take the interest ceiling off of long-term bonds and thus permit the Treasury to bargain properly for the money it needs. But, if the savings bond rate is raised, some good, at least, will come of the Treasury's efforts.

Coast Guard Should Be Placed Under the Department of Commerce

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BOWLES. Mr. Speaker, I have today introduced a bill, H.R. 9214, to transfer the peacetime jurisdiction over the U.S. Coast Guard from the Department of the Treasury to the Department of Commerce.

My colleagues with long memories will recall that this step was originally proposed in 1949 by the Hoover Commission, one of whose members was our distinguished colleague, the gentleman from Ohio [Mr. BROWN].

In making this recommendation in 1949, the Hoover Commission said in part:

The Coast Guard is obviously misplaced in the Treasury Department at the present time. The principal functions of the Coast Guard relate to provision of coastal and interior aids and services to air and water navigation. It regulates and inspects provisions for marine safety. Considering the general nature of the work it performs, its location in the Treasury has no reasonable basis.

From the standpoint of functional efficiency, there can be no argument with the Commission's recommendations. If anything, they are more cogent today than they were 10 years ago.

In the 18th century, placing the Coast Guard under the Treasury seemed like a logical step. At that time, smuggling was a problem to our young country. Every dollar of revenue lost through smuggling operations was a dollar our struggling Nation could ill afford. At that time the Coast Guard was primarily concerned with smuggling, and it therefore seemed reasonable to place it under the Cabinet department chiefly affected by a potential loss of revenue.

This situation no longer holds true, Mr. Speaker. The modern Coast Guard's activities in the fields of aids to navigation and marine safety have no connection whatsoever with the Treasury's principal function of fiscal management. This old and honorable service has, over the years, become a stepchild.

This anachronistic situation has resulted in the continued smothering of the Coast Guard's very real needs for money and manpower. The most striking example is the Coast Guard Academy in New London, Conn. While we hear tales of $90 medicine cabinets and other costly installations elsewhere, the Academy at New London is denied funds to replace rotting docks and causeways which are no longer safe and wartime temporary wooden buildings which the Connecticut State authorities have condemned as unsafe.

I would like to make it plain, Mr. Speaker, that I am in no way criticizing Secretary of the Treasury Anderson for this situation. I have had the greatest personal respect for Mr. Anderson for many years.

The Treasury is preoccupied with its basic functions of fiscal management, however, and rightly so. When this interferes with the legitimate needs of a fine and honorable service like the Coast Guard, I think it is high time that the situation is corrected. Many observers are convinced that the critical financial needs of the Coast Guard would receive more sympathetic consideration in the Department of Commerce. I have introduced H. R. 9214 in order to carry out the recommendations of the Hoover Commission to transfer the Coast Guard with this in mind.

The Best Investment: People

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. TOLL. Mr. Speaker, under permission to extend my remarks, I include a thought-provoking article by Prof. Theodore W. Schultz, of the University of Chicago:

[From the Humanist]

HUMAN WEALTH AND ECONOMIC GROWTH

(By Theodore W. Schultz)

We Americans have traditionally taken it for granted that expansion, growth—particularly economic growth—is in itself a good thing. But recently we have witnessed the beginnings of a debate; it is being argued that we are putting too much emphasis on economic growth in national policy and in our thinking, and that it should be given a lower priority. This essentially is the thesis of a recent book by Professor Galbraith of Harvard, "The Affluent Society." In effect, Dr. Galbraith closes the United States off and says that we have grown fairly rich now, and why then be concerned about more economic growth?

This amounts to a very sophisticated new brand of isolationism with which I would quarrel seriously; and I was glad to see an article by Leon Keyserling (the New Republic, Oct. 27, 1958) in which he took Mr. Galbraith and others very much to task for this limited view. Mr. Keyserling said very effectively—not speaking as an economist, and more effectively than an economist could have said it—that if we were truly aware of our responsibility in the world today, we would see that we are indeed very poor.

That is not to argue that economic growth will necessarily solve all the problems of the world. It cannot give us all the necessary and sufficient conditions for world peace. Nor is rapid economic growth always a comfortable process for the countries involved. Very heavy stresses and strains are implicit in the changes brought by rapid growth in the economy. We in the West do not usually consider this when we urge poor countries to move ahead more rapidly. But it is easier to see at home, for example in American agriculture, where change has been so rapid that the social cost is very high. During just 1 peacetime year, from April 1956 to April 1957, we had 2 million people leaving American agriculture. That was 10 percent of the American farm population. In leaving a sector of the economy they normally had to change both location and job, giving up not only their occupation but their community life as well. When change occurs at such a fantastic rate, the social cost is proportionately high. And we should bear in mind that when rapid growth occurs in poor countries, the same kind of thing happens. This is not to argue against economic growth, but to say that order too has value for the community; that order and change should each have a place in the thinking and experience of communities where change is going on.

What then, we may ask, do people want economic growth for? Do people, as individuals and as communities, want economic growth? Is it important to them, and why? My answer is that economic growth is important on a worldwide scale because there is so much poverty in the world. And we no longer believe that poverty is ordained by God. Men today will not be kept down in poverty because it is a part of the symbolism of a caste or class or religion. Men can, and men will, do something about it.

The example of early industrial development in the West, of Japan later on and Russia more recently, has become common knowledge all over the world. People in the areas we think of as "backward"—Africa, some of the Asian countries, even the Indians in the mountains of Peru—are rapidly becoming informed and aware of these vital matters. They want first-class citizenship and the right to enjoy some of the fruits of living, and not the bare subsistence that has for centuries been their lot.

Economic growth, therefore, is important both for us here in the United States and for others; and it is important for us to comprehend the way in which it is brought about. I believe that we in America do not really understand our own economic growth and how it was achieved. Much of our debate on the subject is in terms of material as against spiritual values; and we think of economics as materialistic, partly because we have identified capital with goods—reproducible goods—and have not seen it in its human context. And this applies to Marxian theory as well as to our own non-Marxian thinking. At the individual level, the way to achieve economic growth can be stated very simply: work, and thrift. You work hard, you are thrifty and save and you accumulate something called capital. It helps to have chosen your birthplace wisely, to be born where there is plenty of oil, and coal, ores, rich farmlands, harbors and rivers; but I suspect that this is less important than has been supposed. Consider the prosperity of landlocked, mountainous Switzerland; or look at what the Puerto Ricans are doing on an island that has almost no resources, or at Mexico which is far from rich in this sense. And there are other examples. The key to economic development, I believe, is in man himself, and not in material resources.

Another road to economic growth has been revolution—followed by a generation or two of enforced accumulation of capital achieved by forced labor of one kind or another along with drastic limits on consumption. The human cost of that road is, of course, appalling. It is shown in Boris Pasternak's

much-discussed novel "Dr. Zhivago," where we see the lives of a few people who try to save their souls from the crushing excesses of a vast revolution. Similar excesses characterized the French revolution, and in some ways also the Mexican revolution. It would be a mistake to see the novel as a purely political document, rather than as an account of what happens to human values during such a revolution. William Faulkner's account of other human values, in "Intruder in the Dust," with its setting in our society, is if anything sharper and more devastating than anything in "Dr. Zhivago."

WHAT CAUSES ECONOMIC GROWTH?

Let us consider economic growth in the United States, and how it came about. Do the increases in man-hours of labor, the total man-hours worked as our population and labor force have grown, plus the increases in the stock of real capital, account for most or all of our own economic growth throughout our history? Several recent studies have been made that bear on this question, and they all tell very much the same story.

Consider the period from 1929 to 1953, which is fairly recent and avoids some of the measurement problems that would be met if we went back further. During this time, the total national real income—and by real income we mean, not money income, but "real things"—of this country a little more than doubled. If we think of it in terms of compound interest, this is an increase of something more than 3 percent per year.

During this period from 1929 to 1953, while total real income doubled, our resources in terms of total man-hours in the labor force increased by 17 percent. At the same time, the total capital stock—that is, the value of material resources, manufacturing plants, etc.—went up 42 percent. If these figures are weighted properly, the total rise in input (man-hours and capital stock combined) is about one third—or, in compound interest terms, an increase of 1.2 percent per year as compared with the 3-percent increase in real income.

The increase in resources, then, would seem to account for about two-fifths of the rise in real income, leaving three-fifths open and to be explained. We added a third to our resources, and ended up with twice the product. Where did the rest come from? What explains the difference? This is the enigma of our history; we do not understand it ourselves, and I think most of the political debate on this issue is quite beside the point. Both the liberal and the conservative views on economic growth are probably wrong.

Businessmen and others who tend to the conservative view would probably argue that if we want more rapid growth in the American economy, we will have to give larger incentives to people to hustle, to work, save, invest, accumulate capital, build new plants, and so on. Lower taxes on these activities might provide these incentives. And conservatives would also argue, no doubt, that when decisions by Government result in waste of resources, these should be corrected. A fair case might be made here in connection with—for example—some of the transportation decisions made by the Interstate Commerce Commission and some of our agricultural policies. If, however, as we have just seen, growth in capital accounts for such a small proportion of total growth, it would seem impossible that even substantially higher incentives to increase capital in reproducible goods would result in a substantially greater increase in total growth. It might be wise to do some of these things on other grounds, but that they alone bring about appreciably more economic growth, can be denied.

On the liberal side, our friends in labor would say that to get rapid growth we should reduce unemployment; that if, instead of running 5 to 6 percent unemployment on the average, we could get this figure down to 3 or even 2 percent as they are doing in some European countries, the problem would be solved. Certainly this would result in a larger product in the beginning; there would be a rise when the extra resources in human effort were allowed to work. But it does not follow that this would lead to a higher rate of growth from then on, and the picture in European countries at present bears this out. Again, I do not mean to argue that a decrease in unemployment is not a desirable thing to achieve; but it cannot by itself bring about economic growth of the explosive kind shown in the unexplained figures just given.

Another liberal argument is that the public sector of the economy should be enlarged, and more resources given to the government to spend in certain ways, in order to achieve this kind of rapid growth. Of course, the list of things that ought to be done on the public account is a very long one: urban renewal in our large cities; enlargement of social security; conservation of natural resources; improving our parks, rivers and harbors; development of water sources, dams, power; building highways, schools and hospitals; and so on. But I doubt that even if each of these were increased by 20 percent, this would lead to appreciably more economic growth. Certainly we are woefully behind in some public facilities in our society today, and for the welfare of our citizens we should be spending more funds on these things. But I do not believe a case has been made for the achievement of economic growth in this way.

THE FORMATION OF HUMAN CAPITAL

What then is the key to economic growth? The hypothesis which follows has become the center of my own work in studying this subject, and I do not wish to state it dogmatically as proven; but it seems to organize the relevant facts of our history and experience better than any other hypothesis I have worked with.

That hypothesis can be stated this way: looking at our own economic growth from 1929 to 1953, or at the rapid growth of Japan or Germany or other countries, one observes what I shall call an underspecification of resources. We have omitted a part of wealth, and my thesis is that this omission is represented by the additions that have been made in the stock of human wealth. This human wealth consists of improvements in human effectiveness arising from the fact that man has developed capacities that result from investments in man. We may feel a bit touchy at having this concept of "capital" taken over from the realm of reproducible, material things, and applied to ourselves as humans. And yet perhaps the greatest capital formation that has been going on in our society is this investment in ourselves. It may be that these investments in ourselves—in our abilities, our talents and capacities, in our stamina, our health, the way we live and what we eat—are the very kinds of capital that make the greatest returns in terms of reward for our efforts.

One aspect of this human wealth, of course, is the great increase in useful knowlege. I first became aware of the importance of this when I tried to understand the rapid growth that has taken place in some parts of Latin America, Mexico, for example, has been an extraordinarily poor country. If anyone had hold me, when I first studied it in 1930, that Mexico could achieve the increase in output, in its total production, that it has achieved since that time, I should have said it would be impossible. Particularly I should have said this about the economic area I knew best, agriculture. If I had been told that Mexico, with its pitifully poor resources, could actually double its output in agriculture—traditionally one of the hardest kinds of output to increase—I should have denied it. But that is what the Mexicans have done. Their gross national product has been rising by 7 or 8 percent a years, but the agricultural product has been rising even faster. In the past 12 years, they have had increase in gross national product of approximately 80 percent—and they have again doubled their output in agriculture. Although less dramatic, yet similar things have been happening in Brazil and in other places, such as Puerto Rico.

These observations prompted a second look at some earlier work in which I had found that in this country, since 1923, for every 25 percent increase in agricultural output, we had increased our input in man-hours and material resources by no more than 3 to 5 percent. It suddenly occurred to me that some of these countries that are moving forward so rapidly now are doing much the same thing. They have found a way to get a greatly increased output without an input that is proportionately that large. This would appear to be a direct contradiction of the doctrine of the 18th century economists, Ricardo and Malthus, who held that for every increase of, say 10 percent in input, a country would get somewhat less than 10 percent growth in output—the classic image of diminishing returns.

In order to discover just what was going on in these areas, my colleagues and I began a series of studies, particularly of Argentina, Mexico, and Brazil. These studies showed that Brazil and Mexico in particular began to develop, in the late twenties, and achieved an increase in agricultural output that was substantially greater than the additional input. Argentina showed a pattern of growth that looked very much like that of Canada and the United States—until Perón came to power; and then it reversed itself. And unfortunately, Argentina has not begun to move forward again even now, 3 years after Perón's downfall.

In another study, I then undertook to try to discover whether these unexplained, omitted, "inputs" could be represented as the return on the investment that has been going into humans. One of these investments is education, in high schools, colleges, and graduate schools in the United States. Comparing figures for two dates, 1920 and 1956, we can identify what the economists would call gross capital formation, in ourselves, for this one kind of investment during that period. In 1920, counting all the costs as you would if you were developing capital in the physical sense, our investment in education in the United States was $1.6 billion. In 1956, this figure had risen to $22.7 billion. This is a much more rapid increase than the value of our physical capital during the same period. In fact, it was 7 percent of gross physical capital in 1920, and in 1956 it was up to 28 percent. And even this is an understatement. In terms of net capital (that is, the life of capital when its depreciation is subtracted), the comparison is even more striking, because during this period the life of human capital has been increasing very substantially. A person invests in himself, and then has a longer period of useful activity in society than he would have had 30 years ago. At the same time, the life of so-called physical capital is getting shorter and shorter. This is one of the notable phenomena of our time.

RETURNS ON INVESTMENT IN KNOWLEDGE

The individual and social returns on our investment in education are suggested in the

results of a recent study in which Morton Zeman of the University of Chicago tried to explain the very large differences in the average earnings of urban workers, Negro and white. Using census figures, Dr. Zeman was able to classify people, white and Negro, by region, city size, age, and education. He found that in the North, comparing Negro and white workers all of whom had had 5 years of school, the average difference in their earnings was small. The average earnings of northern Negroes were slightly less than those of whites of the same educational level.

Of course there are other factors influencing earning power, such as age, city size, and so on; and in the South the picture is still more complex. But the extraordinary thing was that, at any rate in the North, the most important factor determining earning power of both white and Negro workers was the amount of education they had had. This suggests that one of the tragic errors in American history has been our failure to invest in Negroes as citizens as we have invested in whites as citizens. One of the great costs has been the lower productivity in the economy, as well as the individual differences in earnings as revealed by Dr. Zeman.

Other studies, of white and Negro farm families, have yielded similar results. The implication is that our economy pays high rewards for more investment in people, as shown even by this crude measure. The fifth year in school, the sixth year in school, the seventh and eighth and so on through the high schools—with each added year of education, the rewards increase.

The social returns on investment in new useful knowledge are demonstrated in another set of studies. In a project underwritten by the National Science Foundation, we attempted to identify particular pieces of new knowledge that have moved into the economy, and to see what they cost the society and what return they made to the society. One such piece of new knowledge that we were able to isolate and treat in this way was the development of hybrid corn.

The history of hybrid corn development in this country goes back to 1910, with relatively few people involved at first, but with a pyramiding of effort in the later stages. A colleague of mine has just published the results of some very ingenious research; he has found that if we count all of the private and public costs of hybrid corn, everything that has gone into its development—and the records on this are quite complete—a total of $130 million has been invested since 1910. (This figure also allows for compound interest over the time period, but that is a technicality.) Then if we measure all of the product that can be identified and attributed to this particular new piece of useful knowledge, we find that its contribution to the consumer surplus—and it quickly becomes a consumer surplus, which is what made the analysis so difficult and required so much ingenuity—turns out to be no less than $910 million. That is, the return on the $130 million invested is running at 700 percent per year.

Most of the time we consider it an improvement if we can work out an allocation of resources that increases the return from 5 percent to 6 percent. We criticize private or public business if they are sinking funds in 5 percent areas where they could use such resources in activities that produce 6, 7 or 8 percent. My argument is that we should be looking for ways in which human effort and useful knowledge can move us into the range of 50 percent, 100, 200—even 700 percent return. This is the key to the explosion of our own economic well-being.

If my hypothesis is correct, it carries radical implications for our thinking about the rest of the world. It implies that fewer steel mills and other big plants should be built in the underdeveloped countries, and more invested in the people of those countries, as we have invested in ourselves.

As we look at other countries, let me draw a few comparisons. We can now gain new insights on why Great Britain's growth has been appreciably slower than our own during the past 50 years. The British have neglected the education of the middle group in their society. Their elementary education system is much like ours, perhaps better. But at what we call the high school level, before university education begins, the story is of two different worlds. Our high schools, like the elementary schools in both countries, still deal in mass education. At this level we are still investing in people on a mass basis. In Britain, on the contrary, only some 15 to 18 percent of the people go beyond elementary school.

By way of contrast, let us look at Japan, an Asiatic country, highly populated. Something happened in Japan at a very early date, and it began to produce not only industrial products but also much more food under the most adverse circumstances. The agricultural achievements of Japan between 1875 and 1910—before World War I—stand as a miracle. In 1873, Japan moved to universal education, a 6-year program, compulsory all over the country. As a result, they very soon had a literate population; the rural people became more skilled at farming, and a supply of labor was made available to industry that was more sophisticated than even European countries had at that time, and far more so than that of other Asiatic countries. And we should remember that we did not have universal compulsory education for Negroes, or for some whites, in the United States at that time. (Some of my American colleagues, confronted with these facts, have said, "Why, it couldn't have happened. It hadn't happened in the United States yet."

I think I now understand why Japanese tenant farmers could come to our west coast and do better at farming than many American farmers with whom they were competing. It is often said that they were able to save and buy land because they were willing to accept lower standards of living. But that is not the whole story. I have seen some of these farms; I remember one, of 231 acres, not far from Stanford, which had been acquired by a thrifty Japanese tenant who came over in the late twenties. He and his family farmed the land intensively, with little extra labor—about 10 people in all at peak periods—and today he is an American citizen, owns his farm, and his three sons are all graduates of the University of California. When I visited him, he was selling over half a million dollars' product a year from 231 acres. The intricacy of that farming operation makes our agriculture in most of the United States look simple.

A parallel situation would be the postwar recovery of West Germany. When I saw the destruction of the houses, the factories—whole cities in ruins—like everyone else, even the Germans themselves, I missed completely in anticipating the rate of recovery. We simply could not visualize what would happen in growth, in production, during the next decade, or up to the present. And the reason was that we were putting too much emphasis on steel mills, plants, machinery, railroads, and buildings. We didn't see the human capital—and it was the human capital that went to work.

ALONE ON THE HIGH ROAD?

What does all this mean for the U.S. policy? I believe it means that the time has come when we have to understand ourselves, and recognize the predominant role of human capital, human wealth. Somehow we have hit on a productive formula for our own society; and it seems that the Russians also are making large gains on this score. The importance of the role of new physical capital in the Soviet Union is often overstressed. The Russians, like ourselves, have been creating human capital very rapidly; and they have been turning it sharply and directly to economic account—undoubtedly at the expense of values we hold dear in our own free society.

Therefore, as we take a hand and act responsibly in other countries, we should bear in mind that the increase in real earnings, the rise in product that is needed to help the peoples of the world out of their poverty, requires human capital. Whether it be in point 4 technical assistance programs, in activities like the Rockefeller Foundation work in Mexico with hybrid corn, in the work of church groups operating through some 1,600 mission projects in agriculture, education, and health in Latin America and elsewhere, or through private business—the transfer and development of new knowledge, new abilities and capacities are the most important contributions we can make. This is where the underdeveloped countries tend to neglect themselves. This great neglect in India, for example, is men. There are now three countries in Africa that are investing more per capita in human resources in this generation than India is. The great emphasis on human capital in Puerto Rico makes it stand out in comparison with other Latin American countries.

We in the United States stand here on the high road, which is indeed well paved with large stocks of knowledge and many developed abilities. This is our good fortune, part of our heritage and history. But is this road for us alone? What about most of mankind, trudging on the low road marked "poverty," working so hard and with so little knowledge? Shall we leave them there, like the lonely cultivator described in Faulkner's "Intruder in the Dust"? "The man and the mule and the wooden plow, which coupled them furious and solitary, leaning terrifically against nothing."

A Nobleman in His Own Right

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. DELANEY. Mr. Speaker, the Honorable James A. Farley's host of friends will agree wholeheartedly with the sentiments expressed in the following editorial which appeared in the September 5, 1959, issue of the Irish Echo:

A NOBLEMAN IN HIS OWN RIGHT

The appointment of James A. Farley by Governor Rockefeller to the Harness Racing Commission is one that has met with popular approval in New York.

It is felt by all who are familiar with Mr. Farley's public career that no more eligible appointment could have been made by the State's chief executive. For more than a generation now Mr. Farley has demonstrated his capacity to serve the public with the highest qualifications including honesty, integrity and ability. He has measured up to the highest expectations. And it can be taken for granted that he will be an asset to the Harness Racing Commission which will place it among the most respected in public officialdom.

Mr. Farley will be long remembered as Postmaster General of the United States

during F. D. Roosevelt's administration as one who gave to the Federal postal service a most progressive business stride and for his untiring disposition to make that service of full use to the American people. He is, and always has been, an ideal public official.

Public Comment on the Interest Ceiling for Federal Bonds—No. 8

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 8 of the series:

[From the Washington (D.C.) Post and Times Herald, Sept. 7, 1959]

ECONOMIC VIEW

(By Harold B. Dorsey)

LEGISLATORS HURT THOSE THEY PROFESS TO PROTECT

The penalty of financial strigency imposed upon millions of small businesses and individual borrowers was symbolized last week by the increase from 4½ to 5 percent in the interest rates which commercial banks charge their "prime" customers. The interest rate charged for money loaned by the banks to other borrowers will now scale upward from 5 instead of from 4½ percent.

There can be little doubt that the failure of Congress to pass legislation that would permit more flexibility to the Treasury Department in its financial operations is closely associated with the rising interest rates. As prospects for this legislation diminished there seemed to be a corollary increase in interest rates. Then when it was announced that the House Ways and Means Committee had pigeonholed this legislation for the balance of the session, interest rates rose sharply.

On Monday of last week the Treasury Department had to pay the highest interest rate for its 91-day borrowings since the bank holiday in March 1933. And Government bond prices declined again to the lowest levels since the early 1930's. The interest yield for most outstanding Government bonds is now well in excess of the 4¼ percent ceiling which Congress has refused to lift.

Only a few months ago it was considered to be only a fantastic possibility that Congress might force the Treasury Department to borrow all of its money in the short-term and intermediate-term market. Now that the fantasy seems to have become a fact, it is clear that this competition of the Government for short-term credit, in competition with all of the other kinds of borrowers, is causing an extremely tight credit situation.

One might logically ask: Why has there been so much weakness in market prices for longer-term Government bonds? The answer is that the congressional attitude on this subject strongly suggests encouragement for inflation. Few lenders want to lend their money for a long period of time if there is such a clear threat that they are going to be paid back in depreciated dollars.

At any rate, we stand today with some of these financial factors in an unusually critical condition. Furthermore, the arithmetic suggests that this condition is going to get worse between now and the end of the year. The Treasury Department has $8.9 billion of debt maturing in November to refinance and it has to raise several billions of dollars of new cash in the next few months. This substantial demand for credit has been forced into the short-term credit market.

In addition, many businesses have to increase their borrowing between now and the end of the year to carry harvests and to carry their Christmas inventories. More bank credit will be needed after the steel strike has been settled to finance the anticipated snapback in business activity.

When we pile these additional demands for credit on top of the present unusually tight situation, we do not end up with a very pretty picture. Somebody is going to get hurt. In the first place, the implied inability of small-business people to borrow money for their seasonal needs is a painful matter. In addition, millions of people who borrow for their personal needs are being forced to pay higher interest rates—if they can find the credit at any interest rate.

And as if that were not enough damage, all of the rest of us are being penalized by the needlessly higher interest rates which our Government is having to pay for its borrowed money.

It is very difficult to understand why Congress has not been able to recognize these painful effects that are resulting from their amateurish efforts to tamper with the Nation's delicate credit mechanism. Is it possible that those Congressmen who are blocking the legislation to give the Treasury Department more flexibility fail to comprehend the painful effects of their inaction? If they had not been able to anticipate that their inaction would cause the Treasury Department to pay the highest interest rate on its borrowings since the bank holiday 26 years ago, then all they have to do now is look in the newspapers and find that that is the fact. If they had been advised that this kind of thing could not happen, then they should, at leat belatedly, recognize the ignorance of their advisers. The facts that have already been developed prove that ignorance.

The weird part of this whole thing is that the suffering is most serious for the millions of people whom these Congressmen profess to be protecting, while it is helping the profits of the comparatively few for whom numerous Congressmen have frequently expressed criticism—the bankers. Even the latter realize that they will ultimately suffer by the distress that is being imposed on all of the others.

Planning for Equal Opportunity—A Call for Statesmanship

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. AUCHINCLOSS. Mr. Speaker, I am grateful for permission to extend my remarks in the RECORD and include therein an address entitled "Planning for Equal Opportunity—A Call for Statesmanship," given by Mr. Albert F. Watters, vice president of General Foods Corp., White Plains, N.Y., before the National Urban League in Washington on September 10, and I hope that my colleagues will take the opportunity to read this enlightened, intelligent, and forward-looking statement.

The General Foods Corp. has adopted a policy of employee selection and nondiscrimination which has met with the general endorsement of responsible people and organizations, and in his speech Mr. Watters thoroughly explores the problem of employing Negroes from the point of view of the responsibilities of a corporation to its stockholders, the responsibilities of good citizenship, and the responsibilities of the Negro himself. This is a real contribution to this very live problem.

The address follows:

PLANNING FOR EQUAL OPPORTUNITY—A CALL FOR STATESMANSHIP

I am especially happy to be here today. First of all, it is an honor to share the platform at this important conference. And I welcome every opportunity that comes my way to reciprocate for the substantial and continuing help given to me by Julius Thomas, and by others whose warm friendships I have come to value during the 15 years I have had the pleasure of working with the Urban League.

As I understand my assignment on this program, I am to try to give you some points of view which might help to make your work more effective in the quest for equal employment opportunity.

To do this I propose to touch briefly on the history and general climate of your work. I will register some views from my personal experience about how employers regard the risks involved in providing equal employment opportunities, and then go on to how employers view their responsibility to establish and maintain equal employment policies. Finally, I expect to offer some observations about the Urban League itself.

The theme of your conference, "Planning for Equal Opportunity," clearly indicates that you are here to provide for future action. In a search for new ideas, an evaluation of present practices and a look into the past gives us a useful frame of reference. So let's look back over the last 20 years, and note the almost revolutionary developments that have come to pass in the status of the Negro here in the United States.

At once, I believe, we have to look beyond this country for a full understanding of what has come to pass. There is no doubt in my mind that the accelerated pace at which these developments have occurred in America—especially since World War II—is part of a larger, worldwide development.

Since 1945, more than 20 nations of predominantly non-Caucasian peoples have achieved a new status of freedom—the freedom of self-determination, the freedom to do for themselves. This new freedom contains political, social, and philosophical overtones, but in every instance—as clear as a bell—the fundamental note is economics. The struggle for freedom is essentially an insurrection against poverty.

In my view, the same fundamental force motivates the American Negro. The struggle for voting rights, education, and personal development are all directed—and rightly directed—toward equality of economic opportunity. If the American Negro wins economic equality, he will also win a balanced social status. It is to this end that he is struggling. It is in this light that reasonable people must view his struggle, if the ex-

tremes and the complications of emotion and racism are to be averted—or at least be kept in proper perspective.

Although the advances made so far are still far distant from the goals set, they should be a source of considerable satisfaction to you of the Urban League and others who have dedicated themselves to the struggle.

Not too many years ago a Negro child was taught at home and came to believe from personal experience that the best he could look forward to was a small, almost unmeasurable, improvement in his status. He was compelled to believe that the enlargement of his opportunity to live and grow in our American society had to be at a snail's pace. He consoled himself—if it was consolation—with the idea that generations yet unborn might some day become the beneficiaries of his acquiescence, and of his patience.

But thanks, no doubt, to those who were not acquiescent, who were patient only to progress and not to stagnation—see what has happened.

Twenty years ago nonfarm employment of Negroes totaled 4 million. Today approximately 6 million Negroes obtain their living from nonfarm employment.

Since 1940 more than 3 million Negroes have migrated from the South to the greater opportunities of the North, often with help from the Urban League. To the everlasting credit of the Urban League, the movement continues with 1,400 arriving monthly in New York, 2,000 in Chicago, and 1,700 in Los Angeles.

Twenty years ago there were 46,000 Negroes enrolled in institutions of higher learning. Last year more than 100,000 Negroes attended colleges and universities.

Since 1940, earnings of the Negro worker have increased four and one-half times, and the spendable income of the Negro community has increased from $3½ billion to $19¾ billion.

This is progress. It has been made possible not only by the faith, zeal, and courage of Negro leaders and organizations in all parts of the country, but also because reasonable white Americans have sensed the valid and humane purposes involved. And it has been speeded by a widened understanding among thoughtful Americans that a full utilization of America's total manpower is essential to the continuing growth of the United States—and to its strength as a world power.

Both the great depression of the thirties and World War II helped to crystallize this understanding. The need for manpower during World War II, particularly, provided a situation in which difficult local, sectional, and regional points of view were in large part moderated to help the common cause—the winning of the war. And some of the war-induced moderation toward equal opportunity persisted—after the war. Moreover, as a result of favorable wartime experience, many employers began to employ Negro workers in significantly increasing numbers.

The resulting improvement of the economic status of this important group of Americans, and the development of an important total Negro buying power, has produced not only a potent economic impact upon employers (who are also sellers) but has also observably strengthened our economy. This, too, has widened understanding.

There is another side to the picture, of course. The existence of bigots, extremists, and racists of one kind or another, will continue to plague and interfere with the orderly process and reasoned development involved in improving the Negro's lot in the United States. But this condition is a known factor—past, present, and future. It can be dealt with in the years ahead as it has been in the past.

It still remains that whether measured in terms of moral right, social development, education, job opportunity, or by any other yardstick, the requirements of the future, as reflected in the hopes and fears of mankind, compel all thoughtful Americans to extend their thinking far beyond the color of a man's skin.

As we plan for the future, then, it seems to me that we can be motivated by the high sense of purpose which comes from the knowledge that job opportunity and economic progress are almost synonymous. If we accept the thesis that economic progress for the Negro is fundamental to all-over progress for America, we will not be sidetracked or caught up in the emotional snares of what is altogether too loosely called social progress.

Today, more than ever, our national needs call for all the intellect and all the skills of all of our people. As we look to the highly technical requirements of the jobs and products of the future—both in terms of national defense and the Nation's economy—the call can be answered, the demand met, only by greater educational opportunity and higher level educational opportunity for Negroes.

Basically, this also asks for an unprecedented program of scholarships and early vocational guidance for Negro young people, directed toward motivating and equipping them to find employment in industrial and scientific occupatons. Such a program should enable them to compete successfully in the higher employment levels which will become more and more a part of the American job scene during the next 20 years.

Motivational and training processes must also be developed to retrain large numbers of Negro workers who have been or will be dislocated by new production techniques in this era of rapidly developing automation. An important goal of this phase of the overall program must be to reawaken the interest of many Negro workers in further personal development—to inspire them to gain the higher skills necessary to perform jobs at higher technical levels. And it should be clear to all thoughtful Americans that any limitation of interest in development by the Negro often stems from indifferent treatment of the Negro.

A program of new motivational and training processes is fundamental to preparation for upgraded jobs which, in the future, will be provided by American industry. Progress in this area is absolutely essential to the expansion of job security and earning power of the Negro. And, most importantly, such a program is undispensable to the economic and political well-being of our Nation in its relatively new role of leadership in the free world.

Of the many considerations involved in the various lines of progress I've traced out today, one consideration always seems to be present. I can put it in the form of a question. "When it comes to expanding opportunities for the Negro, just what is involved for those who are properly concerned and responsible?" It is true, is it not, that the educator, transport official, retailer, landlord, politician, churchman, businessman—and the Negro leader—all think in terms of the risks when attempting to compose the points of view and forces which bear upon any proposed action?

Let us examine the risks from the point of view of a prospective employer—and we will assume that the employer is a reasonable man with a fundamental desire to provide equal job opportunities in his company. What are the risks he must consider? As he tends to see it, that question breaks down into many parts. For example:

What will be the reactions of present employees if we hire a Negro?

If we employ Negroes, will it create complications with the union?

Can Negroes be taught to do the kind of high quality work we need to have?

Will the Negro be reliable—or are we creating a problem of absenteeism for ourselves?

Will turnover among regular employees increase because of the introduction of a Negro into the work force?

Will we run into consumer and customer problems either nationally or regionally?

After employing a Negro, how do we continue providing equal opportunity within the organization?

If the results are unfavorable, will it be a personal reflection on my capabilities?

Those are some of the questions the employer will ask. Of course all of you recognize them as typical of those which the Urban League must help employers answer or resolve. This is a service the employer expects from you. By assisting him to cope with these risks, the Urban League fulfills an important part of its function. Experience has shown that many such risks vanish into thin air once an intelligent program has been undertaken.

However, although the employer expects help from the Urban League, the responsibility for the adoption and implementation of a corporate policy on equal employment rests squarely upon the employers own shoulders. There are, of course, several reasons why this is so. For example:

1. An employer has a responsibility to the Federal Government to conform to a policy of nondiscrimination in connection with work on Government supply contracts.

2. An employer has a responsibility to observe certain State and municipal laws and regulations regarding nondiscrimination in employment.

3. An employer has a responsibility to the American public in general to conduct his employee relations in such a manner as to contribute in the greatest practical degree to the Nation's economic and social progress.

4. An employer has a responsibility to his stockholders to conduct his employee relations in such a manner as to generate and develop acceptance of his products by all segments of the buying public.

5. An employer has a responsibility to his employees to meet its responsibilities involved in policy statements and union agreements, both in letter and in spirit.

The way in which an employer meets these responsibilities is, of course, up to his management organization—an obligation that runs from the very top to the lowest level of management. As a management representative, I am proud of the record of many fine companies, large and small, whose corporate conscience has greatly contributed to progress in this respect. And I would like to quote the direct, six-step procedure my own company finds effective in implementing our policy of equal opportunity:

1. The president reaffirms that its policy and policy implementation agree in letter and spirit with National, State, and local law and regulations relative to nondiscrimination in employment.

2. The president assigns responsibility for implementing corporate policy to each operating division general manager and corporate staff head.

3. The president affirms to each operating and staff head his desire that each such executive utilize the services and advice of personnel administration in developing employment techniques and practices which will be effective and orderly in anticipating and meeting problems arising out of the integration process.

4. The president requests an annual report from the operating and staff heads, to be submitted and coordinated through personnel administration, reflecting status, progress, and plans with respect to employment of Negroes.

5. Each personnel manager and employment manager will be reminded in writing by his divisional general manager, or appropriate staff head, of his responsibility for carrying out the company's policy of nondiscrimination and for keeping the reputation of the company inviolate in this respect.

6. The approach and method will in all matters be based on qualitative considerations.

Here, with your indulgence, I want to register my deep pride in the fact that the General Foods policy and procedure has been adopted by the Pennsylvania Fair Employment Practice Commission as a guide to other employers. I cannot resist quoting what the commission wrote us:

"After reviewing the materials on employee selection and nondiscrimination," the commission wrote, "we believe they may be of value to us in meetings with other employers in this State who have not as yet developed a clearly defined nondiscrimination policy * * *. We would like permission to use this excellent statement of employment policy and procedure in this State's program on fair employment."

The commission's request, of course, was granted. And I feel justified in quoting the commission's commendation because it gives me the opportunity to suggest that you may also find our statement of policy and procedure useful. I should be happy to provide copies.

Now, if I may, I should like to exercise a friend's privilege and talk about the National Urban League directly—as an organization—and with this preface: that there are few, if any, organizations which cannot benefit from a periodic reevaluation of their own operating objectives and principles.

I will venture to suggest that as an organization through which greater equality of employment opportunity is made available to qualified Negroes, the National Urban League might well benefit from such a self-appraisal. The league might well ask, for example, in considering some of its own principles and practices, such questions as these:

1. In the area of employment and business, can or should the league project itself more as a professional business service organization dealing with legitimate business processes and practices?

2. Can the league benefit by greater use of known tools of management within its own national and local units? By setting of objectives and goals? By evaluation of performance in meeting them?

3. How can the league develop a broader base of financial support?

4. Would a clearer community understanding of the total Negro contributions (monetary and otherwise) to community fund and other communitywide efforts be of value to all concerned?

5. How can the league become more effective in its use of facts and fundamental information in planning to meet objectives?

The same kind of appraisal might also be of value to some of your local urban league groups. It seems to me that each group might well ask itself:

1. Are our professional workers in local situations knowledgeable in detail about our communities? Do we know the moral tone of our communities? Do we know the physical makeup of the community, the population ratio between whites and Negroes, the availability of qualified personnel?

2. Do we know the specific needs and objectives of each company we hope to influence? Do we know the types of products or services, the number of employees, and the kinds of jobs available within each company?

3. How cooperatively do we work with the local U.S. Employment Service and State organizations established to fight job discrimination practices?

4. Do we know our school officials? What are we doing about guidance counseling of Negro high school students?

5. Are we armed with the facts about the buying power of the Negro community in our area?

6. How do we work more effectively with our local community or United Fund efforts?

These are but a few of the questions local Urban League people should be asking themselves, as it seems to me, and no doubt many groups are asking such questions—and finding answers, too. Good for them. Self-appraisal is usually difficult, sometimes painful, but always brings constructive results.

In summary, then, I am suggesting that we apply the art of statesmanship to the problems of equal job opportunity, that we judge our effort to solve them in the broadest and most self-critical terms, and that we will find certain guidelines useful. I have suggested seven.

1. The almost revolutionary struggle of the Negro to improve his status in this country, in which he has now been joined by reasonable men of other races, parallels and, in some respects, is a part of the worldwide effort by underprivileged people and nations to achieve freedom, directed toward self-determination and economic growth.

2. The last 20 years, despite all kinds of problems, interference, prejudice and emotion, have produced measurable and observable progress which has added strength and value to America.

3. Future progress in providing equality of employment opportunity (and perhaps in other aspects of equality) will be stimulated and helped by relating the effort to the achievement of opportunity to economic terms.

4. Management of employer organizations has, by and large, crystallized the character of its responsibility to offer equal employment opportunities in terms of law and the public it serves.

5. Procedures by which equal employment opportunity policies can be implemented have been established—their use continues to be influenced by natural questions as to the various risks which are involved at any point in time.

6. By working with employers in resolving the questions of risk, the Urban League provides an essential, professional, business service.

7. As in any business enterprise, the Urban League at national and local levels can benefit by constructive and critical self-appraisal and perhaps redefinition of some of its own concepts of purpose and processes of operation.

As we continue in our efforts, we can find satisfaction and reward in the knowledge that only in a country such as ours could the struggle we have been discussing take place at all. This is the point that some people at home and many people abroad miss completely—the struggle for equal job opportunity, even its defeats as well as its glorious victories, is a true measure of the meaning of freedom within our concept of democracy.

Public Comment on the Interest Ceiling for Federal Bonds—No. 9

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 9 of the series:

[From the Miami (Fla.) Herald, Aug. 27, 1959]

AND EISENHOWER AT HOME

Before he embarked on his historic mission to Europe, President Eisenhower admonished Congress to get about its business.

In the vigorous language he has been using of late, the President called for a gas tax increase to finance the highway system, an acceptable housing bill, and a boost in Federal bond interest rates, three items vital to his program.

It would seem, however, that the President will not get all he asked. The House holds the key on all three issues and compromises are building up on two.

The Ways and Means Committee, for example, approved a gas tax hike of 1 cent for 22 months, a middle course between the President's request for a straight 1½-cent increase and Speaker RAYBURN's proposal to limit the 1-cent increase to 12 months. It was a hard slap for Mr. SAM who laid his influence on the line and was rebuffed. But the President's position was sustained in principle, since the House previously voted no raise at all. Now the highway program can go forward if this becomes the final action.

The Senate passed and the House Banking Committee has approved a $1.05 billion housing bill. It calls for less than the $1.37 billion measure which the President vetoed as inflationary and extravagant. It still includes provisions for public housing, urban renewal and housing for senior citizens which Mr. Eisenhower found particularly objectionable before.

The issue of the interest rates may turn out to be the most controversial of all. The House Ways and Means Committee first approved the President's request for a jump from 3¼ to 4¼ percent, then voted to suspend action on the bill for the remainder of the session.

Thus the President, in his messages to Congress, stepped into three highly controversial situations.

The effect is that the Democratic majority, greatest since the salad days of the New Deal, is faced with the hard choice of knuckling down to the President or taking the consequences. One consequence is the danger of being tagged as the most ineffective congressional leadership in a long time.

Rabbi Samuel A. Bloom, Spiritual Leader of Amsterdam, N.Y., To Be Honored at Testimonial Dinner on September 20

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. STRATTON. Mr. Speaker, one of the outstanding religious leaders in my district, Rabbi Samuel A. Bloom, spiritual head of Congregation Sons of Israel in Amsterdam, N.Y., will be honored by his many friends at a testimonial dinner to be held in the city of Amsterdam on September 20.

In the 10 years in which Rabbi Bloom has been in Amsterdam, he has made great contributions to better understanding between peoples and has established

himself as a leader in the community, not only from a religious but also from a civic and cultural point of view.

Under leave to extend my remarks, I include an editorial from the Amsterdam Evening Recorder of September 3 commenting on this significant occasion in the city of Amsterdam:

DECADE OF SERVICE

The spirit of a community is said to reflect the character of its civic and religious leaders. If this is true, we in Amsterdam have good reason for pride.

We have many leaders dedicated to the betterment of the community. One of these is Rabbi Samuel A. Bloom, spiritual head of Congregation Sons of Israel, who will be honored by a testimonial dinner on September 20.

In the 10 years he has been in Amsterdam, Rabbi Bloom has done much to create better understanding among the races, creeds, and religions which are represented on the Amsterdam scene.

Through his brotherhood programs, many of us have gained a better understanding of the importance of true tolerance and trust in our fellow men. In addition to his religious activities, Rabbi Bloom has found time to participate in many civic enterprises which have meant much to the community as a whole.

We in Amsterdam are fortunate in having men like Rabbi Bloom to guide us in these troubled times. On this, the anniversary of his first decade of service in Amsterdam, may we add our congratulation accompanied by the wish that he will continue with us for many years to come.

The Presidential Inability Riddle

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced H.R. 871 to provide a method for determining Presidential inability.

In that connection I commend to the attention of our colleagues an article by Edwin L. Gasperini, a member of the New York bar, as it appeared in the New York State Bar Bulletin of July 1959:

THE PRESIDENTIAL INABILITY RIDDLE [1]

(By Edwin L. Gasperini, member of the New York bar)

Clause 5 of section 1 of article II of the Constitution of the United States reads in part as follows:

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said Office, the same shall devolve on the Vice President." [2]

QUESTIONS RAISED BY THE CLAUSE

1. Does the Office of the President, or the powers and duties of the said Office devolve upon the Vice President?

A. In the event of removal, death, or resignation?

B. In the event of inability to discharge the powers and duties of the said Office?

2. Who raises the question of inability, and who makes the determination as to the commencement and termination of inability?

THE LOUISIANA CRISIS AGAIN FOCUSES ATTENTION ON THE PRESIDENTIAL INABILITY RIDDLE

The confused state of affairs in the State of Louisiana in its recent political crisis concerning the inability of the Governor to act, once again emphasizes that on the Presidential level, no clear and permanent solution to the riddle of Presidential inability has been found.[3] A brief description of some of the statements and acts of Louisiana officials, as reported up to the time this article went to print, should highlight the picture of a State operating in complete confusion.

The attorney general of Louisiana gave as his opinion:

"The constitution is very clear that if the Governor is unable to serve for any cause, the Lieutenant Governor acts as Governor ad interim until the disability is removed.

"The question of Long's inability to serve was answered by the court yesterday when it ordered him [Governor Long] to Southeast Louisiana Hospital." [4]

The Louisiana secretary of state disputed the ruling of the attorney general, giving as his view "that some official body, or Mr. Long himself, must declare the Governor's inability to act." [5] Meanwhile, press reports had the Lieutenant Governor moving "cautiously to take over the reins some 16 confusing hours after Gov. Earl K. Long had been dragged, battling and bellowing, to a State mental hospital." [6] He finally declared, however, "I'm Lieutenant Governor," and declined to assume the powers of Governor of Louisiana when Mr. Long was in the State of Louisiana.[7] These acts took place some 3 weeks after Mr. Long entered a mental clinic in Texas. The leaders of the house and senate, and various other officials and doctors, had varying comments to make, but while officials were debating and declining to act, Mr. Long was in and out of mental institutions, and the State of Louisiana was in fact without a Governor.[8]

The manner in which Mr. Long finally effected his release from one of the mental institutions, Southeast Louisiana State Hospital, is also worthy of note. Acting as Governor, and joined by the Lieutenant Governor and president pro tempore of the senate, he simply discharged the superintendent of the Southeast Louisiana State Hospital, and replaced him with another appointee. The latter thereupon declared him "sane" and a free man. A habeas corpus proceeding scheduled to inquire into whether he had been legally committed was dismissed by the judge, since no cause for it remained in view of Mr. Long's having been set free. For good measure, the director of the State department of hospitals and the head of the State police were also discharged, and the Governor muttered threats of other reprisals. Governor Long left the Louisiana courthouse and alternating between sheriffs' cars and Cadillac limousines, eventually arrived at his farm in Winnfield, La., described by him as his "Little Pea Patch." In addition to being a free man, he was exercising the powers of Governor of the State of Louisiana with a vengeance.[9] Press descriptions of the events expressly left open the question of his "sanity" [10] however, and painted a portrait of a press conference at which Governor Long appeared in pajama top with a sheet draped over his legs and a psychiatrist sitting beside him.[11]

One shudders to think of what would occur on a national level, given a similar set of facts, in a time of national or international emergency. Yet for reasons of physical health, mental strain under the stress and burdens of the most wearing office in the world, or other eventualities which might occur in this atomic age, inability to discharge the powers and duties of the office of President by the incumbent, could occur overnight.[12] Yet, the Constitution of the United States is no clearer on the question of inability of the President than is the constitution of Louisiana. Indeed it is less clear.

Section 6, article 5 of the constitution of the State of Louisiana reads:

"In case of vacancy in the office of Governor, the order of succession shall be: first, Lieutenant Governor; second, president pro tempore of the senate; and if there be no Lieutenant Governor or president pro tempore of the senate to fill the vacancy, the powers of the office of Governor shall devolve upon the secretary of state, who shall act as Governor until a president pro tempore of the senate is elected and qualified.

"In case of the inability of the Governor to act as such by reason of his absence from the State or for other cause, all the powers and duties of his office shall devolve upon the officers in the order named above, and such officer shall act as Governor ad interim until the inability be removed."

Thus, it can be seen that under the Louisiana constitution, in case of inability, only the powers and duties of the office of Governor devolve, and not the office itself. Under the U.S. Constitution, it is ambiguous as to whether the powers and duties devolve, or the office itself devolves.

The New York constitution is also quite clear that only the powers and duties devolve, the second sentence of section 5 of article IV reading:

"In case of the impeachment of the Governor, or his removal from office, death, inability to discharge the powers and duties of the office, resignation, or absence from the State, the powers and duties of the office shall devolve upon the Lieutenant Governor for the residue of the term, or until the disability shall cease."

THE HISTORICAL BACKGROUND OF THE PRESIDENTIAL INABILITY RIDDLE

On April 4, 1841, 1 month after his election, William Henry Harrison, the ninth President of the United States, died, worn away and destroyed by the hordes of applicants for public office.[13] Professor Corwin recounts:

"Two days later Tyler took the oath prescribed by the Constitution for the President, but only, as he explained at the time, for 'greater caution,' his own conviction being that he was fully 'qualified to perform the duties and exercise the powers and office of President without any other oath than that which he' had taken as Vice President. In other words, it was clearly Tyler's original belief that he was Vice President acting as President, and not President. But, characteristically, reflection enhanced his self-assurance and stiffened his attitude, and in the 'inaugural address' that he published on April 9 he boldly proclaimed that he had been called to 'the high office of President of this Confederacy,' though by whom called he did not say." [14]

Since President Tyler's time, Messrs. Fillmore, Johnson, Arthur, Theodore Roosevelt, Coolidge, and Truman have followed his precedent and assumed upon the death of the President the office of the President and not just the powers and duties of the office. These seven precedents have solved the riddle on the death of a President, but have raised a question as to whether, in the event of inability of the President, an assumption by the Vice President will be of the powers and duties of the office or, as is the precedent in the case of death, a permanent asumption of the office itself. The view has been advanced that such assumption would, in effect, oust

Footnotes at end of speech.

the President for the remainder of the term. This is one phase of the problem, and the reluctance of Vice Presidents Arthur and Marshall to act during the "inability" of Presidents Garfield and Wilson has been attributed by historians to a fear of such ouster.[15]

WHO RAISES THE QUESTION OF INABILITY AND WHO DETERMINES IT?

The other phase of the riddle is the determination as to the commencement and termination of inability. There are varying views as to where the power to determine inability is vested under the Constitution, i.e., the courts, the Congress, the President, or the Vice President. The problem was first raised in 1787 at the Constitutional Convention by John Dickinson who asked "Who raises the question [of inability] and who determines it?" [16] Delegate Dickinson's colleagues did not answer him, and 172 years later no clear answer has yet been given to Mr. Dickinson's query. The majority of the commentators seem to believe that the Vice President has the power.[17] This view is supported by the rule of law that in contingent grants of power, the one to whom the grant of power is given must decide when the emergency has arisen. However, this interpretation has been vigorously disputed by Martin Taylor, Esq., chairman of the subcommittee on Presidential inability of the association's committee on Federal Constitution.[18]

Various suggestions and solutions have been advanced to solve the riddle of the determination of the commencement and termination of inability, including commissions composed of various officials, distinguished citizens, doctors, Members of the Senate and House of Representatives; the courts; the President; the Vice President; the Vice President and the Cabinet; and assorted combinations of the foregoing. Expressions of the views of eminent jurists, political scientists, public officials, students of government and the Constitution, have been sought and presented to subcommittees of the Senate and the House of Representatives in the period 1956–58. There would appear to be as many views, ideas, and solutions as there could possibly be in any particular area. Extensive study, analysis, and proposed solutions have been made in the past, especially—and almost exclusively—at the height of Presidential illnesses. Thus the bibliography on the subject during the years 1881, 1919–20, and 1956–58, is extensive, and reflects the illnesses of Presidents Garfield, Wilson, and Eisenhower. Yet the ambiguity remains in the Constitution, and no proposed constitutional amendment or legislation to deal with the problem has been adopted by either House of the Congress.

As stated by Congressman EMANUEL CELLER, Chairman of the Committee on the Judiciary of the House of Representatives, "We believe, therefore, the people of this Nation will not tolerate a repetition of the silence and stagnation of past congressional action on this matter. To date providence has been patient and benevolent to our Government in spite of a blatant disregard of its responsibility on the part of the Congress.

"In view of the precarious condition of present world affairs and the tremendous responsibility which world leadership has placed in our hands, it ill behooves us to tempt providence once more by inaction.

"The time to strike at the heart of the problem is here. Clarification must supplant procrastination." [19]

POSSIBLE SOLUTIONS TO THE RIDDLE

President Eisenhower and Vice President NIXON on March 3, 1958, published a memorandum of their understanding of the constitutional role of the Vice President as Acting President during the inability of the President.[20]

The memorandum expressly stated, however, that it was "intended to apply to themselves only." In accordance with the memorandum, the Vice President would serve as Acting President in the event of being informed of inability by the President. In the event of an inability which prevented the President from communicating with the Vice President, the Vice President could make the decision and would serve as Acting President until the inability had ended. Under the memorandum, the President retains sole power and authority to determine when the inability ends, and at that time resumes the full exercise of the powers and duties of the office of President.

The memorandum has received various comments from many sources, mostly favorable. However, it does not provide a permanent solution to the problem,[21] since it is only meant to be binding upon President Eisenhower and Vice President NIXON. It also does not provide for a system of final determination of inability by anyone other than the President, in the event that the President is actually unable to discharge the powers and duties of the office, but believes otherwise.

Two permanent solutions which seem to have evolved from the various hearings, studies, and reports are contained in Senate Joint Resolution 40 (introduced in the 86th Congress on January 29, 1959, by Senator KEFAUVER, for himself and Senators DIRKSEN and HENNINGS),[22] and the Report of the Committee on Federal Constitution of this association dated December 31, 1958.

Under both proposals, clause 5 of section 1 of article II would be amended to make absolutely clear that the Vice President succeeds to the office itself upon the removal, death, or resignation of the President. Both proposals also make it clear that upon the "inability" of the President to discharge the powers and duties of his office, the Vice President succeeds only to the powers and duties as Acting President, and not to the office of President.

With respect to the determination of the commencement and termination of inability, Senate Joint Resolution 40 and the committee's proposal take divergent courses. Senate Joint Resolution 40 spells out a detailed system whereby if the President declares his inability in writing, his powers and duties shall be discharged by the Vice President as Acting President. It authorizes the Vice President, if satisfied that inability exists and the President does not declare inability, with the written approval of the majority of the Cabinet, to assume the discharge of the powers and duties of the office of President as Acting President. The President may recover the powers and duties of the office after a declaration by him that his inability has terminated, unless the Vice President, once again with the approval of a majority of the Cabinet, declares that, in his opinion, the inability has not ended. This determination by the Vice President with Cabinet approval, has itself to be approved within 7 days by a concurrent resolution of two-thirds of the Members present in each House of Congress. If the determination is approved, the powers and duties of the office would be restored to the President thereafter only upon a proclamation by the Acting President that the inability is ended, or a concurrent resolution approved by a majority of the Members present in each House of Congress.

The association's committee on Federal Constitution "does not believe that the amendment should prescribe the methods for determination of the facts relating to inability. It is better constitutional practice to leave that matter to Congress, which under our proposed amendment Congress would be authorized to provide for by legislation." [23] The committee's proposal is accordingly "that the commencement and termination of any inability shall be determined by such method as Congress shall by law provide." [24]

The committee on Federal constitution endorsed as second best Senate Joint Resolution 161 (1958, introduced in 1959 as Senate Joint Resolution 40). The report of the committee on Federal Constitution was approved and adopted by the executive committee of the association on January 29, 1959. The executive committee's supporting resolution called for action in the following whereas clause:

"Whereas in the last 2 years extended hearings have been held by the Judiciary Committees of both the Senate and House, and much thought has been expressed by a wide variety of informed persons and much education accomplished by public discussion, and it is important for the committees of the 86th Congress to come to a conclusion and submit to Congress a solution for this most urgent national problem."

A proposal which would combine Senate Joint Resolution 40 and the proposed constitutional amendment of the committee on Federal Constitution is presently under consideration in legal circles. In essence, this proposal also favors a constitutional amendment making it clear that on removal, death, or resignation the Vice President succeeds to the Office of President, whereas on inability he succeeds only to the powers and duties of the Office of President. It would leave the determination of the commencement and termination of inability to "such method as Congress shall by law provide"—i.e., the proposal of the committee on Federal Constitution. However, it would then go further and endorse the rather detailed method of Senate Joint Resolution 40 for the determination of the commencement and termination of inability as implementing legislation which the Congress should enact.

The proposal would appear to cure by constitutional amendment a problem which legal scholars and constitutional lawyers believe must have its permanent solution in a constitutional amendment. It would, at the same time, approve implementing legislation which appears to be satisfactory and to contain sufficient safeguards to deal with the problem. Yet it would not freeze into the Constitution a detailed system for determination of the commencement and termination of inability, which experience might prove should be modified.

In any event, this latter proposal, Senate Joint Resolution 40, and the proposed constitutional amendment of the committee on Federal Constitution of the association, with the resolution of approval of the executive committee of the association, have sufficient merit to warrant consideration by the appropriate committees of the Congress and action by the Congress.

CONCLUSION

The Presidential inability riddle has been thoroughly canvassed, explored, and analyzed. The time for action has come. The present Congress affords an excellent opportunity for such action. It is a sad commentary that only at times of high crisis is attention given to solving the riddle. The next crisis may come at a time when it will be too late and lead to tragic consequences.

The appropriate committees of the Congress and the Congress should be urged to submit a solution for this most urgent national problem and eliminate the enigma in this area. In the words of Chairman CELLER, "Clarification must supplant procrastination." [25]

---

[1] Riddle, "An enigma propounded for solution by guessing, esp. as a form of play; * * * a riddle commonly involves paradoxical or contradictory statements and is definitely proposed to be guessed." Webster's New International Dictionary, 2d ed., 1958.

[2] The remainder of the clause reads, "and the Congress may by law provide for the case of removal, death, resignation, or in-

ability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected." Congress has, pursuant to this provision, dealt with this dual eventuality in the Presidential Succession Act, 3 U.S.C.A. sec. 19 (June 25, 1948, c. 644, sec 1, 625 Stat. 672).

[2] "Disability" is an inclusive term, which would cover all situations, i.e., removal, death, resignation, or inability to discharge the powers and duties of the Office of President. "Inability" accordingly excludes cases of removal, death, or resignation. Since the principal constitutional enigma today relates to inability, this article has been entitled "The Presidential Inability Riddle."

[12] The prescience of Prof. Arthur E. Sutherland, of the Harvard Law School, in his statement at the hearing before the Special Subcommittee To Study Presidential Disability of the House Committee on the Judiciary, 84th Cong., 2d sess., ser. 20, at 77 (1956) is borne out by the events in Louisiana. Professor Sutherland noted:

"However, no very unusual imagination is required to think of a situation in which a President of the United States might have the misfortune of mental illness. Few of us who have practiced law have not had occasion to see the embarrassment arising when some person, stricken with mental illness, very naturally resents the suggestion, even when made by kind friends, that he is no longer able to carry out his ordinary duties. There is now no procedure to cope with such a situation in our public life. The possibility of such a misfortune, or such disabilities as those of Presidents Garfield and Wilson, occurring in the present posture of world affairs, makes the present question one of obvious importance to the United States."

[20] New York Herald Tribune, March 4, 1958.

[21] Attorney General William P. Rogers, with whom President Eisenhower and Vice President NIXON consulted with respect to the memorandum, has repeatedly urged a constitutional amendment to solve the problem. He has continued to do so subsequent to the date of the memorandum: Department of Justice Press Releases, "Presidential Inability," address at the Yale University Law School Association dinner, Apr. 25, 1958 at New Haven, Conn.; address at the 52d Annual Meeting of the National Association of Attorney Generals, June 11, 1958, Chicago, Ill.; Apr. 6, 1959 letter to the Honorable ESTES KEFAUVER, chairman of the Subcommittee on Constitutional Amendments of the Committee on the Judiciary of the U.S. Senate. In the April 6, 1959 letter, urging congressional approval of S.J. Res. 40, Attorney General Rogers stated, "The need for this amendment to close a serious gap in our constitutional fabric is, I believe, clear. This session of Congress affords the most timely opportunity to discuss the amendment. The proposal can be considered solely on its merits in relation to the constitutional need at this time without becoming intermixed with disconcerting digressions of what effect amendment would have on specific individuals and parties. To summarize, this amendment, I believe, is vitally important; and this is the most favorable opportunity the country will have for several years to give the proposed amendment the objective and thorough consideration it merits. Therefore, I urge the immediate favorable action of your subcommittee and that of the full Judiciary Committee on S.J. Res. 40."

See also, "Presidential Disability: The Constitutional Problem" address by George Cochran Doub, Assistant Attorney General, at the dinner of the Federal Bar Association in honor of the judges of the 10th circuit, at 14–15, May 25, 1959. Denver, Colo., noting that—

"Although the problem arises from a permanent inherent defect in our constitutional system, proposals for its resolution now lie dormant in the Congress under the press of far less significant matters. The bipartisan constitutional amendment (S.J. Res. 40, 86th Cong.; S.J. Res. 161, 85th Cong.) was proposed over a year ago yet the Senate Judiciary Committee and the House Judiciary Committee have taken no action of any kind.

"An informed and responsible public opinion appears needed to secure the action which the interests of the Nation plainly requires."

[22] S.J. Res. 40 is identical to S.J. Res. 161, a bipartisan amendment introduced in the 85th Congress, and reported on favorably by the Subcommittee on Constitutional Amendments of the Senate Judiciary Committee. S.J. Res. 161 was never reported on by the Judiciary Committee. S.J. Res. 40 has been reported out this year by the subcommittee to the Judiciary Committee, but hearings have not as yet been scheduled on it by the Judiciary Committee.

[23] Report of the Committee on Federal Constitution, Dec. 31, 1958. The committee also believes that any proposal must "meet the issue in a manner that would be understood by or acceptable to the American people, a consideration of highest importance, and that the text should be readily understandable not only to lawyers but to laymen as well."

[24] One further difference should be noted. The committee on Federal Constitution's proposed constitutional amendment would provide for the succession to the office of President upon the removal, death, or resignation of both the President and Vice President, whereas S.J. Res. 40 retains the present constitutional language, which allows the Congress to provide by law "for the case of the removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President." There would seem to be no reason to further in this way Tyler's original assumption of the office of President. This point of difference presumably could be worked out if eventual agreement could be reached on other points. The committee on Federal Constitution makes no recommendation with respect to the legislation for the determination of commencement and termination of inability, leaving that matter to Congress.

[25] See note 19, supra.

Public Comment on the Interest Ceiling for Federal Bonds—No. 10

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 10 of the series:

[From the Burlington (Vt.) Free Press, Aug. 27, 1959]

RISING INTEREST RATES NO BOON TO BANKS

President Eisenhower wants the 4¼ percent interest ceiling on long-term Government bonds lifted. The reason is that the Treasury can't sell new bonds at this rate when Federal securities can be had in the market which yield about 4½ percent.

This forces the Government to sell short-term securities on which there is no interest ceiling. For reasons we will not go into, this makes it difficult to manage the debt without contributing to inflation.

Members of Congress who refuse to lift the 4¼ percent ceiling dwell on the "high interest burden." Yesterday, we quoted Secretary of the Treasury Robert B. Anderson to the effect that interest costs are small compared to the increased cost of goods and services caused by inflation.

Rising interest rates are a result of restrictions on the supply of money and credit imposed to prevent inflation.

Another argument used by those who favor "easy money" for the sake of low interest is that high interest benefits the bankers at the expense of the public.

In his copyrighted interview with U.S. News & World Report, Secretary Anderson also debunks this notion.

"That is a common misconception," he said. "It is true that banks earn higher interest rates on their loans * * * that's to be expected when money is scarce relative to the demand for it. But what is often overlooked is that the values of their investments in Government bonds and other securities go down at the same time. If they want to make new loans at the higher interest rates, they are probably forced to sell some of their Government securities at a loss. * * *

"Also, people often overlook the fact that higher interest rates are costly to banks. As interest rates have risen in the past few years, competition has forced banks to pay higher interest rates on time and savings deposits. It is interesting to note that, since 1946, the amount of interest banks received from Government securities has increased about $200 million, but their total interest paid out on customers' time and savings deposits has risen by almost $1 billion."

Before flying to Europe, the President told Congress that it is inviting inflation by re-

fusing to permit a higher interest rate on Government bonds. A flood of letters to Congress has demonstrated that inflation is a key issue. If the pressure is maintained, there will be action.

New Era for Families in Agricultural Area: Ranch-to-Ranch Milk Delivery

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. ANDERSON of Montana. Mr. Speaker, when I was a boy growing up on a Montana homestead farm, we and each of our neighbors kept a few milk cows. Morning and evening, 7 days a week, the chores had to be done and the cows milked. One couldn't leave the farm even for a weekend without arranging for one of the neighbors to come in and "do the chores."

Gradually, farmers sold off their cows to concentrate on their main crop production, and bought their milk and dairy products in town.

Now, the ultimate step has been taken and the milk, cream, butter, cheese, and other dairy products are delivered twice a week right to the farmers' doors.

I realize that for anyone who has never traveled through the rugged country of the great Northwestern States of our Nation, it may be impossible to visualize the vast stretches of land separating neighbor from neighbor, and rendering almost inaccessible such a convenience or service as this which the urban-born and -bred expect and take for granted as a part of their daily living. Even more difficult to imagine is the fact that throughout much of the territory in my district, during many months of the year, our roads are impassable and our people are virtually cut off from contact with the outside world except for the mediums of radio and television.

I, therefore, desire to commend those enterprising individuals, Ralph Hales, manager of the Conrad Creamery at my hometown of Conrad, Mont., and the driver of the creamery truck, Robert Aitken, who have undertaken to deliver their Pride of the West dairy products to some 200 families in the region. Some of the ranches served are as much as 30 miles from any town, and it is frequently several miles between ranches. This involves driving approximately 1,000 miles a week. Remarkably, during the past winter season, they missed only one delivery day because of bad weather. Often such luxuries and conveniences make slow progress in a geographic area like ours, and I feel that these men are to be highly complimented for their introduction of this service which in a short time has come to mean a great deal to the families of our agricultural community.

What Mr. Khrushchev Won't See

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BOLAND. Mr. Speaker, this morning's New York Times contains a fine editorial anent Khrushchev's impending visit to this country. There are many tangible things that he will see on his tour but the Times points up that there are many things he won't see—the ideas that this Nation has been built on.

I commend to the attention of Mr. Khrushchev a reading of the following editorial:

WHAT MR. KHRUSHCHEV WON'T SEE

Mr. Khrushchev will not see the most important things in the United States. He will see our biggest city, our rugged iron and steel center, our horizon-filling grain fields, our impressive Government buildings. He will see our officials, wave to roadside throngs, scan the breadth of our country twice. But he won't see the most important things; they can't be seen, since they are ideas. These are the ideas this country was built upon, which are even more important than the people in the country; these are the ideas of freedom and democratic processes that we try to make clearer and clearer to ourselves, that we pass on to descendants for preservation, that we will always refuse to give up.

These ideas are rejected by Communists as hollow slogans. A number of Americans visiting in Russia during the last few years have reported similar experiences illustrating this. A discussion of political differences with a Russian official or citizen will progress fairly well to a point. Then the American will try to illustrate his position by saying that, though he is an executive of his company, he is of a different political party than, say, the president or chairman of the company. The Russian will regard him with total blankness or will shake his head. An American broadcaster with the Nixon party recently had this experience when he was talking of his network's independence from the Government and freedom to criticize it. The Russian official simply threw up his hands and broke off the conversation.

The fact is that the Russians believe, when the conversation reaches this point, that they are speaking to a man duped by propaganda, and that it is useless to go on. It is not that Russians can't understand the democratic idea—they have a sort of vision of it expressed in their own belief in the Communist governing apparatus ultimately withering away. But they can't believe that the democratic idea really is working in this country today. The blinders they are wearing are those of economic dogma. This dogma runs as follows: Under capitalism there can be no real freedom for the nonmoneyed classes. The Government is controlled by the moneyed classes. Newspapers and radio stations are owned by the moneyed classes—so naturally they wouldn't criticize seriously the Government they themselves control. An employee's freedom to differ with his Government or employer is limited to trivial areas. The right to vote is not a real freedom since there is no difference between the two major parties, both of whom are controlled by moneyed groups. Thus runs the Soviet dogma on life under capitalism.

That Mr. Khrushchev himself believes these things implicitly and fully is shown clearly enough in some of his public statements. If he could be relieved of such notions—if he could be made to feel that there is an air of freedom in this country, that would be a greater accomplishment by far than any impression we could score with our material might, or even evidence of our unity. How to do it? Perhaps the sight of our judicial system in operation in a jury trial would impress Mr. Khrushchev—or an explanation of a writ of habeas corpus. Or perhaps Mr. Khrushchev should be shown a few bushels of the latest opposition mail received by Congress or the White House on specific issues—or perhaps he should be allowed to sit in on a union-steel company negotiation session. There is nothing so far on Mr. Khrushchev's itinerary that is likely to remove his blinders—that is doubtless too much to hope for. But some human scene, or some one's chance remark may give Mr. Khrushchev an insight into the fact that the freedom here is real.

Public Comment on the Interest Ceiling for Federal Bonds—No. 11

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 11 of the series:

[From the Denver (Colo.) Post, Aug. 26, 1959]

THE DOLLAR NEEDS MORE MUSCLES

Democrats in Congress have decided to try to hold interest rates on Government savings bonds and long-term bonds within artificially low ceilings.

They say they fear a hike in the Government interest rate would be reflected in higher interest rates generally, for persons borrowing to buy cars or homes, for merchants borrowing to buy stocks of goods, for persons borrowing to start new businesses.

Cheap or easy money, the Democrats believe, helps creditors while dear money is of advantage only to lenders.

So, the bill requested by President Eisenhower, to permit the Government to offer more than 3¼ percent on savings bonds and 4¼ percent on long-term bonds, has been tabled in the House Ways and Means Committee, thereby killing it for this session.

We doubt if the Democrats will be able to get much political mileage out of their be-kind-to-borrowers gesture. And their refusal to adjust interest rates to meet current bond market conditions may have serious consequences.

The first effect of the Democratic decision will be to force the Government to put more and more of its debt in short-term bonds on which there is no interest ceiling.

The trouble with short-term Government bonds is that they are virtually the same as cash. If billions of dollars are added to the short-term debt, a vast floating supply of cash or near-cash will be created in the country, adding tremendously to inflationary pressures on prices.

It has just been announced that the consumer price index has climbed to its fourth consecutive record level in 4 months. It would be a good idea to syphon some buying power into long-term bonds but the Democrats in Congress are unwilling to help.

The worst effect of killing the bond interest bill may be its reaction on the world money markets.

Our monetary policies have already weakened confidence in the dollar to some extent. Some countries have been cashing in their dollars for gold.

If we deliberately embrace a policy of easy money and rising prices, we will encourage a belief that the United States is not fully responsible as far as Government finances are concerned and that the dollar, long the anchor of free-world strength, is no longer to be trusted.

Cooperation by the Armed Services With a Local Community Humanitarian Project

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. FOLEY. Mr. Speaker, it is a genuine pleasure to bring to the attention of the Members of the Congress a recent outstanding example of close, constructive cooperation by the armed services with a local community humanitarian project. In a letter of September 9, 1959, Mr. Robert T. Bond, chairman and camp director, of the American Legion Boys' Camp, sponsored by post No. 86 of Rockville, Md., informed the Honorable Murray Snyder, Assistant Secretary of Defense, of the practical assistance to the underprivileged boys' camp rendered by the Military District of Washington, the National Naval Medical Center, and Fort Detrick.

It was my privilege this summer to visit this boys' camp at Camp Echo Lake, Frederick County, Md. There I saw firsthand the superlative volunteer work that the members of post No. 86 is doing.

Under the energetic, dedicated and imaginative leadership of my good friend, Frank Bliss, of Rockville, nearly 100 young underprivileged boys tasted the joy of outdoor, close to nature living, supervised by members of post No. 86. Building boys to be better citizens in this way is the best insurance against juvenile delinquency.

The letter set out below is concrete proof of the rich benefits derived from detailed participation by the armed services in worthwhile community activities.

THE AMERICAN LEGION BOY'S CAMP
OF MONTGOMERY COUNTY, INC.,
Rockville, Md., September 9, 1959.

Hon. MURRAY SNYDER,
Assistant Secretary of Defense (Public Affairs), Office of the Secretary of Defense, Pentagon, Washington, D.C.

DEAR MR. SNYDER: It is with a great deal of pleasure that I write to you concerning the outstanding support that members of the armed services, both active as well as Reserve, have contributed to the American Legion Boy's Camp of Montgomery County. This camp, initiated by the membership of Henderson-Smith-Edmonds Post 86, the American Legion, to provide an opportunity for a few days camping to young boys in our community who might not otherwise be privileged to enjoy such a pleasure due to the limited circumstances of their families, has received commendable assistance each year from individuals and organizations of the military services. Today these individuals and units, some having been with us from the start, consider it a privilege to participate in this fine community program. Currently the camping period is for 15 days.

The first year the commanding general, Military District of Washington, provided tentage, mess gear and cots; the commanding officer, National Naval Medical Center, provided medical personnel for daily sick call; personnel of the antiaircraft gun sites adjacent to Rockville aided in the operation of the camp; and CWO Louis A. Fricke, USN, recruiting office, Rockville, organized the mess and prepared and served all of the meals for the 2-week period, which incidentally was during his leave.

In the secnod year there was increased participation by the armed services. In addition to the continued support of the National Naval Medical Center and the Military District of Washington, Capt. (then 1st Lt.) John G. Jimison, Jr., U.S.A., stationed at the missile site on Muddy Branch Road in Montgomery County, CWO Vaughan B. Coale, USNR, and Herbert Pennington, Sr., CS 1, USNR, joined the program. Herb Pennington performed superbly in supervising the mess which undoubtedly was the crowning feature of the camp. Captain Jimison and selected members of his battery erected tents and participated in the daily functions of the camp during their off duty hours. Captain Jimison offered this assistance as his contribution to promote good public relations in the community in which he resided, and in which his men spent many of their off duty hours. During that year the camp was honored by visits, both informally as well as by invitation, of many of the ranking military commanders in the Washington area. These commanders participated with the community leaders in addressing the youth and created a most favorable impression on the audiences, youth as well as adult. It was during that year that initial interest was developed by personnel of the Naval Reserve Surface Division 5-37 (L), Silver Spring, Md.

In the third year our camp outgrew the facilities available to us at our post home on Congressional Lane, Rockville, and we had to seek another location. Fortunately with the assistance of Captain Jimison and community leaders we were able to obtain the use of ground in Seneca Creek State Park on Cloppers Hill Road, Montgomery County. It was during that year that Comdr. Ray O. Zimmerman, commanding officer, Naval Reserve Surface Division 5-37 (L), swung his wholehearted interest to the camp and provided personnel on a full time basis as part of their active duty for training. Equipment was loaned by the commander of the David Taylor Model Basin, principally through the effort of Lt. Comdr. Charles Hart, USNR, who is employed as a civilian at the basin. Chief Warrant Officer Coale again spent many hours at the camp. Of particular significance was the outstanding contributions of Frank Bliss, Jr., SMC; Samuel L. Saylor, Jr., GMM 1; and Charles T. Abshire, SK 1 all of the Naval Reserve Surface Division 5-37 (L). Also worthy of recognition was the assistance of Mr. A. Franklin, civilian, Warehouse Section, Property Branch, Office of the Post Quartermaster, Fort Myer, Va., who upon instructions of the commanding general, Military District of Washington, made available tentage, cots and mess equipment. M. Sgt. Irving D. Dixon, special service office, Military District of Washington, spent many off duty hours assisting in the operation of the camp. Captain Jimison's missiliers again erected tents and gave assistance in camp sanitation. Maj. Gen. John G. Van Houten, commanding general, Military District of Washington, honored us by his informal tour of the camp facilities.

This year growth continued and we had our most successful camp, which in no small part was due to the support of the armed services. Capt. M. L. McCollough, Jr., USN, commanding officer, Naval Reserve Training Center, Washington, D.C., lent his support to provide Naval Reserve personnel for key spots in the camp operation. He also visited the camp on Naval Reserve night to address the boys. The Office of the Surgeon General, Department of the Army, provided medical support through medical personnel stationed at Fort Detrick, Md. Daily sick call was conducted at the camp, this year held in Frederick County some 14 miles northwest of the city of Frederick, by Capt. Donald A. Pious, MC. Captain Pious gave unstintingly of his time and professional skill to insure that the maximum of health was maintained among the campers. Frank Bliss, Samuel Saylor and Charles Abshire again superbly organized the operation of the camp. Herb Pennington came back, after an absence of a year, to again supervise the mess and, although it is hard to believe, he topped his performance of his first camp. Other Naval reservists were Richard Ogan, ETR 2; Thomas Martin, SA; William Dorsett, SA; and James Dean, SR. Incidentally many of the above named eligible veterans have joined our American Legion Post as the result of working in the camp project. Their continued participation assures us that we are serving the community, State and Nation through a demonstrated need in the community. The training and practice in leadership that is gained in the camp is particularly beneficial to the participating reservists.

I realize that this has become a rather lengthy letter, but the significance of the outstanding support in community service contributed by the Armed Services in this area requires more than a few cursory lines to express our appreciation for their individual and collective, directed and volunteered efforts.

Sincerely yours,

ROBERT T. BARD,
Chairman and Camp Director.

Public Comment on the Interest Ceiling for Federal Bonds—No. 12

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 12 of the series:

[From the New York Times, Sept. 8, 1959]

THE E- AND H-BONDS

The House Ways and Means Committee, it seems clear, will take no action at this time

on the President's request for a general relaxation or removal of the present restrictions on the interest rate the Treasury may attach to its medium or long-term security issues.

Last week, however, the committee moved to grant the Administration's request so far as it applied to Government savings bonds. It would authorize the Treasury to increase the rate on its E-bonds and H-bonds from the present 3¼ percent, which, since 1957, has also been the maximum legal rate, to 3¾ percent. In the case of persons holding bonds purchased prior to June 1 of this year, interest payment would be adjusted so as to make the higher rates applicable from that date through the remaining life of the bond.

If this proposal, designed to enhance the appeal of savings bonds to the small investor, is, as Senate Majority Leader LYNDON JOHNSON predicted yesterday, approved by Congress, it will mark the third time since 1952 that it has been found necessary to sweeten up these securities in order to keep them on a competitive basis with other saving outlets in a tightening money market. In 1952 the Treasury raised the effective interest rate to maturity from 2.9 percent to 3 percent, then the ceiling rate, by the simple expedient of shortening the maturity from the prevailing 10 years to 9 years and 8 months. With interest rates again on the rise, Congress was persuaded in 1957 to raise the legal limit on these securities from 3 to 3¼ percent.

The urgency of the 1957 change was shown by the decline in popularity of these bonds, beginning midway through 1956 as reflected in the volume of sales and the rate of redemptions. Sales fell off $300 million from the level of 1955, though the year 1956 as a whole still showed an excess of sales over cash-ins of $211 million. By the end of July of this year we had been witnessing a recurrence of that warning symptom for an entire year, and on a more spectacular version. In the first seven months of 1959 alone the excess of cash-ins over sales amounted to $613 million.

Civil Rights Report Vicious Attack Upon Historic Powers of the States

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BROWN of Georgia. Mr. Speaker, I wish to call to the attention of the Members of the House a splendid editorial which appeared in the September 8 issue of the Augusta Herald, Augusta, Ga., on the report of the Civil Rights Commission.

Under leave to extend my remarks, I include the editorial in the Appendix of the RECORD:

CIVIL RIGHTS REPORT VICIOUS ATTACK UPON HISTORIC POWERS OF THE STATES

One of the most vicious documents ever framed by a commission of the Federal Government has, as of today, at last been removed from behind its tight veil of secrecy and placed within the public province.

We refer to the highly controversial report of the U.S. Commission on Civil Rights, portions of which were made public prematurely by Senators STROM THURMOND and OLIN D. JOHNSTON of South Carolina, and which promptly set off a storm within the Halls of Congress.

It would be well for every American, regardless of race or section of origin, to take close note of some of the designs this Commission is making upon the rights of the 50 sovereign States to administer their own affairs.

Throughout the document, released in excerpt form to the Nation's press, radio and TV, run several recurrent themes, designed first to level the powers of the States and second, to renew the life of this unnecessary Commission, exalt it to the level of a fourth branch of Government, and spread its powers over so broad an area that it would closely approximate a dictatorial power in the field of human relations.

The Commission asks for the adoption of a 23d amendment to the Constitution which would extend a blanket franchise to every person, subject only to state age, and residency requirements or legal confinement. As was pointed out by three members of the six-man Commission, the amendment is wholly unnecessary, since sufficient safeguards to the franchise already exist in the Constitution. These members were Vice Chairman Robert G. Storey and Commissioners Doyle Carlton and John S. Battle.

More ominously, the Commission would have created a system of Federal registrars, who would become the ultimate authority on who may and may not qualify as a voter. This is a clear, unveiled, undeniable infringement upon the historic right of the States to apply their own test to each would-be voter.

It would give added weight to the fraudulent ukase of the Supreme Court in integration by forcing racial mixing in Federal housing and by withdrawing Federal funds from any school or university which balked at integration. It would further extend to the field of housing, built under FHA and/or VA mortgage guarantee, thus denying to the home-builder, civilian, or veteran, the right to live in an area of his own choosing, free from the threat of racial strife imposed upon him by an injudicious but self-willed Washington bureaucracy.

Yet the Commission is inconsistent enough to admit on page 127 of its report that "Desegregation by court order has been notably more difficult than desegregation by voluntary action where the method and timing have been locally determined."

In other words, it recognizes the widespread strife that has been created by the Supreme Court's edict, but nevertheless would insist on creating more.

These are but a few of the disturbing portions of the voluminous report. Perhaps the most damning criticism of the document is the statement by Commissioner Battle appended to its final page. Writes he:

"I must strongly disagree with the nature and the tenor of the report. In my judgment it is not an impartial factual statement, * * * but rather, in large part, an argument in advocacy of preconceived ideas in the field of race relations."

We agree with Governor Battle. The Commission's report itself is the strongest argument that could be advanced for letting the Commission die as it is supposed to this coming November.

That, plus the fact that it never should have existed at all.

Public Comment on the Interest Ceiling for Federal Bonds—No. 13

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, in my remarks on the floor today, I said I was going to put in the RECORD some recent comments on the subject of removing the interest ceiling on long-term Federal bonds. This is No. 13 of the series:

[From the Indianapolis (Ind.) Star, Aug. 29, 1959]

SURE WAY TO SAVE MONEY

The reluctance of Congress to lift the interest rate ceiling for long-term Treasury bonds is interesting. Partly it is just politics, the demagogic appeal to prejudice against "the bankers," meaning in reality anyone who has money for investments which earn interest. But partly also there must be reaction against the high and still rising cost of carrying the national debt. It already costs Federal taxpayers around $8.5 billion a year just to make the interest payments.

The simple refusal of Congress to raise the interest rate ceiling is not going to hold the interest cost down. As a matter of fact it might cause the cost to go up in the end. The Treasury has to borrow so much money this year to cover the budget deficit and to refinance maturing bonds. If it is forbidden to pay an interest rate high enough to borrow this money on long-term bonds, it will simply have to settle for short-term borrowing, on which it has authority to pay whatever interest is required.

In this respect the Government is in the same boat as an individual who needs to borrow money and doesn't want to repay it for 10 years. If the bank will lend him the money for 5 years but not for 10 he'll just have to take the 5-year loan and face the problem again when it is due. In meeting this year's problems by short-term borrowing, the Treasury takes the risk that when it is necessary to refinance these loans the interest rate may be still higher. Because of the influence of the Government's own actions—including heavy short-term borrowing—that is very likely to happen.

There is, however, another way out for Congress if it is unwilling to pay the going interest rate. It can quit borrowing.

This would require giving up the luxury of spending more than is raised by taxes. It would not be so hard to do. For the new fiscal year, which has already begun, it could be done quite readily by cutting back foreign aid spending and farm subsidies. And both actions would result in improvement of the programs. Next year these programs could be further refined and others could be tackled to cut spending down further and enable paying off of some loans as they mature instead of refinancing. Then the interest cost would go down and budget balancing would be that much easier. A persistent downward trend in the total national debt over several years would probably result in lower interest rates on Government obligations, and still more would be saved.

The cycle of budget balance and saving, once set in motion, would tend to be self-energizing, just as the opposite cycle of deficit and constant increase in spending has proved to be self-energizing.

The sooner it is started, the sooner the taxpayers can begin to benefit from it.

American Business Goes Overseas

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. GEORGE. Mr. Speaker, the exodus of business enterprise to foreign

lands is of great concern to this Nation and its economy.

Many make the move to a foreign country in order to avoid paying reasonable wages to their employees and with the hope that they can avoid paying their just share of taxes to their Government.

An editorial which appeared in an outstanding Kansas newspaper, the Kansas City Kansan, written by Mr. John H. Stauffer would be of interest to other members and I ask, Mr. Speaker, that it be included in my remarks.

[From the Kansas City (Kans.) Kansan, Sept. 1, 1959]

FOREIGN GOODS LOWER PRICED

The expression "we are pricing ourselves out of our own labor market" is illustrated clearly by the decision of the Coleman Co. of Wichita to operate a factory in Holland and distribute its products throughout Europe and Asia.

For many years the company's products have been made in Kansas and distributed throughout the world. The company's lamp is probably the best known Kansas-made product. But the company's expansion plans will not help Kansas labor. The new plant was located in Europe because wages are lower than in the United States. Tariff restrictions also are less of an obstacle beyond the U.S. borders.

The Coleman case is but one of numerous instances of U.S. manufacturers setting up operations in foreign countries where they may sell not only in foreign markets but to Americans as well. Manufactured products from pop guns to powerplants are being produced at less cost in dollars in other lands than in the United States.

The American customer will find a surprising number of foreign labels on what he buys if he looks closely, as we did at the "Made in Japan" label stamped in a simple tool for sale at a local store.

The situation is a matter of greater concern to the United States than we may want to admit, because it is hard to see how men can continue to be employed steadily in this country at high wages if the things they make do not command a steady sale. Americans will not cheerfully pay higher prices for U.S. goods than for acceptable foreign-made goods simply for patriotic reasons.

Attorney Louis G. Feldmann of Hazleton, Pa.; Elected New Commander in Chief of Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. FLOOD. Mr. Speaker, it gives me great pleasure to have inserted in the CONGRESSIONAL RECORD some remarks delivered by Attorney Louis G. Feldmann of my district upon his election last week in Los Angeles as the new commander in chief of the Veterans of Foreign Wars, an extremely high honor indeed.

We of Luzerne County are rightfully proud of Lou Feldmann and I know he will be an excellent national commander for this great organization of veterans.

I have known Lou Feldmann for a great number of years. When I served as deputy attorney general of Pennsylvania back in the midthirties, Lou was a member of my staff serving in the capacity of chief investigator. Following his graduation from Duquesne University Law School in Pittsburgh, he practiced law in Luzerne County and became a well-known and popular figure in the county and in northwestern Pennsylvania.

Lou Feldmann was a member of the U.S. Marine Corps during World War II as an enlisted man, reaching the rank of buck sergeant. Upon his discharge from the corps, he returned to Luzerne County and was subsequently honored by the voters of Luzerne County by his election as district attorney, of the third largest county in the great State of Pennsylvania.

Also during the post-World War II era, Lou became one of the prominent figures in the VFW—first on the county level, then the State level, and finally on the national scene, where, for the past year, he served as national vice commander and, finally, last week became the VFW's new commander in chief.

On behalf of the people of Luzerne County whom I have the distinct pleasure of representing in the Congress, I take this means of extending our warmest congratulations and very best wishes to Lou Feldmann for a highly successful and productive term as the new commander in chief of the Veterans of Foreign Wars. We salute him.

Mr. Speaker, as part of my remarks I submit herewith a letter of transmittal from Mr. Omar B. Ketchum, director, Veterans of Foreign Wars of the United States, enclosing some extemporaneous remarks made by Commander in Chief Feldmann on the occasion of his election to that high office on Friday, September 4, 1959, at the VFW National Convention held in Los Angeles:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., September 10, 1959.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR MR. FLOOD: I am attaching herewith copy of a statement made by Louis G. Feldmann, newly elected commander in chief of the Veterans of Foreign Wars at the VFW national convention in Los Angeles, following his election and installation as commander in chief.

The statement was largely extemporaneous, with only a few notes to guide him, but I know Commander Feldmann would appreciate having you place this in the CONGRESSIONAL RECORD at your earliest convenience. I understand the Congress will recess in the very near future, and I hope it can be included before the recess.

Thanking you for this courtesy and with best wishes and kind personal regards, I am,

Respectfully yours,

OMAR B. KETCHUM,
Director.

EXTEMPORANEOUS REMARKS OF LOUIS G. FELDMANN, OF HAZELTON, PA., BEFORE THE OFFICERS AND DELEGATES TO THE 60TH ANNUAL NATIONAL CONVENTION OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES IMMEDIATELY FOLLOWING HIS UNANIMOUS ELECTION AS COMMANDER IN CHIEF ON FRIDAY, SEPTEMBER 4, 1959

My comrades of the 60th National VFW Convention, first of all, I should like to introduce to you my wife. Many of you have met her. We have been married for 28 years, and, as I have told some of you for 2 years, I love her very much and I am sure you are going to like her too.

Next, I should like to introduce my young nephew who was in the news with Vice President NIXON and was described as the calmest and most collected man in the receiving line. When the Vice President asked him who he was and that he was glad to meet him, Pete nonchantly said, "Likewise."

And a niece who has been here with me to enjoy these things. I want to present Miss Judy McKernan.

I should like to present two men under whom I served in the 3d Marine Division, first, a man that you have met before, one of the few four-star generals in the history of the Marine Corps, Gen. Graves Erskine, retired, not only my former commanding officer but my very dear close friend and adviser.

The other, Brig. Gen. Don Hittle, who was G–4 in the 3d Division and who has been most helpful to me in my career and is now a liaison officer with the Marine Corps in Washington.

First of all, may I say I want to thank all of you who have so vigorously supported me over the years, and, particularly, I want to thank all of you from Pennsylvania, for without your help it would have been impossible. Of course, I must especially thank those people from northern Pennsylvania, particularly the Anthracite Counties Council, where I really started in 1946; the people from Hazleton, my sister-in-law, Ann Mary Caparell, and all the people that came out here with me, Victor Diehm, who has handled radio contacts for me, Dom Antonelli, and so many people.

May I put everybody at ease. I have no intention of conducting a stormy administration or trying to set the prairies on fire, because, as I see it, our approach to the various problems facing veterans, their widows and their orphans, must be realistic and progressive. We must face these problems with positive action rather than negative words.

But let me get something straight. Despite the fact that I think Commander in Chief John W. Mahan did a great job and that every Member of the Congress who worked for and voted for the present pension bill was honest and sincere, I don't like that bill. I will agree that great progress was made in the bill as to widows and orphans. John Mahan worked hard for it, as he should—and I would have done the same thing that John did—but that does not prevent me from disagreeing with certain fundamentals of the bill.

First, the income limitations are so low that in some States you can get more on public assistance than you can get by taking a pension under the bill, and I don't think that is right.

Second, there is a little provision in this pension bill called corpus of the estate. You people who aren't lawyers may not know what it means. But it means if you die and leave a home or some savings, under the law as it is written the Administrator of Veterans' Affairs may decide how much of that estate must be used up before your widow or child can qualify for a pension. I believe Administrator Whittier to be a completely honorable and sensible man and I don't believe that he would do anything unreasonable, but years ago one of the Founding Fathers of this country said, "Don't give power to your friends you wouldn't want your enemies to have." And, therefore, I want that "corpus" out of the pension bill entirely.

Finally, I refuse to destroy thrift. I refuse to destroy frugality. I refuse to destroy all of the American concept of life. If income limitations are to be placed in pension bills—and unquestionably they will as a practical matter—then I state emphatically they should not include anything ex-

cept earned income. The limitations should not make a veteran or a widow either a pauper or a thief before he or she can collect under the bill.

The most crucial problem facing the veteran today is that of trying to find medical and hospital care. John Mahan has made great steps forward in that area and so have our last several VFW administrations. There is still much to be done but there is a limitation on the dollars to do it. I am of the opinion that maybe we could get more hospital beds by increasing VA efficiency. I have no brief for the veteran who uses a veterans hospital bed as a place to loaf and denies beds to those persons who need it because they are sick. I want to get those veterans who do not require serious medical attention out of the hospitals and into some kind of domiciliary care, or something of that sort, which costs less than a hospital; so we can find beds for the sick ones who really need the beds.

However, in order to make sure that I am right, I plan to set up a special hospital committee this year that will have the stamina and courage to face up to the ever-growing problem at veterans' hospitals, the need for beds and facilities, and the need to improve the lot of our aged comrades. This committee will be made up of competent men both in and out of the VFW—men trained in the field of medicine, law and cost accounting—men who can answer any argument of the Government budgeteers.

Let me say another thing. I am getting very tired of hearing how much the VA program costs. I am getting completely tired of hearing about $10 billion additional cost in the next 40 years. One answer would be a complete analysis of the VA budget. I believe a complete analysis of that budget will show that many of the things that are charged to veterans should be charged to the Public Health Administration and to other branches of Government. I have no objection, in fact I urge research in medicine on geriatrics and many other problems, but why should the veterans be charged with research costs when medical research benefits all of this country?

In the past the Veterans of Foreign Wars has worked with the youth of the Nation. We have established programs that have become institutions in the towns and hamlets across America, programs such as teener baseball, marble tournaments, rifle matches, bowling leagues and working with our local Boy Scout troops. Yet today the problem of juvenile delinquency is greater than it ever was before.

This year we must squarely face one of the most important problems—juvenile delinquency. I don't mean breaking windows. I mean thievery, robbery, marijuana, dope, rape, and murder. It is a responsibility of everyone in this room to fight this community blight. It is up to the veterans of this Nation, men who know the horrors of war, to do their utmost in stamping out this cancerous menace that is threatening America today.

For that purpose I am appointing a competent committee of advisers to suggest what we can do in the big cities to help stamp this condition out. If you don't think it is bad read the newspapers about the situation in New York in the last 2 weeks.

Over in Korea right underneath the Communist guns there is a village that has been practically destroyed. People still live in it despite the destruction. It is an example of things that have not been corrected. Because of redtape and things of that sort, and diplomacy being what it is, nothing can be done to reconstruct it.

I would like to suggest the thought that possibly the Veterans of Foreign Wars might like to help reconstruct those buildings. I am going to more fully develop this at a later date, because I think it would be an outstanding example of how free men and how veterans who fought in foreign wars are willing to help those who carried the brunt of the battle for them. I am going to talk to you as I visit you this year about this Korean village and whether or not you would like to help reconstruct it, and to say to the Communists, "We believe in the things we talk about. We put our money where our mouth is."

We must be conscious of the international trouble spots throughout the world: Indochina, the Middle East, Africa, Latin America. We must at all times strive to counter the Communist menace that is seeking to engulf the world. To do that we must sell America as an individual in the people-to-people concept. This year the VFW will lead, as it has for many years, the fight against international communism. Those who fought so hard for victory in war must fight ever harder in stamping out international communism wherever it is found. We must be ever vigilant against those Communists who masquerade as Americans, those Communists who while professing to bear allegiance to the Stars and Stripes, actually hate everything that it stands for. They are just as bad as the people in the Kremlin. In fact, they are worse because we know where the people in the Kremlin stand.

Communism has enslaved Poland, Hungary, and Yugoslavia; communism has enslaved Latvia and Estonia; it has enslaved parts of Indochina and China; Communism would enslave countries all over the world. Today as I am talking to you communism is about to enslave Laos. Laos is a tiny nation that few of us ever heard about until it got in the news, but I say to you we should with every ounce of our moral fiber call upon our Government to make sure that Laos is not enslaved by the Communists. Let our Government take whatever steps are necessary to aid and assist in making sure that Laos does not slip under the enslavement of the Communist rule.

Now Mr. Khrushchev is coming to this country. That is already decided. Mr. Eisenhower is going to Russia. That is already decided. It is going to happen. What are we going to do about it? Well, since Mr. Khrushchev is coming to this country my recommendation is that we should all be silent but civil. We should treat Mr. Khrushchev the same as we expect Mr. Eisenhower to be treated in Russia. But there is a way to do something. You know, there is a great difference of opinion as to where we stand economically in relation to where the Russians stand economically. There is a great difference of opinion as to which nation is going to be ahead in 10 or 15 years. There is a great difference of opinion as to educational programs in both countries. There is a great difference of opinion about many things, but, as you know, we have one thing Russia doesn't have and we can use it to demonstrate, to let Mr. Khrushchev know how we feel. There is one think that Mr. Khrushchev and his Communists must hate, if they believe in the concept of communism. They must hate every reference to God or by whatever name the Supreme Being may be called.

Therefore, I suggest a way for us to demonstrate, a way for all the people of this Nation to demonstrate—let every faith, creed, let every color, let every religion demonstrate; let us all go to our houses of worship throughout this country in the greatest number this Nation has ever known while Khrushchev is here, to inform Khrushchev that we have one thing he doesn't have—we have a belief in God, and having a belief in God we know this Nation cannot perish from the earth.

Let us work for victory. Let us not just talk, let us work, let us work hard for this victory of peace; let us work just as hard for peace as we did in war. Let the letters of the VFW be reversed. Work for victory. If we are willing to work we will be an organization worthy of our congressional charter. Thank you very much.

Public Comment on the Interest Ceiling on Federal Bonds—No. 14

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of Friday morning, September 11, 1959:

WHAT LEADERSHIP

In his column today, Mr. Thomas O'Neill recalls the sanguine mood of the congressional leadership at the beginning of the year. They had the votes: they were going to take over the leadership.

They still have the votes. What about the leadership?

A good example of the quality of this leadership is provided by the congressional handling of two matters: the pork-barrel bill and the administration's urgent request for the right to raise the interest rate on Government bonds.

The bond interest rate is now limited by law to 4¼ percent. Owing to the high cost of money, the Government is unable to float any bonds at all at that rate of interest. It is under the harrowing necessity of financing current obligations by means of short-term notes, most of which must be refinanced by new borrowing in a year or less. This kind of financing is only one step from printing-press money. Yet this Congress has flatly refused to pave the way to more orderly deficit financing by raising the interest rate ceiling.

As for the pork-barrel bill, the President has vetoed it twice. He vetoed it both times because it contains 67 unbudgeted projects which, though calling for small expenditure this year, would commit the Government to $800 million worth of spending in the years immediately following. Both the House and the Senate have already overridden the President's second veto.

Put these two together and what do you see? First, Congress commits the Government to raising an extra $800 million that it doesn't want to spend. Second, it adopts a point of view on the interest-rate question that prevents the administration from selling bonds to raise the money.

What leadership.

Keeping the Family Together

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, September 11, 1959

Mr. HART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a most remarkable article from a small neighborhood newspaper in Detroit, the Southwest (Detroit) Journal, of August 20, 1959.

This article gained for the editor, Hal Miller, the written commendation of the Commission on Children and Youth of the city of Detroit, and I ask additionally that a communication signed by Grovenor N. Grimes, executive secretary, Commission on Children and Youth, city of Detroit, also be made a part of the RECORD.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

CITY OF DETROIT,
COMMISSION ON CHILDREN AND YOUTH,
August 25, 1959.

MR. HAL MILLER,
Editor, the Southwest Journal,
Detroit, Mich.

DEAR MR. MILLER: I was particularly pleased to note your article in the August 20 edition of the Southwest Journal, regarding four suggested steps for holding a family together.

Those of us who are concerned with children and youth realize how important it is that there be a constant re-stating of basic principles of family life. I was especially gratified to note the inclusion of the family ritual idea, because there appears to be considerable evidence that when a family enjoys being together and participating in certain small rituals—as birthdays, anniversaries (which were mentioned) or traditional breakfasts, picnics, Christmas festivities, and the sort (which were not mentioned)—that family has an excellent chance of being a successful and happy family.

We are always interested to see such constructive articles in the neighborhood and language newspapers which we feel are a definite and valuable influence in the community.

Sincerely yours,
GROVENOR N. GRIMES,
Executive Secretary.

[From the Southwest (Detroit) Journal, Aug. 20, 1959]

HOW TO HOLD FAMILY TOGETHER—HERE ARE FOUR SUGGESTED STEPS

The increase in marriage breakups and juvenile delinquency are evidence that family life in America needs strengthening.

Any family can take certain steps, at no cost to itself, which will pay dividends in security in a single generation. Four steps recommended by the American Institute of Family Relations are: Family association, family ritual, family discipline, and family love.

Family association: It is important for couples to associate with persons who have satisfactory ideals and practices concerning marriage and the family. Couples whose close friends and daily associates are people with negative outlooks on marriage, are more apt to have their marriage end in a divorce court.

Family ritual: Celebrating birthdays, anniversaries, and even the keeping of pets help create family solidarity. Every successful family has its own symbolic customs. A family council where problems are discussed is outstanding in this respect.

Family discipline: Consistency in discipline is more important than the kind of discipline maintained. Children need standards to go by. They want to know where the limits of behavior are. The greatest defect is parental inconsistency. The adolescent is allowed to do as he pleases this week and then violently punished next week.

Family love: It has never been doubted that love of parents for their children and for each other is equally necessary. One study shows that children make the best adjustments in their own marriages when they come from homes where father and mother not only love each other, but were demonstrative in showing this love in the presence of the children.

A family can select its associates carefully, maintain its ritual, discipline and atmosphere of harmony. Without these, family disintegration is almost inevitable.

The "Pork Barrel" Bill

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the text of Bill Sprague's comments last evening over WRC radio. Mr. Sprague and his background stories on the day's news events are a regular feature on this station, and I think his remarks on the public works appropriation bill—or "pork barrel" bill—would be of interest to many in the House and Senate.

Rather paradoxically, President Eisenhower has had his first veto overridden at a time when his popularity and prestige are at a crest. Never since his first days in office has Mr. Eisenhower apparently enjoyed such widespread backing.

This comeback, reflected in the opinion polls, dates from about the time Gov. Sherman Adams vacated the White House. Whether the evidence of the President's leadership and this parting of the ways had any real connection is a subject for debate.

At the time of the Goldfine-Adams Roman holiday, the President rejected the suggestion that he fire his chief of staff with the words, "I need him." With no disrespect to Governor Adams intended, it now appears that his indispensability was somewhat exaggerated. Certainly the Eisenhower relations with Congress and with the press have been steadily and dramatically improving and his stature with Allied Nations now can scarcely be improved upon.

It is also written that the changeover in the Republican high command in Congress has made all the difference. Senator DIRKSEN, once looked on as an irritable relic of the McKinley era, has blossomed out into a field general who can work with the White House and with his colleagues in a manner far more effective than his predecessor, Senator KNOWLAND. And Capitol Hill observers are virutally unanimous in their agreement that Minority Leader CHARLES HALLECK in the House has performed feats of strategy which old wheelhorse JOE MARTIN could never have pulled off.

But despite all this, the House and then the Senate today overrode the White House veto of the second public works appropriation bill.

This measure, which comes up every year, has long been referred to as the "pork barrel," because a Congressman's chances of reelection often depend heavily on how many Federal works projects he can wrangle for his district. Some Members are rather sensitive about the epithet and take trouble to explain that each of the flood control, beach erosion, navigation, land reclamation, and power development projects they've proposed is necessary and vital to the welfare of the United States. In many instances the plea is made that public works is a form of sound investment on the Government's part, that when the such-and-such river is made navigable the people and firms in the area will get richer and have to pay more taxes.

But this year the administration chose to put the brakes on the public works program as an economy measure, and the key provision of the bill sent to Congress from the Budget Bureau was no new starts. That is, work should continue on projects already begun, but no new projects should be initiated. Congress added 67 new starts.

This didn't appreciably raise the amount of the appropriations bill for this year, for most of these 67 new starts were merely studies of a few thousand dollars each. Congress upped the Budget Bureau's figure by less than 1 percent. But since the principle had been violated, and more important because this was committing the Treasury to future expenditures running close to an extra billion, Mr. Eisenhower vetoed the bill and demanded that the 67 new starts be dropped.

This didn't set well with the Congress. Fact is that a good many Republicans were in inner turmoil when it was decided to try and override the veto in the House. Should they vote to uphold the President and thereby stay in solid with the White House, or should they go along with the crowd and stay in solid with their constituents? It was a matter of guessing which way the vote to override would come out, and they guessed wrong. For the President won that first test by a one-vote margin, and those of the faithful who sided with him began to look bad at home.

The committee then set up a new bill that the President was bound to veto. Keeping the 67 new starts, it brought the total figure down to less than the one in the budget by reducing each project, new and old, by 2½ percent. Its only merit was political. Those behind it could boast they'd voted less money than the administration wanted, neglecting to mention that they were mortgaging the future.

But though the President suggested that Congress enact a stopgap resolution to keep work underway going forward until next year when a better bill might be worked out, the House and Senate today overrode his second veto with yelps of triumph. In the House only 121 Members stuck with the leadership. When the result was announced there was cheering, and then a crowd of Republicans trooped over to the Senate to supervise the voting of the other body.

There, the critics of foreign aid were getting in their licks, pointing to the new starts the administration had been launching in the mutual security field, despite much talk of money being wasted. Said Senator MANSFIELD: "The administration is asking more than $300 million for foreign aid 'pork barrel' in Cambodia, Formosa, Indonesia, Korea, Laos." "New starts," he observed, "are proposed in Morocco, Somalia,

and Tunisia. This doesn't include the development loan program in which hundreds of millions are earmarked for new starts all over the world."

The Senate quickly followed the lead of the House, which had been fully expected, with eight votes to spare.

Asked for the President's reaction to the news, Jim Hagerty at the White House said, "He thought the lure of the 'pork barrel' was a little bit too much for the Congress to avoid."

How Heavy Will Be the Mortgage on Our Future?

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. GEORGE. Mr. Speaker, a very good friend of mine, Mr. John W. Colt, managing editor of the Kansas City Star, recently returned from a 2-month trip to Europe.

Soon after his return he addressed a convention of Kappa Alpha in Kansas City. An article which appeared in the Kansas City Times on September 4, 1959, tells of Mr. Colt's conclusions after studying the effect of our foreign aid in other countries.

Inasmuch as he takes exactly the same position as did I in my 1958 campaign with respect to limiting our foreign aid to long term loans, I ask unanimous consent, Mr. Speaker, that this article which quotes Mr. Colt be included as part of my remarks.

And today, Mr. Speaker, it is regretable to note that powerful interests on behalf of the administration are attempting to deny to the Congress the right to be informed of the corruption, waste, extravagance, fraud, and inefficiency in the administration of our foreign aid program. The millions wasted, the millions given unnecessarily, add to the already heavy mortgage on our future.

CALLS FOR END TO GIVEAWAYS

"Is it necessary for the United States to continue financing the free world?"

That was the question posed by John W. Colt, managing editor of the Star, last night in a speech to representatives at the convention of the Kappa Alpha college fraternity at the Hotel Muehlebach.

"I am convinced," he said, "that we must put a stop to the fantastic giveaway parts of the aid program and set the rest of it on a long-term loan basis."

SEES MUCH PROGRESS

Colt, who recently returned from his third trip to Western Europe in 10 years, said he was amazed at the economic recovery and present day prosperity of that area.

"If someone were to ask me just what was the main difference I have noticed in this last trip and the other two, which were in 1950 and 1954, I would say it was the present air of prosperity," he said. "It puzzles the tourist who has been contributing taxes for foreign aid.

"Aren't we approaching the time when we can cease to be banker at no rate of interest and with little or no prospect of getting it back? I don't know of any bank in the history of the world that has survived on such a program."

SOME AID IS NECESSARY

His conclusion:

"Let's don't presume we can change all this foreign-aid system overnight, a system which amounts to the largest engineering, supplying, and banking operation of all time.

"The foreign aid program is only one instrument we have for influencing the course of the world's struggle, but it is a necessary one. This makes it all the more important that the program be placed on a sound basis if it is going to be necessary to the security of the free world, for many years to come. We cannot continue the present pattern of waste." Colt pointed out that since foreign aid started in 1946 the United States has paid out between $70 and $80 billion. He compared it to crating up 16 or 17 of our largest cities and shipping them to Europe. He added that the Federal budget has been balanced only five times in the last 27 years.

A MORTGAGE ON FUTURE

"We are putting a massive mortgage on our future production and wealth to the extent of more than $280 billion (the approximate national debt). This Federal debt, borne by us, only 6 percent of the world's population, is greater than the combined debt of all the other (86) countries in the world, including the 70 we are giving money to," he said.

Referring to a report to Congress recently, Colt pointed out that in 1957 the United States led the world with a production valued at $440 billion compared to $397 billion for all of Western Europe and $175 billion for Russia and her satellites. The report, he continued, estimated that by 1970, Western Europe would lead with $800 billion, wtih $740 for the United States and $400 billion for the U.S.S.R.

"As the economy of our debtors rises we find growing competition from foreign goods. The economic facts of life are that in many cases we are financing a competition that puts U.S. citizens out of work.

"Hasn't the time arrived when free-world countries must start taking over the project of helping themselves? They must establish strong economies sometime; why not now?"

Colt said that 80 percent of foreign aid under the present program is given away, never to be repaid, that the United States will recover only about one dollar out of every five provided.

He pointed out too, that in some cases our aid programs have made enemies rather than friends out of the recipients, and that the money is often wasted.

Systematic Retirement of the National Debt

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. WRIGHT. Mr. Speaker, the National Federation of Independent Business has polled its entire membership on my bill creating a systematic retirement of the national debt. This poll included more than 130,000 independent businessmen all over the Nation, and the result of the poll shows an overwhelming 86 percent in favor of the bill.

Only 10 percent expressed doubt about the efficacy of the proposition and 4 percent expressed no opinion.

This overwhelming endorsement resulting from this actual poll of small businessmen throughout the Nation corresponds with the general enthusiasm I have encountered in the public at large in favor of this proposal to retire the national debt on a systematic basis.

Texas "Aggie" Earns Education and Maturity in 4 Years With Corps

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BROOKS of Texas. Mr. Speaker, one of the most important factors in our democracy which has made our country great is our splendid colleges and universities. Of these schools none has made a greater contribution to our democratic way of life than Texas A. & M. College at College Station.

Although we have other outstanding colleges in Texas—among them Lamar State College of Technology, which I attended before it became a 4-year college, and the University of Texas, where I received my work in journalism and law—there is no Texan who is not proud of the splendid academic record of Texas A. & M. I know each member of the Texas delegation shares with our colleague, Congressman OLIN TEAGUE, who represents the district which includes College Station, the justifiable pride he feels for his own alma mater.

This pride we all feel for Texas A. & M. reaches beyond its high academic standards to include the remarkable esprit de corps of Texas "Aggies" and the guidance this spirit gives to its graduates throughout their lives. Loyalty is a most commendable attribute of any man and loyalty to the worthwhile traditions of "Aggieland" is particularly commendable.

A devoted alumnus of Texas A. & M. and my good friend, Mr. C. L. Babcock, of Beaumont, this year sponsored a campuswide essay contest with entries to be written on the subject: "What Does Texas A. & M. College Mean to the Average Student?" The winner of this contest was a senior student from my congressional district—Mr. Tommy Keith, of Cleveland.

Mr. Keith has written in a few hundred words the experiences and challenges at Texas A. & M. that have helped him, as he puts it, in the long climb from boyhood to manhood. Few things are more important to either men or boys.

Mr. Speaker, I believe Charlie Babcock should be commended for making it possible for such an essay to be written, and after having read Tommy

Keith's account of his nearly 4 years as a Texas Aggie, I feel sure each of our colleagues in the House will join me in congratulating this fine young man for a job well done.

I ask unanimous consent that Mr. Keith's essay be included in the RECORD at this point:

TEXAS A. & M.—WHAT IT MEANS TO ME

(By Tommy Keith)

An individual goes to college for various reasons, but primarily for one thing—an education. Certainly Texas A. & M. stands out as one of Texas' outstanding educational institutions, but means much more than that to me.

One of the first things that comes to my mind as I think of what A. & M. means to me is how it has assisted me in growing up and maturing. I came to Aggieland straight off the farm. I attended a small high school where nearly everyone, even I, was a "wheel" of sorts. I had a highly exaggerated opinion of myself which certainly needed to be destroyed.

It took only about 2 days in the corps and approximately an equal number of days in class to knock the props completely out from under me. Everything I did seemed wrong. I decided that the thing to do was get out of the terrible old corps, but changed my mind after a man-to-man talk with an upperclassman to whom I am still grateful. I became convinced that the real thing to do was stay and fight it out instead of running away, even if I did have to sacrifice my curls and see my "steady" only three times a semester.

This was undoubtedly one of the turning points of my life. I could fill the entire space of this essay enumerating duties, pressures, and so forth, that I was subjected to. But the important thing is that I had to cope with these things to remain at A. & M. and I feel that facing them helped me greatly in the long climb from boyhood to manhood.

At A. & M. I learned tolerance that was unheard of, to me at least before I entered. As in any military organization that is to achieve any measure of success, certain disciplinary steps must be taken. Walking the "bull-ring" is not my idea of the perfect way to spend a sunny Saturday, nor is "call to quarters" my concept of an entertaining night. But I had to endure them and I feel that even though their value can't be measured in dollars and cents the training they and similar things provided will be most valuable on jobs I hold.

To me it is impressive that some of the things that are standard procedure and just routine at A. & M., though unheard of at most other colleges, can be of much value. For example, "whipping out" (introducing oneself) provides valuable training in meeting and remembering people.

No discussion of what A. & M. means to me would be complete without mentioning traditions. I may soon forget many of the formulas taught in freshman math, but I will never forget how I feel at Silver Taps. I may forget the skeletal makeup of my body, but I shall never forget the first muster I attended. I have already forgotten many of the laws of physic, but memories of the Aggie bonfire shall stay with me always. Traditions will most assuredly occupy a big portion of my memories of A. & M.

I stated in my opening paragraph that an individual goes to college primarily for an education, and though A. & M. is outstanding in this field, it means much more to me.

I have listed a few of the other things which could be classified as more or less accessory benefits and could enumerate many more if room permitted. However, I don't want to minimize what A. & M. means to me from the standpoint of education, for I feel that this would have to be listed in the position of top importance. I don't mean to completely divorce education from the other things I have discussed because I think they are certainly a vital part of it. But in this particular discussion I am referring to education as the training and knowledge one gains in his particular field of study.

I am strong in the conviction that A. & M. is unsurpassed in this category. Before I came to college I was interested in agriculture and knew several leaders in the field who were A. & M. graduates. This is probably the biggest reason I entered. I might add that it was the logical reason since theoretically a person goes to college mainly for one reason—so he can "live a little higher off the hog." So naturally I wanted to pick the school I thought would do the best job.

But not until after I started to college did I become fully aware of A. & M.'s prestige as an institution of higher learning. Students in almost any field are confronted with a difficult schedule designed to do the best possible job of preparing them for their work after graduation. It is also significant to me that a number of employers seem to be aware of this.

This means a lot to me. It means that while I am in school I have the benefit of top training and preparation, and it means that when I am graduated I carry with me the reputation and prestige of an educational institution which is widely recognized for its success in turning out topmen.

A common Aggie complaint is that we have no girls and not enough parties, as coeducational institutions do. But even this means a lot to me. It means added prestige and helps to set A. & M. apart from the run-of-the-mill schools. Of course, there are other factors involved, but the lack of many so-called good times gives people the true impression that we are here for what we should be—an education.

As I look over this essay, I realize that I have fallen far short of adequately telling what A. & M. means to me. But as I think about it, this is quite natural. I feel that Aggies have a lot to be proud of—and I challenge any man to attend Texas A. & M. almost 4 years as I have and put what it means to him in a meager 1,000 words.

Luzerne County's Civil Defense Program Proven of Value

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Keystone Defender of July–August, 1959, on the civil defense program of Luzerne County, Pa. This publication is released monthly by the Commonwealth of Pennsylvania State Council of Civil Defense, Harrisburg, Pa.

LUZERNE'S CIVIL DEFENSE POLICE PROGRAM PROVEN OF VALUE

During last spring's Susquehanna River mine disaster civil defense police from Pittston, Dupont, Exeter, Wyoming, West Wyoming, and Jenkins and Plains Townships, all of Luzerne County, did outstanding work around the clock assisting State and local police in traffic and crowd control.

This disaster, termed an extreme emergency both by Governor Lawrence and President Eisenhower, had attracted the curious from near and far.

Fortunately Luzerne County Civil Defense had long placed emphasis on auxiliary police training (at this writing, 1,300 trained and duly enrolled). Lt. Col. Frank Townend, Luzerne director had agreed with Auxiliary Police Chief Frank Flynn's viewpoint:

"I feel the greatest deterrent to panic are trained men. And the better the traffic control at a disaster scene, the fewer casualties. We're training auxiliary police for one purpose—civil defense disaster."

Chief Flynn has a goal of 3,000 trained auxiliary police in Luzerne County—trained, and organized.

"After the training period none of the classes has drifted away or disbanded," Chief Flynn writes. "This is due largely to real interest shown by local police chiefs and regulars. Our chiefs and his assistants take the course right along with us. At graduation the local police assist the new auxiliaries in forming companies, platoons, and squads, each with a leader but always under supervision of the chief of police.

"Some of our units organized socially, meeting at least once a month and electing officers and paying dues. Wives and families often join in social gatherings."

Chief Flynn stresses the cooperation of heads of local political subdivisions. "They've helped us a lot under the Federal Matching Fund program," he asserts. But men have purchased uniforms without such assistance.

"Keeping the outfit together after training" appears to be the No. one problem facing civil defense police units today. Chief Flynn's comments have a value here. Ideas from other leaders across the State will be welcomed.

Cheaper Men's Wear From the Far East Threatens U.S. Market, Worries Industry

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal, of September 9, 1959.

CHEAPER MEN'S WEAR FROM THE FAR EAST THREATENS U.S. MARKET, WORRIES INDUSTRY

(By Laurence G. O'Donnell)

NEW YORK.—Men's suitmakers are getting nervous about competitive imports from Japan and Hong Kong.

Bringing in suits from the Orient in growing numbers, importers are able to undersell domestic competitors by about $10 a suit at wholesale, even after including shipping and tariff costs, U.S. producers protest. These importers are finding an eager market among the big department store chains, domestic suitmakers contend.

Although the foreign competition isn't seriously hurting America's suit industry yet, the trade worries about continuation of a trend that may eventually affect the business of big volume garment producers, as well as small retail outlets.

Lower labor costs give foreign suitmakers the edge, U.S. suit manufacturers say. Domestic suit producers pay union workers about $2.12 an hour, including fringe benefits, for a 40-hour week. In Japan, workers receive 14 cents an hour, benefits included, for a 50-hour week. In Hong Kong, the current wage rate is 9¾ cents an hour. Labor costs figure out to about one-third of a suit's cost.

So far, suit makers in Japan and Hong Kong are turning out only about 10,000 garments a month, but the Clothing Manufacturers Association of the United States, a leader of the anti-imports drive, estimates it won't be long before Japanese and Hong Kong production reaches 50,000 suits a month or more.

SHARE OF MARKET APPRAISED

Projecting this rate to an annual production figure of over 700,000 suits, it's estimated the suit trade in Hong Kong and Japan would soon have about 4 percent of the U.S. market, based on last year's domestic output of 17.7 million suits.

Already, clothing makers and union workers have taken their case to Congress. The C.M.A. and Amalgamated Clothing Workers of America recently explained their plight to 19 Senators. Result: This week New York's Senator KEATING will introduce a bill to amend existing tariff laws to aid the suit business.

The industry says it wants a "sliding scale of duty rates," which would take into consideration the comparative hourly wages of foreign and American workers.

Although the suit industry complains about Hong Kong exports, its ire really centers on the Japanese situation. To avoid labor costs in the United States, "several so-called 'American entrepreneurs'" have opened up clothing factories in foreign countries, asserts Harry A. Cobrin, executive secretary of the C.M.A. "Ready-made clothing factories are now beginning to mushroom in Japan," he says. "We're crying wolf before it's too late." Mr. Cobrin stresses that "readymade clothing plants previously had not existed in Japan because the average male there usually wears custom made or special order garments."

The men's suit business, of course, is just one of many sectors of the apparel and textile industries fighting imports. Late last week, the National Cotton Council, speaking for cotton growers as well as the cotton cloth mills, filed a new petition with the Agriculture Department; it seeks import quotas or tariff rate increases to curb the inflow of cheaply produced textile products from abroad.

Some divisions of the textile and apparel trades have already worked out some compromises on imports from Japan. The Commerce Department arranged a system of "voluntary quotas" on shirt imports from Japan, for example. Since it took effect in 1957, Japanese imports have totaled 1 million dozen a year, or 2½ to 3 percent of the U.S. output.

Suit makers, however, favor the "sliding scale of duty rates," rather than quota systems. "We want them (the oriental suit makers) to pay a decent wage," Mr. Cobrin of the C.M.A. says.

It's known, though, that the suit industry fears evasions of "voluntary quotas," which plagued shirtmakers in the past. Shirtmakers found that Japanese exporters got around the "voluntary quotas" by shipping goods to the United States via other countries; currently, however, the shirt business thinks these "deviations" have been curbed.

Current import restrictions on woolen imports are causing problems for suitmakers. Their domestic supply of suit fabrics has diminished with the sharp cutbacks in U.S. woolen and worested mills during the past decade. With the big upswing in demand for suits so far this year, suitmakers have been caught short of piece goods and are unable to satisfy completely their needs in U.S. markets. And they've found "no important relief from fabric imports," either, according to one major suitmaker.

SHIPMENTS FROM ITALY UP

Reason: Woolen fabric imports are governed by quotas. This year, exporters of low-quality woolen from the Prato district of Italy, near Milan, shipped more than 11 million square yards of cloth to the United States before the "cutoff" date in May. That was 198 percent more than in 1958, and more than any other country including Great Britain, a key supplier of woolens. "Prato" cloth isn't usable in men's suits.

Imports from Great Britain slipped 2 percent to just under 11 million square yards, while fabric imports from Japan, another key source, dropped 18 percent to 8.1 million square yards. As a result of the "Prato" imports, foreign supplies of men's suit materials was sharply reduced, complain suitmakers.

They concede they could have bought imported cloth after the "cutoff" date. But the increased cost of this cloth, caused by higher tariff rates, would have made the price "prohibitive for manufacturers of popular-priced clothing," says one executive.

The tariff setup on woolen goods shapes up this way:

The importer pays ad valorem duty (based on the value of the cloth) of 25 percent plus 37½ cents a pound. After the "cutoff" date, the ad valorem rate soars to 45 percent (the higher rate goes into effect when 5 percent of the previous 3 years' average domestic wool fabric output is matched by imports).

Poison in Your Water—No. 169

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Winston-Salem (N.C.) Twin City Sentinel of February 18, 1958, entitled "Twelve Towns, Firms Pollute Streams":

TWELVE TOWNS, FIRMS POLLUTE STREAMS

(By Gene Whitman)

The State stream sanitation committee listed a dozen Rockingham County towns and industrial firms today as significant pollution sources in the Roanoke River basin.

It identified Draper, Leaksville, Madison, Mayodan, Reidsville, Spray and Stoneville in Rockingham, and Walnut Cove across the line in Stokes, as communities which have insufficient sewage treatment, or none at all.

It listed Fieldcrest Mills at Draper, Leaksville, and Spray, Leaksville Woolen Mills, Inc. at Spray and Washington Mills Co. at Mayodan as industrial polluters. Other towns and firms farther east were listed.

The cities and industrial firms are expected to advise the division of water pollution control of the State board of health within 60 days whether they contemplate voluntary action to abate the pollution and apply for a temporary permit.

COULD CONTINUE

Under the temporary permit, they would be allowed to continue discharging wastes into the streams under a satisfactory time schedule for building adequate treatment facilities.

The North Carolina policy is not to start enforcement action if satisfactory compliance from the towns and industries is obtained voluntary.

There was no estimate of the money which will be required to treat the sewage and industrial wastes. The committee suggested that towns and their industries get together on treatment plans, if possible.

Committee conclusions on the pollution and the steps needed to abate it included:

Draper: A system expected to serve 3,500 persons discharges sewage without treatment. A treatment plant should be built as soon as possible.

Leakesville: A system collecting sewage from an estimated 5,080 provides no treatment. A plant should be built as soon as possible.

TWO SEPTIC TANKS

Madison: Sewage from approximately 1,200 flows through two septic tanks that are grossly overloaded. A secondary treatment plant should be built as soon as possible.

Mayodan: A municipal sewage system serves an estimated 2,000 and receives domestic sewage from Washington Mills. A small intermediate treatment plant is overloaded and not properly operated and maintained. It should be either enlarged or replaced.

Reidsville: Sewage from a plant serving about 4,000 is discharged into the Roanoke basin, increasing the coliform bacteria. No further physical improvements are indicated at present, but the city should begin planning to enlarge its facilities or pump the wastes into its new plant for treatment.

Spray: The sewage system collecting wastes from an estimated 5,000 provides no treatment. Proper treatment facilities should be built as soon as possible.

Stoneville: A sewage system serves an estimated 530 and gives both primary and secondary treatment, but needed repairs and alterations should be provided.

Walnut Cove: The sewage system serves only about 566 people—a small portion of the town. A primary treatment plant is overloaded and some sewage is discharged without treatment. The town should consider extending its sewer lines into areas not now served and providing treatment in a single plant.

Fieldcrest Mills, Draper: Sewage from each mill is given partial treatment in a septic tank, then discharged into the river. Treatment equal to secondary treatment should be provided.

Fieldcrest Mills, Leaksville: Sanitary sewage, dye house and finishing wastes are discharged without treatment. Facilities should be built, providing the equivalent of secondary treatment.

Fieldcrest Mills, Spray: Sanitary sewage, dye house and finishing wastes are discharged without treatment. Facilities should be built providing the equivalent of secondary treatment.

Leaksville Woolen Mills, Spray: Sanitary sewage and a small amount of industrial waste are discharged without treatment. If the town of Spray will not accept wastes, the company should determine the most practical method of treatment.

Washington Mills Co., Mayodan: Overflow sanitary, bleach and dye wastes are discharged without treatment. They should be treated prior to discharge.

A West Point for Science and Engineering

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. GEORGE. Mr. Speaker, in three campaigns for Congress, I urged that emphasis be placed on the training of

young people particularly in the field of science and engineering. The following is from a speech made in Overland Park, Kans., on August 9, 1956.

We should offer scholarships for capable students or establish a West Point for Science and Engineering as soon as possible in order to train much needed scientists and engineers.

The Republican administration since taking office in 1953 has failed to grasp the importance of having sufficient trained scientists and engineers in order to maintain a strong and firm economy and national defense.

Today I am introducing a resolution which I trust will result in thorough consideration being given to the establishment of a U.S. Science and Engineering Academy. No better location for such an institution could be found than at Sunflower, Kans., where over 10,000 acres, many buildings and much equipment under control of the Army are now standing idle. An advanced academy of this type could be combined with one for foreign service training which would give special emphasis to foreign languages.

The Science Advisory Committee recently appointed by the President, while attempting to avoid statements which conflict with the policy of the present national administration, certainly took cognizance of the great need for training in the science, engineering and other fields.

Dr. Edward Teller and Vice Adm. H. G. Rickover and many other outstanding Americans have sounded the alarm that Communist Russia will far outdistance us in the education of our youth unless decisive action is taken immediately. Only by proper and adequate education can we maintain, or regain, our leadership in the field of science and foreign relations.

Before the advent of the first Russian sputnik an editorial written by Miss Helen E. Kohlenberg, editor, appeared in the Western Spirit, published at Paola, Miami County, Kans., on Thursday, June 28, 1956, and under leave to extend my remarks in the RECORD, I include Miss Kohlenberg's editorial.

THE GEORGE PROPOSAL

In his statement released at the time of filing as Democratic candidate for Congress from the Second District of Kansas, NEWELL A. GEORGE, Kansas City attorney, advocated the establishment of a "West Point" for science and engineering to provide the needed technically trained young people.

This stems from a condition of which few Americans are cognizant. But recent statements by top administration officials to the effect that Russia holds superiority over America in certain lines of national defense are just cause for action along the lines of promoting science and engineering research and training. We train young people in other lines through scholarships and they enter the professions or industry. Hence, scholarships are not the answer.

A West Point for science and engineering, established along the lines of the naval, Army, and air academies would serve to remove the shortage of scientists and engineers by providing an incentive to young people to enter those fields of endeavor, and young people thus trained would serve their country just as heroically as do the military.

Need for immediate action is emphasized in the testimony of Gen. Earle E. Partridge before the Symington committee that Communist Russia is far advanced in the development of the intercontinental ballistic missile. Other testimony was to the effect that one thermonuclear (hydrogen) weapon could completely destroy one of our large cities and that Russia has the planes to deliver such weapons.

GEORGE'S suggestion that no better location for such an academy could be found than in the Second Kansas District fits into the picture of the movement by the Government, the military, and industry to midwestern locations.

Mr. GEORGE'S proposal for such an academy is the first that has come to our attention and we urge that it be given serious consideration.

Good Services Recognized

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. ROGERS of Colorado. Mr. Speaker, Mr. R. James Malloy, an employee of the Bureau of Reclamation in the Denver, Colo., office, has devoted his extra time in the last 4 years to make recreational development for the people of Colorado a reality.

His services in this regard have been without remuneration or hope of reward. However, the Denver Post, on August 29, 1959, placed Mr. Malloy in its hall of fame because of his successful efforts to have Cherry Creek Reservoir developed as a State recreational area. There were many complicated problems in the achievement of his objective because the U.S. Government had constructed a dam on waters controlled by the State of Colorado. Nevertheless, Mr. Malloy was able to bring about a solution to the problems and today the people of Colorado are enjoying a new recreational area because of the leadership of Mr. Malloy.

Most of the people interested in the recreational area joined in a letter setting out the accomplishments of Mr. Malloy. The letter is as follows:

We are writing this letter in appreciation of a Colorado and Denver citizen who we feel should because of his personal accomplishments in the last 4 years in the field of recreational development for the people of Colorado be given public recognition.

We refer to R. James Malloy, a respected member of practically every boating and wildlife organization in the State and who some 4 years ago was the first person to start a crusade to impound water behind Cherry Creek Reservoir. His and our dream was culminated this summer when the State parks and recreation department opened this area for the people of Colorado.

Because of the hundreds of letters he wrote to Federal agencies, State officials, and to the Colorado congressional delegation, and the many personal conferences with all concerned in pursuit of his dream that this area should be fully developed as a recreational area, he can truly be called the father of the Cherry Creek recreational development.

Coincidently with the Cherry Creek project, he had his sights on other recreational areas that he felt should be made available to the people of Colorado. After 2 years of negotiation, on April 24 of this year, he personally negotiated a contract and agreement with the Denver Water Board to open Antero Reservoir for boating and boat fishing only, with Cheesman, Gross, and Eleven Mile Reservoir to follow next year. The operating contract between the Denver Water Board and the State parks and recreation department was signed on July 28, 1959, and Antero Reservoir should be opened for public use no later than August 15, 1959. As a result of his efforts, future years will see thousands of Colorado families enjoying these areas. For years in his talks before boating and wildlife organizations he has stressed and pleaded for more effective planning and use of Colorado's outdoor recreation resources. A recent statement we heard him make is, "Boating, fishing, camping, hiking, skiing, and hundreds of other recreational opportunities can and must be wisely developed so that present and future Coloradans can more fully enjoy their own State—the greatest State in the Union." In collaboration with Harold Lathrop, State director parks and recreation department, and at the request of Senator Dunkley of Denver he wrote Colorado's boating bill which was passed by the last general assembly. He is a hunter, fisherman, boater, and water skier. We feel that he can be called Colorado's No. 1 sportsman and boater.

He is a supervisory official of the U.S. Bureau of Reclamation and he has accomplished these things on his personal time without financial remuneration from any organization.

We feel that he is a credit to the State of Colorado and the U.S. Bureau of Reclamation who employ his services.

Because of his aggressive leadership throughout the years, we recommend him to you for proper public recognition and your newspaper's Hall of Fame as Colorado's No. 1 Sportsman for 1959.

Sincerely,

Patrick W. Chamberlain, representing the Rocky Mountain Boat Racing Club, Inc., Arvada, Colo.; Paul L. St. Onge, representing the Outboard Boating Club of Metropolitan Denver, Denver, Colo.; James B. Jurgens, representing the Inboard Association, Denver, Colo.; Gene Wensinger, representing the Riviera Lake Boating Club, Denver, Colo.; Robert T. Roath, representing the Mile Hi Boat Racing Club, Denver, Colo.; C. N. Centers, commander, U.S. Coast Guard Flotilla No. 2012, Denver, Colo.; Leon S. Brunner, Jr., representing the Metropolitan Wildlife Association, Englewood, Colo.; John L. Shumaker, representing the Sailboat Association, Littleton, Colo.; Wilfred Howard, Jr., representing the Denver Municipal Boating Association, Denver, Colo.; Tris Calomino, representing the Calomino Marine Co., and past president, Marine Dealers Association, Denver, Colo.

The Work of Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I would like to insert the following radio editorial which was broadcast over station KOAT-TV in Albuquerque, N. Mex., on September 15, 1959:

In closing tonight, this food for thought: Along about this time of year the people as a group and the press in general begin to get a little impatient with Congress. Senators are accused of dragging their feet, Congressmen are often accused of clamping the lid on important legislation. However, if for just 1 day, every person in the Nation could read the complete CONGRESSIONAL RECORD, it would make one thing clear. The boys in Washington may take a while to get things accomplished * * * but a great deal of research and thinking goes into their final decrees. The RECORD is full of very enlightening reasoning by men supporting both sides of any controversy. And the choice of which side to take can sometimes be tough. Generally speaking, though, Congress as a body does an excellent job in keeping the wheels of Government going. The proof of this is that the wheels have never stopped and look good for the next three or four centuries, at least.

The Late Honorable Edmund P. Radwan

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. ZABLOCKI. Mr. Speaker, I was deeply sorry to learn about the passing away of our former colleague from New York, the late Honorable Edmund P. Radwan.

I had the privilege of serving with Congressman Radwan on the Committee on Foreign Affairs. Through our close association over the years, I learned to respect him greatly for his integrity, for the soundness of his judgment, and for his devotion to his legislative duties. I know that many of my colleagues have shared my esteem for him. We are deeply moved by the sad news of his death.

It is indeed tragic that someone so young, so able, and having—to all appearances—the whole world in front of him, should have suffered so much and been called by his Maker in the prime of his life. The illness which ultimately led to Congressman Radwan's death had earlier forced him to resign from the Congress and to abandon the life of public service to which he had devoted himself with such vigor and devotion. That grievous misfortune was compounded by the ordeal of repeated surgeries which he had to undergo, and by great physical pain and suffering.

Although we cannot always understand the workings and designs of the divine providence, we must seek consolation today in the thought that the good Lord had called our late colleague to be among His very own.

I want to extend my deepest sympathy to Congressman Radwan's family and his friends. May the good Lord keep them in His special care during this time of their great sorrow and loss.

The New Face of Our Foreign Trade

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the developments in our foreign trade in the last 18 months have been so startling and ominous that the Congress should no longer look upon the scene with folded arms.

The trends that have become apparent cast a serious doubt over our foreign trade policy, and especially over the wisdom of entering into negotiations for further tariff reductions, such as are contemplated in 1960. Our exports have been dropping in serious proportions since 1957 and efforts to restore them depend largely upon further subsidization.

Raw cotton is an example. Our exports have declined alarmingly, from some 6 million bales to less than 3 million. Now we have increased the subsidy by allowing exports at prices 8 cents per pound below the domestic price, compared with the previous 6½ cents. This increase in the differential between the domestic and the export price is expected to lift exports to 5 million bales.

We cannot expect to subsidize all exports. Among the heavy volume shipments abroad in the past have been automobiles and steel. Now we import more of each than we export. Are we going to subsidize these exports in order to recoup our export markets? From the trends that have become apparent we would soon be subsidizing one line of exports after another. We have long subsidized merchant shipbuilding and the merchant marine in order to keep it on the high seas. Even so there has been a serious decline in the share of world trade carried by American-flag ships.

It must be obvious that we cannot ask the Treasury to bail out every industry that either finds itself losing its foreign market or crowded more and more in the domestic market by imports or both. Yet, an increasing number of our industries are finding themselves in that situation.

Mr. Speaker, under leave to extend my remarks I include an address made by O. R. Strackbein before the Plumbing Brass Institute on the occasion of their annual meeting in White Sulphur Springs, W. Va. Mr. Strackbein presents an analysis designed to demonstrate that the present import-export situation is not a passing phenomenon but the reflection of a very serious shift in our international competitive position that shows this country in a weak and weakening position.

I commend his address to all Members:

THE NEW FACE OF OUR FOREIGN TRADE

(Address of O. R. Strackbein, chairman, the Nationwide Committee on Import-Export Policy before the Plumbing Brass Institute, White Sulphur Springs, W. Va., September 2, 1959)

In March of this year our imports reached a record high level above any previous month in our history. In June the March record was surpassed. Also in June our imports exceeded our commercial exports. The first half of 1959 saw our imports run 18 percent ahead of the first half of last year.

Our exports on the other hand have declined. In 1958 they dropped 16 percent from the preceding year and during the present year they have declined roughly another 5 percent.

These trends are being explained by liberal trade proponents as being temporary and abnormal. They say that the high imports this year are swollen by heavy steel imports attributable to the steel strike, the popularity of the small foreign automobile, and several other extraordinary factors. When the steel strike is settled and when the domestic automobile industry brings out its so-called compact car, imports will presumably level off. Last week Assistant Secretary of Commerce Henry Kearns in a press conference expressed the opinion that our exports would rise; and he doubted that we have priced ourselves out of foreign markets.

As for exports, the freer-trade apologists expect cotton exports to spurt and jet plane shipments to zoom, and thus to raise the export level.

If we examine these explanations and hopes we find that even though steel and automobile imports have risen, coffee and petroleum imports, which are among the highest of all, have suffered a decline in dollar value. If coffee prices rise this year imports will again loom larger. Also, it may be questioned whether steel imports will fall substantially after the strike. They began rising over a year before the strike was called and price comparisons with the foreign product would indicate a continuation of imports at a level considerably higher than in the past. If a judgment can be based on the experience with other products, imports that have a distinct price advantage will continue to increase; and steel should be no exception.

The same reservation applies to the small foreign car. It may be found that imported cars have established a market for themselves that will not readily yield to the smaller American car. Of course, even if the automobile industry, with its mass production techniques, should succeed in stemming the import tide without resort to import restrictions, this would offer little comfort to other industries that do not possess the vast resources of this giant among American industrial wonders. The test even with automobiles, however, is still to be met.

It should also be pointed out that the petroleum imports that helped swell the total import volume for the first half of 1959 began to decline after March when mandatory import quotas were established. This again would indicate that total June imports of all products were not abnormally high. Petroleum and coffee imports, both of which were down from previous levels, have been the No. 1 and No. 2 imports in dollar value for several years. Therefore the increased steel and automobile imports that are used as explanations to account for the surge in our total imports do not of themselves succeed in making the high import levels of recent times abnormal. They are offset by declines elsewhere that may be of a temporary nature. Moreover, high steel and automobile imports may continue.

That exports of cotton may increase seems assured with the increase in the export subsidy that went into effect August 1. Such an increase in exports will, however, be an artificial rather than a normal and healthy expansion, since the subsidy amounts to about 30 percent of the price. An increase of this kind should not be counted as a sound commercial development nor should the upward surge be listed as reflecting the capacity of the American economy to com-

pete in the world market—quite the contrary in fact.

The anticipated increase in plane exports may also help to boost exports. This is expected to be in the magnitude of $400 or $500 million per year and will represent commercial exports. However, a sharp decline has been registered in coal exports within the past year, and this does not appear to be headed toward a reversal. An increase in exports in some other field, such as the expected rise in sales of planes abroad will indeed be needed to offset this loss.

Steel exports have recently been exceeded by imports at a ratio of two to one or more. This is a startling development. In 1958 imports of typewriters for the first time also exceeded our exports. In many other fields, such as electronics, sporting goods, fishing tackle, cameras, sewing machines, farm tractors, etc., imports have increased sharply. Machine tools have also had the experience of increasing imports and falling exports; and this is very significant because machine tools are of themselves sources of technological development. Greater self-sufficiency abroad, as indicated by the decline in our exports, combined with the ability of other countries to export machine tools to us, are more than straws in the wind to be blown out of the way by the words of Assistant Secretary Kearns.

In the textile field exports have been declining for several years while imports have risen greatly. The trend to higher imports was halted, temporarily at least, by inducing Japan, the principal source of imports, to impose export restrictions on her shipments to us. That such restriction was necessary in order to save the domestic industry demonstrates once more the weak competitive position in which we find ourselves in the foreign field.

It should be clear enough all around that the increasing imports since 1957 plus the decline in exports since that time reflect, not an abnormal and passing condition, but bespeak yet greater competitive trouble for many of our domestic industries in the future.

There is yet further evidence of the uncomfortable position in which the United States finds herself in the foreign trade field. In 1958 we experienced a defict of $3.4 billion in our total foreign account even though our merchandise exports exceeded our imports by more than $3 billion. Actual gold shipments abroad covered some $2.3 billion of this deficit. This drain on our gold has continued through the first half of 1959 during which period we lost another $955 million in gold. Our gold stock in Fort Knox has fallen below the $20 billion mark, the lowest level since 1940. The National Foreign Trade Council recently estimated a deficit of nearly $5 billion in our total foreign account for 1959.

The foregoing facts will not be vaporized by glib assurances of the freer-trade elements. The latter seemingly have lost their contact with reality.

There is much else beside the statistics of imports and exports and figures on gold drain and falling U.S. gold reserves that should indicate even to the blindest that the United States has come into a highly vulnerable competitive position in the world. Even our great mass production industries, these giants that have been in the technological forefront and in the vanguard of automation are now finding themselves beset by a competition that is beyond their reach.

There should be no element of surprise in this at all. Other countries have imported or otherwise obtained from us through foreign aid approximately $30 billion of modern machinery in the past 11 years, $21 billion of it in the past 6 years. Installation of this machinery abroad has brought with it a great boost in foreign productivity. During these same years in the neighborhood of 10,000 foreign productivity teams have been given access to our factories.

The increase in foreign productivity, while uneven, has obviously been startling in many instances. Modern machinery superimposed on a low level of technology or primitive machinery, as has happened in many foreign production centers, has meant a boost in productivity not experienced in this country. We have saved a number of countries a generation of research and development by making available to them our latest technology.

This is not said by way of complaint; but we should at least have sufficient insight to comprehend the probable consequences of our policies. The echoes are now coming in from many directions.

Not least among our difficulties is the fact that foreign labor unions have yet far to go to equal ours in bargaining capacity. They are hobbled psychologically no less than ideologically. Therefore increasing productivity shows up in lower costs abroads more readily than in this country.

Not only is the trend in our trade in the past 18 months not abnormal; the competitive situation on which it is based is not a superficial one. The cause is deep seated and was long in the making. The higher costs of production in many of our industries compared with foreign costs are the result of developments that will not be undone overnight. In seeking to adjust to them an increasing number of our industries have been arranging for foreign production. Some of them have established branch plants in other countries; others are in the process of doing so and still others are studying the possibilities. In other instances licensing arrangements are made with foreign producers whereby our patents are made available on a royalty basis. Then again some of our companies have bought foreign concerns outright or purchased a substantial interest in them. Others are still shopping for production facilities in a number of countries.

The purpose is to gain the advantage of lower wages and thus to become competitive in foreign markets. In some instances as in the case of automobiles, tractors, and typewriters, the foreign branches or subsidiaries ship the foreign-made product into this country itself. Principally, however, the purpose has been to hold the export position or rather to make up for the loss of exports by supplying foreign markets from foreign sources.

This trend toward partial emigration represents an adjustment by our industries to the competitive facts of life. As imports encroach on the market in this country and deprive our own industries of ever increasing shares of their accustomed market, industry is driven abroad as a matter of self-defense. Since capital has mobility this is not only a possible move but in many instances an unavoidable and sometimes a profitable one.

What is wrong with it?

There is nothing wrong with the self-defensive movement of itself; but there is something disturbingly wrong with the conditions that have brought forward this type of economic defense as a competitive necessity.

It is often said that we have priced ourselves out of foreign markets. This may be admitted without placing the blame on any particular factor of the domestic economy. Many will say that it is our high wages; but it would be just as easy to say that foreign wages are too low. Certainly heavy contributing factors of our high costs are the war expenditures and postwar defense outlays, the heavy national debt, price supports for agriculture, social security, etc. Our wages are admittedly high but we should not overlook the fact that they provide the tremendous purchasing power that has kept our economy at a high level. If foreign wages were higher than they are in relation to foreign productivity our higher wages would not create a competitive disadvantage, such as is now the case.

If foreign wages could be increased our competitive troubles would disappear; but there is no present method that can be employed by us to accomplish this objective immediately or very soon.

The question then arises what can be done.

There are those who, though recognizing the difficulty, say that tariffs are not the answer; and, of course, tariffs are not the complete answer. They say that we must invent and modernize and sell more vigorously; we must mechanize all possible production and in general become more efficient.

All these years we had been told by the liberal trade advocates that we were in the forefront in technology, productivity, know-how, and efficiency. Now, it appears, this is no longer true and we need to buckle down to hard work, take in our belts, and reinvigorate our economy. Very well, but other countries are mechanizing, too, and since they have a lower starting base they can easily outstrip us in raising their productivity. They, too, are buckling down and inventing and selling. Moreover, we are still assisting some of them technologically and financially and putting our techniques at their disposal.

The prospects are not bright for a pull away by this country. Not at all. The other countries now have all that it takes to catch up with us, including the creation of mass markets. The question is how their catching up is to be accomplished. Must we be torn down in the process, or can we hold our own while the other countries come up?

We need a holding defense. This can best be contrived through a combination of tariffs and quotas, by the use of which suitable shares of our market can be opened to imports while reserving the remainder for ourselves. We can thus recognize the need for a high volume of trade without placing our industries on the sacrificial block as pawns in the shifting currents of international politics.

American industry is exposed competitively to imports to a degree not previously experienced. Our defenses are down, with an average tariff protection about 80 percent below the level of 25 years ago; and there is virtually no remedy today against injury from low-cost imports.

For these and other reasons it would be high folly to consider the present foreign trade situation as a passing phase of an abnormal development. Most of the pointers indicate otherwise. Therefore we should prepare for what appears to be ahead.

Reserve Air Fleet

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of September 8, 1959:

RESERVE AIR FLEET

In Washington it has been proposed that a large-scale loan guarantee program, to spur development of a national air cargo fleet, be undertaken.

This would be a highly desirable program, and it is to be hoped that it will soon be

underway. Approval, in brief, would guarantee loans to individual airlines purchasing modern, efficient cargo-carrying aircraft.

For one thing, such a program would build up the air cargo industry by enabling airlines to reduce costs and rates. Those costs and rates are high today because inefficient aircraft are being used.

The aircraft were designed for passenger transportation rather than freight.

For another thing, a modern reserve cargo fleet would be instantly available to the Nation in a military emergency, and this is something which is badly needed today. MATS aircraft are rapidly becoming obsolete, and Congress recently refused to vote any money to allow MATS to purchase jet aircraft, to be used for logistical support purposes. (Private airline companies, and their lobbying, are responsible for this congressional attitude.)

The new program would enable the commercial airlines to build up their cargo fleet, but it should be coupled with appropriations enabling MATS to modernize its logistical support fleet also.

Most MATS planes today are rapidly becoming obsolete, and Congress has not authorized any jet acquisitions. Therefore, it is vitally important to the safety of the country for the Nation to have an available capacity of jet cargo carriers.

Such a fleet should be acquired by every means available.

Successful Cooperation Between the Commander of a Military Establishment and Citizens of the Surrounding Area

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. STUBBLEFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter forwarded to Maj. Gen. W. C. Westmoreland, commanding general at Fort Campbell, Ky., by Mr. W. Graham Harvey, president of the Hopkinsville and Christian County Chamber of Commerce, Hopkinsville, Ky.

Congressman ROSS BASS and I commend it to our colleagues as an excellent example of successful cooperation between the commander of a great military establishment and the citizens of the surrounding area:

Maj. Gen. W. C. WESTMORELAND,
Commanding General, Fort Campbell, Ky.

DEAR GENERAL WESTMORELAND: The relationship between the personnel of Fort Campbell and the townspeople of Hopkinsville, Ky., is a great credit to both of these communities. This splendid association exists not only in social contacts between members of our two communities, but also extends into the area of business relations.

This relationship is of great concern to us in Hopkinsville because we realize the well-being of the service personnel at Fort Campbell is of primary importance to us due to the important position they fill in the defense of our country.

We are proud of our relationship with Fort Campbell as it now exists because we feel it is the best we have ever had and was developed by mutual understanding and trust. Recently there was some discussion by us as to the operation of the Fort Campbell post exchange and commissaries and as we did not fully understand these operations we invited Brig. Gen. W. G. Rich to meet with our board of directors and chamber of commerce retail merchants committee. General Rich met with us and explained the operation of these facilities and did a brilliant job of answering the many questions of our members.

Later we called General Rich and through his willing cooperation a tour of these facilities was arranged for some of our merchants in order that we might still better understand their operation.

The results of the study made by the chamber of commerce board of directors and retail merchants committee are as follows:

1. While it is normal for every merchant to strive to gain the largest portion of any available market, we do realize the basic importance of the Forst Campbell post exchange and commissaries and feel that the contributions made by them as presently operated, outweigh any loss of trade these facilities might cause to us in our civilian operations. We recognize the fact that the savings the military personnel gain by purchasing on the post in most cases find their way into the local economy. We also realize that a stabilizing factor in our economy is the civilian payroll of the post exchange and commissaries and Fort Campbell.

2. Our chamber of commerce would like to compliment you and your command on the operations of the post exchange and commissaries and wish you to know we look with favor upon these facilities at Fort Campbell, maintained within their present limit, as to the type of items sold.

At a meeting of the board of directors held on July 20, 1959, I was instructed by the board to write you that after the complete study by the board of directors and the retail merchants committee that the board of directors unanimously voted to publicly endorse the operations of both post exchange and commissaries at Fort Campbell for the benefit of our Armed Forces personnel.

Yours very truly,
W. GRAHAM HARVEY,
President, Hopkinsville and Christian County Chamber of Commerce.

The Future of Labor Can Be as Useful as Its Past, Despite Present Trials

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. LOSER. Mr. Speaker, on September 7, 1959, the Nashville Tennessean published a splendid editorial on the growth and accomplishments of labor unions in this country. This editorial is one which should be read by every person who is sincerely interested in organized labor and, under leave to extend my remarks in the RECORD, I am including it for this purpose.

Organized labor has accomplished a great deal for the working people of this country during this century. It has grown to a place of major importance in our economy, and it is believed that it will fully awaken to its new responsibilities to its members and its country.

The editorial follows:

THE FUTURE OF LABOR CAN BE AS USEFUL AS ITS PAST, DESPITE PRESENT TRIALS

Organized labor's time of trial over internal abuses and scandals has resulted in losses of prestige and public support. Now the excesses of the few have brought new legislation with which the whole must live.

In the tumult, perhaps a great deal has been forgotten about a movement that today has more than 18 million members in 190 national or international unions and 77,000 locals. Any assessment of the trade union movement now requires a backward glance, for it is in retrospect that we are best able to measure what organized labor has meant and can continue to mean. Labor Day, 1959, is an appropriate time for a history review.

During the infancy of this Nation, the lot of the workingman was what his employer decided it would be in terms of hours, wages or working conditions. If a few workers protested, or attempted to form a bargaining unit, they were slapped down by the law. The early courts followed English common law doctrine based on concepts that a maximum wage could be fixed by law and that workers could be compelled to work. Any challenge here was held to be a criminal conspiracy.

But with the growth of industry and the factory system, workers found themselves increasingly exploited. Labor was a commodity swelled by immigrants and men, women, and children from farms. They spent long hours in crowded, unventilated places filled with dangerous machinery and subject to the whim of overseers whose only thought was production at a profit.

In the years of the 1800's, the laboring force had almost no voice in determining the course of economic or social destinies. The workers knew theirs had to be a stronger voice. They formed organizations, only to have them struck down by depressions or management efforts. The cycle of rise and fall went on, but finally the labor movement caught on, given life in the protest against what seemed to be an inherent economic tyranny of the factory system and its dictum: submit or starve.

From 1904 to 1917, unionism grew. It brought on more receptive legislation, betterment of working conditions and wages. The 8-hour day was adopted for the first time in many industries, and union membership increased to 4 million. In the 1920's, however, labor was again in retreat, hit by depression, strike loses, Government hostility and reaction against radicalism. Only the stronger unions survived.

It was well into the 1930's and under the New Deal that the labor movement entered a new era, began once more to grow and assert itself in areas of economic and social needs. Already it could look back on such gains as universal male suffrage, free public schools, mechanics lien laws, and the abolishment of imprisonment for debt.

Unions became more and more a force in the development of the Nation, sharing increased portions of the fruits of a system of enterprise that promised and delivered material abundance beyond that of any man-made system. Great economic and social gains were again being brought about with the help of organized labor, gains in which all workers could share. Among these were the 40-hour week, minimum wage rates, establishment of child labor laws, a National Labor Relations Act, a Fair Labor Standards Act, social security for the old-aged, survivors, and dependents. Legislation in the realms of social security and labor standards was designed to aid working people whether they were organized or not.

It is important to remember this role of unions in the development of the country. It is also important that organized labor stay fully conscious of the fact that past laurels are no guarantee of its own permanency.

The labor movement has reached a point of power it has never had. And it has reached a point of corresponding responsibility as a major force in industrial society. In the future, the political power and the faith of the public in the labor movement depend as never before on how wisely and how well unions measure up to that responsibility.

The people and Congress have just given labor unions an object lesson on the issue of abuses and corruption within labor's house. It would be foolhardy for the union movement to fail in demonstrating from here on that further lessons aren't needed.

Labor: in the Public Interest

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. GEORGE. Mr. Speaker, now that the labor-management reform bill is about to become law it is interesting to recall the outstanding work of the McClellan committee and its staff headed by Robert F. Kennedy, it chief counsel.

Established early in 1957 by the U.S. Senate, much unsavory dealing was brought to light on the part of management and labor. Although the blackest chapters of the life of the committee established that some corporations were guilty of contemptible acts, which were selfish and greedy to the extreme, our news media did not succeed in impressing those heinous deeds upon the American people.

Instead, Mr. Speaker, opprobrium was brought down on all of organized labor because of the shameful conduct of a few leaders among the many in the labor movement. Three top labor leaders were proven unworthy of their trust.

Hutchinson, Beck, and Hoffa—all of labor suffered because of them. Seldom did the public press limit its criticism and make clear that these three were the culprits and not the whole of organized labor. Never did the slick magazines clearly set forth that all three were high in the councils of the Republican Party.

No, Mr. Speaker, the average reader thought he knew that those three, stigmatized by the proven facts, were Democrats. He little knew, and had no way of knowing from the public press, that these infamous three were among the largest contributors to Republican campaign funds and to other devices designed to bring victory to the old guard of the GOP in elections that now are history.

Of the thousands of citizens who urged passage of either the Shelley bill or the Landrum-Griffin bill, possibly a dozen individuals had read the bill they endorsed. But again, the press and communications media played their part.

"The Landrum-Griffin bill is a start in the right direction," said the President. So said practically all of the Republican leaders, the National Chamber of Commerce and the National Manufacturers Association. If this bill was but a start, just where would be the end. Or was it their desire to bring an end to organized labor and to compel the laboring man or the working woman to bargain individually for decent wages and working conditions? The answer, Mr. Speaker, is very clear.

The labor reform law can now be tested and in the light of experience it may need to be amended. But, Mr. Speaker, let us all give the law a fair opportunity to prove its value and its faults before another drive is begun to crucify organized labor. Let us remember that the prosperity Americans have enjoyed and the economic progress our country has made is due in large part to organized labor.

To the Honorable JOHN F. KENNEDY, Senator from Massachusetts, all Americans should be exceedingly thankful. Because of his patience, his endurance, his knowledge of labor-management relations and his legal ability, unconstitutional provisions were removed and certain sections that would have defeated the legitimate objectives of organized labor were modified in conference. To Senator KENNEDY all of us who believe in fair play, whether of management, of labor, or of the public, should be forever grateful.

Recently an editorial written by Bill Baker appeared in the Kansas City Star which paid tribute to the McClellan committee and its chairman. The writer frankly admits that he frequently disagrees with the Senator from Arkansas, as do I. But, Mr. Speaker, I believe that other Members would enjoy reading this September 5, 1959, editorial and I include it as part of my remarks:

JOHN MCCLELLAN'S LABORS FOR A LABOR LAW

It is one of the ironies of legislative history that the new labor law does not bear the name of JOHN LITTLE MCCLELLAN, of Arkansas. Certainly no man has worked harder, longer and more doggedly for the bill that finally emerged from the crucible of compromise. Indeed, if there were a D-day for the new law, it was February 1, 1957, when the Senate established the McClellan committee.

For students of political science, we recommend the ensuing investigation as the textbook example of the way congressional investigations should be conducted. Seldom if ever has any congressional group conducted such an important study. Seldom, if ever, has a congressional committee been so objective. An excellent staff was gathered, spearheaded by young Bob Kennedy. In the hearing room, MCCLELLAN was the imperturbable chairman who brooked no nonsense from witnesses. Nor did he permit his colleagues to wander away in search of political headlines.

The conduct of the investigation was typical of JOHN MCCLELLAN, and it has paid off in a bill that he regards as a fine reward for the years of work. It is unlikely, however, that the Arkansas Senator would permit himself even a moment of self-satisfaction. That would be out of character for the little man who poses as a plain country lawyer.

In Congress, the country lawyer is a dour, usually quiet man who can explode with sudden fury. A wide range of committee activities gives the impression of a man always on the go yet unhurried in the tradition of the South. And MCCLELLAN is by all means the southerner. Politically, he is a conservative and he makes no bones of the fact. He is, however, fiercely independent of his party, a fact recognized by Democratic leaders.

Only such total independence could have produced an objective study of such a politically-loaded subject. Independence, and a terrific amount of energy that is perhaps an escape from the personal tragedies of his own life. MCCLELLAN'S three sons have all died untimely deaths, the last in an airplane crash in 1958.

We have frequently disagreed with JOHN MCCLELLAN'S position, and there will be times when we will disagree again. But the labor law of 1959 is a milestone of a legislative career in the tradition of a State that has produced some outstanding lawmakers. The country lawyer from Camden is a credit to the Senate, his State, and the Nation.

The John J. Dempsey Memorial Radio Scholarship

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. MONTOYA. Mr. Speaker, the New Mexico Broadcasters' Association on August 29, 1959, established a new scholarship for radio broadcasting in honor of the late John J. Dempsey, former Representative and former Governor of New Mexico. It will be known as the John J. Dempsey Memorial radio scholarship.

Radio broadcasters and newscasters in Washington and throughout the entire country remember Representative Dempsey with particular affection. After learning from Fulton Lewis, Jr., of the inadequate facilities for radio newsmen covering the Capitol, Representative Dempsey was instrumental in 1939 in establishing the congressional Radio Galleries. His resolution amending the Rules of the House to set up the House Radio Gallery was passed on April 20, 1939. The House Radio Gallery was opened on May 23, 1939, and is 20 years old this year. A companion resolution to the Dempsey resolution amending the Senate Rules to set up the Senate Radio Gallery was passed on April 25, 1939. The Senate Radio Gallery was opened on February 9, 1940.

Now, 20 years later, in recognition of Mr. Dempsey's contribution to facilitate radio news broadcasting, the New Mexico Broadcasters' Association has elected to make its own contribution to the future of radio broadcasting in the form of a scholarship in John J. Dempsey's name.

The new scholarship will be awarded for the first time this year. Potential recipients will be New Mexico college sophomores who plan to major in radio journalism at the University of New Mexico. The $500 annual award will be made on the basis of scholastic aptitude,

high character, financial need, and a sincere interest in the radio news field. The selection of the recipient will be made by a committee made up of two faculty members of the University of New Mexico and three members of the New Mexico Broadcasters' Association. The scholarship will be continued through the recipient's junior and senior years, providing his scholastic record is 2.5 or better, and providing he continues his interest in radio broadcasting.

The scholarship fund will be administered by the University of New Mexico. Each radio station in the State will contribute to the annual scholarship fund. Wayne Phelps, owner and manager of radio station KALG, Alamogordo, N. Mex., is chairman of the John J. Dempsey Memorial scholarship committee for the New Mexico Broadcasters' Association.

Presentation of Flags to Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, recently the Committee on Science and Astronautics staged a historic meeting in its committee room. The occasion was the formal presentation of the American flag together with the Army flag with its 145 colorful battle streamers. On this occasion, the committee was honored by the presence of the Secretary of the Army, the Honorable Wilber M. Brucker, and by the Chief of Staff of the Army, Gen. L. L. Lemnitzer. The entire committee was present and drawn up around our distinguished guests and around the Army color guard.

The Secretary opened the program by presenting to the committee these two symbols of our Nation and its Army with a short speech, a copy of which I am presenting for insertion in the CONGRESSIONAL RECORD at this point:

Chairman Brooks and members of the House Science and Astronautics Committee, it is a great honor and a genuine pleasure for me to represent the U.S. Army today in presenting the American and Army flags to the Committee on Science and Astronautics of the House of Representatives. Although both of these banners are new, they both symbolize institutions as old and older than the Nation itself.

Our American flag is a familiar and beloved symbol to every red-blooded American. Its history and its significance are known to every schoolchild, and the new, 49th star it bears—signifying the entrance of Alaska into the Union—gives every thoughtful citizen new cause for pride. In this troubled and changing world, when most of the colonial areas and peoples of the world are seeking freedom from old ties, it is deeply significant that a large and richly endowed area, such as Alaska, should so enthusiastically enter our family of States. The faith, good will, and patriotism reflected in this act betides more future good for American than all the forcefully acquired and subjugated land areas will ever mean to a ruthless conqueror. What greater tribute could be paid to any government than this irrefutable evidence—given freely and without fear or force—of belief in these governmental principles which make our several sovereign States the United States of America.

Our Army flag has been in existence only since June 13, 1956, at which time it was presented to me on behalf of the President by Vice President NIXON. Although many Army units, from groups and corps down to separate battalions, had long had their distinguishing colors and standards, there was no flag, prior to 1956, which was the emblem of the Army as a whole.

This beautiful silken banner is made up, as you see, in our national colors—red, white, and blue. The blue device in the center is the seal of the War Department authorized by the Continental Congress in 1779, which still serves as the real of the Department of the Army. Above the seal a rattlesnake—reminiscent of the colonial rattlesnake flag—holds in its mouth a streamer bearing the motton "This We'll Defend." The date 1775 shown on the flag refers to the year in which the Continental Congress established the U.S. Army on June 14, 1775, by authorizing 10 companies of Infantry to be raised in Pennsylvania, Virginia, and Maryland to march to Boston, Mass., and there be formed into an Army under Gen. George Washington, its first Commander in Chief.

We are tremendously proud of this flag and of the glorious tradition of courage, devotion, and sacrifice in the service of America which it symbolizes. Each of these 145 colorful battle streamers represents one of the campaigns in which the Army has fought during its 184 years of history—from Ticonderoga right down through Korea. What a splendid record of dedication to the security of our national heritage these battle streamers signify.

The Army feels a close kinship with the House Committee on Science and Astronautics. We share your belief in the principle that activities in space should be devoted to peaceful purposes for the benefit of all mankind, and we are partners in your efforts to apply our newly acquired knowledge in this area for national defense, if need be.

With the devout hope that this committee and the Army may continue to work together for the defense of the Nation and the progress of science, I shall now ask General Lemnitzer, Chief of Staff, U.S. Army, to make the official presentation.

Mr. Speaker, this speech was followed by the formal presentation of the Army flag by Chief of Staff, General Lemnitzer, in the presence of four young men in full uniform, color bearers for the Army.

I, as chairman of the committee, replied on behalf of the Committee on Science and Astronautics, accepting these two flags and causing them to be installed at once in their proper place of honor in the committee room. My remarks are as follows:

Mr. Secretary, General Lemnitzer, this occasion is indeed a signal honor to this committee, of which I am proud to be chairman, and I am sure that the distinguished Members here assembled join with me in extending to you our sincere thanks for the magnificent flag of our country and of the Army which now stand proudly on our rostrum.

It is most appropriate that, as Secretary of the Army, you should present this committee with our Nation's flag, since the Army throughout our entire history has been in the forefront of the unending struggle of our people to preserve our freedom and to defend it through many wars against enemies who have opposed the principles of human dignity for which "Old Glory" stands.

And when I look at the flag of the U.S. Army, and see the battle streamers that represent 145 campaigns in which the Army has fought, I think of the millions of American men and women, foreign-born or descendants of people from almost every country on earth, who have carried our flag to the far corners of the world and many of whom gave their lives so that we can stand here as free men on this memorable day.

I am reminded, too, when I proudly wore the uniform of our Army in France during World War I. I can vividly recall my deep feeling of pride in seeing "Old Glory" flying above our cantonments and camps, a symbol of hope, encouragement, and ultimate victory for our country in its struggle against imperial Germany.

And again, I am reminded of the World War II and Korean campaigns which will remain as eternal monuments to the courage and unlimited sacrifices of Americans who fought to preserve their way of life, which since the beginning of history has been founded on the bedrock principle of human rights and self-determination for all men.

And now, we are engaged in a struggle that is no less bitter and crucial than those of the past. We are faced with an enemy that abhors everything this country represents, and who has openly and continuously dedicated himself to the destruction of our Nation and the other free nations. At these critical times, the Army continues to be one of our main bulwarks of strength, and a source of great confidence in the future.

We, the members of this committee, are not unaware of the significant and material contributions being made by the Army in this space and nuclear age. We have heard testimony from many important witnesses who have reminded us of the outstanding accomplishments the Army has made in developing operational guided missiles and in placing our first satellites in orbit. We know that our Army stands continuously prepared for any national emergency that may arise and to undertake any task that may be assigned to it.

And now, Mr. Secretary and General Lemnitzer, it is with great pride and reverence that I accept these flags on behalf of the Committee on Science and Astronautics. May they continue to remain for many years to come a permanent part of the committee, giving our members and our staff an increased sense of responsibility and loyalty and inspiring an even greater devotion to our labors here in the committee room. You may be sure that the committee members will be ever mindful of the great heritage these two flags and their battle streamers represent.

Look Here, Mr. Khrushchev, and Learn How Private Industry Underwrites Medical Research in Free America

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CEDERBERG. Mr. Speaker, it would be futile to hope that any of the pollen of the flowers of the American private enterprise system would rub off on Mr. Khrushchev during his visit to this country, but as just a single example I wish he could become acquainted with the contribution one of the Nation's big

chemical companies, whose main offices and plants are located in the district I represent, is making as a public service in the field of medicine.

The Dow Corning Corp., of Midland, Mich., a pioneer in silastics, has announced the founding of the Dow Corning Center for Aid to Medical Research for the purpose of furthering medical research in the use of silicones in medicine and surgery. The center is financed by the corporation and all its findings will be available to the medical profession without cost.

During the past several years a number of remarkable advances have been made in medicine and surgery by using Dow silicones in a variety of forms. The interest among physicians and surgeons has grown so great that Dow-Corning Corp. had to assign two of its best scientists to act in a liaison capacity between physicians and surgeons and its research laboratories.

AID TO MEDICAL RESEARCH

Dr. W. R. Collings, president of the Dow Corning Corp., in announcing the founding of the new center said:

Our board of directors has recognized the responsibilities of the corporation by authorizing a nonprofit unit separate from our commercial activities, but allied with our research department.

According to Dr. Collings the purpose of the center will be to aid medical research by supplying technical assistance, by acting as a clearinghouse for information about the use of silicones in medicine and surgery, and by cooperating in research in organosilicon chemistry in relation to the human body.

Offices of the new center will be at Midland. The director will be Dr. Rob Roy McGregor, and the executive secretary, Silas A. Braley, Dr. Collings announced.

Dr. McGregor is one of the first inventors of commercial uses of silicones. Formerly a fellow of the Mellon Institute, Pittsburgh, he has been a member of the research team of Dow Corning since its founding in 1943. Assistant director of research, he has in recent years given his time to relations with the U.S. Food and Drug Administration and with the medical profession.

SILICONES HAVE MANY SURGICAL USES

Dr. McGregor points out that so far the best known medical uses of silicone material have been in brain surgery, heart valves, sutures, ducts, and heart-lung oxygenators. Already silicone valves have been responsible for over 4,000 successful operations on children with hydrocephalus — water-on-the-brain.

In one form or another medical research has found use for silicones in literally every part of the body, even the eye. One main reason is that silicones are chemically inert and nontoxic. They can be made in any physical form from fluids to rubber and thus can be applied as coatings or molded. Tissue fails to adhere to silicone rubber, and thus embedded material can be removed without pain.

Appropriately and in accordance with the rules of medical ethics, the announcement of any new techniques will come from the medical profession itself.

This, Mr. Khrushchev, is just a small sample of the contribution made by the free industries of America under the capitalistic system which you propose to bury.

One Man's Record

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "One Man's Record," which appeared in the Arizona Republic, Phoenix, Ariz., of September 4, 1959:

ONE MAN'S RECORD

BARRY GOLDWATER ought to be feeling pretty good today. He was the one Senator who voted against the Kennedy labor reform bill. Ninety of his colleagues voted for it. Senator GOLDWATER said it was a panty-waist bill completely incapable of cleaning up the Augean union stables uncovered by the McClellan committee. The other Senators were satisfied with the bill. Organized labor thought it was too tough, and union leaders almost unanimously lashed out against GOLDWATER as the "bete noire" of the labor movement, a union-hater of the first order, a reactionary so-and-so.

BARRY shrugged off the abuse and stuck by his principles. He said it was high time to make union leaders account for their funds, to require them to stand for regular secret elections, to end personal raids on union treasuries, to protect the average union worker with a bill of rights, to protect the public by outlawing organizational or blackmail picketing and secondary picketing, to end the no man's land bteween Federal and State agencies in handling labor dsputes. The people rallied to his cause. A flood of mail reached every Member of Congress, urging the lawmakers to end the unholy power of racketeering, corrupt, and unscrupulous labor leaders.

The rest is history. The House of Representatives properly sensed the public demand for a strong labor reform bill. It passed the Landrum-Griffin bill despite some of the most arrogant, strong-armed union lobbying in the history of Congress. Union Leader Jimmy Hoffa threatened nationwide teamster strikes. Union Leader Jim Carey wrote Congressmen who had voted for the Landrum-Griffin bill threatening to purge them in the next elections.

For 12 days a joint Senate-House committee worked at the task of reconciling the effective Landrum-Griffin bill with the ineffective Kennedy bill. On Wednesday they reached agreement on a measure that was in essence the Landrum-Griffin bill, with a few minor refinements. Its passage by both Houses and approval by the President was assured.

Thus ends the great labor reform fight of 1959. Union leaders are still sulking in their tents, muttering threats of reprisals, talking about the killer bill that Congress passed. But there is nothing in the new measure that will hurt honest trade unionism. There is a lot in it that will protect rank-and-file union members and the public. The Congress has shown that the people of the United States do not intend to let any segment of the labor union be run by extortionists, scofflaws, and power hungry bosses. This Nation, from time to time, has redressed the balance caused by individuals and groups who thought they were bigger than the people as a whole. It has now taken steps to put the unions in their place, a dignified, respected place to be sure, but not one of complete power.

The whole country owes a debt of gratitude to BARRY GOLWATER for never quiting when the going got rough. He has answered the old question that confronts individuals in a democracy, "What can one man do?" He has shown that one man, with the people behind him, can do anything that is required by the national welfare.

An Appraisal of Herbert Hoover

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CONTE. Mr. Speaker, the distinguished former Governor of the Commonwealth of Massachusetts, Robert F. Bradford, has written an intensely interesting evaluation of the life of former President Herbert Hoover. This article appeared in the Boston Globe of September 9.

I commend to the attention of all my colleagues this article about a great former President—written, I might add, by a great former Governor of my State, whom we in Massachusetts respect and admire in much the same way that the entire American Nation now respects and admires Herbert Hoover:

HERBERT HOOVER

(An appraisal by former Gov. Robert F. Bradford, written for the Boston Sunday Globe, Aug. 9, 1959)

It is seldom that a man reaches full stature in the eyes of his contemporaries. More often perspective is distorted by events with which he is associated or exaggerated because of legends attaching to his personality. Thirty years ago, or even 20 years ago, this could be said to be the case with Herbert Hoover. He had already lived three full lives. He had been a highly successful mining engineer with an international reputation dating back to his work in China even before the Boxer Rebellion. During World War I he became the symbol and administrative genius behind the organization of American relief to refugees, first in Belgium and later throughout Europe. From that it was a short step after the United States entered the war for him to become Food Administrator—a position without much power, but so ably directed that for the time being to "hoover" or to "hooverize" in the saving of food became a part of the national vocabulary.

With the change of administrations following World War I Hoover became Secretary of Commerce and applied his great talents and wide range of knowledge to rally the shaking business structure which was the immediate aftermath of peace. Thirty years ago Mr. Hoover became President of the United States. Up to this point his image in the public mind was that of a benevolent, impersonal, somewhat autocratic man with an awesome reputation for efficiency and getting things done. His very formidable successes in his previous roles set an impossible standard for him as President: it made him seem unapproachable, and it attributed to him the

blame for anything anywhere that went wrong. Then in October 1929 came the stock market crash which cast an inevitable pall over the entire administration of President Hoover.

One of the sorriest chapters in American political history is the story of the deliberate, cold-blooded and carefully performed campaign by the Democratic national high command to smear Hoover. The story is told baldly in detail by the principal executioner, hired for the job, Charles Michaelson, in his book "The Ghost Talks." After the midterm congressional elections of 1930, which returned a Democratic House to Washington, nothing that President Hoover proposed could get through Congress. No program for recovery known to be favored by him stood a chance of adoption. The reaction on the President, with his dedicated sincerity and his tireless capacity for work, was complete frustration and the Nation wallowed in what the opposition was prompt to label the Hoover depression. Mr. Hoover left the White House a man politically destroyed. Yet many a proposal originated by him, only to be blocked in the Congress, was immediately put into effect by his successor. The Federal Deposit Insurance Corporation is one such plan, to name one out of many.

So complete was the destruction of the political image that for almost 20 years Democratic candidates all over the country were, as someone well said, "running against Hoover" with every hope of success. For the average individual who did not know the man it was impossible through this smoking ruin to evaluate the real Herbert Hoover. Even in political circles it was thought unsafe to be identified with the name. In the 1936 Republican Convention in Cleveland Mr. Hoover was permitted to speak, or so the corridor legend goes, only upon the understanding that he would leave the convention immediately after finishing his address. At all events he lived up to the agreement, if it was an agreement, scrupulously and the fears, for they were genuine fears, of a stampede for Hoover among the delegates were allayed. At the 1940 convention, again steps were taken to avoid the possibility of a draft Hoover maneuver. No opportunity was afforded him to address the convention until after the nomination was settled.

If these details seem petty in a life as full and serviceable as that of Mr. Hoover up to the time he left office as President, they are important to emphasize because they underscore the greatest achievement in Mr. Hoover's great career: His ability to rise above personal bitterness, rancor and frustrated hopes of vindication and to achieve a fourth life of selfless and serene statesmanship as a private citizen.

There is a story which is so good one can only hope that it is true that during the early stages of this fourth phase of Mr. Hoover's life he was called upon to give an address in Oakland, Calif. One of his close friends who saw an early draft of the speech was bold enough to suggest that Mr. Hoover inject some of his natural humor into the text. The President strenuously opposed the idea; it was out of character for him and undignified. Nevertheless he went along with the suggestion. Immediately after the address he boarded a train for New York, being joined on the trip by one of his former secretaries, Theodore Joslin, formerly of the Boston Transcript. All the way across the country Mr. Hoover was plunged in gloom. No telegrams had come in, no comment or criticism of the Oakland speech had been received. He felt that he had been right in opposing the friend's suggestion and that through his weakness in finally going along with the idea his reputation was forever ruined. When the train reached New York Mr. Hoover was met by another secretary bulging with telegrams. At the door of his apartment there was a positive avalanche of messages, all highly laudatory. Finally, convinced, Mr. Hoover turned smilingly to his staff and said with a twinkle, "You see, I knew all along this was what I could do if I tried." In any case it was about this time that a new Hoover definitely emerged. That is to say, the real Hoover began to be known for himself.

Another great American, John Quincy Adams, defeated for reelection as President, and with an illustrious record behind him, made his greatest contribution in afterlife as a simple Member of Congress, dubbed "Old Man Eloquent" by his fellow Congressmen for his unflinching fight against the tyrannical gag rule. So Herbert Hoover, ex-President, may be said to have done most for his country through his example as a private citizen and for his leadership and implementation of the recommendations of the bipartisan Hoover Commissions for the reorganization of our National Government.

So as we salute him on his 85th birthday it is possible to say of Herbert Hoover that he has lived to achieve the satisfaction of complete vindication and a permanent place in the affection and admiration of his fellow countrymen. No one who was present at the Republican Conventions of 1952 and 1956 could have failed to note in his memory book that the highlight of both conventions was the spontaneous and overwhelming welcome extended to Mr. Hoover during his entire visit to the platform and the reception of his remarks, which were those of a wise, witty, warmhearted, and happy man.

The clouds have lifted from the mountain. What emerges in the clear light of the afternoon sun is the peak, calm, serene, and magnificent. That is the Herbert Hoover every American hails today.

The Storm's Gathering

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., September 4, 1959:

THE STORM'S GATHERING

As this is written, President Eisenhower has reassured West Germany's Chancellor Adenauer, if in vague terms, of our determination to pursue the unification of Germany and "protect the freedom and welfare of the people of Berlin," and is now engaged in talks with Britain's Prime Minister Macmillan in London.

At both Bonn and London, the President was received in tumultuous ovations by crowds that obviously exceeded all expectations. On the 16 mile automobile journey from the London Airport to the residence of U.S. Ambassador Jock Whitney, the conquering hero reception reached a level of exuberance that more than once rent the police lines asunder, but apparently without serious incident.

It looks as though the British leaders, generally regarded as advocates of appeasement, have stiffened their attitudes toward the Kremlin since the Khrushchev invitation to the United States. Now, uneasy of the outcome of the Washington talks, Mr. Macmillan is expected to advise the President that he must adopt a get tough policy toward his guest, and to urge a four-power summit conference this fall.

At his next stop, Paris, President Eisenhower will doubtless be received with all the uproar and excitement with which the French invest a public reception. But the real test of his journey will come in the conversations with the stiff-necked President De Gaulle, who not only takes a dim view of the Khrushchev visit, but, with some justification, we think, feels he has been given the back of Uncle Sam's hand. If President Eisenhower soothes De Gaulle by endorsing the French policy in Algeria, it will be all right with Chancellor Adenauer, but Prime Minister Macmillan will be very unhappy and regard this as a blow to Western prestige in Asia.

And then home to prepare for what is, at best, the most dangerous diplomatic experiment in American history. Khrushchev, of course, has been preparing for it by lobbing further threats at West Germany and by hotting up the Lao war, in which we are now participating with military aid to this beleaguered free nation.

In the meanwhile as disapproval of the Khrushchev visit mounts here at home, its repercussions in Moscow add to the growing hope that the visit may still not happen. In anticipation that this unwelcome guest may bow out, just as he canceled his trip to Sweden, the White House might still withdraw the invitation.

A Minimum Security Unit

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. GEORGE. Mr. Speaker, overcrowded prisons and correctional institutions are causing much anxiety to law enforcement officials.

The U.S. Prison at Leavenworth, Kans., was erected in 1895 and is now overcrowded by some 800 prisoners.

One of the greatest needs in this country today is a minimum security institution in which young and first offenders could receive proper treatment, care and rehabilitation.

Dr. Karl Menninger, an outstanding psychiatrist, is of the opinion that less confinement and more psychological therapy would improve our penal system. This would certainly be true in the cases of young offenders.

An editorial, Mr. Speaker, appeared on Tuesday, September 1, 1959, in the Kansas City Kansan of which Mr. John H. Stauffer is the editor. Under leave granted I include this editorial in the extension of my remarks:

[From the Kansas City Kansan, Sept. 1, 1959]

OVERCROWDED PRISONS

Dr. Karl Menninger's recent statement that prisons are a poor place to rehabilitate wrongdoers is recalled when one peruses the official reports disclosing the steadily increasing population in our institutions of confinement. The total population of the United States is growing fast but the prison rate is growing even faster, according to J. Edgar Hoover, Director of the FBI.

The situation in Kansas is worthy of passing note. The U.S. prison in Leavenworth, built in 1895 to house 1,700 at present houses 2,500 prisoners, which has been an average

total for a number of years. In 1934 when many men were being convicted of making and selling illegal liquors the prison population reached 3,400, according to Associate Warden Kaiser's report to the Leavenworth Times.

There are more Federal prisoners now, he thinks, because more offenders are being caught. But Leavenworth's problems are not unique. All Federal prisons are over crowded, Kaiser says.

At the State penitentiary at nearby Lansing, Warden Tracy Hand sees no population problems as far as State institutions are concerned. Capacity there is 1,945 prisoners; present occupancy, 1,544 prisoners. The housing limit has been exceeded in the past however. During the depression when men were driven by want and hunger to crime there were as many as 2,100 prisoners at Lansing.

Dr. Menninger believes a better penal system should be instituted, with much less confinement and much more psychological therapy and an adequate parole supervisory program.

Which leads one Kansas editor to suggest that the State prison be relocated to Topeka, where psychotherapists are available.

Military Manpower Waste

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. WOLF. Mr. Speaker, the investigation of misuse of military manpower which is being made by the Manpower Utilization Subcommittee of the House Armed Services Committee has already uncovered many situations in need of correction.

Under the able chairmanship of our colleague, Congressman MELVIN PRICE, of Illinois, the subcommittee has been doing splendid work to strengthen the armed services and save millions of dollars for our taxpayers.

Congressman FRANK KOWALSKI, of Connecticut, our indefatigable colleague, has won national admiration for his endeavors in the manpower field. And the efforts are beginning to pay off.

It is gratifying that the Military Establishment is taking some small steps to correct the waste of our most precious asset—manpower. But the job of seeing that personnel are utilized for maximum effectiveness must go on. Some rather startling changes were made by William Bradford Huie in the October issue of Cavalier magazine and if the situation is as described by Mr. Huie, then the U.S. Army and the Marine Corps are subsidizing athletes and athletic teams.

If big name athletes are being kept off duty and out of training simply to play at their sport, then the only word that can be used is "subsidizing."

Brig. Gen. William B. McKean, U.S. Marine Corps (retired) has said that the situation in the Marine Corps is deplorable. If what Mr. Huie reports about the treatment of Lt. Ron Kramer is true, then a deplorable situation also exists at Bolling Field.

If the facts in this case are not as presented in the Cavalier story, the Bolling Field people should welcome the opportunity to present the facts.

Let me present some significant extracts from the article in Cavalier magazine:

We can tell Mr. PRICE right now, and we'll give him plenty of proof later in this story, that investigating athletes won't win him any popularity contests—as Mr. KOWALSKI's investigation of servants is doing for him. But if manpower is what his committee is talking about, he sure better look at the jockstrap situation. Not only will he find a horde of men being wasted but he'll find that a lot of money is being spent helping these men carry on a program that is making their presence in uniform a farce.

Mr. PRICE really doesn't have to travel very far to find out if the jockstrap program is worth investigating. Two of the biggest fellas are right under his nose—Bolling Air Force Base and the Quantico Marines.

For a starter he could check the training records of such Bolling stars past and present as John Roach (SMU and Chicago Cardinals), Don Schaeffer and Joe Heap of Notre Dame, Ralph Guglielmi of Notre Dame and the Washington Redskins, now a civilian again.

Now the Bolling people will have an explanation. Bolling's an administrative base, they'll tell Mr. PRICE, and because most of the athletes (who were in Air Force ROTC in college) have a physical defect they are held over at Bolling. Same goes for Eglin AFB, the other big Air Force football power.

Someone else might tell him that the Air Force ROTC is the best thing that ever happened to the Bolling team. That now the coaches know who's coming into the Air Force in the fall and can requisition the men through personnel and thus can plan the teams in advance of the season. The fact that Bolling, the base closest to the Pentagon, has the best record over the years is not a coincidence.

No, the Bolling brass will say, it's all coincidence and luck that they get such teams.

Ron Kramer, the Michigan and Green Bay Packer star end, could tell Mr. PRICE a story too, and Ron is at nearby Fort Myer, Va., quite accessible to Mr. PRICE, if he wants to ask him.

Seems Kramer, an Air Force ROTC man, was called to active duty and taken in on a waiver after failing the physical examination. The next stop for him was Bolling Air Force Base. But Ron was a spoil-sport. He just refused to play football. He had a bad knee and he was going to save it for Green Bay where the pay is better.

You remember the old service saying "we can't make you do it—but we can make you sorry you didn't." Kramer began to get some of that—and once more he turned out to be a spoil-sport. He mentioned what was going on to a couple of newspapermen on the coast and one in New York, and they gave out with a few growls and the Bolling people ran like hell.

When the Kramer situation cooled off, he was transferred to Fort Myer, where they don't have a football team. There was no need for his type of intelligence officer at Bolling, the Public Information Officer explained. Question: What job would he have done at Bolling then if he had played football? Mr. PRICE can get the answer when he finds out what the other stars do when they're not playing. Should be very interesting.

Over at Quantico they'll be more direct—in the best Marine tradition. They've had great teams for as long as anyone can recall and they'll admit they try to hold on to the good football material as long as possible.

The reason given for that will be elevation of morale. For an answer to that I commend to Mr. PRICE a passage from the book Ribbon Creek by the outspoken Brig. Gen. William B. McKean, USMC (retired). In the chapter on leadership Mr. McKean says:

"Now we have a large completely different influx; those fulfilling obligated service. Rather than be drafted into the Army as a private these characters do the minimum work necessary for a commission because they think life as an officer easier than that in the ranks, and also they wish to exercise some control over where they do their required service. A large share of these draft evaders just mark time waiting for a release. This was pointed up by a recruit battalion sergeant major sitting on our enlistment board. "Well, sir. They go to basic school and stay at Quantico until basketball season is over. Then they come down here for a season of football and basketball. After that they come into a recruit battalion for about 3 months to complete their active duty. What can we expect?"

After these "characters" go back to inactive duty they go into the Reserves where eventually they become captains. In a brush-fire affair they could be leading companies of men. Theortically they'd be qualified. Theoretically.

The Marines really work at having the good teams and spreading the good teams around. Athletes at either basic school or boot training are eligible for only one season of a sport at Quantico or Parris Island. (This can mean a whole year for a three-sport man.) To make sure this rule is enforced, Headquarters has a special jockstrap roster punched into its accounting machines and a desk in the personnel department which manages the swapping of players among "clubs."

Good for morale? Or just good for the morale of the hero-worshiping brass? Certainly not fair to the taxpayer who is paying for a man to be trained as a fighting man and not fair to the man who leaves the service labeled "trained and combat ready" when he isn't.

And it doesn't stop here. The jockstrapper is a big man in the Pacific and European theaters, too. Listen to a young ex-Army man and he'll be glad to talk to Mr. Price about it too. "I spent almost 24 months in the Army. For about 5 months I was on real active duty. The rest of the time I did next to nothing except play basketball.

"When I first went into the Army at Fort Dix, I was assigned to a training company and issued a rifle. A few days after my training cycle began, I was tapped to be a basketball player. I had played college ball. When my company commander objected to my absence from training formation, I was transferred to another company. At this other company, I did very limited training in the morning. I was picked up at 1 o'clock in the afternoon and taken to practice. I slept in a special cadre room by myself in a 7-foot bed. It took me almost 8 months to finish basic. I never had a rifle after leaving my first company.

"When my orders were cut for overseas duty, I was told to look up a certain officer at Fort Kilmer, N.J., who would see to it that I was taken off the overseas shipping orders and would be assigned to a post in the States, a good basketball post. When I got to Kilmer the officer in question was gone and instead I ran into a anti-jockstrap officer who gave me a really hard time when I broached him on the subject.

"When I went overseas I was again tapped to play for the team at Orleans, France. Here we played something like 60 games—a big schedule—and did very little, if any, duty. We were very seldom at the base. When we weren't playing, we were usually in Paris on passes. The only time I was ever on duty

was when I was on teletype during alerts. All athletic activity stopped during alerts, but I assure you I could have done very little if the alert had ever been the real thing. We traveled all over Europe playing other teams and almost took a trip to Egypt, but missed out at the last minute. As I said before, the last officer I met at Camp Kilmer had been antijockstrap. The light colonel we had with our Orleans team was almost pathetically projockstrap. He used to stand behind the bench and towel us as we came off the floor and also inject drops into our noses.

"Most jockstrappers had all the leave they wanted. Most of it wasn't charged to them because the brass always had a man in personnel who would juggle records for the athletes.

"When I got out of the service I was almost as green a recruit as I was the day I went in. From what the other guys I knew from basketball tell me, the same setup is still going strong."

Time To Pay for Prodigality

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, I include here an editorial appearing in the Wall Street Journal for Thursday, September 10, 1959:

TIME TO PAY FOR PRODIGALITY

It cannot be an easy decision for the President to make public acknowledgment that the Government of the United States is in financial straits.

For one thing, such an acknowledgment must partake of the nature of a confession by those who make it; it must also carry implications of blame for many past errors by others. Thus it would be bound to raise a tremendous political furor.

For another, there is the sheer difficulty of explaining the problem, of relating the Government's fiscal difficulties, seemingly so remote, to the work-a-day lives of the people. It would require considerable skill to do this with the right sense of proportion.

And finally there is the very real fear that dramatic gestures might carry such a tone of desperateness as to make matters worse. It is this that pinions the President and those about him upon the horns of a dilemma; they may need dramatic gestures to give a sense of urgency to action, but the same gestures could conceivably turn a sense of urgency into one of panic.

So we can understand the doubts and hesitation over the plan, now being discussed within the administration, to call a special session of Congress to deal with pressing fiscal problems and to have the President personally explain to the country, by television and radio, the dimensions of that problem.

Yet it seems to us that the time has come for something to dramatize the Government's fiscal plight. The risks involved, we think, are far outweighed by what is to be won.

The fiscal problem as viewed by the men who manage the Government's money, and whose views are reported elsewhere in this newspaper, is serious, beyond doubt. But it is not calamitous, much less hopeless—if the right actions are taken promptly. And we have not lost our conviction that the people of the United States will support the right actions, once they are told the truth plainly and honestly.

That truth, in its simplest form, is that time has caught up with a prodigal country. For more than a decade this country has spent money like the proverbial drunken sailor. We have poured out billions to make life more pleasant for farmers, to pay handsome rewards to veterans, to give ourselves a luxury of houses and roads and any sort of welfare that came happily to mind. We have poured many billions of hard-earned money all over the globe.

And we have done all this with a blatant disregard of the deficit the billions accrued in our accounts. Many politicians led us on by dangling before us all the wonderful things we could buy with these billions. Worse, many learned economists reassured us that all those deficits were of no consequence; the supply of money was endless. Still worse, we as a people believed all this, too intoxicated to remember that even the richest purse is not bottomless.

Well, now the men who manage the money see that the bottom is not far away. The technical problem that grabs the headlines—the rising interest rates for borrowed money—is merely a warning sign of what lies beneath. It says that the barrel is running dry not only for the Treasury of the United States but for everybody.

But a warning is also an opportunity. Here the opportunity is time to choose between two paths. One is to choose inflation; not the modest inflation we have heard so much about but inflation in mammoth doses. The other is to choose to put our house in order.

This means, first of all, to pay the price of our past prodigality. Congress must give the Government the legal authority to shoulder long-term debts regardless of the cost, in interest rates, of that debt; the managers must have the tools to manage with. But it means most of all that we must stop our prodigal spending.

Neither the President, the Secretary of the Treasury nor anyone else need suppose that it is any secret to the informed people of the world that the United States has come to this choice. Not to speak of it, not to say frankly what must be done, will only hide it a little longer from the great body of the citizens.

So we think it is far better to speak plainly and act boldly. This country has had more than a decade of dancing to a feverish spending tune. But nobody need despair of it if it shows it is now ready to pay the piper.

Agricultural Imports Do Not Help America's Farmers

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. KNOX. Mr. Speaker, our Nation's trading partners abroad are well on the road to achieving a record year in sales of their products to their favorite customer, the United States. Manufactured goods of practically every description are landing at our shores in unprecedented volume—to the distress of many American producers, investors, and jobholders.

The invasion of our domestic markets is not limited to manufactured products and minerals, about which we have heard much in recent weeks. Our agriculture interests find themselves targets for foreign competition which is rapidly mounting.

The meat industry provides a good example. In 1958, our imports of meat products were valued at nearly $335 million. Animals shipped here for slaughter were valued at $131 million. Together, they accounted for some $460 million in sales for livestock producers, packers, and shippers in other countries.

Moreover, this represented a gain of 86 percent in a single year. In 1957 our imports of edible animals and meat products totaled $250 million. But at the time, that too was a banner year, for only a year earlier, in 1956, total imports of these items were less than $160 million. So 1957 brought a gain of more than 60 percent over 1956.

Thus, in the brief span of 2 years, 1956–58, imports of livestock, poultry and meat products climbed $310 million, or very nearly 200 percent.

This phenomenal increase indicates clearly why so many of this country's livestock producers have joined their voice to the rising chorus of protests against a foreign economic policy that leaves them all but defenseless in the face of unreasonable competition from abroad.

Some segments of the domestic meat industry have been harder hit than others. Mutton producers, for example, are witnessing a virtual flood of imports from Australia and New Zealand. The statistics will speak for themselves.

In 1956, Australia shipped 313,000 pounds of mutton to the United States; in 1957, shipments rose slightly to 441,000 pounds; in 1958, the dam burst and shipments soared to 14,250,000 pounds, or more than 30 times the 1957 volume.

But teh worst was yet to come. Australian mutton shipments to the United States surpassed the record 1958 volume in the first fourth months of 1959. By June 30 they had reached nearly 23 million pounds, up more than 50 percent over last year's total imports.

Mutton imports form New Zealand show a similarly fantastic increase, from a mere 9,000 pounds in 1954, to 250,000 pounds in both 1955 and 1956, to 1,300,000 pounds in 1957, to 2,310,000 pounds in 1958, and in the first 6 months of 1959, over 5 million pounds.

New Zealand also found the United States a prime market for lamb, beef and veal. In 1956 New Zealand shipped us 161,000 pounds of lamb; in 1957, 368,000 pounds; in 1958, 4,700,000 pounds.

Imports of beef and veal increased even more dramatically. Shipments from New Zealand have risen from 1,121,000 pounds to 182 million pounds in the short space of five years.

As recently as 1956, imports of beef and veal from New Zealand totaled 4 million pounds, then multiplied more than 12 times to 50 million pounds in 1957, and then nearly quadrupled to 182 million pounds last year. In the first 6 months of 1959 these imports lagged only a trifle behind the terrific pace achieved a year ago.

Australia, of course, could not be expected to concede the U.S. beef

and veal market to its New Zealand competitors without a struggle. So, not surprisingly, imports of beef and veal from Australia, after a fairly slow start, have caught up with and passed New Zealand's shipments.

In 1954 Australia sent us $1,800,000 pounds of beef and veal; moderate yearly increases sent the total to 5½ million pounds by 1957. Then, in 1958, these imports more than tripled in volume to 17 million pounds, and this volume was exceeded in the first 2 months of 1959. By the end of June 1959 the United States had received more than 83 million pounds of Australian beef and veal, and New Zealand, after far outstripping its neighbor's shipments a year earlier, was running a respectable but fairly distant second.

Other examples of the unreasonable competition confronting the American meat industry are plentiful. For instance, in the single month of January 1959 Australia shipped us more lamb than she sent here in the entire 12 months of 1958. Imports of Australian lamb reached 2 million pounds in the first 6 months of 1959, compared to 326,000 pounds in all of 1958.

A recent issue of the Sheep Industry Journal reports that lamb growers from Australia and New Zealand have journeyed to this country to find ways to increase their shipments here.

With all due respect to the splendid free nations these gentlemen represent, I cannot sincerely wish them success in their overtures. On the contrary, I would advise them to let well enough alone.

For in spite of its haphazard trade policy, the U.S. Government still retains a sense of obligation to its domestic industries, and sooner or later it will take steps to prevent the American meat producers' total destruction. We can only hope that these steps, when finally authorized, will not be too little and too late.

Shall Congress Sell Michigan Down the Mississippi?

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. CEDERBERG. Mr. Speaker, the people of Michigan are grateful to Congress because it has once again stuck its thumb in the dike, so to speak, and prevented for the time being the outpouring of the waters of our Great Lakes into the Chicago drainage canal for the benefit of that city's sewage system.

The selfishness of the Chicago authorities is appalling. In the face of the objections of an adjoining nation and the city's neighboring States, these officials continue to insist on getting congressional authorization for additional water with which to flush its sanitary canal.

The editor of the Midland (Mich.) Daily News appropriately asks, editorially, "Is Michigan Being Sold Down the Mississippi?" The editorial is very much to the point. I hope my colleagues who have supported this water diversion proposal in the past will take another look in the light of the Michigan position, as reflected by the editor of the Midland Daily News. The editorial follows:

IS MICHIGAN BEING SOLD DOWN THE MISSISSIPPI?

Washington reports seem to predict that Michigan, as well as other Great Lakes States, is about to be sold down the Mississippi.

Senators from the Lakes States failed Friday to stem the tide on Chicago's request for more water from Lake Michigan. By a 66–21 vote, a motion to delay action lost. A second 72–19 vote made the bill the pending Senate business.

The big question was whether the House-approved measure was near final Senate passage.

The bill would, for a 1-year trial period, increase water diversion into the Illinois Waterway from the present 1,500 cubic feet per second to 2,500 cubic feet per second to increase the flushing effect on the Illinois Waterway and the Chicago sanitary canal. It also authorizes a 3-year study seeking a solution to Chicago's sewage problems.

Other cities, large and small, treat sewage and return water to rivers and lakes. For instance, Midland takes water from Lake Huron. Sewage is treated and water returned to the Tittabawassee which flows back to Lake Huron.

With lake levels already low despite wet seasons, further diversion of water by Chicago is questionable at best. Millions of dollars in lake frontage investments is involved as well as navigation on the lakes.

There is apparently little Michigan can do except to continue fighting. Its Senators are lined up against the bill. If passage comes, the only hope is for a Presidential veto which appears possible.

Meanwhile, Chicago and Illinois could do something about solving their sewage problems in a manner that would not damage other States.

Nigola Dimitrov Petkov

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I feel it an honor and privilege to call to the attention of my colleagues the following biographic sketch of the great Bulgarian patroit, Nokola Dimitrov Petkov, who courageously defended the freedom and independence of his country through his lifetime:

NIKOLA PETKOV: BULGARIAN NATIONAL HERO AND GREATEST MARTYR IN THE STRUGGLE FOR FREEDOM AND INDEPENDENCE

Nikola Dimitrov Petkov was born in Sofia in 1894. He was the son of Dimiter Petkov, a self-educated peasant from Dobruduja, who became Prime Minister of Bulgaria. Dimiter Petkov was assassinated in 1907 for opposing foreign intervention in the internal affairs of Bulgaria, especially on the part of Tsarist Russia.

Petko Petkov, Nikola's brother, was one of the greatest Bulgarian peasant leaders. He fought Alexander Tzankov's Fascist dictatorship of 1923 and as a result was shot down on a Sofia street on June 14, 1924—exactly 1 year after the merciless assassination of Alexander Stamboliiski.

Nikola Petkov received a law degree in Paris, where he spent most of his youth. During the Nazi occupation of Bulgaria he was an underground leader and was imprisoned several times.

When the Nazis were driven out of Bulgaria, Nikola Petkov and three other representatives of the Bulgarian National Agrarian Union—the largest political organization in Bulgaria—took part in the first coalition government, together with Communists, Socialists, representatives of the political group Zveno, and the independent intellectuals. Together with Dr. G. M. Dimitrov, Secretary General of the Bulgarian National Agrarian Union, Nikola Petkov fought stubbornly against Communist outrages, terror, and violence, and thus incurred the hatred of both the Communist Party and the Soviet occupation authorities. Despite these difficulties, he continued to defend the freedom and independence of his country.

When the Soviet occupation authorities demanded the removal of the capitalist agent, Dr. G. M. Dimitrov, from his post as Secretary General Nikola Petkov took his place.

In July 1945, Nikola Petkov sent a memorandum to the Inter-Allied Control Commission demanding the postponement of the elections which the Communists had scheduled for the end of August 1945. These elections were to involve only one list of candidates, headed by the Communist party. As a result of the memorandum, the Prime Minister declared that Petkov had resigned, although formally he never did so. In protest, Nikola Petkov and other cabinet ministers broke up the Coalition Government, and thenceforth openly opposed the Communist dictatorship. Upon interevention of the control commission, the elections were postponed until November 18, 1945.

During the winter of 1946, Stalin sent Vishinsky to Sofia for the purpose of getting Petkov to come back into the government. At their dramatic meeting, Petkov declared that it was not his custom to obey the orders of any foreigner, but to listen only to the will of the Bulgarian people.

That meeting decided Petkov's fate.

In October, 1946, Petkov headed the opposition in its election campaign against the Communist-Soviet attempts to seize full control of the country. The enthusiastic people from the countryside and towns voted en masse for Petkov's list, but the election results were falsified and violence and bloodshed were commonplace. Nevertheless, 101 people's representatives, headed by Petkov, were acknowledged to have been elected and triumphantly entered the grand national assembly. It was there that Petkov's most courageous and heroic struggle culminated. Availing himself of his constitutional immunity, he unmasked in Parliament the treacherous intentions of the Communists and their leader, Georgi Dimitrov, former Secretary-General of the Comintern. He accused them of being Stalinist agents, and said that their hands were stained with the blood of innocent Bulargians and that they wanted to make Bulgaria a Soviet province.

As a result of his activity, Petkov was charged with conspiracy against the state and the Soviet Union. Like his predecessor, he was called "an agent of Anglo-American capitalism."

After dramatic and stormy debates in Parliament, Petkov was arrested inside the Parliament Building in complete defiance of the constitution and the law. Petkov declared dauntlessly that he would share with pride the fate of his father and his brother.

On August 16 Petkov was sentenced to die on the gallows.

Early in the morning of September 23, only 15 minutes after midnight, he was executed in secret because the Communists feared the people's mass indignation. (At that time all executions took place about 5 o'clock in the morning.)

Prior to the execution a representative of the Bulgarian Communist Government appeared in Nikola Petkov's prison cell and offered him a pardon if he signed a petition in which he declared his repentance.

"You are even trying to desecrate my sacred memory," Petkov replied. "My sentence was passed by your Moscow masters and no one can revoke it. I do not seek any mercy from you. I want to die so that my people may be freed sooner."

The heroic example set by Nikola Petkov shook the free world and opened its eyes to the treacherous intentions and methods of the Bolshevist international conspiracy and the tragic fate which Soviet imperialism is preparing for all of humanity.

Petkov's career was a brilliant model of self-sacrifices for his people, principles, ideas, freedom, and democracy. Thousands and thousands of Bulgarian patriots followed his great example.

That is the reason why the American Congressmen who, upon the occasion of a visit to Bulgaria, laid a wreath on his freshly dug grave, called him "one of the greatest democrats of all time."

This is why government officials and statesmen from all over the world sent protest notes to his Sofia and Moscow executioners, and honored, and still continue to honor, Nikola Petkov as one of the greatest martyrs of human freedom and the right to independence.

With each elapsing year, the memory of Nikola Petkov is becoming a greater danger for the Communist tyranny, shaking its yoke and leading the freedom fighters to their final victory.

General Romulo on Philippine Island Veterans

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. PELLY. Mr. Speaker, recently, here in Washington a ceremony was held in the Philippine Chancery, which is significant because it shows that our friends and allies, the Filipino people, are grateful and they recognize services rendered in their behalf. It also shows that we have fellow Americans who do honor to their country by taking up unselfishly a cause that they believe just. Philippine-American friendship is fostered by occasions such as that which took place on September 2, 1959, when Gen. Carlos P. Romulo, Philippine Ambassador to the United States, who has dedicated the best years of his life to building up and developing friendly relations between our two peoples, decorated Mr. Miles D. Kennedy and Col. Clarence H. Olson with the Philippine Legion of Honor, in the degree of officer, for their service to the veterans of the Philippines.

I would like to state in this connection that it was proper that General Romulo should have been the representative of his government to award the decoration of these two officers of the American Legion because I have personal knowledge of the untiring efforts of the Philippine Ambassador in defending the rights of his fellow veterans in the Philippines and has spared no effort here in the United States to uphold their cause. Recently, because I invited him to open the International Trade Fair in Seattle, he left his work and other engagements here to accept my invitation, and in his speech at a banquet at the Olympic Hotel, he did not fail to mention the heroism of the Filipino veterans who fought for the American flag in the Second World War.

His address when he decorated Messrs. Kennedy and Olson follow:

REMARKS BY GEN. CARLOS P. ROMULO, PHILIPPINE AMBASSADOR, AT THE PRESENTATION OF AWARDS TO MR. MILES D. KENNEDY AND COL. CLARENCE H. OLSON OF THE AMERICAN LEGION AT THE PHILIPPINE CHANCERY, WASHINGTON, D.C., WEDNESDAY, SEPTEMBER 2, 1959

I am happy to be the representative of my Government to confer the Legion of Honor, rank of officer, to two Americans who are real friends of the Philippines. I am proud as their fellow veteran to be able to publicly thank them in this manner in behalf of all the veterans of my country. Aside from Congressman OLIN E. TEAGUE, of TEXAS, who has been conferred the highest decoration in the gift of our Government by the late President Magsaysay, and Congresswoman EDITH NOURSE ROGERS, of Massachusetts, I do not know of any two Americans who have so indefatigably and so disinterestedly fought for the recognition of the rights of the Filipino veterans than Mr. Miles D. Kennedy and Col. Clarence H. Olson. We in the Philippines owe them a debt of gratitude which we can never repay, and these medals are but a modest token of our deep appreciation which the Republic of the Philippines officially makes as its own today.

Here are two Americans who owe no favors to us. Without hope for any material reward, of their own free will, merely because they believe in the justice of our veterans' claims, they have taken up the fight. I have personal knowledge of the amount of work that they have done in pleading for a hearing for their fellow veterans in the Philippines, of their persistence, of their personal sacrifice. Against all odds they have tried every means and exerted every effort to show the American Government that the case for the Filipino veteran is a case that involves not only Philippine-American relations but America's honor. In the American Legion, on Capitol Hill, before American official agencies, whenever and wherever they can be heard, they have spoken forthrightly and eloquently for our veterans' cause.

While we have such American friends, while we can count on the support of such champions of our veterans, while we have Americans imbued with that inherent sense of fairness and square deal of the true American, while we have men like Congressman Teague to whom we are indebted for his untiring efforts for our veterans, Congresswoman Rogers, Mr. Kennedy, and Colonel Olson who selflessly take up the fight for us, I say to my people that they can take heart, they need not despair, for as I have always said, the cause of our Filipino veterans is a just cause and I have an abiding faith in the unfailing sense of justice of the American people.

The Filipino veterans who have come from Manila to attend the American Legion convention in Minneapolis last week have seen another convincing demonstration of America's friendship for us and of the Legion's firm conviction that the fight for our veterans in the Philippines is a just fight and must be pursued here in Washington at all levels. The American Legion has approved three resolutions all of which are an endorsement of the plea of the Filipino veteran for a recognition of his just rights. If our people are looking for another evidence of America's continuing friendly interest in us, of the reservoir of American good will for the Philippines, the American Legion has given such evidence and I need not say it is deeply appreciated by my people.

The fight to assert the just rights of our veterans is three-pronged: (1) to enlist the help of American public opinion, and working through influential organizations like the American Legion is a correct approach; (2) to get the favorable support of the administration, that is, get the affirmative report of the executive agencies of the U.S. Government; and (3) finally, the approval of the American Congress. It is not an easy matter to succeed in getting a concerted action by these three. In fact, it is an uphill fight and it takes time, patience, coordination of efforts and restraint. It took us 24 years to get recognition of the justice of our gold devaluation refund claim and 10 years for the approval of additional war damage compensation. With Congressman TEAGUE and Congresswoman ROGERS and other friends on Capitol Hill and with men like Colonel Olson and Mr. Kennedy and others in the American Legion, with our Government firmly backing up our veterans, and with our veterans in the Philippines presenting a united front, I am confident that this question of the claims of our veterans will be solved to the mutual satisfaction of both peoples.

For my part, I wish to give the assurance that I will continue to spare no effort and leave no stone unturned to see to it that my fellow veterans who risked their all for the American flag are given the recognition that is their legitimate right. On the floor of the U.S. Congress when I was Resident Commissioner and in committee hearings—all of which are on record—I have given voice to their just pleas. In three of my published books I have paid them the tribute that they have earned and thus impress the American people with their heroism and sacrifice. My unremitting efforts in their behalf I reiterate will continue with vigor because I firmly believe that their cause is just and the American people, given the facts, will not deny justice where justice is due.

Mr. Kennedy and Colonel Olson: The medals that you now wear symbolize your entry in the Legion of Honor, select men to whom 23 million Filipinos are beholden for outstanding and distinguished service rendered in their behalf. You personify the qualities of true Americanism that have won for your people the friendship and loyalty of men who in America's hour of need stood by you without counting the cost. When your Old Glory was pulled down in the Philippines by enemy hands, in your darkest hour in the Pacific, they were brown hands that picked it up and they were brown breasts that were bared against Japanese bayonets in defense of the United States. In behalf of those Filipino soldiers who did not hesitate to fight for your flag, I thank you for remembering them and for your efforts to see to it that your people may not forget.

AFL–CIO President George Meany's Address to 60th National Convention of the Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of an address made by George Meany, president of the AFL–CIO, before the distinguished guests banquet at the 60th annual national convention of the Veterans of Foreign Wars:

ADDRESS BY AFL–CIO PRESIDENT GEORGE MEANY TO THE DISTINGUISHED GUESTS BANQUET OF THE 60TH NATIONAL CONVENTION OF THE VETERANS OF FOREIGN WARS AT THE STATLER-HILTON, LOS ANGELES, CALIF.

Distinguished guests and friends of the Veterans of Foreign Wars, I am deeply touched by your recognition of my efforts to serve America. There could be no greater tribute than to be honored for service to Americanism at such a moment in the life of our Nation. What I appreciate most about receiving this award is that, in honoring me, you are paying tribute to the vital and constructive role of American labor at this crucial hour.

Since receiving notice of this award I have asked myself: What is Americanism? What is the most valuable thing in our life as Americans? To American labor, Americanism is a way of life based on human values, on the right to worship God in the way we please, on men not on money, on character and capacity and not on color, on opportunity not on origin, on aspiration rather than on acquisition. We look upon our democracy not only as a heritage—but also in part at least as our own achievement, with a continuing responsibility upon all Americans to constantly work for the improvement of our democratic institutions. Americanism cannot be the monopoly of any organization, movement, or individual.

Much of our national strength is rooted in the diverse backgrounds of our people. If we go back far enough, we are all foreigners. Whether we came via Plymouth Rock, or Ellis Island, or as refugees from Communist-enslaved Hungary, we were impelled by a yearning for freedom, dignity, opportunity for creativeness and growth and not only by a hope for material improvement. This common faith, this common hope, has welded us into one Nation of many peoples.

We dare not take our liberties and our national security for granted. Never, for a moment, can we take our eyes off the reality of our times. The aggressor we face is ruthless and fully armed with the deadliest modern weapons.

The world crisis has made us more aware of the weaknesses and shortcomings of our democracy. The totalitarian despots are counting on these weaknesses to help them triumph. We must not slacken our efforts to overcome such weaknesses as racialism, discrimination, recurring economic recessions, unemployment, and poverty. Failure to overcome these weaknesses would jeopardize our democracy.

We of American labor have the greatest faith in the effectiveness of democratic institutions and processes as instruments for solving economic problems and furthering happiness in the daily lives of our people.

Political democracy cannot grow or even continue for long without our economy prospering and growing. Economic democracy must go hand in hand with political democracy. Theodore Roosevelt once put the problem this way: "If democracy is to mean the happiness and contentment its founders intended for all Americans, we must pass prosperity around."

Our democracy cannot be defended successfully by military force alone. Social and economic security is indisepensable to national security. Denial of industrial freedom and social and economic insecurity are enemies of democracy within our lines. We must overcome these enemies from within in order to take the full moral and political offensive against our enemies from without. Communism, fascism, falangism, and every other type of tyranny thrive on social maladjustment and economic insecurity.

If we look at Americanism in a practical sense, and not as a platitude, then we will see clearly that one of the most vital and indispensable expressions of American democracy is the labor union. I say this with a full realization of the errors and weaknesses of our movement. The right of workers to join one with another for the purpose of collectively securing a fair share of the wealth created under our American system is a basic right without which there would be no protection for workers against economic exploitation.

American business has learned quite well to adapt itself to technological change. But, unfortunately, quite a few businessmen still refuse to adapt themselves to social change and progress. Failure in this respect can only lead to a bankruptcy even more costly that that which would result from refusal to adapt business to technological change.

On a number of recent occasions, the Soviet dictator, Mr. Khrushchev, has said that his totalitarian system is new and young and that the democracy we in America cherish is old. He has bragged that Soviet Communism is the wave of the future and that the future belongs to his slave empire. In the role of a prophet, Khrushchev reminds us of Hitler who often boasted that his Nazi empire would last 1,000 years. Need we remind the Communist dictator about what happened to Hitler and his prophecy?

Khrushchev knows his tyranny, but he certainly does not know his history. Historically speaking, the democracy which our country represents is new and young. Democracy is the most forward-looking, and advanced system of human relationships—being based on human dignity, equality, opportunity and justice. The tyranny that Moscow represents is old. It is totalitarian slavery. The only thing really new about Soviet tyranny is its masquerading a movement for profound social reform and its utilization of modern technology and industry for bolstering its despotism. Khrushchev's communism is but another reactionary and dreadful episode in the long history of man's uphill struggle for dignity, decency, and democracy.

In recent weeks, there has been much talk emphasizing America's desire for peace and friendship with the Russian people. There never was any question about the American people being genuinely friendly toward the Russian and the other Soviet peoples. We want peace and friendship with the Russian and the other enslaved peoples of the Soviet empire. However, the issue in the world today is not peace and friendship but peace and freedom. This is the issue at the heart of the world crisis. It is not an issue merely dividing the Kremlin from the White House or the Moscow regime from the American people. It divides the Moscow regime from its own people. In a world of peace and freedom, there would be no problem of friendship between nations. But in a world where peace can be dictated by blackmail or the ballistic missiles of despotism, there can be no real friendship, there can be no freedom, and there can be no peace—unless it is the peace of the prison or the peace of the graveyard.

But military attack is not the only danger our country faces today. We must also guard against dangerous illusions about our enemy and his hypocritical pretensions.

Wishful thinking has led some to delude themselves into believing that the Communist dictators are hostile to America because they do not know enough about our country and have some misconceptions about our democratic way of life and the loyalty of our people to our free institutions. Therefore, say these self-deluded: let the Communist dictators come to our land as our guests, let them see for themselves the truth about our country and they will lose their misconceptions. Then, they will become friendly to us, world tension will be lessened, and the danger of war will be ended. It is all so simple.

No illusion could be more dangerous. The Soviet rulers have unlimited access to the facts about life in our country. They have the most extensive and effective intelligence espionage service in the world. Very likely, the Moscow dictators are far better informed in a detailed sense about our defense system, our economy, our labor unions and our political parties than the heads of our Government are about what goes on in the Kremlin.

It is not so much ignorance or misconception of our democratic way of life which has prompted Stalin and Khrushchev to wage cold war against us and to threaten humanity with atomic destruction. In fact, the more Khrushchev and his Communist regime know and understand our democracy and the full support it enjoys among our people, the more they fear and hate it as the obstacle in their drive for conquering the world and remolding it on the Soviet pattern.

The Communist rulers are prisoners of their own dogma. Twenty-five years of American recognition of the Soviet Government have meant the presence of many of its diplomats in our country. Leading Soviet figures have been participating actively in the affairs of the Unted Nations. Molotov, Manuilsky, Mikoyan and Kozlov amongst other Moscow bigwigs have visited our country and have had every opportunity to see it firsthand.

Did any of them lose any of their misconceptions about us? Did their regime change its policies and work for peace and friendship as a result of their having been confronted wth the realities of our land?

These Soviet visitors reported faithfully and fully to Stalin and Khrushchev on what they had seen and learned. Yet these educational tours did not stop Khrushchev from telling us: "We will bury you." Apparently visits by officials like the one Mr. Mikoyan and Mr. Kozlov made to the United States did not provide the means of frank and full discussion of some of our problems and the development of solutions for them. Nor did these visits by Mikoyan and Kozlov bring about any change in the Soviet pattern of diplomatic negotiations. As Secretary of State Herter declared after his last return from the Geneva Conference of Foreign Ministers: "The Soviet Union pursued an objective that made successful negotiations impossible."

The Moscow rulers continue to spend hundreds of millions of dollars a year on jamming our broadcasts.

They do not allow their subjects, the plain people, to leave the U.S.S.R. and come to our country as tourists.

Obviously the Kremlin dictatorship is afraid to trust its own people with ideas different from or critical of communism.

These days, some are getting excited about cultural exchanges with the Soviets. Some are even deluding themselves into hoping that these cultural exchanges will get Moscow to call off the cold war. This is no time for wishful thinking. Let us be realists.

Under Khrushchev, as under Stalin, the Soviet peoples lack the basic democratic rights which they must have in order to have free and genuine contacts among themselves. Until the Soviet peoples get these democratic rights, they certainly will not be able to have free and genuine cultural contacts and exchanges with other peoples.

Until the average Russian worker and peasant, and not only the handpicked Soviet representative or espionage agent, can visit our country, it is self-deluding to talk about people-to-people exchanges between the U.S.S.R. and the United States.

And until those who do visit us can, upon their return, report freely to the people on what they saw and learned in America—without fear of imprisonment or execution for treason—it is an insult to commonsense for anyone to pretend that the Russians are free to exchange ideas with other nations.

Visitors and tourists who have recently returned from the Soviet Union tell us that there is great friendship among the Russian people for the American people. The visit by Vice President NIXON has confirmed this. However, it is also evident that this obvious friendship of the Russian people toward the American people has had no impact on the Soviet Government's foreign policy.

It is in the very nature of the dictatorship that what the people think and feel on foreign as well as domestic affairs is not reflected in the actions of the ruling clique.

The Kremlin has tried to make it appear that the crisis of our times is due to a conflict between American capitalism and communism. This is sheer nonsense. The crisis today is not between American capitalism and Soviet communism. We in the United States never had and do not have today capitalism as it was known to Marx and the Socialists of Europe and Asia. The growth of our free economy has not been hampered by feudal barriers or cartels. Moreover, our economy has shown great resiliency and a capcity to adapt itself to change.

The real struggle in the world today is between democracy and despotism, between human freedom and tyranny.

We must understand that communism is predicated on the basis of a definite objective.

Its fundamental principle is world domination with the aim of remolding the entire world—including the United States—on the pattern of Soviet tyranny.

The Communists have been unrelenting in the fanatical pursuit of this aim. They may vary their strategy and tactics, but they never change or even swerve from their fundamental aim. The Communists are past masters in combining rigidity of purpose with flexibility of tactics.

The overriding aim of every Communist Party, no matter where located, is to subvert and overthrow by force every form of Government—except the so-called proletarian dictatorship.

Communism is a worldwide system of rule. It is, therefore, quite natural that its decisions and deeds should be determined and directed by the strongest state under Communist control. Today, Russia is that state. Since the Soviet rulers are also the rulers of world communism, they always consider its interests, or the interests of any non-Russian Communist regime as subordinate to or identical with the interests of Soviet Russia.

If any Communist Party or individual Communist outside the U.S.S.R. should balk at this absolute Russian monopoly, he gets booted as a revisionist, deviationist, or a traitor. What happens then?

Clearly, under such a system there are no American Communists, but only Communists in America. Communists in democratic countries may, at one time or another, say they are for democracy and peaceful democratic methods, but secretly and actually they continue to be dedicated to the overthrow of all democratic institutions.

Some of our businessmen seem to be in a great hurry to trade with the Soviet Union. The Kremlin needs such trade to build up a huge modern chemical industry and to develop automation in its production. Let these get-rich-quick industrialists ponder the basic dogmas of Russian communism before they rush to do business with Khrushchev. Need we remind them of what happened after some profit-hungry industrialists and financiers "did business" with Hitler?

Khrushchev would have us believe that some bilateral arrangement between the Soviet Union and the United States is the surest way to avert a world war. His arrangement would, of course, have our country recognize the legality of the Kremlin territorial grabs. Moscow wants time in which to consolidate its conquests. It wants America, as the most powerful democracy, to accept as final the status of the captive peoples. American acceptance would shatter the morale and hopes of the oppressed for freedom, and, thereby, serve to stabilize and strengthen the Iron Curtain empire.

Moscow wants bilateral hobnobbing and talkfests in order to sow suspicions of America among our allies and take the ground from under the foundations of NATO.

In his recent "sweetness and light" speech thanking President Eisenhower for inviting him to the United States, Khrushchev reiterated his determination to snuff out the freedom of West Berlin and absorb all Germany into the Communist slave empire.

Nowhere in Europe is the fraud of Soviet communism so painfully glaring as in the Russian Zone of Germany which incidentally is the only area in Europe with a declining population. According to the latest official "Statistical Year Book" of the Soviet Zone administration, the population of this area fell by more than a million between 1950 and 1958—from 18,388,200 to 17,311,707.

Some in our midst are prisoners of the illusion that Stalin pursued warlike foreign policies but Khrushchev is more peaceful. Nothing could be further from the truth. The 20th Soviet Communist Party Congress did not change Stalin's foreign policy. It did not say a word against the Stalin annexations and aggression of the postwar period or his unleashing of the cold war. It made no decision that communism will now try to achieve its international objectives by peaceful means rather than by force.

At the 20th Soviet Communist Party Congress in February 1956, Khrushchev sharply criticized the dead Stalin for his brutal mistreatment of some of his closest and most loyal followers. But, while making this criticism, Khrushchev did not dare to reverse Stalin's basic economic and international course, because such a reversal would have shaken the very foundations of the Soviet slave empire.

And lest we forget, it was Khrushchev who supported Peiping's military attacks on Quemoy and Matsu and the rape of Tibet. It was Khrushchev himself who directed the butchery of the Hungarian people when they sought freedom and genuine peaceful coexistence with the Soviet Union and the rest of the world. Nor is the present Soviet-provoked Berlin crisis exactly a demonstration of "peaceful means." As a matter of fact, in his ultimatum of November 27, 1958, Khrushchev was far more truculent and aggressive toward Berlin and German national reunification than Stalin ever was.

In the days of Molotov, whom the free world found to be very rigid and stubborn, the Soviet rulers, on occasion, even paid lip-service to the idea of unification of Germany through free elections.

These days the columns of Pravda are oozing "sweetness" toward the United States. How reminiscent of the Geneva spirit of 1955. But let no one forget that this spirit was followed by Hungary and Khrushchev's threats to launch a missile attack on London and Paris during the Suez crisis in 1956.

No one should oppose negotiations with the Kremlin on any level in the interest of peace and freedom. But let us have no illusions. A change of phrase, a slick maneuver, pretension to international honor and morality does not mean a change in Communist basic aims. Only a change in deed, a change of Soviet purpose and practice can really be meaningful. Such a change has not taken place in the Kremlin hierarchy.

If we do not delude ourselves, then there is no basis for panic or pessimism about the future of our country.

No doubt, Communist despots, like their predecessors—the Pharaohs of old, the Kaiser in World War I, and like Hitler of yesterday—have been able to organize production and harness effectively the technology of their times to the pursuit of aggression and war. Hitler was even more ahead of us in missiles than Khrushchev is today. We should neither minimize nor exaggerate the Soviet capacities to challenge us in the realm of economy.

We of American labor prefer our democracy—with all its imperfections—a millionfold to the perfect totalitarian despotism behind the Iron Curtain. This is the categoric position of American labor.

Ours is a human country—with all the frailties and all the failings that are human. In our country, there is much to be improved and remedied and many wrongs to be righted on both sides of the Mason and Dixon line. I am confident that these will be righted by those who love America and not by those who hate our democratic way of life and want to replace it with communism or any other despotism.

Let us remove the shortcomings and weaknesses in our own social fabric—racial discrimination, unemployment, un-American living conditions.

In Latin America and Africa, as well as in Europe, let us talk and act as friends of the oppressed and never as friends of dictators and oppressors.

Let our Government exercise a greater initiative in extending democracy and freedom by working to have our allies break with all colonialism.

Let us improve the substance and manner of our helping the newly established and economically underdeveloped nations to grow into healthy and prosperous democracies. Remember, life is still a nightmare for hundreds of millions throughout the world—the underfed, undereducated, underhoused, and underproductive.

Let us rebuild NATO and enlarge its purpose through effective cooperation by its members in promoting economic progress and prosperity, mutual assistance in the realm of technology and science, and the strengthening of the military forces.

Let us strive to turn the United Nations into a more effective instrument of world peace on the basis of its charter. Under no circumstances, can we accept the transformation of the United Nations into a reformatory for international criminals like the Chinese Communist dictators.

Last but foremost, let us build an America that will be strong enough, along with our allies, to deter and if need be defeat those who stand in the way of world peace and the freedom of mankind.

Come to Bergen County, Khrushchev; See Us; Hear Freedom Ring

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. OSMERS. Mr. Speaker, those of us who live in Bergen County, N.J., have great pride in its growth and development under this wonderful free enterprise system of ours. One of our leading citizens, who happens also to be a lifelong friend, Edwin Emrich of Haworth, has returned recently from an extended tour of Russia. He traveled as an individual, not as part of a group. He says he found "the food inferior, the women brawny, and the people intensely curious, particularly about the United States." Emrich is a resident of Haworth, a great admirer of Bergen County and its people, a successful stockbroker with Hirsch & Co. in New York City, a member of the Bergen County Planning Board, and president of the Northern Valley Planning Association. He is considered to be one of the leading municipal and county planners in the United States.

The Bergen Evening Record of Hackensack, N.J., asked Mr. Emrich to write a special article that would be of particular interest to Bergen County readers in the light of Premier Khrushchev's impending visit. Mr. Emrich's article was published on September 9 and because it applies to just about every State, county, and town in our great country, under leave granted I insert it in the Appendix of the RECORD where all may benefit from the great American philosophy so well expressed by him.

The article follows:

"OUR PEOPLE, LIKE YOURS, WANT PEACE; BUT WE WON'T BE BULLIED"

A population study made by the Bergen County Planning Board has shown some very interesting facts. Here in this county we had in 1950 some 75,000 foreign-born residents—60,000 of them naturalized, 15,000 not naturalized. In 1950 we had 2,446 persons who were born in the U.S.S.R., a gain of 24 percent over 1940, a gain second only to Canadian immigrants, and compared with a gain of 2.3 percent from England, and a loss of 1.5 percent from Italy.

THEY HAVE A CHOICE

Truly, if Mr. Khrushchev should come to Bergen County, he would find as many different national origins as he has in his vast native Russia.

Come to Bergen County, Mr. K.

We'll show you a community just short of 1 million representative Americans of every heritage known to mankind—Americans with the problems of life, its joys and sorrows, with wealth and modest means, average men, below and above, each with a different ambition or desire, an individual way of life.

They conform or they don't. They have free choice, free speech, free assembly. They have justice and injustice.

These things, Mr. K., are ours: The right to make our own mistakes, our own successes, our own homes, our own law, our own trees, our own churches, our own business; most of all, our own families, our own children, not raised by the State, not indoctrinated with a single system. We have the right to doubt or to have faith; a huge, free, competitive press to print every opinion to all, for all. We have free libraries and pay libraries, books for all by anyone who has anything to say, wise or foolish, great or mediocre. We have new thoughts, new ideas, wisdom and stupidity, vision, and talent, creative men and women.

All this awaits you in Bergen County, Mr. K.

You will see every shade of architecture and design, wide roads and narrow, crowded streets and empty, parks, playgrounds, every type of recreation and enterprise. It's all here, Mr. K. In fact so much is here that our own people sometimes don't know really how great it is. They must travel all over the world, including your own Russia, to find out how truly great and massive, how abundant and wonderful and thrilling their own possessions are.

Here in Bergen County, United States of America, Mr. K. we will show you people who are kind and generous and peaceful and determined to improve with each generation. When we slip from our course it is because of human frailty and not because we wish to do harm. We will defend all we have with everything we have but we threaten you not and the people of Russia not at all.

We offer you the chance to see us, study us, copy us or not, as you choose, but we ask the same of you, Mr. K.

Don't push. Don't threaten. Don't holler, and above all, don't start anything!

The moon shines over you and over us. The stars come out at night in Russia and in the United States of America. The winds blow, the snow and rain fall, and the sun shines freely for the the entire world. The same creator watches all children.

So come to us, Mr. K. Read our papers and our books and try to understand our hearts and minds. Please remember that freedom is a noble thing and we think freedom more to prize than all the gold in the world.

Yes, come to Bergen County, Mr. K. Here you will find the descendants of the world's greatest revolution, the longest lasting, and the most successful. It was a revolution led by truly noble men, Washington, Jefferson, Franklin, Adams, and Paine. They were intellectuals, patriots, men of justice, lovers of liberty.

The giants roadway to freedom runs through Bergen County and clear across the world to join together all revolutions based on justice, freedom, and the rights of man against the state.

Thirty Years With the Louisville Courier-Journal

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. NATCHER. Mr. Speaker, on September 9, Robert L. Riggs and the Courier-Journal of Louisville, Ky., celebrated the 30th anniversary of a highly successful relationship. It is most appropriate that Bob Riggs has served so long and with such distinction as a correspondent for the Courier-Journal for this newspaper consistently is named on all survey lists as one of the 10 great U.S. papers. The ability and integrity of its correspondents, editorial staff, and technical personnel have raised the Courier-Journal to this position of recognition and eminence in the newspaper field. The incisive, comprehensive and intelligent reporting of Bob Riggs has contributed in no small measure to the superiority of the Courier-Journal.

When Robert L. Riggs began his association with the Courier-Journal 30 years ago, the Nation was staggering under the sullen weight of the depression, and breadlines and soup kitchens were common stories for the young reporter. However, the economic stability of our country was to improve, and concomitant with a gradual return to fiscal normalcy was the emergence of America as the industrial giant of the world. The fast-moving events of the next 3 decades were reported by Bob Riggs and his career has covered one of the most exciting periods in history—from the industrial age, to the atomic age and now into the mysteries of outer space. These are thrilling and frequently tense times in which we live, and no one is more familiar with the conquests of science and the flow of history than a man whose job it is to record these events in the daily press. Just within the past year or so we have seen the development of a nuclear submarine which can remain submerged for as long as 60 days, jet planes span the country in less than 4 hours, one of our satellites is in orbit around the sun, IRBM's and ICBM's are becoming more devastatingly accurate, astronauts have been selected for the first manned flight into outer space, the world's first atomic-powered merchant vessel was launched this summer, and the conquering of age-old diseases has prolonged our lifespan by many years.

Bob Riggs has been chief of the Washington Bureau of the Courier-Journal for many years and is presently serving in that capacity. His affable manner and shy smile are well known on Capitol Hill. He is especially familiar to all members of the Kentucky congressional delegation, and, while at times there might be a slight difference in viewpoint, the excellence of his reporting is universally held in high regard. Robert L. Riggs has earned the admiration of his friends and the respect of his colleagues. He is a newspaperman in the finest sense of the word.

Khrushchev's Broken Promise on Slave Labor in Russia

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of an article by Mr. Béla Fabian, chairman, Federation of Hungarian Former Political Prisoners, which appeared in the September 7, 1959, issue of U.S. News &

World Report. I am bringing this shocking report to the attention of those Members of this body who have not already read it since it clearly reveals that, despite persistent denials by those in the Kremlin, Soviet slave labor camps are still very much in existence in Soviet Russia and hundreds of thousands are still suffering in these camps which Mr. Khrushchev promised to shut down in 1955:

KHRUSHCHEV'S BROKEN PROMISE ON SLAVE LABOR IN RUSSIA

(By Béla Fabian, chairman, Federation of Hungarian Former Political Prisoners)

The Soviets are playing up the question of Nazi concentration camps, mainly to draw away the attention of the world from their own. They pass over with silence the fact that it was the Soviets who first introduced the system of slave-labor camps on the Solovetski Islands in 1919. Neither do they speak of the outrageous fact that they deported the survivors of the Auschwitz camp, which they "liberated" in 1945. They do not boast about the millions of Russians who were deported to Germany by the Nazis, and whom they took back to the Soviet Union against their own will, to confine them to Siberian slave-labor camps for reeducation.

One of the aims of the Federation of Hungarian Former Political Prisoners, which was founded in 1951, is to collect information about concentration camps in the Soviet orbit. I myself have spent 5 years in Nazi and Soviet camps and prisons, and, therefore, believe that I cannot do a more useful job than to try to free the ones who are still suffering in camps and prisons.

We receive our facts from three competent sources:

1. From prisoners who were released from concentration camps;

2. From prisoners who escaped; and,

3. From Russians serving in the Soviet Army who are stationed in occupied countries. As they themselves bitterly oppose the concentration-camp system, they willingly reveal the truth to persons with whom they are in close contact.

Our organization learned about the tragic fate of the Hungarian girls who were deported to the Soviet Union for having actively taken part in the revolution in 1956, from letters which these girls wrote to their families, and which were forwarded by the Russian soldiers whom they had met in Siberia. The parents of the girls wrote to their friends in America asking them to do something on behalf of the girls.

From Hungary alone, approximately 6 million letters are sent yearly to the United States, as there are 1 million Hungarians living in America. Whenever such letters contain information that would interest our organization, we are immediately contacted. A large number of letters are likewise being sent from other countries behind the Iron Curtain. They have developed a special common language. So if, for example, a father writes that his son was taken to the hospital, this means that he was arrested.

In 1955, Khrushchev declared that all concentration camps would be dissolved and all political prisoners would be released. Not only did this fail to materialize, as so many other Soviet promises, but, since Khrushchev came to power, the number of concentration camps and political prisoners has increased.

In Hungary alone, in the darkest days of the Rákosi regime (Mátyás Rákosi, former first Secretary of the Hungarian Communist Party), there were only three concentration camps and the number of political prisoners amounted to 27,000. Today, I myself have knowledge of the existence of seven camps and the number of political prisoners surpasses 60,000. Two of the largest concentration camps, Kistarcsa and Tököl, are only 12 and 20 kilometers (7 and 12 miles), respectively, distant of Budapest.

In Albania, Bulgaria, Czechoslovakia and Rumania, the concentration-camp system is still prevalent. In Albania, a system of concentration camps built underground has recently been introduced. Since the Hungarian revolution, the regimes of the occupied countries no longer conceal the fact of the existence of concentration camps and the cruel treatment of prisoners. This serves as an instrument of terror to discourage and suppress any move for freedom.

Prisons, concentration camps and secret trials are the three principal implements of terror, without which no dictatorship, especially not that of the Soviets, could maintain itself.

The denial of the existence of concentration camps is only for outside purposes, as no newspaper published in countries under Communists rule would dare print such a brazen lie.

When Mikoyan (Anastas I. Mikoyan, a Soviet First Deputy Premier) visited the United States, I asked some influential persons, who had the opportunity to speak to him, to intervene with him for the release of political prisoners who were deported to the Soviet Union or imprisoned in Hungary. One of them was Senator HUBERT HUMPHREY, who was invited to the Soviet Embassy in Washington to have lunch with Mikoyan. Mikoyan told Senator HUMPHREY that there were no political prisoners in the Soviet Union. In Soviet terminology, this means that anyone who is in prison or concentration camp is a criminal. When I asked Zorin (Valerian A. Zorin, a Soviet deputy foreign minister) at a press conference in Geneva whether there was any chance that the Hungarian deportees would be returned before the conference was over, he became very angry and told me that I was living in the past, otherwise I wouldn't ask such foolish questions.

Although the concentration camps exist as before in the Soviet orbit, some changes have taken place inside the Soviet Union since Stalin's death.

In the summer of 1953, shortly after the East German revolts, strikes broke out in all East Siberian and Arctic camps. The bloodiest revolts took place in Karaganda, Kolyma, Norilsk, and Vorkuta. In many places the military and the guards went over to the prisoners' side, and some camps even fell into the hands of the prisoners. Security troops from Moscow and Leningrad had to be sent out to reestablish order at the cost of thousands of lives.

Even if the revolts were put down, they nevertheless achieved some reforms and alleviations.

Food became more abundant and of a better quality. Bread rations were increased from 600 grams to 1 kilogram (1.3 to 2.2 pounds) daily. Restaurants and commissaries were set up in the camps where prisoners could eat and purchase certain things, as they now received pay. Furthermore, bars were removed from the windows of the barracks, and the prisoners were permitted to write more frequently to their families.

All these reforms served the purpose of increasing production in the mines and other industrial enterprises—such as the production of timber, which is done by prisoners, as is 98 percent of gold mining and 17 percent of coal mining in the Soviet Union. The industries of the Leningrad district depend entirely on the output of the mines worked by prisoners.

However, despite the easing of some aspects of their life, there is no serious increase in production as, naturally, the prisoners want the total dissolution of the camps. As long as they had to subsist on a starvation diet, food played the foremost role in the prisoners' lives. Now that they have enough to eat, all they think of is to regain freedom.

Whenever a prisoner has completed his sentence, he is released from the camp but, with a few exceptions, permitted to live freely only in the district where his former camp is situated. The reason for this is that work would stop in the mines if the prisoners returned to their former dwelling places. In order to keep them there, especially in the Arctic regions, the regime rather consents to their having their families brought there. So, for instance, in the Komi territory, that includes Vorkuta, there used to live some 80,000 to 100,000 Komis, whose language is related to the Finnish and the Hungarian. Now it has 4 million inhabitants who are living in and outside the slave-labor camps.

The regime has two means of keeping the so-called free laborers in such places. One of them is that they receive a paper on their release specifying that they are not permitted to leave a certain territory without a special permit. Without special permit they cannot buy railway tickets, and there are no other ways of travel. From places such as Karaganda, Kolyma, Norilsk, and Vorkuta it is impossible to escape. Distances are too great to walk, and there is no place to hide because of the Arctic climate.

Instead of stopping deportations, Khrushchev has started a new phase. Khrushchev's pet project was that of opening up the virgin lands of Kazakhstan. However, normally, it would have been impossible to settle free workers there because of the extreme climate and the shortage of housing facilities. He solved the problem by recruiting so-called volunteers, mainly university students and workers who betrayed too much independent thinking. They were promised good wages in case they volunteered, but had no other choice, as they would have been deported anyway. On arrival they found nothing but desert land, and had to build their own living quarters.

The adverse climate and total lack of the most elementary conditions of hygiene took a heavy toll in lives. With the exception of volunteers from the Baltic, who had to sign only a 5-month contract, all others had to sign one for 3 years. Khrushchev himself said in one of his speeches that, out of the 8,000 students of Leningrad University, 4,200 had volunteered.

Because at the beginning mostly young men were called upon to volunteer, unrest broke out later because of a lack of women. The regime is now recruiting young girls and women in large numbers, not only in the Soviet Union but also in the satellite countries. Recently, a short notice was published in the Soviet newspapers praising 25,000 women who had volunteered to help carry out the Khrushchev plan in Kazakhstan. More than 10,000 girls were recruited in Bulgaria, and the Bulgarian newspapers publish notices of marriages and of new houses being built. A Polish Communist reporter, who was in Sofia at that time, took pictures at the railway station of a train full of girls leaving for Kazakhstan. Girls are also being recruited in Hungary and Rumania.

How to put an end to the shameful system of concentration camps? By not going along with Khrushchev and pretending to believe that there are none. The free world must keep talking about this question and not treat is as taboo. A disease that is concealed can never be cured. A maximum of publicity is the only way to close down the concentration camps and to free the political prisoners.

Donald V. Sawhill, Civic Leader, Business Executive, and Outstanding Pennsylvania Citizen of Sharon and Pittsburgh, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FULTON. Mr. Speaker, Don Sawhill was such a wonderful fellow and such a fine friend of so many of us in western Pennsylvania and eastern Ohio that I want such a personable, gay, and constructive person noted permanently in the CONGRESSIONAL RECORD.

Don certainly deserves to be remembered by our generation, and the generations to come, for his many accomplishments in the betterment of his community, his help to young people in education, and his high level leadership of his good business associates and employees to such well-deserved business success.

Don worked hard and enjoyed it. He was loyal to his friends. He was a wonderful guy. We friends vote him "tops."

As a memorial for Don Sawhill, I call to the attention of my colleagues in Congress, and to the American people, the generosity of his good wife, Mrs. Donald V. Sawhill, his son Don, the family, and his associates in the Sawhill Charitable Foundation and in his businesses, set out in the following newspaper quotations:

[From the Sharon (Pa.) Herald, July 21, 1959]

PERKINS PROPERTY IS GIVEN TO UNITED FUND BY DON SAWHILL'S HEIRS—MEMORIAL GIFT TO BE USED AS AGENCY OFFICES

Mrs. Donald V. Sawhill and the trustees of the Sawhill Charitable Foundation jointly announced today the gift of the former Grace Tod Perkins property on West State Street to the United Fund of the Shenango Valley area.

A memorial to the late Donald V. Sawhill, founder and chairman of the board of Sawhill Tubular Products, Inc., and a tireless worker for the civic good of the valley, the property and buildings will be used as a community service center for the United Fund, its agencies and the residents of the valley.

Mrs. Sawhill and the foundation purchased the tract from the Perkins heirs.

The gift is the biggest private grant to the valley since Mr. and Mrs. Frank H. Buhl endowed it with Buhl farm in 1915.

WILL BE MEMORIAL

The executive committee of the United Fund, in accepting the deed to the property yesterday afternoon, indicated it would be called the "Donald V. Sawhill Memorial Building."

In a prior meeting yesterday at the Sawhill suite in the Shenango Inn, the presentation was made by the Sawhill trustees and a representative for Mrs. Sawhill to Dr. A. A. Booth, United Fund president.

United Fund officials said that the historic Sharon landmark, an approximate 8-acre tree-shaded sweep of hillside on the corner of West State Street and North Irvine Avenue, will be kept intact. The United Fund will be responsible for maintenance.

The estate includes a brick three-story, 16-room house, built in 1912, a gate house, a huge carriage house, a tool house, a caretaker's home, a greenhouse and extensive flower and vegetable gardens.

VALUED AT $260,000

Replacement value of the estate is reported to be $260,000.

The gift represents a boost for the West State Street business area where a renovation program is in the planning stage.

Yesterday's transfer of the showplace, known in late years as Perkinsville, also represents the first time since 1832 that the land has been out of the hands of the descendants of Gen. Joel B. Curtis.

At the site, Curtis developed the first coalfields in Mercer County. Later, in 1850, he opened the first iron industry in the valley. Miss Perkins, who died last month, was his great-grandniece. She was the daughter of Simon Perkins, the man who founded Shenango Furnace Co. in Sharpsville. The property was willed to her niece and nephew, Mrs. Laura Woodruff and George Leonard Collord.

Dr. Booth, envisioning activities for youth and golden-agers to be carried on at the spot as well as a variety of community uses, called it "a place for the people."

The grant is the initial act of the Sawhill Charitable Foundation since it was organized last November. Donald B. Sawhill, secretary of Sawhill Tubular Products, Inc., and son of the firm's founder; Ray F. Eisenbies, president of the company, and Louis J. Wiesen, general counsel and a director of the firm, are members of the foundation.

The idea of the presentation was conceived by Donald B. Sawhill, who is also a member of the United Fund board of directors. Eisenbies is cochairman for the United Fund campaign in the valley this fall.

Mrs. Sawhill, the codonor, is the widow of Donald V. Sawhill and is chairman of the board of the company. She lives on Highland Road.

In extending the gift in the memory of Mr. Sawhill, the group noted: "His business associates and his family felt it was fitting because of his many long years of interest in charitable and beneficial works in the Shenango Valley."

United Fund leaders said today that the main fund-raising office and a group of agencies that do not have buildings of their own, do not have to conduct welfare programs in segregated localities and that indicated in a recent survey that they might be interested in new office space will move into the buildings on the property within the next several weeks.

These agencies, unaware of yesterday's events, were invited to meet at 2 p.m. this afternoon. At that time, they were taken to view the building.

The housing committee of the United Fund that had been surveying possible office sites since January is composed of Peter Joyce, chairman; Mrs. William Whitla, Louis Puskar, G. S. Warren, Jr., B. W. Norton, and S. B. Doyle.

Mr. Sawhill was a prime mover in promoting the health and welfare of the community. Before his death in 1955, he was a director and vice president of the Sharon General Hospital, a former campaign chairman, director and active supporter of the Community Chest, one of the planners of the Shenango Inn, and later served as a member of the board of the Valley Hotel Operators Corp. and a chairman and trustee of the Mercer County Branch of the Pennsylvania Economy League.

He fathered the planning commission idea in the valley. He was a trustee of the Economic and Business Foundation of New Wilmington. He also was a trustee of Thiel College and held an honorary doctorate from the school.

During World War II, he served as a member of the War Production Board.

His other affiliations included director of Armstrong Grocery Co. here and Copperweld Steel Co. in Pittsburgh.

[From the Youngstown (Ohio) Vindicator, July 21, 1959]

SHENANGO UF GETS MANSION AND EIGHT ACRES—HUGE ESTATE IS GIFT OF SAWHILL GROUP TO COMMUNITY

SHARON, Pa., July 21.—Shenango Valley United Fund, celebrating its fifth anniversary, has been donated a 16-room mansion located on 8 acres of land for its offices and headquarters.

The Perkins estate located on the west fringe area of the city's business district, is the gift to the community of Mrs. Donald V. Sawhill and trustees of Sawhill Charitable Foundation.

It will be a memorial to Don Sawhill, founder and president of Sawhill Tubular Products Inc., who died in 1955 after an outstanding industrial and community-service career.

The estate, named "Donald V. Sawhill Memorial Building," by the United Fund directors who Monday afternoon accepted the deed for the property, was purchased by the Sawhill Foundation from the estate of Miss Grace Tod Perkins, who died several days ago. Miss Perkins was the daughter of Simon Perkins, a pioneer industrialist in this area. The value of the gift is given as in excess of $80,000.

PROVIDES AMPLE SPACE

Located on West Hill at State Street and Irvine Avenue, the mansion will provide ample space for housing of officers of the local agencies supported by the United Fund. There also will be room for carrying out activities of some of the agencies.

The deed for the property was turned over to United Fund by representatives of the Sawhill family and foundation at 2 p.m. Monday at Shenango Inn. Three hours later the United Fund directors and executive committee accepted the gift.

Mrs. Claire Sawhill was out of the city and was unable to attend the ceremonies. The family was represented by her son, Donald B. Sawhill.

GIVES GIFT TO THIEL

The Sawhill Foundation was formed at the request of Mr. Sawhill, and in recent months has made several community contributions, including a gift to Thiel College where a new dormitory is to be named Sawhill Hall.

This is one of the largest contributions made to Shenango Valley in recent years and is the first by an individual outside the community gifts from Mr. and Mrs. Frank H. Buhl and the P. L. Kimberly estates.

The mansion was built in 1912 and has been one of the show places in Sharon. The property was purchased in 1832 by Col. Joel B. Curtis who developed coal mining operations on the site. Curtis, who was a great-grandfather of Miss Perkins, a founder of the plant now known as Shenango Furnace. Miss Perkins had willed the estate to her niece and nephew, Mrs. Laura Collard Woodfuff, of Sharon, and George L. Collard, Jr.

[From the Sharon (Pa.) Herald, July 22, 1959]

DEDICATED TO SERVICE—GIFT ESTATE SUITED TO UF USE

Elegant red brick, Georgian "Donald V. Sawhill Memorial Building" and community activties go together like a horse and carriage.

Under United Fund management and that of United Fund agencies, its 8 acres of land and adaptable outside buildings will adjust not only to meeting rooms and offices, but to youth programs and work centers for the aged.

Speaking of horses and carriages, in the old carriage house that also contains a wash rack for buggies, youth groups may hold gettogethers or winter baseball games. They also may conduct Easter egg rolls or go sled-riding on the long sweep of lawns. And there is quilting and workshhop space for goldenagers and greenhouses and gardens where they may work close to the land.

CHALLENGE TO GARDENERS

Gardeners might find a challenge in the century-old asparagus fields on the upper property or mushroom trays in the basement of the manor house. Bookkeepers might set up shop in the brick gatehouse that once served as an office and tally the success of the crops.

Almost hourly activity will be chalked off on the brass sun clock in the gradens.

This and community contributions have been traditional at the site.

The clock dates back more than 100 years when Joel B. Curtis bought the land. That was in 1834 and the purchase was from John Hull who thought Sharon would never come to much so he moved to Pulaski. Curtis, a downtown merchant, found coal on the property. An opportunist, he shipped the coal on the Beaver and Lake Erie Canal and opened Mercer County's coal trade. In 1850, he founded Sharon Iron Co. and opened Mercer County's industry.

About the same time he organized Sharon Iron Co., Curtis put a house on the corner of West State Street and North Irvine Avenue. It was a fantastic, yellow framehouse adorned with columns, carved wood orches, turrents, parapets, eave brackets, all in line with the style of the day and had more additions than there were city blocks in Sharon. In 1864, a second story was added

The old porch columns are still used in the arbor. A toolhouse, that is even older than the big house, stands in the garden.

BUILT IN 1912

The present house was built in 1912 after the old framehouse had burned to the ground one March morning in 1910. At the time, the whole community turned out to help rescue the furniture. The dining room table that the United Fund will use as a conference table, was rolled down the hill and the piano, still in use, was pushed down the hillside where it was caught at the bottom by a cluster of Sharon railroad men who banged on the keys while the house burned.

The hillside landscaping, that has never been changed, was engineered by Curtis and executed with a horse and scoop.

Now tree shrouded, it is composed of the sprawling great house, built by Wallis and Carley, and composed of three usable floors, a through hall, dormer windows, arched porchway, window seats in a 40-foot-long living room, and eight bedrooms and eight baths.

The property is enclosed by an old spiked fence that was made at Sharon Iron Co.

It was inherited from Curtis by his son, Alfred Norton Curtis. He was known for his private charities in the community. This, in turn, is traditional with the purposes of United Fund.

It passed to Alfred Curtis' niece, Mrs. Simon Perkins, who had married the founder of Shenango Furnace Co. in Sharpsville. Miss Grace Tod Perkins was their daughter.

For her, the estate was called Perkinsville. Her heirs, Mrs. Laura Woodruff and George L. Collord transferred it to Mrs. Donald V. Sawhill and the Sawhill Charitable Foundation who gave it to the United Fund as a memorial to Donald V. Sawhill. Mrs. Woodruff and Collord felt that Miss Perkins would have preferred that the property go to an organization that worked for the community.

Donald V. Sawhill was of the same community conscious frame of mind.

United Fund leaders said today that they will retain it as a historic landmark even while they use the property to the highest degree of usefulness.

Invitation To Attend the Admission Day Celebration of the State of Hawaii

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. INOUYE. Mr. Speaker, I am hereby enclosing a certified copy of Senate Concurrent Resolution 3, which was adopted by the First Legislature of the State of Hawaii in special session, on September 4, 1959:

SENATE CONCURRENT RESOLUTION 3

Concurrent resolution inviting the President, Vice President, Members of the 86th Congress of the United States, members of the Cabinet of the President of the United States, the Governors of the several States of the United States, and other dignitaries to attend the admission day celebration of the State of Hawaii

Whereas throughout more than the sixty years that Hawaii has been a Territory of the United States, the President, Vice President, and Congress of the United States have shaped its growth and guided its development toward the ultimate destiny of full participation in the National Government of the United States; and

Whereas the 86th Congress of the United States, through its passage of the Act of March 18, 1959, Public Law 86-3 (73 Statutes at Large) to admit Hawaii as a State has fulfilled the aspirations of the people of Hawaii to become an integral part of the United States Government; and

Whereas the 49 several States of the Union of the United States have supported Hawaii in its aspirations to become a sister State; and

Whereas it is the intent of the First State Legislature of the State of Hawaii to make an adequate appropriation in order to make the official observance of Hawaii's Admission Day a glorious and fitting celebration; and

Whereas it is particularly fitting that the President, Vice President, Members of the 86th Congress through whose wise and just actions the desires of the people of Hawaii have been realized and the Governors of the several States of the United States whose support of Hawaii is deeply appreciated, participate in the joyful celebration which will take place upon the office observance of admission of Hawaii as the 50th State of the Union: Now, therefore, be it

Resolved by the Senate of the First Legislature of the State of Hawaii (the House of Representatives concurring), That the President and Vice President of the United States, all members of the Cabinet of the President of the United States, all Members of the 86th Congress of the United States, the Governors of the several States of the United States and such dignitaries as the Governor may deem desirable, are hereby invited by the First Legislature of the State of Hawaii to join with the people of Hawaii in the official observance of Hawaii's Admission Day Celebration; and be it further

Resolved, That the Governor of the State of Hawaii issue formal invitations to the parties hereinabove named; and be it further

Resolved, That duly authenticated copies of this concurrent resolution be forwarded to the President and Vice President of the United States, all Members of the 86th Congress of the United States, all members of the Cabinet of the President of the United States, the Governors of the several States of the United States and the Governor of the State of Hawaii.

THE SENATE
OF THE STATE OF HAWAII,
September 4, 1959.

We hereby certify that the foregoing concurrent resolution was this day adopted by the Senate of the First Legislature of the State of Hawaii in special session.

W. H. HILL,
President of the Senate.
WALTER G. CHUCK,
Clerk of the Senate.

THE HOUSE OF REPRESENTATIVES
OF THE STATE OF HAWAII,
September 4, 1959.

We hereby certify that the foregoing concurrent resolution was this day adopted by the House of Representatives of the First Legislature of the State of Hawaii in special session.

ELMER F. CRAVALHO,
Speaker, House of Representatives.
HERMAN T. F. LUM,
Clerk, House of Representatives.

Higher Price Tags May Mean Better Bargains

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Minneapolis Star of September 8, 1959. Mr. Arthur Upgren is a distinguished economist with the rare capacity to describe economic facts and processes in terms understandable by all of us. This article is especially important when it is being contended by some, wrongly, that to let interest rates find their natural level will automatically mean higher living costs:

HIGHER PRICE TAGS MAY MEAN BETTER BARGAINS

(By Arthur Upgren)

Is a straight line always the shortest distance between two points? Not always, as mathematicians and geographers can prove.

Can a higher price give you something for less money? I think I can demonstrate the truth of this equally surprising proposition.

For example, I have recently been criticized for saying that higher interest rates can give us houses for less money. I'd like now to show why this is so.

At the time of the Korean war the Government reimposed larger down payments and shorter periods of payment for the purchase of automobiles. These terms can be thought of as a higher price.

What was the result? A sharply lower price for automobiles both new and used. Three Minneapolis sales manager for automobiles told me at the time that the price of a nice used car came down from about $1,595 to $1,195.

With stiffer down payments, fewer people could buy a car at once. That reduced the total demand for cars. When you reduce

total demand that makes the price less. That is the way the law of supply and demand works.

Actually we had diverted enough steel from the production of automobiles to the making of implements of war so that we had to get along with fewer new automobiles. Somebody had to wait to get a new car.

If we had not imposed stiffer down payments and shorter terms, too many people would have tried to buy cars. The price would have risen. That's inflation.

The American people wouldn't have gotten any more cars, they just would have had to pay more money—a higher price—for the limited number of cars available.

It was that higher price trend that we nipped almost in the bud. So the stiffer terms made the automobiles lower in price.

About the same time, 1951, interest rates moved sharply forward when the Federal Reserve banks dropped the support of all Government bonds. That support had made interest rates low. Dropping the supports made credit tighter and interest rates higher. The prices of houses declined.

An economist for the AFL–CIO bought a house in Washington. He complained, that he had to pay what amounted to about 1 percent more interest. Someone might say that made the house cost him more. But did it?

One percent more interest on a $15,000 mortgage amounts to $150 a year increased cost to pay interest on the mortgage. (Actually the interest rates have not gone up that much in any single year either then or now.)

But my economist friend also told me that he got a wonderful bargain in buying his house. In his own words he said he bought the house "for $4,000 less than it was worth."

Tighter money meant not quite so many people could buy houses. That reduces demand. Lowering demand has the lowering effect on price.

The real point is that when you have inflation you cannot meet all money demands at prices that remain constant. So businesses raise the price. That is inflation. Tightening credit raises the financing cost but it helps hold the price of the thing on which you pay interest down to lower levels.

If you have any doubts about this just ponder for a moment the idea that lowering the interest rate will make things cheaper. How do you lower interest rates? By making money much cheaper. That will make money available at, say, 5 percent instead of 6 percent for houses.

What do you think will happen to the price of houses? We can't build them out of air, and our production of them cannot increase quickly. So the price will have to go up until some buyers are squeezed out of buying. That makes houses more expensive for everybody who can buy.

The only person who gains by a lower interest rate is the one who finances his house at the low rate just before the rate is advanced.

Our New Labor Law: What It Is and How It Came About

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, the remedial labor legislation recently enacted was designed to and will first, to a great extent, protect the right of union members to participate in union policy. To know for what purpose the dues and special assessments exacted from them through the checkoff are spent. It will give them a greater opportunity to elect union officials and, thereafter, control their activities.

Second. It will in certain circumstances permit the union shop which compels the applicant for a job to join the union, pay initiation fees, and dues.

Third. It will somewhat limit secondary boycotts, picketing to force employees to join unions.

Fourth. It supplements the Hobbs amendment to the Corrupt Practices Act, which if properly enforced, will prevent extortion and racketeering.

It does not make antitrust and monopoly laws applicable to union activities. This is necessary if nationwide strikes and tieups are to be prevented.

It fails to prevent strikes in public utilities, which in the past have, and in the future may, prevent the supply of necessities such as light, water, food to whole communities.

It fails to prevent forcing employees to make involuntary contributions for the establishment of policies to which they are opposed.

Overall, it is a good bill and will work out for the benefit of practically everyone.

WHO FORCED ITS ENACTMENT?

An amusing situation has come about because of the effort of so many to claim credit for the law's enactment.

In truth and in fact, as everyone familiar with the situation knows, we now have the law on the books because the people, learning through the publicity given the McClellan committee's hearings so much of what has been happening, and many, finally realizing how they were adversely affected, demanded that their representatives provide a remedy.

We have the law today because of aroused public sentiment. The result is very encouraging because it shows that, when the people really take an interest in their Government and insist, their representatives get up into the collar and do what the home folks want.

The Union Oil Co. Responds

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. PORTER. Mr. Speaker, on July 30, 1959, I wrote a letter to Mr. Reese H. Taylor, chairman of the board of the Union Oil Co. of California, commenting on that company's advertisement in the July 13 issue of Life, and taking exception to what I termed "misleading and unfair poppycock" in the advertisement. On August 14, Mr. Taylor wrote a reply to that letter and he has recently asked that I insert it in the Appendix. I am glad to do this and to consider his complaint that my "lengthy comments hit us somewhat harder than we deserve."

Of course, I shall not argue with Mr. Taylor about the necessity for old fashioned hard work. Moreover, I am very glad to see his stress on annual growth rates, but I hope he will also pay attention to annual growth rates with respect to overall productivity and share my concern for our economy in this vitally important respect. I do not like taxes any more than Mr. Taylor but I do not see much hope in his suggestion that we reduce Government spending "through greater efficiency, less Government in business operations, and the elimination of waste." This is like saying, "fight needless spending" or "eliminate corruption."

I am glad to know that Mr. Taylor is not "antiforeign products and against high wages." This was not at all clear from the advertisement in question. I share Mr. Taylor's concern for our competitive position in the world and I, too, am against unearned wage advances whether or not they are accompanied by increased featherbedding or other labor wastage.

Under unanimous consent previously granted, I am including the entire text of Mr. Taylor's letter to me of August 14, 1959:

UNION OIL CO. OF CALIFORNIA,
Los Angeles, Calif., August 14, 1959.

Hon. CHARLES O. PORTER,
Representative in Congress,
House Office Building, Washington, D.C.

MY DEAR MR. PORTER: Thank you for your extremely detailed letter commenting on our advertisement in the July 13 issue of Life magazine. One of the aims of this series is to encourage thinking and discussion about important economic problems facing our country. From the many hundreds of letters we have received, we feel confident that we are succeeding in this.

I wish to say at the start, that we are proud of our country, proud of its people, and proud of its accomplishments. However, we are not content—and this was the message we were driving at in the ad—to sit back and reflect on our past accomplishments; we are not content with the knowledge that our standard of living has long been the highest in the world. Rather, we are extremely concerned with the possible consequences of our becoming a high-cost nation in the world trade picture. We believe this is a real possibility, with consequences far more serious than generally realized. This we wished to call to the attention of the American people.

In our effort to keep our message short, simple, and direct we did not completely cover all aspects of the problem in the text of the ad. Although we anticipated some criticism because of this, we believe your lengthy comments hit us somewhat harder than we deserve.

You ask many questions, although most of them, I suspect, are more rhetorical than interrogatory. However, the three principal issues—foreign trade, productivity, and taxes—can be answered as follows:

1. On page 2 you wrote: "Did you forget, if you ever knew, Mr. Taylor, that in no year since 1936 have our imports been as great as our exports and in recent years the excess of exports over imports has been most substantial." Foreign trade statistics are used to measure a great variety of things, and in proving a point such as this one you can no doubt find supporting statistics. However, if we limit ourselves to merchandise exports and imports—the major

components of our "balance of payments"—the facts do not support your complacency. The following table shows, for the last nine quarters, a significant and alarming trend:

U.S. merchandise exports and imports

[Millions of dollars, seasonally adjusted]

Quarter	Exports	Imports	Difference
1957:			
1st	$5,122	$3,229	$1,893
2d	4,899	3,366	1,533
3d	4,918	3,380	1,538
4th	4,451	3,316	1,135
1958:			
1st	4,065	3,076	989
2d	4,019	3,187	832
3d	4,143	3,218	925
4th	4,000	3,432	568
1959: 1st	3,773	3,525	248

Source: Survey of Current Business, June 1959, p. 17.

In the past this merchandise surplus has helped offset our Government's direct payments abroad. However, as the surplus has shrunk, we have seen dollars and gold flow out in order to restore the necessary "balance" to our balance of payments. This outflow cannot, of course, continue for very long without seriously affecting our national economy.

It has been estimated that some 4 to 5 million people in this country are employed in jobs supported by foreign trade. We are not concerned with what these people did in 1936. We are concerned about what might happen to them in 1959, 1960, and beyond.

2. While we agree with your remark that "the available data on productivity for industry as a whole is not very satisfactory," we do not agree with your further assertion that there is no evidence that wage gains are in excess of productivity gains. The data you cite, in our opinion, are not directly related to the productivity problem. Your figures cover only part of the manufacturing labor force and include only direct payroll costs. Further, by considering real wages you are bringing into the picture the effects of all inflation in the economy irrespective of how it was generated.

The issue is this basic one being faced continually by businessmen: Suppose product output per man-hour (commonly called "productivity") rises by, say, 2 percent in a given period and total labor costs also rise by 2 percent, then labor cost per unit of product would be unchanged. In this circumstance, labor, by itself, would contribute no direct pressure for a product price increase. However, if output per man-hour rose by 2 percent and labor cost by 4 percent, then labor cost per unit of product would be higher and there would be pressure for a price increase. This has been happening throughout much of the postwar period and describes what is commonly meant by the expression: "Wage gains are in excess of productivity gains."

Actually, since the definition of productivity as "output per manhour" ignores the enormous role played by capital investments in bringing about our expanded output, it is, in fact, only a partial definition. The broader, correct concept of productivity (called total factor productivity) has been studied at length by Dr. John W. Kendrick, of the National Bureau of Economic Research. In a recent report of this work (reported in Business Record, June 1958), Dr. Kendrick presented the following date for the U.S. private economy for the period 1948–57:

	Average annual rate of change, percent
Total factor productivity	+2.1
Factor prices:	
Labor	+5.2
Capital	—1.0
Product prices	+1.6

These data point out the fact that during the postwar period the rate of return on capital has actually declined, thus offsetting, in part, some of the inflationary effects of labor's gains of more than 5 percent per year. This trend has continued during 1958 and 1959.

In your last sentence on page 2 you ask: "Where else does the average factory worker have the automobiles, the electric appliances, the comfortable homes, the leisure, and the luxuries that are commonplace here?" We may enjoy this favored status today, Mr. PORTER, but unless we start substituting old-fashioned hard work for this continued "pointing with pride," a great many nations may soon overtake us. This possibility is suggested quite clearly by data included in a recent study of international productivity trends by Dr. Marvin Frankel, of the University of Illinois. In this study he estimated annual growth rates in industrial output per employee for 15 nations for the period 1950–57 to be about as follows:

	Annual growth rate, percent
Japan	13.1
Poland	8.2
Italy	7.4
Czechoslovakia	6.2
France	6.1
Soviet Union	6.0
West Germany	5.2
Austria	5.0
Norway	4.5
Denmark	2.9
Sweden	2.9
Belgium	2.8
Canada	2.1
United States	2.0
United Kingdom	1.9

Source: American Statistical Association, proceedings of the business and economic statistics section, Dec. 1958, p. 265.

A 5-percent growth rate (such as in West Germany) means a doubling of output per employee in 15 years; a 2-percent rate (such as in the United States) means a doubling in 35 years.

3. Admittedly, America's tax burden is not the highest in the world, yet its rate of advance certainly is enough to cause alarm. For example, consider the following data published by the Tax Foundation:

Year	Tax receipts—Federal, State, local	Taxes as percent of net national product
1938	$14,180,000,000	18
1948	57,548,000,000	24
1958	110,300,000,000	28

This upward trend has contributed to the Nation's inflationary pressures and, we fear, will probably continue to do so. In a situation such as our country faces today, every dollar added to the price of our products—whether because of higher labor cost or taxes or any of the costs of production—can make us less able to compete in world markets. You imply, Mr. PORTER, as do many politicians when someone complains of high taxes, that I am demanding fewer schools, roads, hospitals, and a sharp curtailment of our national defense effort. This is so absurd as to require little reply. Surely you must be aware that there exist ample opportunities for reducing Government spending through greater efficiency, less Government in business operations, and the elimination of waste.

A final comment, Mr. PORTER, is this: You accuse me of being antiforeign products and against high wages. Neither of these charges has a grain of truth in it. Free trade has long been recognized as a means whereby two or more countries can both gain by concentrating on producing goods for which they have a special advantage. We do not oppose high wages, as such; however, we do oppose today's trend toward unearned wage advances accompanied by increased featherbedding and other labor wastage. We fear that if these things are not halted we could well find ourselves at a substantial disadvantage in the competitive markets of the world. The result could be the loss of many jobs and the lowering of our standard of living.

We believe the time to be concerned about these things is now—while there is still time for corrective steps.

Yours most sincerely,

REESE H. TAYLOR,
Chairman of the Board.

P.S.—You might be interested to know that we have received thousands of letters regarding this ad and other similar ones. Only slightly under 2 percent are critical, the balance being extremely complimentary and expressing appreciation.

Warsaw Letter Depicts Nixon Visit Rejoicing

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a letter which appeared in the Public Letter Box of the Detroit News, on August 21, regarding the reception Vice President NIXON received on his recent visit to Warsaw. It is indeed heartening to read of the enthusiastic and warm reception which was accorded the Vice President in Poland. It clearly demonstrates the strong bonds of friendship which exist between these people and the United States:

WARSAW LETTER DEPICTS NIXON VISIT REJOICING

To the EDITOR:

A Detroiter recently received from his brother in Warsaw, Poland, a letter describing Vice President NIXON's visit to that city. It was so eloquent a letter that I am sending translated parts of it along to you in the belief it would be of interest to your Letter Box readers. The excerpts:

"People came to the gates of the University of Warsaw to show their love, not the kind given the previous visitor (Khrushchev). But the police cordon closed the gates and didn't allow anyone inside, making it difficult for anyone to see the visitor (NIXON). Many in the huge crowd became so angry that they screamed 'Moscow puppets' at the police. They asked why the police gathered up people to see Khrushchev and wouldn't let them see NIXON. Shamefacedly, the police finally opened the gates.

* * * * *

"People bought out all the flowers in Warsaw and suburbs for NIXON, something Khrushchev never dreamed of or saw. I saw this fox (Khrushchev) driving along Holy Cross Street with head bowed, a silent man among silent people. There were no shouts of 'niech zyje' (long life) for him as there were for NIXON. Instead of flowers, the people would have liked to hit him with a strap, but our political and geographical situation makes this impossible.

"In the case of Khrushchev we were told to greet him, but no one wanted to. NIXON was shielded from the crowds who sincerely and universally wanted to greet him. Those who saw NIXON considered it a rare and pleasant privilege, as compared with Khrushchev. Those who didn't were sorry indeed."

JAMES KEITH.

Views on Veterans and Washington Generally, by Dr. Stanley E. Peterson of Brockton, Mass.

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under permission granted to extend my remarks, I include a letter and newspaper clipping from Dr. Stanley E. Peterson of Brockton, Mass., which is self-explanatory.

The bill to which he refers is H.R. 7650, which passed the House on June 15, 1959, by a division vote of 226 yeas to 34 nays and passed the Senate on August 13, 1959, by a record vote of 86 yeas to 6 nays. The bill has now been approved by the President and is designated as Public Law 86–211.

I am advised that Dr. Peterson is a specialist in surgery, and I hope is not representative of the medical profession.

So far as I know, Dr. Peterson had no service in any branch of the Armed Forces.

The letter and clipping follow:

BROCKTON, MASS., *August 26, 1959.*

DEAR SIR: Enclosed is a clipping from the Boston Herald.

May I congratulate you for your dishonesty and corruption. Kindly convey this message to your committee also.

What we need in Washington is a good housecleaning via the firing squad or rope.

Sincerely,

S. E. PETERSON, M.D.

As I have written previously to Washington, the biggest parasites we have in this country are the war veterans, farmers, and Congressmen.

PENSION AUTHOR ADMITS $10 BILLION COST BOOST

WASHINGTON.—The House passed veterans pension bill conceded it will cost the Government an extra $10 billion in the next 40 years rather than save $12 billion.

Representative OLIN E. TEAGUE, Democrat of Texas, made the concession after Representatives CLARE E. HOFFMAN, Republican of Michigan, and H. R. GROSS, Republican of Iowa, said the cost of the measure had been camouflaged in Monday's debate. It passed the House 226 to 34 and was sent to the Senate after limited debate.

"This is nothing but a deception and a fraud on the Members of the House," HOFFMAN said.

TEAGUE is the chief author of the bill.

Strongly denying any deception, TEAGUE, who is chairman of the House Veterans' Affairs Committee, said that all House Members were supplied last weekend with "full information as to the effects and costs of the bill."

He said that the cost of a provision adding many more widows to pension rolls was not mentioned in debate because of lack of time. That provision is expected to cost $22 billion through the year 2000.

The bill, approved unanimously last Thursday by TEAGUE's committee, would result in a sweeping overhaul of the pension system for veterans with non-service-connected disabilities. It would peg pension systems on the basis of need.

In addition, it would liberalize eligibility qualifications for World War II and Korean war widows. Under present law, they can be eligible for pensions only if their husbands had service-connected disabilities. The bill would place them in the same category as World War I widows and make need the only qualifying basis.

Memorandum by Peter Schoemann, General President of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. PUCINSKI. Mr. Speaker, recently I received a memorandum prepared by Mr. Peter Schoemann, general president of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada.

I believe that Mr. Schoemann's effort to correct some erroneous impressions which have found their way into the dissenting views of the House Committee on Education and Labor regarding H.R. 8342 should become a part of the permanent RECORD regarding this year's labor legislation. I am including Mr. Schoemann's statement in the RECORD today because the House Labor Committee's own transcript has already been printed.

Mr. Schoemann's memorandum follows:

DEAR CONGRESSMAN PUCINSKI: In studying the report of the Committee on Education and Labor concerning the Elliott bill, H.R. 8342, I was very much disturbed by some of the statements which appear in the dissenting views printed as a part of the committee report.

I am referring to pages 95 and 96 of the report. Here, the dissenting views allege that some Indiana members of Chicago Steam Fitters Local Union 597 have tried for years to secure a separate charter and have not succeeded in obtaining a proper investigation of their request by their International Union, the United Association of Plumbers and Pipe Fitters. And, as an indication of a weakness in the so-called bill of rights in the Elliott bill, the dissenting views further charge that these members had to bear the costs of their efforts to secure a charter and have been subject to reprisals by the local officials.

Contrary to these allegations, the record in our hearings of the House Committee on Labor and Education clearly shows that the question of issuing a charter to this small group of men was fully considered by the general president of the united association not less than three times. Each time a separate charter was denied only after full consideration of all of the equities of the situation and only after fully consulting the best interests of the 9,000 members of this local union.

The record further shows that the Indiana members seeking a charter represented a very small minority in the local union. They could not even claim to represent a majority of the members of 597 who live in Indiana.

Many years ago local union 597 received broad jurisdiction over the entire Chicago industrial area, including northern Indiana, for the very purpose of promoting the welfare of all members living in the Chicago area, so that all members might freely seek employment at standard wages and working conditions with all contractors performing any work in any part of this sprawling industrial community.

As one who has spent his life in Chicago, you undoubtedly know that no one traveling through this great industrial area from Chicago toward the Indiana line can possibly tell from observation where Illinois ends and Indiana begins. At one place, for example, there is a large powerhouse situated exactly on the line between these two states. One-half of the powerhouse is in Illinois and the other half is in Indiana.

Workers living in Indiana move daily across the invisible boundary to jobs in Illinois and journeymen in Chicago move daily to employment in Indiana. Certain places such as South Chicago and Hammond, Ind., are only about 20 minutes from downtown Chicago by automobile. And to reach the furthest boundaries of Lake and Porter Counties in Indiana takes only about 45 minutes from the city of Chicago. All of these facts appeared in the record before the subcommittee.

In this situation one charter for one local union covering the entire industrial area at a standard wage rate for all workers and all contractors was the wise decision reached by the international union in accordance with the wishes of the vast majority of the members of the local union itself. I, for one, sincerely believe it would have been a clear discrimination against Illinois members to have created a separate Indiana local union under these circumstances.

Yet, here we find the good name and reputation of local union 597 and the United Association of Plumbers and Pipe Fitters tarnished by this statement of dissenting views. Wise action in the interest of the majority is pictured as a denial of individual rights. Apparently, the dissenting members believe the will of the minority should govern and charters should be issued on request. Is it their desire to divide and weaken unions? Do they want to provide breeding places for the very kind of corruption recently exposed in hearings in the Senate?

Issuing charters, at will, to irresponsible groups has, according to the record made before the McClellan committee, frequently turned local unions over to the control of hoods and racketeers. Paper locals created by corrupt international officers have been one means frequently used for shaking-down employers and milking union members. Yet the dissenting views would, apparently, have Congress foster and promote these very conditions by force of law.

Finally, there are printed on these pages, allegations of threats and reprisals by officers of local union 597. Here again, the record fails to support this statement made in the dissenting views. A careful review of the testimony fails to show concrete evidence of force or threats or reprisals at any time. Charges of job discrimination were repeatedly filed with the National Labor Relations Board and were repeatedly dismissed for lack of evidence. Any implication that the union should bear the costs of seeking a separate charter is totally unjustified by these circumstances.

But, both the Elliott and the Landrum bill would provide the very means for penalizing and harassing every union officer who had the courage and wisdom to deny these dissenting Indiana members a separate charter in this case. And, in citing this case in their dissenting views, the dissenting members of the Committee on Education and Labor have given me a illustration of why they were against both of these bills. Because both would punish unions for wise and forthright action in the best interest of union members.

Sincerely,

PETER T. SCHOEMANN,
General President, United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada.

Will There Be Reciprocity in International Trade With the Introduction of Smaller American-Made Cars?

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. KNOX. Mr. Speaker, a great deal is heard these days about the introduction of American-made small cars on a wide scale this fall. Many commentators interpret this move as signaling the U.S. automotive industry's counterattack on the mass invasion of foreign cars.

In my opinion, there is another side to the story, the export side. For the loss of markets by American automakers has not been confined to these shores. While imports have risen dramatically—and are still climbing—exports of U.S. autos have declined tremendously.

Now, with the domestic industry turning to small car production on a mass scale, perhaps there is hope that the export trend will be reversed.

Perhaps it will be possible, for example, to persuade our friends in West Germany to purchase more than 333 U.S. autos, our total exports there in 1958, a year which also saw 134,610 West German autos imported here.

Or it may be possible to expand our exports to Great Britain from 329, the total we shipped there in 1958, to a number more in keeping with the 156,597 British cars unloaded here last year.

Happily, the Government of the United Kingdom has seen fit to increase the annual dollar quota on passenger cars from North America to $2 million, compared to the $600,000 limit which has been in effect.

Admittedly, $2 million is a far cry from $194,072,216—the value of British-made cars imported by the United States in 1958—but it is a tiny step in the right direction, nonetheless.

Both at home and in overseas markets, U.S. manufacturers have a lot of ground to make up. In the period 1956–58, imports of new passenger cars quadrupled, from 107,675 to 433,921, and if the present import pace continues, 1959 will see 600,000 foreign cars landing here.

The value of these imports in 1958 approached $500 million, and this is perhaps a better measure of the domestic market which has swung to imports and which American producers hope to recapture, at least to some extent, with their new economy-size models.

Not only new passenger cars, but other types of imported motor vehicles are reaching the American market in growing numbers. Here are a few examples.

In 1956 we imported a scant 1,537 used cars; this rose to 4,862 in 1957, and then jumped to 12,861 with a total value exceeding $16 million in 1958.

The United States imported 2,853 foreign-made trucks in 1956, 8,036 trucks in 1957, and 15,032 trucks valued at more than $17 million in 1958. In the first 7 months of 1959, our imports of trucks passed 13,000, indicating a 12-month total of 22,000 or more.

Motorcycles are another fast-rising import. In 1956 we imported 32,148 motorcycles; raised that figure to 53,100 in 1957, and raised it again to 63,700 valued at $13 million in 1958.

United States auto exports, meanwhile, remain in a tailspin. American manufacturers shipped 175,000 new cars to foreign buyers 2 years ago, then saw their overseas market dwindled to less than 122,000 last year. In the first 7 months of 1959 we exported 66,000 new cars, so exports this year should approximate 110,000—to register another downturn.

With the introduction of a series of new small cars, produced in American factories by American labor, the domestic industry has served notice it is ready to give its foreign competitors a run for their money.

My hope is that this step will also mark a turning point in our automotive export trade. Certainly it should pacify those who claim that large American cars are neither safe on narrow foreign roads nor economical for foreign motorists paying 75 cents or $1 for a gallon of gasoline.

I, for one, will be most interested to watch the reaction of our trading partners, particularly in Western Europe, to the new competition of American small cars. Will they offer us the same open-arm welcome that we have given to their products, now that it appears we will be able to compete on equal terms in their own markets?

This will be a true test of reciprocity in international trade.

Visit of Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. MADDEN. Mr. Speaker, in view of the pending visit of Nikita Khrushchev, the No. 1 Communist of the Soviet tyranny, I think it is well that the American people keep in mind the years of aggression and oppression which Khrushchev and his predecessor Stalin have inflicted on millions of people behind the Iron Curtain.

The following statement from several Lithuanian societies in the Calumet region of Indiana, sets out facts which the President, State Department, and the American people should constantly keep in mind:

We citizens of the United States of Lithuanian extractions gathered in the annual meeting at our parish hall, 3905 Fir Street of East Chicago, Ind., are shocked by the action of the U.S. Government in inviting Nikita Khrushchev to visit the United States. In view of the foregoing knowledge of Nikita Khrushchev and the principles which he represents and hereby voice our disapproval by registering this our protest:

"Whereas Niikta Khrushchev and his associates have demonstrated to the civilized world to be criminals of international magnitude, guilty of heinous crimes by murdering millions of Hungarians, Lithuanians, Ukrainians, Poles, Latvians, Estonians, Germans, and Russians; and

"Whereas Nikita Khrushchev and his cohorts have enslaved many nations by brutal force and by devious methods of liquidation, deportations and dispersions of leaders and their people, aiming to effect genocide of small nations; and

"Whereas Communist Russia has over 15 million people in the slave camps; and

"Whereas Communist Russia is fomenting discord among nations and disturbing the peace of the world; and

"Whereas Nikita Khrushchev represents a regime dedicated in principles to brutal suppression and persecution of religions; and

"Whereas the leaders of communism, in order to hide their crimes against humanity, have established an Iron Curtain around Russia and enslaved nations:

Therefore, we resolve that the Committee of the Lithuanian Community of East Chicago, Ind., shall forward copies of this resolution to the Secretary of the United States and our Senators and to the press."

Sincerely yours,

BRONIUS NAINYS,
Chairman.
VIKTORAS MAKIELJUS,
Secretary.

As long as the United States keeps a firm anticommunistic policy, maintains its strength and power, leads the cold war strategy, and does not recognize the occupied territories, the spirit of freedom behind the Iron Curtain will continue to burn and at least a passive resistance will be maintained. This passive resistance is one of the major causes preventing the Soviet Union from starting a major war. The truth told by refugees to the free world about Mr. Khrushchev's mass murders, prison tortures, slave labor camps, mass deportations, and all kinds of persecutions, is the main barrier in his way to conquer the world. This is the main problem that Mr. Khrushchev will try to solve in his favor at this coming visit.

What will we ask of him? What answers will he give us? Will you ask him, Mr. President, to give freedom to the enslaved nations, such as Lithuania, Latvia, Estonia, and others; to release slaves from labor camps; to return deported ones to their homelands; to give freedom of press, speech, meetings, and religion, and free elections? Will you ask him to withdraw the Red armies from occupied nations? It would be too naive to believe that Mr. Khrushchev could be persuaded to do so. Then why invite him? Are we that inexperienced and careless in our foreign policy?

At a recent news conference you asked American people to show Mr. Khrushchev warm hospitality and you were quoted as

saying that there are certain uncontrolled individuals who might disturb the long created friendly atmosphere. It would not be hard to understand that this name applied to the citizens involved in the demonstrations against Khrushchev's predecessors, in which we, unable to take an active part, gave the demonstrators our full moral support. And why do you think we deserve such a name?

If you remember 13,000 brutally murdered Polish Army officers at Katyn, thousands of Ukranians slaughtered at Vinica, mass tortures and murders in Lithuania, Latvia, Estonia, the massacre of Hungary, the shooting down of defenseless American planes, our brothers and sisters dying in the slave labor camps and deportation boxcars, and thousands of other atrocities committed by Mr. Khrushchev and his murder gang, how could you expect us to greet this international criminal with broad smiles and shake his bloody hand?

And you call us certain uncontrolled individuals despite the fact that by peaceful demonstrations we are trying to tell the truth to the world. We feel hurt and depressed. We are not "certain uncontrolled individuals" but we are fighting for the freedom which was denied us at Yalta and other conferences, similar to the one Mr. Khrushchev is now seeking. No human being has a right to stop us.

We do not believe in violence, but reserve us the right to fight by every possible peaceful means for independence of our motherlands, and no matter what the diplomatic courtesy may be, by our demonstrations we are trying to show that at least we are not welcoming the murderers. In our greatest fight for liberty and human rights we expect our President to help us, not to destroy us.

Very respectfully yours,

The Representatives of American Lithuanian Council at Lake County, Ind., Albert J. Vinick; American Lithuanian Community East Chicago Chapter, Antanas Juodvalkis; Lithuanian Democratic League of Lake County, Ind., Angue Justine; Lithuanian Alliance of America, Lodge 185, ——— ———; National Lithuanian Society of America, Inc., East Chicago Chapter, Kasimir Pocius; Lithuanian Pleasure Club, East Chicago, Inc., Theodore Mason; Bronius Nainys, Secretary of the Executive Committee.

Granting of Statehood to Hawaii Struck Home in Asian Hearts

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, during the various debates on statehood for Hawaii, some of us have emphasized the tremendously favorable psychological effect which granting statehood would have on Asian peoples. It will bring our deeds into harmony without words—and in a most dramatic way, incapable of being distorted by our enemies into something unworthy.

Vivid confirmation of this view has come from a distinguished Asian of Chinese descent and Thai citizenship. His comments were reported in the Honolulu Advertiser, as follows:

[From the Honolulu Advertiser, Apr. 6, 1959]

THAI CHINESE LEADER PRAISES STATEHOOD AS "ACT OF FAITH"

(By Gordon Morse)

The leader of Thailand's 3½ million Chinese residents said yesterday that the United States had done more for international good will by admitting Hawaii to the Union than any other single act in recent history.

"The granting of Hawaiian statehood has dramatically lifted a veil of misunderstanding from Asian eyes and its repercussions will change history," said Chang Lan-Chen.

Chang is chairman of the Chamber of Commerce of Bangkok. As Thailand's leading Chinese citizen in business and social circles, he is spokesman for the largest block of Chinese residents outside of Red China and Taiwan.

He left Honolulu for the mainland. He and Mrs. Chang are the first couple to be invited by the U.S. State Department to tour the United States for 2 months.

"The granting of Hawaiian statehood was an act of faith in the democratic conception that men of all races could live in peace and harmony," said Chang through his interpreter.

"America had done a lot of preaching about this but had done little that the common resident of the Far East could understand. Statehood for a Pacific island community with its minority population of Asian descent struck home in Asian hearts.

"Now suddenly a veil of misunderstanding dropped from our minds. We witnessed Americans taking Asians into their arms. Most Asian people only believe what they see and this they witnessed and understood."

Chang urged that America follow up the Hawaiian statehood act with a more sincere program of internationalism and cement the new feeling of friendship now created.

He also applauded Hawaii as the perfect place for a foreign visitor to be introduced to the United States.

"I would have been completely bewildered and lost if I had suddenly been set down in a place like Chicago or New York," said Chang. "But Hawaii has my kind of people living as Americans. This I can understand. They gave me the introductory course."

Address by Senator Eugene J. McCarthy on "The Family and Political Action" at the Annual Convention of the Christian Family Movement at the University of Notre Dame

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. BRADEMAS. Mr. Speaker, there are few Americans who can discuss with such wisdom and dedication the role of politics and politicians in a democracy as the distinguished junior Senator from Minnesota, the Honorable EUGENE J. MCCARTHY.

Senator MCCARTHY has been a high school teacher and a university professor. For 10 years he served with great distinction as a Member of the House of Representatives. He speaks with deep understanding and experience of the responsibility of the Christian in political life.

Last month, on August 29, 1959, Senator MCCARTHY delivered a fine address on "The Family and Political Action" at the 11th Annual Convention of the Christian Family Movement held on the campus of the University of Notre Dame, Notre Dame, Ind.

Other distinguished speakers at this convention, which was attended by more than 2,500 persons, including 750 married couples, included Roman Catholic Archbishop Albert G. Meyer, of Chicago; the Reverend Robert C. Hartnett, S.J., former editor of the weekly magazine America; and Stephen A. Mitchell, former chairman of the Democratic National Committee.

Mr. Speaker, I should like at this point in the RECORD to include excerpts from Senator MCCARTHY's address:

THE FAMILY AND POLITICAL ACTION

(Excerpts from address of Senator EUGENE J. MCCARTHY at the Christian Family Movement Convention, University of Notre Dame, Notre Dame, Ind., August 29, 1959)

Nineteen hundred and sixty is a national election year. When the polls close on November 8, the voters of the United States will have chosen thousands of State and local officials. They will also have elected 437 Members of the House of Representatives, one-third of the 100 Members of the U.S. Senate, and a President of the United States.

Next year will be a year of intensive political activity. Candidates, their supporters, party officials, and party organizations will be busy trying to convince the voters of the merits of their causes.

Through the media of mass communication, the newspapers, the radio, and television, political discussion and political personalities will come into the homes of America. The home, rather than the public square, the street corner, or the picnic grounds has become the principal arena of political controversy.

It is no longer possible for the citizen to avoid politics or to set it apart for special times and places. Neither is it possible any longer to isolate children and young people from politics. It remains to be seen whether or not these changes in place and methods of political action will improve our democracy.

Certainly it is desirable that citizens be politically aware. In a democratic state, all citizens have political power. That power can be exercised well only if all citizens, or at least a majority, are wise; that is, are intelligent and informed and are men of good will.

Modern techniques of communication and of influence have proved excellent tools for the demagogue and the tyrant. The challenge is to use them to improve government and thus to promote the common good.

Parents have a very special responsibility to develop right attitudes and to advance the political education of children. This responsibility is of special importance because of the significance of citizen participation in politics in a democracy, and because of the fact that politics can no longer be excluded from the home or the young people protected from it.

For adults enjoying full citizenship, issues and personalities are important as a basis for the practical political decisions which must be made. Issues and personalities will be important to children in an election year also. It is wholly natural for them to be interested in political personalities and in controversial issues. For children and young people, however, who are not yet qualified for direct or full participation in

political action, the development of right attitudes toward democracy, government, and politics is even more important. In an election, parents have an opportunity to lead the young people of the Nation away from the popular disposition to be cynical regarding politics and government.

There is no disputing the fact that the conduct of some public officials in the United States has been disgraceful. Many have shown a shocking lack of any sense of moral responsibility. Others have been found holding to standards which are extremely personal, flexible, and generally inadequate. The facts in these cases should not be withheld or glossed over. It is essential, however, that they be presented accurately, without exaggeration and without unwarranted general applications.

Children should not be brought up believing that the holders of public office are generally venal and corrupt. They should not be conditioned to the careless use of expressions such as "pork barrel" and "feeding at the public trough" in relation to public service, and should be discouraged from using terms of opprobrium without deliberation and distinction. They should not be led to look upon politics as a necessary evil at best, or as a field in which the ordinary standards of truth and decency do not apply and need not be honored. They should be brought to realize that political party activity is not necessarily unbecoming or degrading.

Not every citizen has an obligation at all times to participate intensively in party activities, but every citizen should realize the need for political parties and for party activities. History demonstrates clearly the need for party politics in democratic government. In America party factions preceded the adoption of the Constitution itself.

Parents should be careful to educate children to an understanding of the importance of the political party in our system of government, and to bring them to realize that good government depends on good political parties. By their own example, as well as by word, they should show the young people that a political party is not merely a propaganda instrument, not a private club, nor an organization which protects one's own job or which provides a job in return for the payment of dues and the performance of party services.

Rather, a political party is an organization made up of a disciplined group of citizens seeking to influence government or to gain control of it in order to govern not only for the majority, but for all according to the determination of the majority within the limits set by custom, law, and constitution.

In order to prevent disillusionment, young people should, of course, learn that politics is part of a real world. Political choices must be made in actual historical situation, affected, therefore, by ignorance, prejudice, and bad will. They should know that political officials often cannot make the ideal choice, but must adjust decisions to circumstances.

Truth will prove the best antidote for cynicism, which is an especially dangerous attitude when it prevails among the young. It destroys the base for an attack on real and different problems in politics, as in other fields.

This danger is clearly shown in one of the novels of Charles Williams, the great English writer of novels dealing with the conflict between good and evil. Mr. Williams shows the great advantage which can be given to evil by the loss of public belief in politics. The consequence of this loss of faith in Mr. William's novel was the acceptance of a completely amoral leader who capitalized on the cynicism of the people and come to power because of it.

An election year provides the best of times in which to develop in children and young people a clearer understanding of the real meaning and implications of democracy; of impressing upon them the fact that democracy does not simplify life, but rather that it complicates it by adding the responsibility of government to other responsibilities.

It is further complicated when we consider that democracy seeks to establish an order based not only upon justice, but upon justice and freedom; that is, not only an order of justice prescribed and forced on people, but determined by them and freely accepted.

An election year provides the best of times in which to develop in our children and young people understanding and respect for the purposes, institutions and procedures of democratic government, and to lay the foundations upon which we can erect in the United States a firm tradition of the privilege and responsibility of citizenship and of public service.

It is not sufficient merely to undertake to humanize and sanctify our individual lives. Neither is it sufficient to humanize and sanctify the institution of the family alone. Over and above this, it is essential to humanize and sanctify social institutions such as the neighborhood, the class to which one belongs, the business and professional community, leisure time activities, means of communication, and political institutions.

For as Cardinal Suhard has stated: "Each of them constitutes both an area of living and reality which is independent of the individuals of which it is made up (and one can say also independent of the family units which make it up) or over whom it holds away."

Although it is true that the social order exists for the persons who make it up, and in a secondary sense also exists for the family, it is nonetheless correct to say that society—that is, civilization itself—requires salvation.

Neither the salvation of persons, nor the salvation of the family can be accomplished without a humanization and sanctification; that is, a Christianization of all essential institutions which make up the social order.

Civil Rights Must Be Safeguarded

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. COHELAN. Mr. Speaker, another forceful reaction to the Federal Civil Rights Commission report is recorded in an editorial from the September 9 edition of the San Francisco Chronicle which I submit for the RECORD under permission to extend remarks.

The specific solutions to be developed are proper subjects of debate and discussion. The point is that the problems revealed cannot be denied and should no longer be ignored:

CIVIL RIGHTS MUST BE SAFEGUARDED

We earnestly hope that the report of the U.S. Civil Rights Commission, published yesterday, will rattle the chains of Congress loudly enough to awaken some of its Members to the need for protecting Negro voting rights.

This report is deeply disturbing in its revelations of the capricious, snide bad faith of southern States in denying Negroes the ballot.

"Complex voter qualification laws, including tests of literacy, education and interpretation, have been used and may readily be used arbitrarily to deny the right to vote," the Commission concludes. "It appears to be impossible to enforce an impartial administration of the literacy tests now in force in some States, for where there is a will to discriminate, these tests provide the way."

The story of the obstacles this Commission met in its efforts to find the facts about Negro voter registration in Alabama and Louisiana has been a running scandal in the papers. Alabama officials refused to produce their registration records at the Commission's hearings but let the staff look at them; Louisiana officials declined even to allow that much. And after records in only half the counties being investigated in Alabama had been examined, the legislature passed a law permitting application forms of persons denied registration to be destroyed.

There is just one remedy for oafishness of that sort—Federal intervention to protect the citizens whose rights are denied. Accordingly, the Commission recommended (1) that Congress require all registration and voting records of the States to be preserved for 5 years and be subject to public inspection; (2) that it forbid any person, "under color of State law, arbitrarily * * * to deprive any individual of the opportunity to register, vote, and have that vote counted" for any Federal office; and (3) that where people are arbitrarily disqualified from voting the President be empowered to appoint temporary Federal registrars to "administer the State qualification laws and issue to all individuals found qualified registration certificates which shall entitle them to vote."

These were majority recommendations. A split developed on a proposal for a constitutional amendment that would put the right to vote beyond the power of a State to deny except on the grounds of age or length of residence. This would take away the power of qualifying electors on property ownership or literacy standards that the States now possess. The need for such an amendment is debatable; the Constitution already gives the Federal Government all the power it needs to deal with denials of the right to vote on account of race; what is lacking is a determination in Congress to use the power.

In its strong conclusions about denials of voting rights, the Civil Rights Commission has given the expiring Congress a challenge on an issue of clear and present discrimination, a challenge from which those Members not dedicated to preserving white supremacy and racial inequality cannot hope to escape. The least that Congress should do now is to extend the life of the Civil Rights Commission and give an unbreakable commitment to take up its substantive recommendations on voting rights at the next session in January.

Our Surplus Food Abroad Can Build Good Will Only if It Is Handled With Great Sensitiveness to the Real Needs and Aspirations of Receiving Countries and to Other Friendly Countries

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a long-overdue article by Alfred D. Stedman, of the St. Paul Pioneer press staff on the dangers and difficulties as well as possi-

ble benefits which must be evaluated more intelligently in our programs of selling or bartering or contributing our food surpluses abroad:

FOOD GIVEAWAYS

(Alfred D. Stedman)

A bit of a shock to U.S. notions was the raising by foreign farm writers here of a certain question. It arose in a recent panel with Minnesota farm editors. Held on the university's St. Paul campus, the panel touched on international problems of food in the cold war.

The question was: Why do not U.S. farmers deal with their own surpluses? Why do we go on producing such big ones? Why, instead of meeting the surplus problems here at home, does the United States choose to export those problems to other countries and peoples?

The question was taken in stride by the Minnesota farm editors. The United States, they acknowledged, has come faster into world power than into knowledge of or experience with problems of other nations. A lot of us are too busy making money to find out about those problems. Our politicians haven't had the nerve to balance Government price supports with effective crop controls. So the United States has gone on growing bigger and bigger surpluses. And it has gone on depending increasingly on subsidized exports to avoid swamping our own farm markets.

Is there food for thought in those answers? There's still more of it in the implications of the question raised by the gentlemen of the foreign farm press.

Their very idea seems to suggest that revisions are in order to some of the most commonly accepted of the assumptions that underline U.S. farm laws and programs.

Aren't the U.S. farm surpluses an unmixed blessing to a hungry world? Aren't our gifts or bargain sales of surplus foods helping us to win the cold war against communism? Can't we give away all surpluses however big?

Of course there's no way of knowing how each of the foreign farm editors would have replied to these questions. But the discussions did show that among these 12 writers, mainly from Latin American and African countries, the answers would not have been unanimously yes.

The discussions brought out that, besides the help given to the hungry by gifts or bargain sales of U.S. food, there are also disadvantages. They brought out that these subsidized farm exports have tendencies to disrupt world trade and unsettle world prices. They brought out the existence of tremendous unsolved problems of transportation of food to the hungry in remote regions. They brought out that the U.S. motives in subsidizing our farm exports are regarded in receiving countries as open to question. They brought out a reluctance of such countries to become dependent on others for food. As a goodwill builder, they emphasized the effectiveness of U.S. technical assistance in developing the resources and the know-how of receiving countries for self-dependence.

And none of the visiting editors expressly dissented from a view that the United States is losing the cold war.

Everyone is at liberty to draw his own inferences from the ideas that came to light among the representatives of the foreign agricultural press. But these gentlemen have perhaps earned appreciation of farmers and farm legislators for helping to clear up points needing clarification.

Indefinite expansion of U.S. farm production in expectation of disposing of all unwanted surpluses in other countries seems unacceptable abroad as a basis of U.S. farm policy. Throwing too much U.S. farm stuff on world markets can break world prices just as doing the same thing at home can break home prices. U.S. food giveaways won't automatically win the cold war.

U.S. food surpluses can build goodwill abroad if their handling fits the needs and aspirations of receiving countries to develop their own resources and economic independence.

Real trade among nations of things and services each can best produce still seems a good basis for economic health and growth of free nations in a free world.

All this seems to mean that, in the end, the United States will have to face its surplus problems here at home with effective crop controls. It can look for expanding exports only of such food and services as other countries want and need.

Tenth Anniversary of Chancellor Adenauer

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. CELLER. Mr. Speaker, September 15, 1959, marks the 10th anniversary of the leadership of Chancellor Adenauer. President Eisenhower has recently visited with him and paid him a tribute of respect and honor.

Out of rubble and ruins, the Chancellor and his Cabinet have built a strong republic, which is orientated westward and has done all and sundry to buckle itself as a stanch ally to the United States and Western democracies.

There is no doubt that West Germany, under the guidance of her leaders like Chancellor Adenauer and President Heuss, Foreign Minister Brentano, Economic Minister Erhard, and others, has realized that the mark of Cain was upon the Germans because of the terrors of Hitler and nazism. They worked feverishly to wipe out that strain and have succeeded in reestablishing West Germany as a liberal nation in the liberal world, dedicated to the principles of individual freedom and democracy.

A look at the map will reveal in realistic fashion that Germany in the heart of Europe must always be a buffer state on the flank of a free and democratic Europe. We do well to strengthen Germany by our insistence that East and West Germany be made one Germany. We do well to assure the world that we will never let Berlin down; that Berlin, now an island in a Communist sea, must be integrated into a unified Germany.

It is worthy of comment also, that Chancellor Adenauer, President Heuss and his successor, Dr. Heinrich Luebke, and the other praiseworthy officials of Germany have made, and are making restitution to the Jews in Israel and other Jews, whose property and valuables were filched from them by Hitler and his cutthroat bandits. That restitution, of course, cannot bring back the 6 million dead, but it can go a great way in the court of public opinion to show that Germany wishes to be rehabilitated, that Germany is repentant and that Germany is expiating her wrongs.

We all, therefore, hail Chancellor Adenauer on his 10th anniversary and present our compliments to President Heuss and his able successor in the Presidency, Heinrich Luebke. We present our compliments also to Foreign Minister Brentano, and Economic Minister Erhard for work well done.

Report by Congressman Perkins Bass to the Second Congressional District of New Hampshire on 1st Session, 86th Congress, September 1959

EXTENSION OF REMARKS

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. BASS of New Hampshire. Mr. Speaker, the 1st session of the 86th Congress has adjourned. We are now able to appraise its accomplishments and their effect on the country and the Second Congressional District of New Hampshire, which I represent in Congress. In many respects it was an unusual session, with the opening guns being fired by a newly elected opposition majority and the final battles being won by President Eisenhower, who exerted a vigorous and effective executive leadership on all fronts.

The tone of the session was set early when the President called for a determined effort to fight inflation through a balanced Federal budget of $77 billion, and indicated his desire to correct labor union abuses and waste in the farm subsidy programs. Despite frequent efforts by the majority members to pass bills which carried spending authorizations far above the administration's original requests, the President held the line through a judicious use of the executive veto.

The highlight of the session, of course, was the passage of the Landrum-Griffin labor reform bill. Senator MCCLELLAN'S investigations of racketeering and corrupt practices in certain labor unions had clearly shown the need for some kind of strong corrective legislation to protect the rights of individual workers and to outlaw secondary boycotts and blackmail picketing. Although it seemed doubtful at first whether Congress would be able to agree on a reform bill which dealt adequately with abuses in these areas, public opinion, spurred by the President's last minute appeal, grew strong enough to push through the tough but fair Landrum-Griffin proposal in substantially the form it passed the House. Like a majority of the Members, I voted for this bill, because I felt it was necessary to protect both the public and honest unions from infiltration of corrupt racketeers and power-hungry opportunists. It is equally important to point out there is nothing in this new law which will harm honest labor unions such as we

have in New Hampshire. This measure is not a "punitive" or "killer" bill, any more than the Taft-Hartley Act was a "slave labor" bill.

On the inflation front the President and the Republican minority in Congress fought hard to keep spending authorizations down to the level required for a balanced budget. The tug of war over spending became particularly apparent to me as a member of the House Banking and Currency Committee. Some of the more controversial big spending bills, such as the area redevelopment bill, the Community Facilities Act, and the original omnibus housing bill, were debated extensively in our committee, with the Republicans, including myself, generally opposing excessive spending authorizations.

In all these areas the administration proposed reasonable programs which would do the job without unbalancing the budget. Unfortunately, in almost every instance, the congressional majority insisted on pushing through proposals with price tags which would have hopelessly unbalanced the budget. That is the main reason why the President, for example, vetoed the first two omnibus housing bills. At the end of the session the Congress wisely passed an adequate housing bill in line with the President's recommendations.

As in previous sessions, the farm problem returned this year to haunt the Congress and the public in general. It seems tragic to me that we have been unable to find a commonsense solution to the problem of mounting farm surpluses. Using taxpayers' funds to buy up these surpluses only aggravates the problem, and I have thought it better to eliminate farm price supports altogether. Farm surplus crops owned by the Government and in storage now total the astronomical figure of $9 billion—85 percent of which is in cotton, corn and wheat. In tthe current fiscal year the Federal Government is expected to spend $4.5 billion for direct price support activities, of which nearly $1 billion will be for storage, handling, and interest charges alone.

This is a disgraceful situation and is the chief reason I voted against the opposition-sponsored wheat and tobacco price support bills which the President eventually vetoed. The feed grain price support bill, for example, would have added an additional $140 million to the already staggering farm bill this Nation is footing.

On a more positive side, Congress passed the Hawaiian statehood bill, after many decades of debate and controversy. Those of us who supported statehood for these islands were particularly proud of the recent election results there which showed that some 93 percent of the Hawaiian voters went to the polls. This in itself was a remarkable proof of their political maturity and fully justifies the wisdom of granting statehood to these friendly and energetic people.

Late in the session a compromise highway financing bill was approved, providing a temporary 21-month Federal gas-tax increase of 1 cent. The program which Congress agreed to after months of consideration will temporarily solve the pressing financial crisis in the highway trust fund by placing it on a pay-as-you-go basis, at the same time calling for a moderate stretchout in construction of the 41,000-mile road system.

Congress also earns a "well done" for passing legislation authorizing U.S. participation in an Inter-American Development Bank. Once established, this Bank will make long-term low-interest loans to South American nations, providing them with badly needed development capital. I personally favor this type of development agency, for it shifts foreign aid from a grant to a loan basis, making it a sounder and more business-like proposition.

Congress deserves credit, too, for much solid work on the annual appropriation bills which must be painstakingly dealt with each session.

Adequate funds were provided for the Armed Forces and for missile development.

New Hampshire residents will be particularly pleased that Congress approved a $3,225,000 appropriation for the construction of a consolidated Army Cold Regions Engineering Laboratory at Hanover. The laboratory will be a boon to the Hanover region, as well as to the Second District in general. The entire New Hampshire delegation worked long and diligently to get this project located at Hanover.

On the whole, Congress did its usual competent if unspectacular job in dealing with the incredibly complex task of providing funds and shaping policy for the world's largest Government. Most of its day-to-day work goes unnoticed by the public. But the work is done, nevertheless, and generally done well. On the question of labor reform, Congress showed that it was responsive to the will of an aroused people.

During the recess, I will conduct office hours in the cities and larger towns in every county of the Second District. I hope as many of you as possible will stop by during office hours in your area to get acquainted and discuss problems.

Small Business Real Target of High Interest Rates

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. MACK of Illinois. Mr. Speaker, on yesterday the Federal Reserve Board authorized eight Federal Reserve banks to raise interest rates on loans of commercial banks from 3½ to 4 percent. This is a new 27-year high and the highest of any time since the stock-market crash and the great depression of the thirties. I am not predicting that we are entering a similar cycle but I want to add my word of caution since there seems to be a continued policy of this administration to make the small businessman extinct. I am particularly concerned because I feel that the small businessman is a very important part of our economy. If this administration is successful in its attempt to eliminate this segment of our economy it could have far-reaching and perhaps disastrous effects.

Mr. Speaker, this hike was even anticipated by our commercial banks who raised their basic interest rates to 5 percent last week. The effect of these increased rates has been to make it difficult if not impossible for a small businessman to secure necessary loans to conduct his normal business operation. It has increased his cost to the place where all of his normal profits have been diverted into the hands of bankers through increased interest rates. Corporations are able to provide necessary financing regardless of interest rates through the issuance of bonds or stocks in the markets but the small businessman is forced on bended knees to beg the local bankers for even this expensive money.

Mr. Speaker, under leave to extend my remarks I wish to include the following article by Sylvia Porter in yesterday's Evening Star, which obviously was written before the Federal Reserve Board took its action to increase the interest rate to the highest level in 27 years. The article is as follows:

THREAT TO SMALL BUSINESSMAN

(By Sylvia Porter)

A potentially great threat to small businessmen has appeared on the financial horizon. The threat lies in the mounting scarcity of credit, the rising cost of borrowing.

We have entered a cycle of the tightest, most expensive money in a generation, and the odds are credit will become even harder to get before it becomes easier. In this era, the big, profitable corporation borrower won't be pinched much, though; the top-notch corporation always will stand at the head of any credit line.

In this era, the borrower who will be squeezed the most will be the small businessman or the so-called marginal concern. Banks are simply not designed to provide risk capital or long-term loans for the small businessman. They never were designed for this purpose.

This type of firm won't be able to get all the funds it needs for long-term growth by issuing bonds or stocks in the capital markets.

This firm won't be able to get anywhere near ample financing from existing Federal or State or semipublic lending organizations. None of these organizations has enough capital to cover more than a fraction of loan demands.

And this firm won't be able to get much aid from the new syestem of small business financing that was supposed to come out of the Small Business Investment Act of 1958 and was supposed to help fill a dangerous vacuum in the credit structure of the United States.

For, so far, this act has been a flop beyond the expectations of even the most cynical. A year ago Congress passed this law under which the Small Business Administration was to promote the formation of local small business investment companies to help small businesses get risk capital and long-term loans at fair interest rates.

But apparently the investment companies are being strangled by redtape, regulations,

interpretations, and misinterpretations. The number created in all these months has been ridiculously meager. The revolutionary new system of financing small business is still to come.

We enter a cycle in which borrowing will be the most expensive in a generation and even the top-rated corporations of the world will be paying up to 6 percent for short-term bank loans. And what will smaller firms be paying? Perhaps an effective rate of 7 percent.

We enter an era in which the intensity of competition will make it imperative for all businesses to modernize their plants, finance research and new products. And what companies will find it toughest to get the cash to finance modernization, research, etc.? You know the answer.

Yet, to all who worry about the unfair, discriminatory impact of tight money, the Federal Reserve System replies, in effect: "If credit controls are to curb inflation, they must squeeze some borrowers. If tight money is to work, it must work some hardship. This is the price the Nation must pay for a stable dollar."

And no one in power is standing up to convince the Federal Reserve it is not pursuing the best of all possible policies now.

A Clear View of the United Nations

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. PORTER. Mr. Speaker, neither blind adoration nor despairing cynicism is the proper attitude to take toward the United Nations. Since its establishment in 1945 it has accomplished much, more than most people realize, but of course it has many imperfections.

This is why many of us want to have high level discussions of charter review and to have a charter review conference in the very near future.

Under a previous unanimous consent I am including here an excellent article by Lincoln P. Bloomfield entitled "The U.N. and National Security" which appeared in Foreign Affairs for July 1958. It is well worth reading to get a clear view of the United Nations.

THE U.N. AND NATIONAL SECURITY

(By Lincoln P. Bloomfield)

In 1945, when the United Nations was founded, its raison d'être was to provide greater security for its member nations. As the basic conflict of interests between Soviet communism and the free nations unfolded, the cold war rapidly came to suffuse the entire organization like a sort of nerve gas, paralyzing but not killing. In a relatively short time, it was seen to be incapable of resolving or even seriously affecting the dominant world conflict. The United States and its principal allies were forced to conclude that except as it provided a forum for counterpropaganda the United Nations was irrelevant to the overriding short-term military and security problem posed by aggressive and expansionist Soviet communism.

The Korean war threw a new light on the capabilities of the U.N. as a political mechanism for organizing and demonstrating worldwide resistance to limited Communist aggression. But the disproportionately large contribution which the United States had to make to that fight strengthened the doubt whether the U.N. could play a central role in the shortrun protection of American national security. It continued to exercise a powerful attraction for the American people, since it exemplified their great will for peace. But as the custodian of the peace it seemed to be in a fiduciary relationship not to us but to an unborn generation of men who might have a capacity for managing their affairs rather more harmoniously.

Reasons for the American public to favor continued participation in the U.N. were, besides the moral attraction of the charter ideal, the possibility of using the organization selectively in the settlement of disputes within the free world, and its secondary activities involving dependent areas, technical assistance and the humanitarian achievements of the specialized agencies. Those functions turned out to be important enough to sustain American membership. But no amount of enthusiasm for the potentialities of the organization under different circumstances could overcome the conviction that at best it must be considered to be on ice so far as concerned the profound and immediate security problem that preoccupied us.

Meanwhile great changes have been taking place in power relationships and in the policies designed to protect national security. The capacity of the United States to influence international events decisively has seemed to decline in recent years. We cannot afford the luxury of misusing any available means of making our influence felt. What of the United Nations? Has our estimate of its capabilities taken account of our new insights into the present realities of international political life, specifically as they relate to political and technological developments? What contribution might it make to security in the years immediately ahead?

II. THE CHANGING U.N.

Four things have happened in recent years to put in question our old basic attitudes toward the U.N. as an agency promoting our national security.

The first is the loosening of the alliance structure on both sides. In the early days of the cold war it was not uncommon for the vote in the General Assembly to be 55 to 5 on a whole range of issues. The lines were sharply drawn; the balance of power was so rigid that little flexibility for maneuver was left within the U.N. or for that matter outside. Even so, U.N. action played a part in varying degrees in Iran, Greece, the Berlin blockade, Korea, and, later, Hungary. In the overall it was not much. There clearly was no possibility of "U.N. action" in the cold war apart from whatever the United States and its allies were themselves able or willing to do.

In view of the cold war, the presence of Soviets and Americans under one roof posed a novel problem for Western diplomacy. In a time when we were struggling to organize a worldwide defensive coalition against the Communist threat, we had to meet and negotiate with our allies in the presence of the enemy. Each issue and each vote thus came to represent a separate test of free world unity, and often it was more important in this sense than because of the actual question involved. As time went on, the unity of the non-Communist world was put under increasing strain by the growing split between the poles of what might be called north and south, primarily on issues arising in the colonial field. But the overall alliance held together, albeit with difficulty.

Since 1953, the tone and mode of Soviet diplomacy, in and out of the U.N., have altered. The political effect of this has been acute, coming at a time when the bipolar political world was itself beginning to splinter. With the development of something like a military standoff between the United States and the Soviet Union, forces within the two coalitions began to assert their freedom of maneuver and to move toward positions relatively independent of the two leader states. Britain, India, Yugoslavia, Poland, Egypt, China and Germany suddenly began to emerge as focuses of new independent leadership. "Automatic majorities" and "automatic leadership" in the U.N., if they had ever really existed, became things of the past. The world was changing and the U.N. was changing with it.

A second development was the enhanced role of the uncommitted countries. The success of the West in gathering support from these countries through the U.N. has become increasingly dependent on the stands which Western nations take on issues of primary importance to the peoples of that "third world." These have not been such issues as capitalism vs communism, or German unification, or liberation of the satellites, but colonialism, "self-determination," economic development and racial discrimination. Out of the present membership of 81 countries, approximately 45 members for one reason or another see these as the crucial issues and put the United States to the test in regard to them with increasing frequency. Here again the issue often is purely symbolic; it may reflect an accumulated heritage of resentment or be designed to play off the East against the West. But in the U.N. these issues take concrete shape in resolutions and action programs in which Russian and American performance is constantly made the measure for a host of other attitudes.

The way in which we have restructured the U.N. itself has added to the American delemma. For perfectly good reasons the United States urged a greater role for the General Assembly (where all nations, whatever their size, have equal votes) in order to offset the impotence of the Security Council. In the fall of 1950 it appeared essential to remobilize the capabilities of the U.N. for collective military action. Happily the American display of determined resistance in Korea as well as other subsequent developments have tended to discourgae military risk-taking by the Communists. The Assembly's real role in this field therefore is still not measurable. But as part of the same development the Assembly has become a prime political forum for the nations which remain outside the East-West camps and pursue their own goals of political independence, economic improvement and racial dignity. In this situation what might be called the North-South conflict cuts across the East-West issues and makes its own powerful demands on American diplomacy, while offering magnificent opportunities for the Soviets to seize the political initiative.

The third change is in the military scene. It is by its performance here that many people would have the U.N. stand or fall. Of course, it long since became clear that the Security Council would not be able to carry out its enforcement powers. Yet in the 13 years since the charter was drafted there has been no general war, and one of the chief reasons for this has certainly been that the important operational principles of the charter—collective action for security and avoidance of violence in resolving disputes—have been in general effect. It might be said that the San Francisco principle has failed in detail but has had general validity in the sense that it has been translated into regional and self-defense arrangements which, because the charter existed, were able to borrow from its spirit and purpose.

The U.N. has also invented new military and quasi-military functions connected with the security task. UNEF in Egypt and the earlier military observer teams in Palestine

and Kashmir are cases in point. And despite waning confidence in the validity of its major premise, the U.N. displayed unforeseen capabilities in a "hard" case of Communist aggression — Korea — which could scarcely be envisaged in 1945. Both in and out of the U.N., then, many states have acted as though they had assumed an important general commitment and meant to take it seriously. In a way which the old League of Nations could never achieve, all states are involved in each successive crisis. This has obvious disadvantages in potentially widening an otherwise limited conflict. The offsetting advantage may be in keeping these crises from ending in general war.

The "failure of collective security," then, turns out to be a failure in the procedure which had been established more than in the substantive result achieved. The notion of universal collective security based on an abstract commitment to fight anyone, anywhere, anytime, on a call of a majority, has evaporated; but it had never really been a legitimate expectation, in the absence of a true world community and given the wide variety of meanings ascribed to the concept of justice.

But something more than this must be said about the political role of the U.N. as an agency of military security in the period ahead. The revolution in military weapons has changed both the kind of wars most likely to be fought and the attitudes of the great Powers toward war itself. The political status quo of the West is anathema to the Soviets, and the territorial status quo of world communism is unacceptable to us. Yet as general war becomes an increasingly unattractive proposition for both parties, the de facto line between the two worlds has hardened. When it is crossed in strength, as in Korea, the entire world appears to recognize it as a plain violation of the peace, and counteraction becomes politically feasible. Even India and Egypt voted initially to oppose the Communist aggression in Korea. On the other hand, as we saw in Hungary, a general military counter-action across the line was quite impossible politically even if we had been willing to lead it—which we were not.

Unlike the Communists, the United States through the President and Secretary of State has specifically renounced force to resolve political differences. There is no doubt that we would react vigorously to open Communist aggression, i.e. action across the line. But we explicitly avoid steps that could lead to general war. We have applied this self-denying ordinance to ourselves in the case of Communist China, the Berlin blockade, the crossing of the Yalu, Indochina and, most recently, Hungary. We have also applied this policy to our friends, as in the Suez crisis of 1956. It is argued that the United States could and should have blocked the shipment of Soviet arms into the Middle East, with the aim of heading off the subsequent crises, but the President was being entirely consistent in refusing to countenance a local military action that could lead directly to world war, however great the provocation to our friends. A significant result of the Suez fiasco is the realization that both the United States and the U.S.S.R. are likely to veto military action by third parties that might commit them to expanding potentially uncontrollable situations. Barring a drastic change in Soviet estimates of Western power, it would appear that the paraphernalia for all-out war has more political than military significance today. In turn, lesser instruments for exerting power assume increasing importance. The United Nations is one of them.

The fourth change is in the significance of disputes within the free world. Cases in point are the Indian-Pakistani dispute over Kashmir; Palestine, in all its ramifications, including the status of international waterways; India versus South Africa over Indian minority rights and racial discrimination; Greece, Turkey, and the United Kingdom over Cyprus; and Indonesia versus the Netherlands over West New Guinea. Each might "go critical." As Suez illustrated, a dispute which did not directly involve the two great powers can quickly pose life-and-death decisions for the entire human family. As things stand, the control rods of "the Suez pile" are held by an international brigade of U.N. troops. The chain reaction can start there again. But for the moment the world is buying time with the help of a variety of U.N. instrumentalities and functions, including UNEF, the U.N. Truce Supervision Organization, and the activities of the Secretary-General. If Kashmir should be the scene of renewed fighting, and if the Soviet Union backed India and the United States backed Pakistan, the risks that the direct Soviet-American confrontation might develop into general war would be that much greater, given the geography and the stakes.

Whenever possible, the United States has preferred to leave disputes not directly involving Communist nations to the U.N. It is within this range of issues that the U.N. machinery for the pacific settlement of disputes has been brought into play. The Suez case is an indication of how we have become prisoners of outmoded ways of thinking about the organization. Throughout the intense and futile negotiations in the summer of 1956 the United States and its partners rigidly shunned any positive use of U.N. instrumentalities. One American motive in this was to avoid the possibility of a public discussion of the Panama Canal, by association, as it were. Consequently we relied exclusively on the so-called London group. This forum was unacceptable to Egypt. At the same time we failed to avail ourselves of a wide range of possible actions through the U.N., including appointment of a U.N. mediator, or of a U.N. agent-general to operate the Canal in the interim without prejudice, or the establishment of a joint régime, or, at a minimum, recognition through a U.N. resolution that the Canal was international in character. Reasonable proposals that enlisted heavy U.N. support could conceivably have altered Egypt's intransigence. We now see that when the British and French finally went to the U.N. in early October it was to clear the way for unilateral action. Only when fighting broke out did we ourselves turn to the U.N. to stop it. And this was of course the one thing the U.N. was unable to do apart from its exertion of purely moral force and apart from whatever outside pressure individual members such as we and the Russians could apply.

Western statesmen have spoken for years, quite correctly, about the great value of the U.N. in getting the parties to a dispute around the table, substituting talk and mediation and conciliation, however endless and frustrating, for bullets, and offering a variety of institutional means for limiting the conflict and facilitating peaceful change. In the case of Suez we underestimated the preventive capacity of the U.N. before the crisis became acute, overestimated its capabilities when the crisis arrived, and again lost interest when the crisis had passed. Our attention immediately wandered to another dimension of the problem—the possibility of overt Russian military aggression. The resolutions regarding a peace settlement and the refugee problem which we introduced in the hectic early nights of the crisis were never again referred to, and instead we brought forth the Eisenhower Doctrine for the Middle East. It may have been worthwhile to post a U.S. "keep out" sign in the area, even though the possibility of overt aggression was and is comparatively slight. But this was our only real move to remedy a whole set of critical local situations which did not primarily involve the Communist bloc but which were the basic sources of conflict in the area. Because all of these, including specifically the refugee problem, have once again been passed over, it can confidently be predicted that the next local explosion will be that much more potent.

III. SECURITY OBJECTIVES OF THE UNITED STATES

How should the considerations just mentioned affect American policy toward the United Nations in the years immediately ahead? Let us first identify some of the overriding security goals of this policy today and see how the U.N. might help in achieving them.

Of course, our principal and obvious security objective is to create the kind of world order in which we and every other nation can cultivate our respective societies free from external threats of disruption. Everything else falls within this governing purpose. Fully spelled out, it would comprehend a wide variety of subordinate objectives in the economic, social, humanitarian and cultural fields. Here, however, we shall concentrate on the most acute problems which determine our choice of means and our allocation of resources.

Objective number one, then, is to reduce the generalized threat which Soviet Communist power presents to the United States and all Western society. This broad objective has three components. The first is to reduce the Soviet capability to inflict intolerable physical damage upon us. The second is to moderate hostile Soviet intentions. The third is to limit and if possible reduce present international support for the Soviet Union.

The second objective is to find means of limiting warfare if it does break out.

The third is to ensure, in the event of general war, that we rally maximum political support to our side, in order that we may have the best chance of organizing the post-war world in an acceptable way.

The fourth is to reduce the possibility of a general war developing inadvertently.

Reducing Soviet military capabilities

Since the U.N. does not have any military force of its own it would seem of little use to us in attaining this first objective. It can provide a variety of forums for negotiating the limitation and regulation of armaments and restricting the use of outer space to non-warlike purposes. True, whether or not these questions are to be resolved depends on agreement between the United States and the U.S.S.R., and in this sense the decision will be bilateral rather than multilateral. Nevertheless the wide choice of means of negotiation offered by the U.N. should not be discounted, as was shown when Russia wanted to talk privately with us about liquidating the Berlin blockade. A summary appraisal must be, then, that the U.N. can affect Soviet military capabilities only indirectly, by furnishing a negotiating vehicle.

Affecting Soviet intentions

This objective is more complex. At its least complicated level—military intentions—Soviet policy since Korea seems to have consciously excluded the overt use of military force in favor of more profitable and acceptable techniques of political and economic warfare. Secretary Dulles has said on several occasions that if it were not for the U.N. we would be in world war III. The real significance of the commitment undertaken by 81 nations—including the Soviet Union—to refrain from the threat or use of force is obviously not in its legal quality. Because any warlike act will immediately be brought before 80 other nations, the Soviet Union is faced with the fact that it must persuade an effective majority that it has not breached the existing line which neither side can properly cross, whatever it may be doing behind that line.

This deterrent is not comparable with the deterrent of our Strategic Air Command, but there have been too many examples of Soviet

sensitivity to world public opinion for us to write it off as meaningless. It is not always remembered that the U.N. resolution condemning the U.S.S.R. in Hungary was supported by 15 Afro-Asian states, with none in opposition. The Soviets periodically stumble badly because of the difficulty of sustaining a soft line in the U.N. when their line outside hardens. Soviet troops are still in Hungary, but the Soviet Union's reputation in the uncommitted nations was gravely tarnished just when its efforts to woo them were at a peak. On balance, the fact that the U.N. exists can be set down as a consideration affecting Soviet calculations about the profitability of military operations, but it hardly figures as a prime factor. On the other hand, regional and collective self-defense arrangements largely embody the charter commitment to oppose aggression, and these manifestly shape the Soviet estimate of the non-Communist world's vulnerability.

If, however, we think of Soviet inventions in the context of an evolution of Soviet society into something more tolerant and more tolerable, there are additional dimensions to the possible U.N. role which may not always be fully grasped. Certainly the U.N. cannot transform the nature of Soviet communism significant, but in various ways it might exert a favorable influence.

The fact that it is a continuous point of contact between the Communist bloc and the West may acquire special significance in a changing situation, if only by giving the Soviet Union assurance of being readily accepted into the community of nations as a great power even though it is rejected as a messianic and apocalyptic force. Meanwhile, U.N. membership can have the effect of sustaining and encouraging the independent identity of such satellites as Poland.

Thus we should continue to offer the Soviets alternative courses of action that one day may appear realistic and attractive to them. With or without them, we should continue to work to institutionalize areas of common action and to create an international community that can compete successfully with the barren Soviet variety. We have already led the way in nonpolitical programs such as health and technical assistance, which the Russians, for many reasons, ultimately have come to join. Seen in this light, the cold war should spur us to greater experiments with multilateralism among those disposed to cooperate; it should not serve as an excuse for us to retreat into inaction and defeatism.

One further matter may be mentioned conveniently here even though it is not directly related to Soviet intentions.

The U.N. is a demonstration and testing point for the unity of the free world. When that unity increases, the Soviets have seemed to raise their estimates of Western capabilities; and, conversely, Western disunity has encouraged the Soviets to calculate their opportunities as more promising. Sometimes the U.N. has been an embarrassment to us when used as a place for airing the free world's dirty linen. Sometimes the Russians have been able to use it as a place to disrupt free-world unity. If we are to live successfully in the kind of U.N. that has developed, and retain majority support when it really counts, we must do a number of new things. We must be prepared to go a great deal further than we have with our close friends on issues which are of great political importance to them but of only secondary importance to us. Primarily, these represent differences over essentially procedural matters such as elections or budgets or the composition of committees, which often have been the source of more interallied friction than any substantive policy issues except Chinese representation or Suez. We might do better not to engage the prestige of the United States on such procedural issues but to save it for the big ones. We might also gracefully accept an occasional minority position on some issues instead of insisting on having our own way, or going over the heads of friendly delegates, or threatening retaliation, however subtly.

Limiting international support for the Soviet Union

This support is coming primarily from the underdeveloped, neutralist, anticolonial countries and territories. No actions of ours can be expected wholly to reverse this tide until it has run its course. Nevertheless, it is here that the battle is being fought, and our task is to find ways of diverting local forces of discontent into constructive channels, to furnish incentives for native leadership so that the forces of nationalism may be harnessed to tasks of building rather than destruction and hate.

The prime factor here is economic. We should estimate afresh the political and economic benefits that might stem from greater use of the U.N. in financing the development of underdeveloped countries. But there also are important psychological factors, and here the style and sensitivity of our diplomacy can be crucial. Both in and out of the U.N., our ability to command the support of an effective majority depends heavily on the way we handle the legacy of bruised feelings left by centuries of Western claims to racial superiority, and on the understanding with which we view the ambition of Asians or Latin Americans to "catch up," to become industrialized, to be less dependent on a peasant economy that offers only continued human misery and poverty.

The U.N. is the one place where all of these tensions and claims and expectations come into focus in full view of virtually all the world. There the uncommitted nations have found their place in the sun, there the concept of the legal equality of States offers them the self-respect and dignity they seek.[1] There they acquire a parliamentary strength entirely disproportionate to the amount of real power they command in the world. This power is used primarily to bring before the rest of the world their ambitions and grievances, incorporated in concrete issues and demands: freedom from the only kind of foreign domination they know about; generous economic assistance for development, specifically grants, low-interest loans and fair capital investment; protection of their exports from uncontrollable fluctuations in world prices; racial equality in practice; freedom for the remaining colonial possessions of Western Powers; in short, equality with the rest of the world.

If we are to have the political support of these nations we must find better ways than we have done so far to relate our own interests to their interests, aspirations and goals. Where the U.N. provides the only agency acceptable to them we must utilize it to the utmost.

Limiting warfare if it breaks out

Our general military objective here has three parts. One is to avoid a direct military confrontation between the Soviet Union and the United States, as already discussed. Another is to keep such a confrontation within bounds if it happens. A third is to keep outbreaks within the non-Communist world from spreading into a general war.

The scope of hostilities between free-world and Communist nations would undoubtedly be determined by the estimates each side made of the intentions and the capabilities of the other. Given the will of each to keep them limited, the U.N. can then offer the advantages it did when the United States made its decision to resist the Russians in Korea.

These advantages are several. First, the U.N. furnishes one means for us to secure maximum worldwide political support. This support is indispensable if we are not to lose the sense of legitimacy and moral right which we as a people need in order to sustain a military effort. The second advantage is the opportunity given us by the commitment made by all U.N. members to assist the organization in any action it takes in accordance with the Charter. This does not have to mean "action" in the legal sense of Security Council enforcement. Marginal offers of bases, transit rights—even "a sharpshooter on a camel"—cannot merely demonstrate the breadth of international disapproval of a Soviet act of limited aggression but can pay important strategic dividends. The third advantage is that the mere fact that the conflict is before the U.N. tends to discourage participants from expanding the scope of the war recklessly or setting extravagant war aims.

Perhaps the situation most likely to arise is one in which a military outbreak does not directly involve the Armed Forces of the United States or the U.S.S.R. Here the role of the U.N. is essentially political. When there is an effective majority against the continuance of hostilities, and the parties involved are responsive to it as they were in the Suez crisis, the conflict may be halted before it gets completely out of hand. An international military force such as UNEF can then play a most important role in helping restore conditions favorable to peaceful settlement and perhaps peaceful change.

Schemes for a standing U.N. force to counter large-scale aggression call for a relative preponderance of power at the center. Without some form of world government this is unattainable. Yet there is a more limited military role for the U.N. that is realistic and at the same time would serve to meet a vital contemporary need. Only the U.N. can develop and perfect the sort of limited and neutral force needed to prevent or deal with local situations which we know constitute a real and present danger to world peace. Such a force would not be supposed to undertake full-scale military action but only police functions. The response of the smaller nations in 1956 proved that they are ready, able and willing to contribute to such a force. Rather than continuing to present the U.N. as a club of like-minded states all prepared to take identical action, we should be grateful that some of them may form a third party available to be interposed in such situations. We ourselves have been the third party on occasion, as in the Indonesian Good Offices Committee, or in Algeria, and might well play such a role again.

A defect of various valuable suggestions recently made for establishing a permanent force along these lines lies in their failure to reckon fully with the formidable financial costs involved. One way to overcome this problem would be to set up a training command with a small permanent cadre. Selected units from member countries would be rotated there for a specified period, but would then return home to be held as a reserve.

Using the U.N. in a general war situation

We are prone to believe that general war would mean the end of the U.N., and this may be so. Yet as we saw in the case of Korea, the U.N. can serve as an umbrella under which the United States can legitimize its military response to a Communist aggression. Our planning must not ignore this possibility. We must assume there will be a postwar world to organize. The U.N. might accord legitimacy to non-Communist representatives of peoples in the Soviet bloc while hostilities were still in progress and thus arrange a vital political focus for the forces which would cooperate to bring into being the sort of world for which we had fought. Finally, if the political war aims were defined by the U.N. rather than by a single nation this might bring hostilities to a satisfactory end more promptly.

[1] This, incidentally, is why a weighted voting system, for all its logic, does not seem feasible unless and until genuine powers are reposed in the General Assembly.

Reducing the possibility of general war developing inadvertently

Since it is unlikely under present conditions that general war will be launched by the deliberate decision of any nation, the chief concern of responsible statesmen should be to prevent the outbreak of war by inadvertence. If we rule out the use of force to remedy the legitimate grievances of states, we are obliged to find other means for the solution of those problems. It is here that the U.N. has possibly its most vital future task to play in terms of our national security. But to energize the U.N. to undertake this task and to exploit its institutional potentialities fully the United States is going to have to attach a wholly new order of importance to developing better means for peacefully settling disputes and facilitating peaceful change. We must apply political muscle to the "preventive peace" about which we speak so frequently. It may mean a concentrated political and financial effort to resolve the Palestine refugee deadlock. It may mean taking the Peace Observation Commission out of mothballs and urging that it be dispatched to an unquiet frontier like that between Tunisia and Algeria. It may mean leading the way to greater use of the International Court of Justice, instead of setting an opposite kind of example by falling back on the domestic jurisdiction plea, as in the Interhandel case. It may mean pressing for the international regulation of international waterways—including the Panama Canal. In short, it means doing what no one has ever done before in all history—expending an effort to prevent violence comparable to the effort usually made in picking up the pieces afterward.

In working with enlarged purpose and effort on the chronic causes of instability and friction, we should not find our motivation only in the Soviet threat. Persistent international tensions threaten our ability to fulfill the promises of our own society. For our own internal good our role in the world must be more than that of a powerful negative force. Our well-rounded development as a people has come to depend on the development of stability for other peoples. Means must be found to resolve peacefully the clash between the status quo and the dynamic forces that continuously challenge it.

In the period ahead the United Nations may have extremely important uses both in support of the national interest and in support of the common interest in a more stable peace. These uses, as indicated here, may have little to do with the stereotypes and symbols of U.N. action that we still cling to, expressed in terms of universal collective security, "misuse of the veto," overemphasis on purely military estimates of the cold war, excessive U.S. control over multilateral funds and programs, the "popularity contest" theory, and expectations about altruistic international behavior. The crisis is too grave for us to afford to misunderstand the capabilities of any instrumentality offering genuine opportunities to advance our national prospects and the prospects for a tolerable world around us.

Unwanted Guest

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. DENT. Mr Speaker I haven't spoken out on the coming visit of Premier Khrushchev until this moment. As yet, I find it difficult to find a good reason for cheering.

However, the purpose of this extension is to put into the RECORD an article published by St. Joseph's Parish, Brooklyn, N.Y., edited by the Reverend Edward Lodge Curran, Ph. D.:

UNWANTED GUEST

In 1955, President Eisenhower attended a so-called summit meeting of governmental big shots in Geneva, in order to find ways and means of reducing the military high blood pressure of the world, or, to use the customary journalistic expression, in order to melt something out of the cold war atmosphere created by the antics of the brutal and godless Government of Soviet Russia.

AT GENEVA

That summit meeting was a complete bust. Only the tyrant of Soviet Russia benefited. He had succeeded in having himself placed on the same level with the decent rulers of the other nations assembled there.

Just recently, again in Geneva, another just-short-of-the-summit meeting was held by the Foreign Ministers of the same nations. This time, Free Western Germany and enslaved East Germany were allowed to sit in as observers. Again, the Soviet representative, one Andrei Gromyko, tied up the meeting in recruiting knots. Again, nothing was accomplished to relieve world tension. Again, this almost-summit meeting was a complete bust.

HOME AND ABROAD

From time to time, on this side of the Atlantic, governmental officials in Washington and American business tycoons have been rolling out the red carpet for visiting top officials from the Soviet Government. Once it was for Anastas Mikoyan. Then it was for Frol Kozlov. Honeyed words were intermingled with snide remarks by the Russian representatives who toured the United States and addressed American audiences. One again, however, nothing was accomplished to ease the warlike tension of the world.

Most recently, we have had glimpses of Vice President NIXON's 2 weeks' tour of Russia, with a brief side trip to Communist-enslaved Poland. The Vice President was cheered by the people, heckled by some workers, and argued with by Khrushchev. Mr. NIXON constantly repeated the theme of "Friendship and Peace." Sometimes he indicated that it was wrong of Soviet Russia to exercise military domination over certain nations in Western Europe. He made no mention of the utter slavery to which the Russian people themselves are subjected. Nor did he publicly refer to God or religion or religious rights. As far as we can judge, this next-to-the-summit tour of Vice President NIXON accomplished nothing.

PRESIDENTIAL GUEST

Now, the American Nation is informed that President Eisenhower has invited Nikita Khrushchev, godless dictator of Soviet Russia and imperial master of all Communist-enslaved nations, to visit him and to tour the United States of America. This means that there is to be a summit meeting between the President and the tyrant in Washington. This will be followed later by another summit meeting between the same individuals in Moscow. The President has chosen to do this, despite his public declaration that he would participate in no summit meeting unless the recent Geneva Foreign Ministers' meeting accomplished something definite. The President ignores the fact that the Geneva meeting merely added hot air to a cold war.

What good does President Eisenhower expect to accomplish by his invitation to Khrushchev? It could not have been issued to acquaint the Russian dictator with the current history and activities of the United States. Khrushchev does not have to visit the United States to learn about us. Through his espionage system and through the Russian officials who have preceded him, Khrushchev already possesses adequate knowledge about American politics and economics and military preparedness and education. He can confirm and increase his knowledge by studying the American exhibitions now on display in Moscow.

Does the President expect that Khrushchev's visit will generate good will toward us on the part of the Russian dictaor? If so, the President is laboring under a tremendous act and atmosphere of self-deception. Communistic tyrants have good will for nothing expect world communism. Their entire philosophy and history and political science are against good will to non-Communists. Communistic tyrants are motivated by fear and hatred, not be confidence and love.

President Eisenhower's invitation is one of the biggest diplomatic victories ever attained by Dictator Khrushchev. It will give him, as the Daily News editorial of 6 weeks ago stated, "a means of building his prestige and convincing his slaves and slave-nations that the United States has at last endorsed their slavery."

POPULAR PROTOCOL

The President's invitation and its acceptance have already succeeded in displeasing thousands upon thousands of our fellow citizens. Americans who have relatives in Poland and Lithuania and Latvia and Estonia and Hungary and other countries behind the Iron Curtain, will not take kindly to it. The Communist-enslaved peoples themselves, of Western Europe and Asia, may again be driven to doubt the sincerity of official Washington's oft-stated sympathy and desire for their liberation.

Both President Eisenhower and Vice President NIXON have asked American citizens to receive Khrushchev kindly when he comes. Until he comes, however, the American people have the right to indicate their individual and corporate displeasure at the President's invitation. By such peaceful means, the people of Sweden were successfull in keeping Khrushchev out of their country.

If such peaceful protests fail and the unwanted guest arrives, American citizens will exercise the kindness of restraint. They cannot be expected to wave flags and strew flowers and utter cheers and play bands and hold parades in honor of the Communist tyrant. They have the right to let him pass in stony silence.

Our fellow citizens will not create any international incident but they will not abandon their religious and political ideals at the sight of one whose hands are still red with the blood of martyred Hungarians. To do so, would be disgustingly hypocritical.

It is too bad that President Eisenhower has overlooked the warning of Pope Pius XI, when he wrote: "Communism is intrinsically wrong and no one who would preserve Christian civilization may collaborate with it in any undertaking whatsoever." By inviting Khrushchev to the United States, we believe that President Eisenhower has made the biggest domestic and international blunder in his presidential career.

Mr. Speaker, while reading this interesting observation, I noted Father Curran's editorial on "Labor Day" and since it is so apropos to the issue of the day, labor reform legislation, I include it with my remarks:

LABOR DAY

Monday, September 7, is Labor Day. The splendid progress made by American workers and American labor unions will be joyfully commemorated by all American citizens.

Much publicity has recently been given to the existence of certain faithless labor leaders in our midst. Fortunately, these constitute only a small and insignificant minority of those who devote themselves to the welfare of American workers. The vast overwhelming majority of labor unions and labor leaders are decent and law abiding and reputable and honest and sincere.

American workers are just as anxious to remove any faithless labor leaders from their midst as are American politicians or journalists. A few faithless law-enforcement officers do not destroy either the integrity or the reputation of a city's police department. Neither should the existence of a few faithless labor leaders be used to question either the integrity or the reputation of American labor.

It was Pope Leo XIII who publicly pronounced the right of workers to organize in labor unions for the protection and promotion of their economic welfare. We pray that the American labor movement will purge itself of any personal or material evils in its ranks. We also pray that the American labor movement will contribute to the spiritual as well as the economic progress of America.

All who work, no matter what their occupation or their status, should always remember the following admonitions of Christ:

"What shall it profit a man, if he gain the whole world and suffer the loss of his soul?" (Mark, viii: 36.)

"Seek ye therefore first the kingdom of God and his justice, and these things shall be added unto you." (Mark, vi: 33.)

Watch Out for Communist Code Language

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post on the Communist code language. At the time of Khrushchev's so-called "peace mission," we need to be more than ever, alert to this doubletalk. Peace means to them, surrender by us. Edward Hunter, writer of the editorial, is the first Westerner who analyzed and described the diabolically skillful ways which the Red Chinese have developed to change people. He has authored "Brainwashing in China," "The Black Book on Red China," and other books on Communist tactics. The editorial follows:

MARXIST JARGON CAN TRAP UNWARY NEGOTIATORS

(By Edward Hunter)

Communism is a language, as distinct as any other, except that it takes the form of a code. Communism's greatest asset is its use of the same words with the same spelling and the same grammar and pronunciation as in other languages, except that the words have special meanings to Communists.

The key to the code is dialectic materialism. This isn't a matter of mere semantics, but of fundamentally different definitions.

Practically everything the Reds say or do falls into place once we recognize this. Adlai Stevenson learned something about code language when he visited Khrushchev. He was informed by Khrushchev that the word "noninterference" means noninterference with Communist procedure or expansion. Thus Communist fifth columns in non-Communist countries are not guilty of interference. Khrushchev presented this hoax with a straight face.

Nasser blew his top because he said Khrushchev broke his word after pledging noninterference. Khrushchev didn't interfere with Communist activity in Egypt. This was what noninterference meant in Communist language. Nasser should have had the agreement translated into the two languages, Egyptian and Communist. The only way an American negotiator at a summit conference—or anywhere else—can similarly guard himself would be by insisting that agreements be translated into English according to Webster and into English according to dialectic materialism.

Dialectic materialism teaches that everything is in flux, everywhere in the universe, except one thing—the Communist line. Dialectic materialism presents new standards. What is good or bad is judged according to whether it is good or bad for communism. What is a lie or what is truth is judged accordingly. If something conforms to communism's needs, it is true; if not, it's a lie.

If Communist strategy required that Americans be said to have engaged in germ warfare, the extortion of fake confessions was good. They were the "truth"—in Communist language. The same applies to the bestial Red charges that the self-sacrificing American and Canadian nuns cracked the skulls of the babies in the orphanages they tended. That they did nothing of the sort has nothing to do with the case, once one accepts dialectic materialism.

Brainwashing has to be part of communism; otherwise nobody would fall for it. It takes the clinical treatment of a twisted Pavlovian approach to madden a mind in this manner.

When a Red delegate in the U.N. rises, after a resolution has been carefully steered through every conceivable legalism, and calls it illegal, he is talking the Communist language. The seating of the Chinese Nationalist Government, or any other act opposed by the Reds is automatically "illegal" once Communist language is accepted.

We know that our truce agreement with the Reds in Korea was violated simultaneously with its signing. According to the Communist language the truce was binding only on us. We neglected to have it translated. Use of this code language has trapped our diplomats and our intelligence officers consistently, and without such translation it makes our newspaper dispatches misleading.

Of course, the Reds would no more agree to such a translation of agreements than to mutual inspection of armaments. But insistence on it would show up the Red hypocrisy and at least inform our side of what the Reds are saying. This would be preferable to being taken for another ride.

A serious dictionary of the Communist language needs to be compiled. Some definitions that rise to mind are:

Peace: A state of affairs where all sides accept communism.

People: Those individuals accepted as legal entities, excluding all not in Communist favor.

Illegal: Not in accordance with dialectic materialism.

Aggression: Interference with Communist activity or expansion.

Democracy: Communist Party activity in the interests of the masses, who don't know where their interests lie.

Education: Instruction in dialectic materialism, or from its point of view.

Patriotism: Local nationalism focused against the free world until communism takes over, then loyalty to the world Communist camp.

Reform: Change in a wrong direction where opposed to Communist revolution; change in a good direction when focused on some one social or political field, taking its direction from dialectic materialism.

Every diplomat, intelligence officer, and newspaper correspondent should be obliged to translate from the communism accordingly. Every agreement with the Reds should contain a statement that the West is not accepting Communist doubletalk.

The Great Jailer Visits the Land of Freedom

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following brilliant allegory on Khrushchev's visit to the United States, written by the eminent clergyman, writer, and television teacher, Bishop Fulton J. Sheen. Read and pondered, his allegory of the jailer will help sincere but puzzled citizens see more clearly the essential facts and factors to be considered, and therefore guide them in determining their attitudes and conduct while the world's greatest jailer is in our midst.

The article from the Los Angeles Examiner follows:

GREAT JAILER'S VISIT TO LAND OF FREEDOM UNIQUE

(By Bishop Fulton J. Sheen)

Once upon a time, there was a great jailer who was invited to visit a people who boasted they were not captive or imprisoned. What made his visit so unique was that this great jailer had millions and millions of people in his prison; some of them he put to death before they even got to jail and others who tried to break out of their jail were driven back with tanks.

The problem that faced the free people when the great jailer came to their free country was: "What should I think?" "How should I act?"

1. Do you think you will make the great jailer anxious to throw away the keys of his prison simply because he sees that you have longer automobiles, better hair-dos, more electric gadgets, more rooms in your apartment, richer food at your table, and the greatest per capita income in the world? Remember that the great jailer is already a rich man—richer than anyone in America; he owns all the lumber, all the steel, all the railroads, all the autos, all the housing in his own land.

The great jailer who became rich through confiscation does not envy your national wealth; he envies your personal wealth. Personal wealth is the economic guarantee of your freedom. He knows that your right to call property your own, is because you already have a soul which you can call your own.

FREEDOM ENVIED

This is a great challenge to the great jailer. If the great jailer believed in the spirit, he would rejoice in your well being, because the spiritual man rejoices in the property of others. But being a materialist, the great jailer envies your freedom; it embarrasses him before other nations of the world.

As Chesterton said: "There is a spirit which drives men incessantly on to destroy what they cannot understand, and to capture what they cannot enjoy."

Think not, therefore, that seeing your comforts will make him work hard to catch up to you in a peaceful world. Rather, he may think it wise to destroy what you already posses. Do all men in the face of saintliness seek to be good? Are there not some men in the face of goodness who seek to crucify? Your freedom is not an object of pious emulation; it is an object to be destroyed.

2. As your economic prosperity and freedom will never change him, so neither will a visit to you change his philosophy of life. Remember that the great jailer is himself a prisoner. He is the prisoner of a collectivity from which he cannot escape. The leopard cannot change his spots, nor the Ethiopian his skin.

ANT HILL LIFE

In brainwashing others, the great jailer has become brainwashed. The touch of Christ's lips did not make Judas less the traitor. The great jailer's life is not his own; it belongs to the ant hill; the moment he changes his mind or heart, he will suffer the liquidation he has ministered unto others for changing their hearts.

There are some who will not believe, though one rise daily from the dead. His basic philosophy is that freedom is not in the person, but in the party; it is the party who decides who shall live and not live. It is therefore, not a person who is visiting you; it is a philosophy; it is a party; it is the great jaildom.

3. Think not that because the great jailer comes, not with the prison keys rattling from his hammer and sickle, that he has nothing to do with bars and cells. In all human relations with the great jailer, remember the prisoners. Prisoners who are so thin they stand like posts in their imprisonment; who are so hungry they even make the name of their country sound like their starvation; remember that in some jails the prisoners wear not stripes but checks.

Look then at the great jailer as if he were transparent; see through him to the millions who weep tears at the sight of a free man from a free country; see through the jailer to the hands lifted saying: "Betray us not. The world is upside down. Those who should be in prison are the jailers. Now is verified the words of innocence behind bars: 'I was in prison and you visited me'."

DON'T INSULT HIM

Finally, do not insult or injure or be unkind in word or deed to the great jailer. Freemen must not lower themselves to the level of those who would destroy freedom. There must be moments of silence before the great jailer as Christ was silent before the Jailer Herod because Herod sent John to his death; but there should be moments of speech, warm and sincere, as the great jailer is shown not just our reactors, but our churches and our synagogues.

Take him to a synagogue, to a Protestant church and to a Catholic church during services, that he may see that we are great, not because we challenge God and seek to destroy Him as is done in his jaildom, but because we love and worship Him Who has endowed us with, as our Constitution says, "unalienable rights" and among which are life, liberty, and the pursuit of happiness."

Food Donations Set Record

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. QUIE. Mr. Speaker, the record set by the administration in donating nearly 3 billion pounds of surplus foods during fiscal year 1959 is surely a record of which all Americans can be proud.

It has been announced recently that this food has been provided for use in our own school-lunch programs and charitable institutions as well as to needy persons at home and abroad. The distribution shows an increase of 5 percent over the previous fiscal year, and marks a high point in donations of Government-owned foods.

The increase has been distributed to domestic outlets, as donations to needy persons, schools, and institutions total more than a billion pounds for the year—a considerable rise over the 871,600,000 pounds distributed the previous year and a tremendous increase from the figure of 161,100,000 pounds in 1953.

Foreign distribution amounted to 1,867,200,000 pounds in donations in fiscal 1959, compared to the 24 million pounds donated in 1953. The administration reports that increased donations of wheat flour were offset by decreased amounts of cheese which was removed from the list of foreign donations last year.

I believe the administration deserves unsparing praise for the manner in which it is handling this important feature of our surplus disposal program. Foods acquired through surplus removal and price support programs are distributed to eligible recipients in our country through designated agencies of State and local governments—while distribution in 91 countries has been handled by voluntary church and welfare organizations. It is important to note that surplus foods are donated for relief overseas only after they have been made available to meet needs in our own country.

Because I believe it is important for all of us to see where the food is going in our own country, I am including a table which sets forth the numbers of needy persons in family units who received donated commodities in June 1959:

Alabama	127,127
Arizona	50,423
Arkansas	178,341
California	23,215
Colorado	18,799
Connecticut	587
Delaware	3,062
District of Columbia	29,604
Georgia	30,878
Illinois	79,281
Indiana	75,485
Iowa	65,919
Kansas	11,370
Kentucky	280,968
Louisiana	120,604
Maine	56,543
Maryland	44,532
Massachusetts	4,114
Michigan	380,343
Minnesota	33,314
Mississippi	179,055
Missouri	93,153
Montana	8,877
Nevada	992
New Hampshire	6,703
New Jersey	13,789
New Mexico	35,628
New York	364,056
North Dakota	5,320
Ohio	113,568
Oklahoma	232,186
Pennsylvania	735,368
Puerto Rico	595,430
Rhode Island	11,432
South Dakota	23,994
Tennessee	149,458
Texas	118,138
Utah	11,667
Vermont	11,633
Virginia	37,404
Washington	3,977
West Virginia	295,345
Wisconsin	40,076
Wyoming	7,468
Trust territory	3,218
Samoa (American)	2,905
Total	4,715,349

Mr. Speaker, the total figure of 4,715,349 should be compared to the 100,000 needy persons in family units who received donated food in fiscal 1953. This is truly a great demonstration of the worth and success of this vital program.

Effective Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. MADDEN. Mr. Speaker, a great number of Members of Congress, including myself, have pressed for practical and effective civil-rights legislation during this the 1st session of the 86th Congress.

Having failed so far to enact suitable civil-rights legislation the feeling among the sponsors is that at this late date the Congress could not give the necessary time and work to enact the type of civil-rights bill which is necessary.

It is my hope and I know I will be joined by a great number of other Members to get effective civil-rights legislation enacted early in the next session.

Rev. L. K. Jackson, president of the Interdenominational Ministers Alliance of Gary and the Calumet region of Indiana, submits the following communication on this important legislation for the consideration of the Congress:

THE ST. PAUL BAPTIST CHURCH,
Gary, Ind., September 8, 1959.

Representative RAY J. MADDEN,
House of Representatives,
Washington, D.C.

MY DEAR MR. MADDEN: Your very kind letter of a few days ago is at hand, contents carefully noted. Replying to same, please accept my sincere thanks for the influence you radiated in an effort to get effective legislation passed, in this session of Congress, that will protect decent, honest and upright labor leaders and members of unions from racketeers, gangsters, and the underworld.

There is another piece of legislation pending in Congress which is just as important as labor legislation is, and our representatives in Washington, from the President down to our most recent elected Congressmen, should be just as deeply interested in, and just as concerned about getting effective civil rights legislation passed in this session of Congress as you were about the passing of effective labor legislation.

In view of the awful shame and terrible disgrace that is being brought upon our country by a large segment of men and women under the leadership of the White

Citizen Council and the Ku Klux Klan, who are so stewed in the broth of race prejudice that they do not believe in democracy for all; and are exhausting every diabolical scheme in the book to prevent the democratic process from working in America, I urge, beseech and pray you to use the influence of your great office to keep Congress in session until effective civil rights legislation is passed that will stop the reign of terror, shame and barbarity that is being carried on in Arkansas, Mississippi, Alabama, and throughout the South against some of the most loyal, patriotic, and law-abiding citizens in America.

Race prejudice is one of the most dangerous, cancerous, contagious and destructive diseases of this age and generation. I cannot see how any loyal American can talk as much as some of them do about communism abroad and do absolutely nothing to destroy the effects of race prejudice at home. For beyond any variation or shadow of doubt, it is the root of more dissension, discord, tension and animosity than can be described; and is doing the United States more harm abroad than all the billions we are spending on foreign aid, mutual aid, and all other aids abroad in an effort to win the uncommitted nations of the world to our philosophy of life—is doing good. With that in mind, I urge, beseech and pray you to use all of the influence of your great office to help pass legislation that will bring an end to this barbarity at home, and take down this reproach abroad.

With every good wish for your continued success and hoping to hear from you at your earliest convenience on this very important matter, I am,

Yours very truly,

L. K. JACKSON,
The Servant of the Lord's Servants.

Truth Will Out: Red China Has To Admit the Fraudulence of Its Claims

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington News of August 27, 1959:

PEIPING PRESTIGE DUE TO DIVE

TOKYO, August 27.—Communist China's admission that it would fall far short this year of its grandiose production targets was certain to send its prestige on a nosedive throughout the Far East today.

Peiping's mainstay in keeping it halfway respectable in the eyes of Asia's millions had been the reported progress in getting more grain and cotton to feed and clothe its millions.

The measures taken on the mainland—such as forcing approximately 500 million into people's communes and all-night work brigades—were harsh, most Asians would admit.

But most of those in Asia's underdeveloped nations, where the threat of famine still too often exists and where few ever have full stomachs, also saw a not pleasant, but at least a possible solution to their woes in the road taken by the Chinese.

ILLUSION DESTROYED

The communique and resolution adopted by the Central Committee of the Chinese Communist Party at their plenary session in Lushan, Kiangsi Province, did much to destroy this illusion.

The communique and resolution, released yesterday, made it clear that the big increases reported during 1958, China's "year of the great leap forward," were greatly exaggerated.

The Chinese admit that they had inflated 1958 grain production figures, for example, by 125 million tons to 375 million tons. The "verified" figure reported now is only 250 million tons.

Also, the Chinese say now that their much publicized backyard furnaces were not up to par and that the figure for steel output in 1958 was only 8 million tons, with 3.8 million tons produced by the "local method" not good enough to be counted in the nation's overall total. The new 1959 goal for steel has been dropped from 18 million tons to 12 million.

Cotton output was 2.1 million tons instead of the 3.35 million earlier reported.

PUSHED TO LIMIT

What will further disillusion Asians is that the Central Committee has called for still further efforts from its millions whom most feel already were being pushed to the limit.

China's prestige already was suffering in the Far East because of its actions in Tibet. Asians were becoming wary of the Chinese because of events in Laos.

The feeling among many Asians now is that much of the hardships and tribulations of the mainland Chinese have been for naught.

A Strong Domestic Minerals Industry Necessary to Our National Security

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I cannot stress too strongly the importance to our national security of a strong domestic minerals industry.

Our Government has, to some extent, recognized this importance. It has taken steps to prevent the undermining of certain segments of the minerals industry. Restrictions have been placed on imports of foreign oil, quotas have been established on imports of lead and zinc, and tariffs have been put into effect on copper and many other materials.

Additional measures are now being seriously considered. Legislation has been introduced to tighten the quotas on lead and zinc. Further legislation is pending to set up a system of quotas and price support for fluorspar. Other proposals are under consideration.

However, no consideration has been given to the plight of the domestic sulfur industry, and industry which for the past five years has been subjected to drastic price cutting by Mexican producers and to flooding of domestic markets by foreign sulfur.

On top of this, the industry is now confronted with large Government sponsored sulfur production in France and with the prospect of even greater production of sulfur from sour natural gas in Canada.

The French production is part of a huge industrial complex which is controlled by the French Government by virtue of its ownership of a majority of the stock and which is largely financed by long-term government loans.

In fact, the development of most of the Mexican production was aided by loans from our Government. The Export-Import Bank put up almost $10 million to help some of the sulfur mining companies in Mexico get started in 1954.

By 1958, the Mexican industry, using the same Frasch hot-water process as that developed by the U.S. industry, had captured 16 percent of the U.S. market and 25 percent of the export market for Frasch sulfur. Last year the Mexican producers flooded this country with 600,000 tons of cheap sulfur and the export market with an additional 460,000 tons, all at the expense of the U.S. producers.

To make these inroads, the Mexican industry carried price cutting to an extreme degree. After U.S. producers had been forced to make substantial reductions in their own prices to try to meet this competition, the Mexican producers cut their prices even lower. I understand that the actual price of sulfur is now little above the level in the depression of the early 1930's and that it is selling at the equivalent of a cent a pound.

The loss of business to the Mexicans has been reflected in earnings of the U.S. sulfur industry. Stockholder reports of one domestic producer show a 52-percent drop in net earnings between 1956 and 1958. Another producer saw net income from sulfur sales decline more than 25 percent in the same period. A third producer's net dropped 145 percent from a profitable year in 1956 to a loss of well over one-half a million dollars last year.

As recently as this past July, the largest U.S. producer announced that it had to lay off 10 percent of its Texas labor force and could see no chance of rehiring the workers in the near future.

Yet, all the while, profits and production in Mexico have been increasing. The largest Mexican producer, moreover, announced recently that it plans a further substantial increase in production.

How have Mexicans been able to slash prices and thereby grab so large a share of the market in so short a time?

The answer is cheap labor, cheap shipping costs and special tax advantages.

The cost of labor is one of the largest expenses a mining company faces, and any saving in this area gives a producer a considerable advantage over his competitors.

A comparison of Mexican and United States wage scales is staggering. Trade surveys show that laborers at the mines on the Tehuantepec Isthmus are paid about $1.88 a day, while the rate for a comparable job in Texas and Louisiana is between $16 and $17—about nine times as much.

The Mexicans also have special shipping advantages. Domestic sulfur shipped to consumers on our Atlantic and Pacific coasts must by law be carried in U.S. vessels, which pay high American wages and charge high freight rates. In contrast, Mexican sulfur comes to U.S. ports in foreign vessels which have low wages and freight rates.

The difference in shipping costs is substantial. For example, in the first half

of this year, it cost $6.50 per ton to ship sulfud from Texas and Louisiana to New England. At the same time sulful was moving from Mexico to New England at rates as low as $2.25 per ton.

Other special advantages enjoyed by the Mexican producers include lower property taxes and production taxes of less than one-fourth those paid by U.S. producers.

While the large sulfur mines in Texas and Louisiana can no doubt withstand this onslaught, the smaller mines cannot survive against this cutthroat competition. And once a mine is closed it is almost always lost forever because of the high cost of reopening it.

Mr. Speaker, I submit that to let such mines wither and die is incompatible with our Government's avowed policies of encouraging the development of domestic mineral production and of conserving our natural resources. Nor is it compatible with national security. In peace and war, sulfur is no less essential than oil or steel. It is, in fact, vital to the processing of both these key commodities, just as it is to the making of fertilizer, chemicals, rubber, rayon, paint, pulp and paper, and a host of other necessities.

Although sulfur is seldom seen in the final product which it helps to produce, it enters at some stage in the production or processing of virtually everything we eat, wear or use. Our industry and agriculture could not exist without it. Thus, the maintenance of a sound domestic sulfur industry is a matter of vital national interest.

My purpose in presenting these facts is to draw the attention of everyone concerned with our natural resources to a situation which needs correction.

I strongly urge that serious consideration be given to the establishment of import quotas on sulfur similar to the restrictions placed on foreign oil and to the quotas in force for lead and zinc. I urge also that consideration be given to the establishment of a tariff on sulfur as we have on so many other mineral products. Incidentally Mexico itself, while flooding our country with sulfur, imposes a tariff amounting to about 25 percent of the value of any sulfur we ship to them.

Mr. Speaker, I believe that a quota and a tariff are essential in order to safeguard the domestic sulfur industry from the disastrous effects of substandard wages and preferential shipping rates prevailing elsewhere and to prevent this industry from being permanently weakened from these effects.

U.S. Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three articles by Hugh B. Hester, brigadier general, U.S. Army, retired. General Hester has considerable background in international relations, and I am including with his articles a copy of his biography. His articles appeared originally in Peace Action, an independent publication published in Washington, D.C. The following selections discuss: "A more Realistic Policy Is Needed for Germany," "A Plague on Both Blocs," and "Keep Up Massive Resistance to Brinkmanship":

BIOGRAPHY OF BRIG. GEN. HUGH B. HESTER

Brig. Gen. Hugh B. Hester, lecturer and writer on U.S. foreign policy, was born in Hester, N.C., in 1895. He is a graduate of the University of North Carolina, and has been a graduate student of law and international relations at the University of North Carolina, George Washington University, and the University of Pennsylvania.

When he retired from active military service in 1951, he had behind him more than 34 years of service, with many and varied military assignments. Among the more important of these assignments were: Executive Officer for Procurement in the Office of the Assistant and Under Secretary of War, 1939–40; Chief of Procurement Control of the Production and Military Planning Divisions in the Office of the Quartermaster General, 1940–42; Director of Procurement of Supplies from Australian sources under reverse lend lease and commanding general of General Depot and Base Section Seven, 1942–45; Director of the German food program for the U.S. Military Government in Germany, serving successively under Generals Eisenhower, McNarney, and Clay, 1945–47; Military Attaché to Australia, 1947–48; commanding general of the Philadelphia Quartermaster Depot, 1948–51.

General Hester has received the U.S. Distinguished Service Medal, and he has been awarded the Legion of Honor (officer) by the French Government.

Since his retirement he has undertaken graduate work in international relations at the University of Pennsylvania. He has written numerous articles in such leading magazines and newspapers as the New York Times, the Christian Science Monitor, the Saturday Review, Nation, Progressive, New Republic, and the Churchman. His recent writings include "The Challenge of Our Times," Virginia Quarterly Review, spring issue, 1957, and "The U.S.A., U.S.S.R., and Peace" Meanjin, December 1957 issue (a leading Australian quarterly of arts and literature). General Hester is the coauthor, with Dr. Jerome Davis, of "Making Peace," to be published in the spring of 1959.

A PLAGUE ON BOTH BLOCS

(By Hugh B. Hester, brigadier general, USA, retired)

Before commenting on the present propaganda hysteria over the execution of Imre Nagy of Hungary in particular and on the cold war in general, I want to make it especially clear that I yield to no one in my abhorrence of physical violence and man's inhumanity to man so characteristic of the 20th century, especially so of that part called the Christian World. This abhorrence is based upon participation, as a Regular Army officer, in World Wars I and II and the police action in Korea, and extends to the senseless slaughter of all men, women, children, and enlisted personnel with equal force as it does to the execution of former Prime Ministers and other important people. It also extends to the casualties on both sides, whether Communist or anti-Communist, in the Hungarian rebellion and to the British, French, and Israeli casualties as well as the Arab victims in the war against the Egyptians in 1956. As members of the human race all are brothers; and in the eyes of the truly humane, the lowliest is as important as the loftiest.

It is necessary, I believe, to understand this in order to establish some sense of sanity or basis for balance in the 40-year-old struggle between capitalism and communism. This struggle has taken the form of both a hot war, as when the representatives of the former en masse attacked the nascent Soviet Union in 1918–20, and that of a cold war from that time to the present. As for the current furor over the execution of former Premier Nagy of Hungary (and again I repeat my deep feeling of sorrow that another human being has been sacrificed upon the altar of violence) it is also importance to remember that he too drew the sword and participated in its blood bath. In this participation he probably committed no greater crime than many others; but in the end his fate did not differ markedly from that of most other unsuccessful men of violence.

Former Premier Nagy, like the countless thousands of casualties of many races and creeds, over the past 13 years, was a victim of the cold war between the United States and the Soviet Union. But for this senseless struggle, it is extremely doubtful that there would have been any Hungarian rebellion in the first place; and certainly there need not have been any Russian participation in it. And the current shedding of propaganda tears over these latest victims of violence is not likely to hasten the establishment of freedom in Hungary, but is better calculated to promote the blood bath of world war III; and as a result the lives of hundreds of millions of others, both big and little, will be lost.

Every competent student of international relations knew at the time of the Hungarian rebellion that the Soviet Union could not tolerate the formation of a hostile government on its borders any more than the United States could or would on any of its borders. They also knew that Secretary Dulles' policies of East European liberation without a general European settlement, or German unification inside NATO, were and are impossible of realization without a world war.

FREE ELECTIONS

In the propaganda struggle, liberation means release of forces from the side of one's enemy and the attachment of those same forces to one's own side; and "free" elections are desirable when—and only when—one is certain of a firm majority. For this reason U.S. official policy favors free elections in Germany and Korea, but not in Vietnam; and the Soviet Union favors them in the latter but not in the former two. Morality, unfortunately, has nothing to do with the position of either power on these issues, and it is time to stop the hypocritical pretense that it does.

This is the self-evident truth about power politics under the balance-of-power system. The maintenance of this balance is now the principal function of both the Warsaw Pact and NATO. The crushing of the Hungarian rebellion and the quashing of the Sues invasion are illustrations of this. NATO has not prevented the Russians from marching west to the English Channel since V–E Day any more than it has been the Warsaw Pact that prevented our coming to the military assistance of the Hungarian rebels in October 1956. And to claim, as some do, that this is so—that since the Russians have not not marched west, NATO has therefore prevented it—is to employ in a negative sense the "chicken coop" logic used by Chanticleer in his call for the sunrise. The fear of world war III was the deterrent (if any was required) against such a move in both cases. But fear is a slender, if not broken reed upon which to lean for permanent peace.

Does any informed person really believe that the United States would stand idly by

while the Communists were taking control of France or any other one of her 42 "allies" through violence, as was attempted in Hungary? If so, he hasn't comprehended the meaning of the Eisenhower Doctrine and hasn't yet read Mr. Dulles's speech before the Overseas Press on March 29, 1954, where he stated: "Under conditions of today the imposition on Southeast Asia of the political system of Communist Russia and its Chinese Communist ally, by whatever means, would be a great threat." And he has, also, forgotten about Guatemala, 1954. But no one can so soon have forgotten what happened in Lebanon and Jordan mid-July 1958.

Is not any moralist entitled then to inquire—since the U.S. foreign policies and those of her allies are allegedly based upon moral considerations—just what distinguishes these policies from those of their opponents? Was not the attack on Egypt by England and France in 1956 and the occupation of Jordan by the English in 1958 in violation of their treaty obligations under the United Nations Charter? Were the interventions by the United States in the Chinese civil war, when the President interfered in the Formosa Straits, June 1950, and again in the Lebanon civil war, 1958, any less violations of the U.N. Charter than the Soviet Union's intervention in the Hugarian uprising, October 1956?

ACT OF FORCE

The fact that China could not at that time challenge the seapower of the United States in no way affects validity of the charge that it was an act of war. In truth many students of international relations believe that this was the principal reason for China's entrance into the Korean war; and on this basis they conclude that her action was no more morally reprehensible than that of the United States earlier. Did not the United States again violate its treaty obligations "not to use the therat of force" when she mobilized the Sixth Fleet in the Mediterranean in 1957 during the tensions between Syria and Turkey? And what of the earlier blank check given by the United States and the British to the Lebanese and Jordanian Governments to intervene upon request in this present civil war? A check since honored.

What, the historians of the future have the duty to ask, distinguishes the Truman doctrine of containment in 1947, as modified and accepted by the present administration and its allies from the Holy Alliance of the 19th century, following the defeat of Napolean in 1815? This alliance, under the direction of Prince Metternich of Austria, obligated the reactionary houses of the Hapsburgs, Hohenzollerns, and Romanovs—together with their allies—to oppose all change. This they did, but change proved uncontainable then and must, I believe, prove so again. No nation or group of nations could then, or can now, control the world or prevent change. A world gendarmerie in the days of the rifle and sailing ships proved impossible of achievement; how much more so must it prove impossible now in a deeply divided world with both sides armed with atomic and hydrogen bombs and missiles, and with the ability to use them effectively? The British and American answer to the Metternich policy of the 19th century was the Monroe Doctrine. Unfortunately the answer to the Dulles madness now may be war III.

The failure of political leadership to realize the basic necessity for change—economic, political, and social—is, in the writer's opinion, largely responsible for the world's present chaotic state. Communism is the symptom, not the cause, of man's maladies. The remedy lies in a coordinated global attack on the real enemies of man: poverty, ignorance, and bigotry—not on more propaganda for the containment of the uncontainable. Since neither bloc can win either the cold war or a hot one, why not substitute international cooperation for conflict?

A MORE REALISTIC POLICY IS NEEDED FOR GERMANY

(By Hugh B. Hester, brigadier general, U.S. Army (retired))

Mr. Selwyn Lloyd, British foreign secretary, seems to be afflicted with the same myopia as former U.S. Secretary of State, Mr. Dulles. Just what basis has either for supposing that the Soviet Union is preparing for unconditional surrender in Europe? According to the New York Times, December 5, 1958, Mr. Lloyd is willing to keep German troops out of East Germany after unification, while retaining a unified Germany inside NATO, and Mr. Dulles remains certain that the Soviet Union is frightened and ready to retreat because West Berlin is a showplace for what free men can accomplish.

It would be difficult to imagine a more unrealistic or dangerous appraisal of the power situation than either of these points of view. The Soviet bloc is much stronger than ever before. Even the Warsaw treaty members are more harmonious and unified than formerly, and therefore the treaty stronger, thanks to the determined efforts of the United States and Great Britain to remilitarize the German Reich. A high ranking officer in the Polish foreign office told this writer a year ago that nothing could more effectively chain all of Eastern Europe to the Soviet chariot than the West's rearmament of Germany. Will we never learn?

As for West Berlin being a showplace, it would be incredible if this were not true after the hundreds of millions of dollars poured into that city by the West for that purpose since World War II. This writer, as Food Administrator for the U.S. Zone of Germany, 1945–47, shipped many millions of dollars worth of supplies to West Berlin. No informed person can really believe that freedom had anything to do with this completely artificial situation. Even the slums of dear old London and of many large American cities could be completely removed and made showplaces through a comparable largess. Western capitalism would prove much more convincing to the uncommitted if it would demonstrate its capacity to lead a peaceful rehabilitation and redevelopment program, under the auspices of the United Nations, for a war impoverished world rather than by making a showplace of West Berlin and redeveloping and rearming Germany for further possible military adventures.

Germany cannot be united inside NATO with or without free elections as every properly informed political scientist knows. The West would not tolerate for a moment a rearmed and united Germany, by whatever means, inside the Warsaw pact, and rightly so. A rearmed and united Germany allied to either bloc would constitute a grave threat to the other bloc, and this writer believes to both blocs. For this reason, if no other, it is time to talk sense and stop this propaganda nonsense about free elections which have no relevance in a militarily polarized world.

The British Labor Party's New Foreign Policy Manifesto offers the most sensible plan so far presented by any official and representative group of the West. Disengagement of the military forces of the opposing powers, through the establishment of a neutral zone, mutually guaranteed by both the East and West, is the minimum requirement for peace in this dangerous area of Europe. Much more than this is required, of course as the labor manifesto points out, for peace throughout the rest of the world. Fortunately for the West and the world, Great Britain, unlike the United States, does offer through her Labor Party an alternative to the stereotyped, sterile, inflexible and outmoded foreign policies of Acheson, Dulles, and Macmillan.

This writer would like to supplement the excellent program of the British Labor Party with a more general one. First, a normalization of relations throughout the nation-state system to include: (1) Recognition of all governments actually in control of the instruments of national power, (2) maximization of trade without discriminatory restrictions, (3) freedom of travel, and (4) free exchange of information and cultural achievements. Second, adequate support of a comprehensive rehabilitation and redevelopment program, under the direction of the United Nations, for the rapid reduction of poverty everywhere. Third, universalization of membership in the United Nations, including Formosa and the divided states such as Germany, Korea, and Vietnam. Fourth, a time limit of 10 years for the independence of all dependent peoples with power to choose complete independence, dominion or other status within a larger unit. Fifth and finally, the immediate and permanent cessation of all atomic tests for weapon purposes, the cessation of atomic weapon production and destruction of present atomic weapon stockpiles, including bases and all means designed for their use and delivery, and as rapid and complete a reduction of the munitions industry and military forces of every kind as internal security will permit.

KEEP UP MASSIVE RESISTANCE TO BRINKMANSHIP

(By Hugh B. Hester, brigadier general, U.S. Army (retired))

It will be a tragedy of the first magnitude if the press, radio and TV commentators, and the public—now aroused over the dangers of brinkmanship—relapse into the lassitude of complacency as a result of the temporary relaxation of tensions in the Far East or elsewhere. Mr. Dulles, for tactical reasons alone, has bent, but not changed, before the storm of protests over Quemoy and Matsu that amazed Vice President NIXON and alarmed President Eisenhower. This is an old lawyer trick of Mr. Dulles, appearing to yield before force in order to create hope and gain the sympathy of an obviously frightened world, while surrendering nothing of importance.

NO SUBSTANCE IN OFFER

Take a look at his proposal for the Far East. If China would renounce force to liberate two of her principal ports, thin out her forces opposite Quemoy-Matsu and surrender her claim to Formosa—a claim which Churchill, Chiang Kai-shek and Roosevelt agreed to at Cairo, 1943; Atlee and Truman reaffirmed at Potsdam, July 1945; and General MacArthur underwrote by directing Japanese forces on Formosa to surrender to the Republic of China, September of the same year—Mr. Dulles indicated he might attempt to secure Chiang's approval to thin out his forces inside two important Chinese harbors: Amoy and Foochow. Oh, yes, and Chiang might consent not to take China alone. Both he and the Secretary agree now to rely to some extent upon a Chinese revolution for help. And presumably, the Secretary, as usual, obligates the United States to supply the wherewithal with which to finance this subversion. Shocking, is it not? Since only the Communists are supposed to resort to such crude immoralities.

TWENTIETH-CENTURY HOLY ALLIANCE

No; Mr. Dulles has not changed. He is still determined upon the destruction of evil as he sees evil from his Olympian heights, even though it should incinerate the human race. Before the Overseas Press, Washington, D.C., March 29, 1954, he said: "Under the conditions of today, the imposition on south-

east Asia of the political system of Communist Russia and its Chinese Communist ally, by whatever means, would be a great threat."

Referring to this a few days later, this writer in a private memorandum circulated to key policymakers, stated: "The key words, the fateful phrase 'by whatever means' is a new policy, a new departure, and one never taken before by the United States"; and asked the following questions: "Is this the 20th-century edition of the Holy Alliance of the 19th century? Are all changes of a political and social character going to be denied? Is self-determination to be abolished as a legitimate objective of people? Is the status quo to be frozen in the name of freedom?

CAN WIN A HOT WAR?

For years this writer has feared that the present Secretary of State and his immediate predecessor, Dean Acheson, were pursuing national policies which could only lead to world war. But it remained for Mr. Dulles himself to disclose that he considered the dangers of the cold war greater than those of a hot one. It is now reported (New York Times, June 27, 1958) that he told a committee of the Congress, "I think we would win a hot war, but I don't know if we will win this cold war or not," and continued, "but as far as the defense of the principles and ideals for which this country has stood from its beginning * * * they are, I believe, in greater jeopardy from a cold war than from a hot war."

PERTINENT NOTES IN DULLES' BIOGRAPHY

According to John Robinson Beal's authorized biography of Secretary Dulles, assurances were given Chiang Kai-shek of U.S. defense of Quemoy and Matsu in connection with both the treaty with him and the Formosa resolution approved by Congress, 1955 (See I. F. Stone's Weekly, Washington, D.C. Oct. 6, 1958, and the Beal biography, pp. 220–1 and 226–4). Should not this be the subject of a full congressional investigation to determine what secret commitments were given, and by whom, to Chiang Kai-shek, or may have been given to some of the others of our 40-odd allies? Are not the American people (those who will be the casualties) entitled to know what commitments, secret or otherwise, have been made for them?

The two-dimensional approach, the black and white, the true and false, the God and Devil, theory of international relations, was bluntly exposed in a widely syndicated State Department paper, August 10, 1958, under the heading, "U.S. Policy Statemen on Nonrecognition of Communist China." This statement studiously ignored the efforts of the United States and the anti-Communist world to "destroy the Communist baby in its crib" á la Churchill, 1918 and since, by (1) a hot war, 1918–20; (2) food blockade, 1918–19; (3) undertaking the supply and financial support of the counter-revolutionary forces—the White Russians; (4) nonrecognition of Russia by United States, 1917–33; (5) trade restrictions; (6) liberation of East European satellites through subversion; (7) encirclement with a thousand or more military bases; (8) a vast military-alliance system; (9) nonrecognition of China by United States; (10) intervention in the Chinese civil war by the U.S. 7th Fleet, June 1950 and since; (11) denial of China's legitimtae seat in the Security Council and refusal of her admission to the General Assembly of the United Nations; and finally, (12) the maintenance and complete logistics support of Chiang Kai-shek by the United States as a pretender to power over the mainland of China and in his civil war with Red China.

In a persuasive speech before the National Council of Churches conference at Cleveland, Ohio, November 18, 1958, Mr. Dulles again sought to wrap his foreign policies in the cloak of high morality and those of his opponent in base immorality. And again he deliberately ignored the many millions of dollars which the U.S. Government is expending annually through Central Intelligence, Army, Navy, Air Force, and Department of State, to subvert the Soviet system. Here again he attempted to leave the impression that only our opponents indulge in such dirty work. Unfortunately for him, Mr. Walter Lippmann in his widely syndicated column August 5, 1958, stated: "Indirect aggression—that is to say, propaganda, infiltration, bribery, subversion—is an old instrument of power politics. * * * Both sides use it."

In stating in the same speech in Cleveland that international communism "won control of all or major parts of what were 16 independent nations with a total population of 900 million," Mr. Dulles not only failed to name them, but failed to note that Estonia, Latvia, and Lithuania, were part of Russia long before Arizona, California, New Mexico, and Texas became parts of the United States, and by the same method—war.

The fact of the matter is that most of the other countries of eastern Europe now within the Soviet bloc are the result of a war against the Soviet Union in which their governments participated as aggressors. It is probably true also that the people of these countries have as much freedom now as they had before World War II and as they would have after another war of liberation. Such is the nature of war. And certainly Mr. Dulles knows that Chinese communism is not the product of an international conspiracy any more than democracy, wherever it exists, is the product of an international conspiracy. Both, of course, are products of ideas widely held in a disastrously divided world.

KEEP UP THE PRESSURE

So long as Mr. Dulles remains in his present office, the best hope for peace will continue to lie in massive resistance to his dangerous policies. And even the success of this may in the end depend more upon the rationality and forbearance of our opponents than upon American leadership: a slender thread indeed upon which to rely in a world gone completely mad with military power.

Unless and until the top leaders of the West are willing to sit at the conference table with the top leaders of the Communist bloc to discuss their problems and normalize their relations at all levels, including recognition of China and her admission to the United Nations, God Himself cannot prevent the catastrophe of world war III. Positions of strength through an unlimited arms race and bloc alliance-systems have always led to war. This time it will, also, lead to mutual suicide.

A HIGHER LOYALTY

"Our country * * * may she always be right" is still sound, but our Government right or wrong is quite a different matter in the thermonuclear age. Man owes a higher loyalty to the preservation of his species than to any government group: local, State or national, and massive opposition to unsound and dangerous foreign policies of one's government is not likely to bring war (as Mr. Dulles asserts) but to prevent it; that is, unless he is prepared to provoke one in order to silence dissent. His policies continue to constitute our greatest threat of war. Continuous and vigorous opposition to them, not only is not disloyal, but constitutes the highest possible loyalty both to the Nation and to humanity.

Hamtramck Little Leaguers World Champions

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. MACHROWICZ. Mr. Speaker, while all the attention is drawn to the pennant races in the American and National Leagues for baseball supremacy, one title was decided Saturday, August 29, at Williamsport, Pa. On that date the two remaining teams, representing their respective Little Leagues, from among over 5,000 such leagues across the United States, met in their world championship game.

The two contenders were representatives of the Little League of Auburn, Calif., and Hamtramck, Mich., which is located within my congressional district.

The day was a historical event for Michigan. Though Hamtramck teams have frequently and habitually reached the playoffs. Never before has a Michigan Little League team attained such a high position in Little League play.

In winning their regular league games, these boys have made a remarkable record in attaining their victories. The spirit of competition was keen and their team play was unmatched. In the district, sectional and regional finals they swept through all opposition, scoring over 50 runs while holding the opponents scoreless. Only in the last regional game was the opposition able to score.

In gaining the right to play in the championship game, the Hamtramck boys had to win over the team representing Hawaii. This they did by a score of 7 to 1.

The final game was played in the newly dedicated Little League Stadium. Presiding over the dedication ceremonies was Gov. William Lawrence of Pennsylvania, and the stadium honors the memory of Howard J. Lamade, a former director of Little League.

The game was witnessed by approximately 10,000 people, among which were about 150 from Hamtramck, led by Mayor Albert J. Zak, and including many prominent civic leaders as well as the parents of the players. Among the spectators was also another Hamtramck champion, Miss Joyce Pniewski, newly crowned national women's public parks tennis queen, who came to cheer her brother, Greg, Hamtramck's catcher.

One New York television station taped the entire game for later presentation, which was seen the next day in Hamtramck.

The spotlight glitters on Arthur Deras and Sydney Cline. These two have been the backbone of the team in hoisting them to the championship game. Deras has pitched and won all his tournament games by shutouts. He averaged 2.5 strikeouts per inning and allowed only 4

hits in 36 innings as a pitcher. He also was potent with his bat, getting 24 hits in 12 tournament games for a comfortable .686 average. Twelve of his blows were last seen going out of the park for homers. He knocked in 23 runs.

On the other hand, Cline, too, had pitched six victories, four of them shutouts. But while these two were hurling the team to victory, the efforts of the other players should not be overlooked.

The championship game turned out to be a slaughter of the Auburn, Calif., team. The final score was 12 to 0. The Hamtramck team lashed out 13 hits off Bob Sunada, an American-born Japanese youngster who never had lost a game in 4 years of Little League pitching.

The game was pitched for Hamtramck by Deras, who added 13 more strikeouts and slammed a 3-run homer and upped his runs-batted-in total to 26 in championship play.

I am happy to extend my most sincerest congratulations to the boys of the team for their wonderful performance in Little League play, an effort crowned by becoming world champions. I would also like to extend these congratulations to the manager and coaches of the team for their interest in youth guidance and their assistance in promoting such wonderful teamplay. I congratulate the parents of these players for permitting the boys to partake in organized play, where they were able to learn the need for working together to obtain the desired victories. Lastly, I wish to congratulate the Hamtramck Recreation Commission for providing the necessary equipment and facilities to permit these boys to play under supervised leadership, thus taking them off the streets and out of trouble.

Hail to Hamtramck, the city of champions.

Impact of the Space Age on Society

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent address by an outstanding U.S. scientist of the space age:

IMPACT OF THE SPACE AGE ON SOCIETY

(By Addison M. Rothrock, Office, Program Planning and Evaluation, National Aeronautics and Space Administration, presented at the University of Maryland Space Education Institute, March 2-May 18, 1959)

You people have come here tonight to learn more concerning space, what we are doing, and plan to do in space, how we propose to do it, and the effect of these activities on us as individuals and on our society as a whole.

I hope to describe to you, in a general way, the impact of man's present and expanding activities in space on our society. I should also like to discuss with you the manner in which space flight fits into our overall technological development.

I propose that we shall examine this subject as answers to four questions:

1. What do we mean by space?
2. What is the space age?
3. What will be the effects on us as individuals and as a society?
4. What are our immediate responsibilities in answering the challenge of space exploration?

If we can answer these questions with reasonable satisfaction, or if we can determine the questions which must be satisfied to provide the answers we will be in a much better position to intelligently face the problems which we, as a nation, and as a society, are facing.

WHAT DO WE MEAN BY SPACE?

The answer to our first question, "What do we mean by space?" is fairly simple. We mean the universe beyond the atmosphere surrounding our own planet. Using this definition, the scope of space is infinite.

Much was learned of space many years ago. During the third century B.C., Eratosthenes of Alexandria made sufficient measurements to estimate the earth's diameter as about 25,000 miles. In the next century, Ptolemy estimated the distance from moon to earth to be 59 times the radius of the earth. Both figures are close to the truth. Following the decay and destruction of the Roman empire, the Greek learning was assimilated by the Arabs. By the ninth century A.D., Baghdad had become a center of learning, and here the Arab astronomer Al-Battani added to the astronomical tables of Ptolemy.

The study of space was not undertaken to any great degree by our own developing Western civilization until contacts were made with the Arabs through the Moorish invasions and through the Crusades. With the decline of the intellectual movement in the Islam world came the growth of it in our own. We term the first accelerative period of this growth the Renaissance. Although started in the Italian peninsula, the secrecy self imposed by Leonardo da Vinci, and the fear of learning that led to persecutions such as those imposed on Galilleo and Bruno caused the center of scientific thought to move to Northern Europe and to England. In the studies of the heavens we now have the names of Copernicus, Brahe, Kepler, Newton, and a host of others until, by the middle of our century, man had made extensive measurements of space, and had learned much about it. But other than light or radio waves, man had placed nothing in space. Then on October 4, 1957, the Russian sputnik was launched and the space age, was in being.

WHAT IS THE SPACE AGE?

The space age is the name that we have applied to that period of technological development that has let man start his investigation of the universe from beyond the limitations of the earth's atmosphere.

Man's scientific and engineering progress has proceeded, continuously, and accumulatively. The satisfying of our desire to know and our desire to do has passed from one civilization or group to another, and, fortunately, though civilizations have disappeared or stagnated, their accumulated knowledge has not.

A tremendous breakthrough (and it is a term that I don't like to use) occurred in our own civilization. During the period covered by the 16th through the 19th century, man realized the dependence of scientific progress on experimentation and further realized that science and engineering could be used to produce devices that not only supplemented, but far surpassed in output, what man could do with his own hands.

The expansion of the experimental method from its accelerative growth in the 16th century gave us the Newtonian mechanics of the 17th century, the start of modern chemistry in the 18th century, electricity and thermodynamics in the 19th century, and nucleonics in the 20th century.

Through the 16th, 17th, and 18th centuries, progress was made by individual contributions either in the field of science, man's desire to know, or in the field of engineering, man's desire to do. The scientist or engineer might be rich or poor. Charles II of England had his own laboratory at Whitehall and, according to Macauley, "was far more active and attentive there than at the council board." Macauley states further: "The spirit of Francis Bacon was abroad; a spirit admirably compounded of audacity and sobriety. There was a strong persuasion that the whole world was full of secrets of high moment to the happiness of man, and that man had, by his Maker, been entrusted with the key which, rightly used, would give access to them."

"Progress in science," quoting from Forbes, "was not achieved by the universities which remained in the grip of Aristotelian logic up to the age of Newton, but by practical engineers and by the learned societies." Formal professional education was, for the most part, limited to law, medicine, and the ministry. However, it became necessary to organize technical learning, and this could be done only in the universities. First in Germany in the late 1700's; and then in the United States, starting with the founding of Renssalaer Polytechnic Institute in 1824, colleges for engineering and scientific learning were established. The classical universities admitted the sciences to their curriculums, but for some time were loath to add engineering. Only in Germany and the United States did the idea of extensive engineering and other technical schools firmly take root. And the United States far outstripped Germany and all of Europe in this endeavor. England chose, for the most part, to substitute trade schools connected with her industrial centers. In the development of technical schools, Russia more recently entered the lists.

Early in the 20th century technological progress became increasingly dependent on industrial, government, and university laboratories. And now a new situation confronts us. The costs, and risks in research and exploitation of certain developments require that government, that is the people as a whole, assume responsibility for the development. The outstanding example is application of nuclear energy to man's benefit.

In space exploration we are in that phase of technological development in which the effort required is of such magnitude that it can be handled only by a large national effort. For adequate progress a minimum of about 200,000 persons must be assigned to the job. This figure represents an annual expenditure of three quarters of a billion to a billion dollars. It must include a continually increasing proportion of our scientific and engineering personnel. Again, this represents about one-third of a percent of our total work force. This figure seems small, but as a unified effort on a project whose benefits cannot be too fully described at this time, it looms large in the public mind. There are few nations who can, or feel they can, afford this kind of expenditure—United States, Russia, and possibly before long Red China. The effort requires a very large population or a lesser, but still large, population accompanied by a high degree of industrialization. This combination is currently limiting and will stay limiting as long as most countries require a large proportion of their working population to provide the bare necessities of life. In Asia,

for instance, about three-fourths of the population is occupied in the production of food, in Western Europe, about one-third, in the United States, one-tenth or less. I do not have the figures for Russia.

If the space effort must be so great and if the benefits cannot be clearly cataloged, why should we concern ourselves with it? Now I must go to personal opinion. If we, as a nation, and a people, want to continue to grow in moral and physical stature, I don't think we have a choice. I think history shows clearly that a nation or people will grow in knowledge and accomplishment, or its culture and standards will start downward to be overrun by another people that has the virility to drive forward. The seeds of decay of a civilization are internal. The final military overthrow is a result, not a cause. It happens after the people have ceased to progress. The fact that the growth effort must now be on a great technological scale is a fortune of our time.

WHAT WILL BE THE EFFECTS OF SPACE FLIGHTS ON US AS INDIVIDUALS AND AS A SOCIETY?

The most immediate effect is that of national prestige. It is an intangible, but I think most of us agree an important aspect. There are many nations who are in the process of deciding whether they will follow our path or Russia's. And we must remember that to a people who are ill fed, ill clothed, and ill housed, the removal of these deficiencies is their first want, though democracy may be their goal. These uncommitted or partially committed nations are watching the progress of these two powerful nations, one under a Government responsible to the people and the other under a government responsible only to itself. To these people, progress on man's newest frontier is a visible symbol of the rapidity of industrial progress—the only means by which vast poverty can be removed.

Effects of direct benefit to us will, as has been well publicized, be first realized in the field of communication, weather forecasting, and, to a certain extent, in navigation. With the use of earth satellites as receivers and transmitters, worldwide radio and television will be possible, and if, intelligently and wisely used, will be beneficial. As long as we have a world in conflict earth satellites will provide surveillance not otherwise possible.

Mostly during the next several years we will launch highly instrumented vehicles into space to make and record measurements. For the first time, we can make them outside the earth's atmosphere and under varying degrees of the earth's gravitational and electromagnetic fields. For our immediate benefit, we will study the earth's atmosphere and its movements and changes which we term "the weather." But we will also be studying our solar system, our galaxy, and to the extent we can, the universe as a whole. We will get data to prove or disprove existing theories, to suggest new theories. We do this not for the purpose of theorizing, but for the purpose of knowing. We do not know until we check with facts. Quoting from Einstein: "The most important demand to be made of every scientific theory will always remain—that it must fit the facts." And from Pasteur: "In science, one must always doubt until facts confirm." So from these data gathering spacecraft, we will increase our knowledge and remove uncertainties. We will also increase our appreciation of the vastness of the universe.

Beyond these types of benefits lies the unknown. Man's scientific and engineering exploits have always led to his betterment. At the start of a new period of exploration we do not know, except in a vague way, what the benefits will be. That we will travel to and from planets in our solar system I am sure. Exactly how it will benefit us I cannot tell you. In trying to predict far into the future, we are always handicapped by our inability to judge the cumulative effects of progress in the many different fields.

WHAT ARE OUR IMMEDIATE RESPONSIBILITIES IN THE SPACE AGE?

We now come to our last and possibly, most important question, "What are our immediate responsibilities in the space age"? I think the first thing for us to realize, is the impact of scientific and technological progress on our civilization. I use technological, rather than engineering, to include the application of the life sciences as well as the physical sciences. Science and technology is having, and will continue to have, an increasing influence on our culture, largely because of what it permits us to do. We will not stop technological advance and it will, therefore, continue to affect us. Some effects will be good, some will not be good. Unfortunately, the debits generally become effective in considerable degree before we are fully aware of them. But the decisions here are up to us as individuals, or through our elected representatives, up to us as a nation.

I think our immediate responsibility lies mostly in the education we are giving ourselves and that we are giving our children. I do think we should fully realize that trained scientists and engineers are a national asset and that the supply is limited first, by the number of children capable of adequately learning science or engineering, and second, by the number of these children who study and follow science or engineering.

Using a broad definition, an education should give a child spiritual and emotional growth and growth in his knowledge and his ability to reason. Although the emphasis in these separate factors may, in individual cases, be placed on only one, separation of them should not be too great. In teaching those things which appeal to the spirit or to the emotions, it is difficult for us to agree on what should be taught. I don't know the answer other than to try to broaden our own understanding through our own living and through adult study, that is, through reading.

We cannot, in our education system, teach all children sciences, but I think there should be an attempt to teach what science means, the importance of experimentation as a means of increasing our knowledge and understanding. We should appreciate that all our material progress, and I firmly believe that material progress benefits our spiritual progress, is dependent on our ability to experiment and learn from experimentation. Quoting again from Einstein: "Pure logical thinking cannot yield us any knowledge of the empirical world; all knowledge of reality starts from experience and ends in it."

We must appreciate that to advance, we must investigate and further appreciate that our investigations because of the very nature of science and engineering will become successively more expensive. For this reason, the exploration of the new frontier of space will be accomplished by us as a Nation, or we must leave the field to others and these others will not be nations smaller than we are. It is true that we will want and will get assistance from other nations, but, for the free world, the major responsibility is ours.

We must help our children to know, particularly when, as adolescents, they are deciding on careers, that an understanding of the basic principles in science is the soundest training for engineering that can be had. This is particularly true, because of the rapidity with which progress is now made. In my own experience in the field of flight propulsion, this fact has been particularly exemplified. In a period of 20 years our major research effort has successively included the reciprocating engine, the turbojet, the chemical rocket, the nuclear turbine or rocket, and more recently, the ion or plasma jet. This progress required extensive coverage in mechanics, thermodynamics, fluid dynamics, materials, chemistry, nuclear physics, and electronics, all applied separately and jointly.

I think we should try to broaden the overall base of our education with more emphasis on history as well as science. We should make more of an attempt to teach our children and ourselves the growth of man's progress, and the things that resulted in this growth. I know that this is difficult because, again, we find it difficult to agree on what should be taught; and, in spite of our progress in learning, there are still lurking fears to the acquisition of knowledge.

So I think our immediate responsibility is largely one of appreciating the necessity and inevitability of technological progress and the realization of the need to sponsor it, as a nation, and to guide it to our betterment.

Looking back to the end of World War II, I am afraid that, as has happened before, we thought we had arrived in our civilization at a point where we could spend our time enjoying the fruits of our labor. Instead, we find ourselves living in a time when people whose civilizations have tended to remain dormant for many generations, or even centuries, are again on the march. We must help to show them the way, and part of this is to lead in the exploration of man's newest and most extensive frontier—the exploration of space.

BIOGRAPHICAL SKETCH OF ADDISON M. ROTHROCK

Addison May Rothrock, scientist for Propulsion in the Directorate of Program Planning and Evaluation, National Aeronautics and Space Administration, was born May 12, 1903, in West Chester, Pa. He graduated from the Pennsylvania State College in 1925 with a bachleor of science degree; he remained there for the succeeding year as graduate assistant in the physics department.

In 1926 Mr. Rothrock joined the staff of the National Advisory Committee for Aeronautics (NACA) and was assigned to the Langley Aeronautical Laboratory at Langley Field, Va. His work there was chiefly in the field of fuel combustion in diesel engines and combustion and fuel rating in spark ignition engines. He has been active in the work of the Coordinating Research Council in these fields, and has served on many committees for the Council.

In 1942 he was transferred to the NACA Lewis Flight Propulsion Laboratory at Cleveland, where he became Chief of the Fuels and Lubricants Division. In this capacity he supervised NACA research in the field of high performance aircraft fuels and lubricants. In 1945 he was promoted to chief of research at the Lewis Laboratory, and in 1947 he was appointed Assistant Director for Research and was transferred to the NACA headquarters in Washington. When on October 1, 1958, the NACA became the nucleus of the newly organized National Aeronautics and Space Administration, Mr. Rothrock became Assistant Director of Research for Power Plants in the Aeronautical and Space Research Directorate.

Later he was named scientist for propulsion in the newly termed "Directorate of Program Planning and Evaluation." In this capacity, Mr. Rothrock applies his broad knowledge of propulsion and propulsion systems to the planning of the Nation's program in space technology.

Mr. Rothrock is a member of the American Rocket Society, a fellow of the Institute of Aeronautical Sceinces, and a past member of the Society of Automotive Engineers, of which he was vice president in 1949. In 1938 he was awarded the Horning Memorial Award by the Society of Automotive Engineers. He is a member of the Pennsylvania State College chapter of Sigma Xi and Sigma Pi Sigma.

Final Report, 1st Session, 86th Congress of Hon. John H. Dent, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit my newsletter for the month of September 1959:

FINAL REPORT, 1ST SESSION, 86TH CONGRESS

This report will try to summarize our efforts, good or bad, as this session comes to an end.

One thing that will stand out of course will be the record of Presidential vetoes.

In every case of a veto the record shows that the item vetoed meant "something for the people."

The ill-advised and unsubstantiated claims of this administration that such vetoes were in the interest of a balanced budget and anti-inflationary period are not borne out by the record.

The items vetoed included housing, public works, area redevelopment, municipal facilities efforts, etc. Some were vetoed directly, others by veto threat.

The increased interest rate and increased foreign aid demanded by the President would pay for all the housing, area development, and public works supported by the Democratic Congress.

Never in our recent history have profits and property been given such a high priority over people as they have during the session of Congress by a President of the United States.

These are the acts passed by your Congress and the record on the major issues:

TAXATION

Corporate income tax: 52 percent rate extended to next July 1.

Excises on alcoholic beverages, autos, auto parts and accessories, and cigarettes: Extended to next July 1.

Tax on local telephone service: Repealed as of next June 30.

Transportation tax: Reduced from 10 to 5 percent as of next June 30.

Life insurance company taxes: Income tax rates adjusted and new levies imposed on underwriting profits and investment income to raise $215 million. Gas tax was increased one-half cent for 22 months.

BUSINESS AND GENERAL

National debt limit: Raised $2 billion to $285 billion, with temporary increase to $295 billion until next June 30.

Hawaii: Admitted as 50th State.

Airport program: $63 million matching Federal aid to States authorized annually for fiscal 1960 and 1961.

Antitrust: FTC cease and desist orders under Clayton Act made finally effective 60 days after issued unless stayed by appeal; FTC permitted to seek penalties for first violation of such orders instead of waiting for second offense.

Bank reserves: Federal Reserve Board permitted, but not required to allow member banks to count all or part of vault cash as reserves; Fed also given discretionary power to ease individual bank reserve requirements in special situations and to eliminate "reserve city class" of members within 3-year period.

Renegotiation Act: Extended to December 31, 1962, with provision for recovery of excess profits on defense contracts. New study of procurement and renegotiation policies authorized.

Veterans' housing: $100 million in direct housing loans authorized; GI mortgage rate raised from 4¾ to 5¼ percent.

TVA: Authorized to issue up to $750 million in revenue bonds on its own for power facilities; territorial expansion forbidden.

Rail workers: Pension and jobless benefits increased under Railroad Retirement and Unemployment Acts.

Labor: Passed Landrum-Griffin bill.

Public works: Was vetoed two times—finally passed over veto.

Passed one-half percent increase for family bond interest only.

Finally passed housing bill as President wanted it—leaving out school classrooms.

NATIONAL SECURITY

Foreign aid: $3.5 billion authorized, including $2.1 billion in military assistance.

Loans of Naval vessels to Italy and Turkey: Approval extended to 1964.

Draft Act: Continued to July 1, 1963.

Navy ship construction: $110 million authorized for fiscal 1960 to develop advanced vessels.

Import duties and taxes on scrap metal: Suspension continued to next July 1.

Subscription to International Monetary Fund: Increased $1.4 billion; to World Bank—increased $3.2 billion.

Above and beyond all other legislative actions by this, the 86th Congress, history will record the Landrum-Griffin bill as the most restrictive and confusing Act ever passed by a U.S. Congress against the free American labor movement.

This act passed final the Friday preceding Labor Day with some of the most critical charges ever made on the record, against labor leaders, labor practices, and in general, the unions of this Nation.

On Monday, September 7, 1959, 2 days later, a less vociferous and somewhat calmer Congress passed the following resolution (unanimously):

"A TRIBUTE TO LABOR

"Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent for the immediate consideration of House concurrent resolution, as follows:

" 'Whereas American labor has raised its standards of productivity to heights unequaled in world history; and

" 'Whereas the efforts of American labor have brought to this country a standard of living that has no parallel; and

" 'Whereas American labor has served the Nation in peace and war; and

" 'Whereas American labor has been a bulwark of freedom; and

" 'Whereas the first Monday in September is traditionally set aside to commemorate the services of working men and women to our Nation; Threfore be it

" '*Resolved by the House of Representatives (the Senate concurring)*, That the Congress does hereby express its deep realization and appreciation of the basic role that labor plays in our economy and of the contributions that American working men and women have made to America's well-being.'

"The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

"There was no objection.

"The SPEAKER. The question is on the House concurrent resolution.

"The House concurrent resolution was agreed to, and a motion to reconsider was laid on the table."

Not doubting the sincerity of the sponsors and of Congress as a whole, one could not help but note the sober, serious and subdued atmosphere in the House on Labor Day.

To one who had heard the speeches, the Jack Paar show, the President's speech, the McClellan hearings, the radio, television and newspaper coverage of the preliminaries preceding the final passage, the passage of the above resolution was an example of the conflicting emotions that dictated the final vote on the Landrum-Griffin Act and also it showed the neat dexterity and shifty footwork of the American politician.

I don't think the American workingman will be fobled by this resolution because if the American workers measures up to the praises of this resolution, he could not be what the Landrum-Griffin bill says he is, a second class citizen who needs to be told whom he can elect to office, how he must spend his money, when and where and what he can say to his fellow worker, what kind of a contract he can negotiate with his employer, how much his union can loan him for an emergency, gives him the dubious privilege of being an accuser and informer, with the promise of secrecy and reward, even if his union officers have not violated the law, but are about to violate and he has no proof nor does he need evidence of wrongdoing.

It further denies him the right to make and carry his own signs proclaiming unjust unfair treatment by his or any other employer, but he may pay for advertisement in a newspaper.

It gives him the right to coerce, intimidate and bulldoze his fellow worker any time, any place if he is attacking and belittling his own union officers, but makes it a crime if he does the same thing against an unfair employer.

This new "Magna Carta" as one Congressman hailed it, gives labor a few more rights that might be considered by the fair-minded American when he is analyzing this act of Congress.

It allows all workers on a construction job to refuse to go through a picket line at a construction except a truckdriver who belongs to the union.

It forbids all other unions except the garment workers from signing a hot cargo contract.

It forbids all other unions except certain trade unions in the construction industry from requiring union membership a requisite to work for any given employer.

It raises the dues of every union in America in order to pay lawyers, accountants, etc. if that union doesn't already have such services.

In every section of this so-called labor reform bill, it provides for attorney fees (out of the workers' pockets) and further excludes from the reporting provision all attorney actions in labor relations under the broad term of "attorney-client" relations.

No person wants to disrupt this great institution of attorney-client relationships, but this lets management continue the abuses practiced by the Sheffermans, Teitelbaums, and others whose actions were exposed and condemned by the McClellan committee.

Every union in this country will be compelled to revise or change its constitution and/or bylaws or find itself, its officers, and even its members in contempt of the law.

Last, but not least, it wipes out the one saving grace of the Taft-Hartley Act which gave union members as well as those seeking to join unions the protection of the services of the Federal courts and turns back to tender mercilees and perilous justice so often found in local courts.

This power, long sought by the NAM and chamber of commerce can make a mockery out of any attempt by the underpaid, underprivileged workers in our Southern States.

Uncurbed, unrestricted use of the injunctive weapon has and will again create abuses against free labor that will not only stop any advances in their workers' living standards, but may very well lower them.

With all due respect and my personal high regard for the sponsor, Majority Leader JOHN MCCORMICK, of Massachusetts, I can't help but compare the high sentiments on Labor Day and the low esteem contained in the Landrum-Griffin bill 2 days previous when I

think of the American worker, your father and mine, this week of Labor Day, Year of our Lord, 1959.

Sincerely yours,

JOHN H. DENT,
Member of Congress.

The American Bar Association Resolutions Regarding the Supreme Court

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the text of an address by H. H. Nordlinger, a member of the New York bar, delivered at the New York State Bar Association summer meeting at Saranac Inn, New York, on June 27, 1959, together with the remarks of Robert M. Benjamin, both of which appeared in the New York State Bar bulletin, was as follows:

THE AMERICAN BAR ASSOCIATION RESOLUTIONS REGARDING THE SUPREME COURT

(By H. H. Nordlinger, member of the New York bar)

On the first page of the news section of the New York Times of Sunday, February 22, 1959, there appeared a story reading in part as follows:

"The governors of the American Bar Association gave their support today to broad recommendations for congressional revision of recent Supreme Court decisions relating to communism. * * *

"The report avoids any generalized attack on the motives of the Supreme Court Justices, as some other recent criticism of the Court has done. * * *

"Nevertheless the report is highly critical of a long list of decisions. It urges Congress to reverse them.

" 'Many cases have been decided in such a manner as to encourage increase in communistic activities in the United States,' the report says, 'although those cases might easily have been disposed of without so broadly limiting National and State security efforts.

" 'Our international security has been weakened by technicalities raised in judicial decisions which too frequently in the public mind had the effect of putting on trial the machinery of the judicial process and freeing the subversive to go forth and further undermine our Nation.' "

The report referred to bears date February 1959 and is entitled "Resolutions and Report of the Special Committee on Communist Tactics, Strategy, and Objectives." It was transmitted by the board of governors to the house of delegates with the following statement:

"The board of governors herewith transmits to the house of delegates the report of the special committee without any deletions or alterations excepting a minor correction in recommendation No. 1.

"The board recommends approval by the house of the several recommendations in the report and their transmittal to the Congress of the United States in order to correct legislative defects in the field of internal security revealed by particular decisions cited in the report.

"In making its recommendations for approval, the board does not in any way intend to indicate censure of the Supreme Court nor an attack upon the independence of the judiciary. Indeed, the obligation of the bar to defend the Supreme Court as an institution is emphasized in the first resolution proposed by the committee's report.

"The recommendation for approval, in the case of this report as in the case of all other reports of association sections and committees, does not constitute endorsement of statements in the report itself, such statements being those of the individual members of the committee."

The matter came before the house of delegates on February 23, at 2 p.m. Arthur J. Freund, of St. Louis, moved that consideration of the resolutions be deferred until the following morning, saying that the proposed matter was one of the most momentous which had come before the association for many years and that he doubted whether any considerable number of the members had read the report. The motion was carried; but when the matter came up at 10 o'clock the following morning, a moton by Orison S. Marden, of New York, to postpone the matter further until the next meeting of the house of delegates was defeated and the resolutions, in slightly modified form, were carried.

While there is naturally no way of knowing whether the action of the American Bar Association correctly represented the view of the American bar, it was greeted with disapprobation in various professional quarters, both organized and individual. I speak only of those which have happened to come to my attention. The New York City Bar Association passed a resolution[1] making it clear that it disassociated itself from any express or implied criticism of the Supreme Court, stating that the association "deplores and condemns any attempt to create or give impetus to any public impression that there exists an attack on the Supreme Court of the United States by the organized bar." A number of members of the American Bar Association—most of them without publicly stating any reason for doing so, but presumably because of displeasure at the action of the association—resigned from membership in the association. The Committee on Federal Legislation of the New York City Bar Association issued a reasoned statement analyzing and disapproving of the action of the American Bar Association. Thirty-five law professors at the Columbia, Cornell, Harvard, Pennsylvania, and Yale Law Schools sent a telegram to Senator EASTLAND, chairman of the Senate Judiciary Committee, opposing the legislation which had been introduced in Congress to implement the action of the American Bar Association. The signers of this telegram included the deans of Columbia, Yale, and Pennsylvania Law Schools, and acting dean of Harvard Law School.

Mr. Malone, the respected president of the American Bar Association, has been busy since February explaining that neither the board of governors nor the house of delegates took any responsibility for the report, but limited their formal action to approving the proposed resolutions. Mr. Malone was frank enough, in one of the very speeches in which he did this, to say:

"In all fairness, I must confess that to an outsider the distinction between resolutions adopted by the house, which represent the position of the association, and the report of a committee which accompanies proposed resolutions to the house and which reflects only the views of committee members who sign it, is quite finely drawn and likely to result in confusion." (American Bar Association Journal, May 1, 1959, p. 346.)

There can be no doubt that in the public mind what happened was that the American Bar Association chastised the Supreme Court for allowing the enemies of our country to escape their just desserts by captious and unjustified invocation of technicalities in their defense.

And the implication that the Supreme Court had made a series of incorrect or doubtfully correct decisions which were harmful to the security of the Nation was much too much in the very warp and woof of the resolutions to be eliminated by mere disclaimer of approval of the report and amendment of the resolutions. The resolutions as adopted contained, among other, the following recitals:

Resolution I:

"Whereas this association recognizes that sharp differences have been expressed as to the soundness of some of the recent decisions of the U.S. Supreme Court affecting the National and State security, with particular reference to the activities of domestic and foreign Communists within our country; and

"Whereas such differences have given rise not only to severe criticisms of the decisions, but unfortunately to condemnation of the Court itself, and to omnibus proposals for limiting its appellate jurisdiction; and

"Whereas while members of this association view some of the decisions to be unsound and incorrect, they deem such broad omnibus proposals at this time unwise and likely to create more problems than they will solve;"

Resolution II:

"Whereas it has been deemed by many Members of the Congress, the bar, and the public that such declarations and interpretations thereof tend to impede the work of the Congress through its committees and thereby create a problem; the solution to which must be found;"

Resolution IV:

"Whereas recent decisions of the U.S. Supreme Court, in cases involving National and State security and with particular reference to Communist activities, have been severely criticized and deemed unsound by many responsible authorities;"

Nor can the American Bar Association dissociate itself from the report. While, as has been carefully pointed out, it never formally approved the report, it has certainly never disapproved it. With nothing but the report before it, it took substantially the action which the report recommended. The only reasonable construction that can be put upon the action taken by the house of delegates is that while they were unwilling to take the responsibility of approving everything said in the report, they in substance approved its reasoning and recommendations. As Congressman CELLER aptly said in his letter to the American Bar Association (Journal of June 1959, pp. 546, 548–549): "I believe that the report is no more separable from the recommendations than are the roots from the tree, and the association must accept the unhappy responsibility for both."

I turn now to the report.

As the title of the report indicates, it covers a wide range, dealing among other things with such diverse subjects as the Red impact on world trade, the weakening of U.S. gold reserves, Soviet advances in the control of space, the Hungarian revolution, recognition of Red China, the proposed summit conference, the alleged weakening effect on the United States of cultural exchanges, etc. Exclusive of the introductory statement and the proposed resolutions, the report is 34 pages in length. Of these 34 pages, only eight (8 to 15) deal with Supreme Court decisions. The discussion of these decisions begins with the following statement:

"The following are the principal cases that have been criticized by the public officials and the bar in varying degrees as illustrative of how our security has been weakened:" (American Bar Association Resolutions and and Report, p. 8).

There follows a numbered list of 24 decisions of the U.S. Supreme Court which are

---

Footnotes at end of speech.

presumably intended to support the statement just quoted.

The only thing these 24 cases have in common is that they were all decided between 1955 and 1958 and that in each of them a ruling was made in favor of a party proved or claimed or suspected to be a Communist or Communist sympathizer.

Not the slightest attempt is made in the report to show that any of these decisions was unjust or wrongly decided.

Justice Douglas began a speech which I heard him deliver this spring, at the annual dinner of the Columbia Law Review, and which was later reprinted in the Columbia Law Review (vol. 59, p. 227), by saying:

"While being interviewed recently by students in Washington, D.C., I was asked by a serious looking young man: 'What is the attitude of the Court these days toward labor?' I was rather surprised by the question since it seemed to assume that judges sit not to dispense justice but to administer their prejudices."

If Justice Douglas was shocked by a group of students taking this position, what are we to think of a supposedly responsible organ of the American Bar Association adopting a similar standard?

Fortunately, we have a Supreme Court which honestly tries, not to administer its (or any one else's) prejudices, but to dispense justice—with due regard, I may add, to the Bill of Rights, to which almost all of us pay at least lip service but the report scarcely even that.

A scholarly study of these 24 decisions undertaken for the Committee on Federal Legislation of the New York City Bar Association by Alfred Berman and Nanette Dembitz[2] shows the following:

1. During the same period covered by the decisions cited by the American Bar Association committee, a number of important cases were decided by the Supreme Court against Communists or alleged Communists. To the cases cited by Mr. Berman and Miss Dembitz may be added the decisions on June 8, 1959, in the Barenblatt and Uphaus cases.

2. All of the decisions criticized in the report were the logical consequence of accepted principles, with the possible exception of the *Jencks* case (353 U.S. 657), which has already[3] been modified by legislation (Criminal Code, sec. 3500). (I do not call this corrective legislation, for I believe the Jencks decision was correct.) Be this as it may, the change had already been made well over a year before the report was submitted. In one of the 24 cases (*Gold* v. *United States*, 352 U.S. 985) the Court reversed a judgment of conviction because of official intrusion into the privacy of the jury. In another (*Communist Party* v. *Control Board*, 351 U.S. 115), it reversed a judgment because it was based on undisputedly perjured testimony. These are practices which I trust no lawyer would publicly and seriously condone, even where the parties under prosecution are Communists.

3. The American Bar Association committee inconsistently criticizes the Supreme Court in some of the cases cited for placing its decision on too broad a ground and in others for placing it on too narrow a ground.

4. Five of the decisions were unanimous. Five were 8 to 1. Only three were decided by a vote of 5 to 4. Of the Justices most frequently in the minority (Clark, Burton, Whittaker, and Harlan), each of them sometimes voted with the majority in nonunanimous cases, and each of them wrote at least one majority opinion.

It may be of incidental interest to note the character of the proceedings involved in these 24 cases.

Nine of them involved refusal to answer questions, almost all before legislative committees. Four involved charges of falsity of noncommunistic affidavits, and one involved failure to file a noncommunistic affidavit. Thus 14 of the 24 cases, it may fairly be said, did not directly involve any question of prosecution or other legal consequences of seditious or subversive conduct, but only the question whether a witness had the right to refuse to give testimony, or the question whether testimony, when given, was true or false. Of the remaining cases, two involved the dismissal of Government employees, two involved admission to the bar, three involved passports or deportation, one involved the classification of the Communist Party as a subversive organization by the Subversive Activity Control Board, and only two (*Yates* v. *United States*, 354 U.S. 298, and *Pennsylvania* v. *Nelson*, 350 U.S. 497), actually involved prosecution for alleged subversive conduct or conspiracy.

This breakdown led me to check up on the number of persons convicted of major crimes against the security of the United States in recent years, and the results may again be of incidental interest.

The annual reports of the Director of the Administrative Office of the U.S. Courts shows that in the years 1955 to 1958 inclusive, there were approximately 115,000 persons convicted of all crimes in the U.S. District Courts throughout the United States.

The major crimes involving subversive activity are treason, espionage, sabotage, and sedition.

The total number of persons convicted of these crimes throughout the United States in the 4 years mentioned (1955 to 1958 inclusive) are: sedition, 63; sabotage, none; espionage, 5, treason, none.

For the previous 5 years (1950–54) the figures are not very different.

The total number of persons convicted for all crimes throughout the United States approximated 177,000. Of these, 114 were for sedition, 1 for sabotage, 8 for espionage, and 2 for treason.

I come now to the actual recommendations in the resolutions, which will be discussed more fully later in connection with the legislation proposal to carry them out.

Resolution I:

The resolving part is as follows:

Therefore, be it

"*Resolved*, That the American Bar Association disapprove proposals to limit any jurisdiction vested in the U.S. Supreme Court; be it further

Resolved, That wherever there are reasonable grounds to believe that as a result of court decisions, weaknesses in internal security have been disclosed, remedial legislation be enacted by the Congress of the United States, including a specific pronouncement of congressional intention that State statutes proscribing sedition against the United States shall have concurrent enforceability."

With the first of these recommendations none of us will quarrel.

The second has two parts, the first of which is so indefinite that it is impossible to attach any specific meaning to it and the second of which proposes to overrule the *Nelson* case (350 U.S. 497), which held that the Smith Act preempted the field of sedition against the U.S. Government. This latter part I shall discuss when we come to the bills which have been introduced.

The second and third resolutions propose to meet the *Watkins* case (354 U.S. 178), by recommending that the authority of congressional committees be better defined and that witnesses appearing before them be specifically advised in writing of the precise terms of the basic authority of the committee. How effective such procedures will be may be a matter as to which opinions differ; but there can be no reasonable objection to the suggestions. In any event, they do not call for legislation.

Resolution IV contains five specific recommendations for legislation.

The first two are inspired by the *Yates* case (354 U.S. 298), which was a prosecution for violation of the Smith Act. The first proposes a broader definition of "organize" than that adopted in the *Yates* case; the second is intended to overrule that part of the *Yates* decision which held in effect that in order to be indictable, advocacy must be more than a persuasion to thought but must amount to an incitement to action.

The third proposal is evidently intended to meet the *Slochower* case (350 U.S. 551), by making it a condition of Federal employment for each employee that he shall not refuse to answer any question before a congressional commitee or before any executive or judicial arm of the Government with respect to Communist front, or other subversive activity or any other matter bearing on his loyalty to the United States.

The fourth suggestion is evidently intended to meet the *Bonetti* (356 U.S. 691) and *Witkovitch* (353 U.S. 194) cases, the former by defining entry as any entry into the United States and the latter by broadening the control of the Attorney General over aliens whose deportation has been ordered but who have not in fact been deported after the expiration of a period of 6 months from the date of the deportation order.

The fifth suggestion relates to a claimed technical defect in the present provision of law and as a result of which the Foreign Agents Registration Act of 1948 might be deemed not applicable to propaganda issued without the United States for dissemination within the United States.

The fifth and final resolution generally commends the work of the Subcommittee on Internal Security of the Senate Judiciary Committee and the House on Un-American Activities Committee and recommends the close liaison of these committees with the intelligence and security agencies, as well as with the Attorney General of the United States. This recommendation obviously does not call for any legislation, and does not seem to require any comment here.

A number of bills have been introduced in both the Senate and the House of Representatives which are designed to accomplish the purposes set forth in the resolutions.[4] As there is considerable duplication among them, they can best be taken up by categories.

Hearings were held on these bills before a subcommittee of the Senate of which Senator KEATING was the chairman. Judge Walsh, Deputy Attorney General of the United States, appeared at these hearings and stated the position of the Department of Justice on all the bills except those relating to passports, as to which he said the State Department should speak.

A number of bills, including S. 3, S. 294, S. 1299, H.R. 518, H.R. 798, H.R. 958, H.R. 1139 and H.R. 2000 seek to amend chapter 37 (entitled "Espionage and Censorship") of title 18 (Criminal Code and Criminal Procedure) of the United States Code by striking out section 791, which limits the applicability of the chapter to the admiralty and maritime jurisdiction of the United States, the high seas, and the territory of the United States. The purpose is to make the chapter also applicable to acts of citizens of the United States performed in foreign countries. While these bills have no direct relation to anything specified in the American Bar Association resolutions, they seem to be in accord with the general principle of these resolutions and are apparently considered a part of the American Bar Association group of bills.

At the subcommittee hearing, a feeling was expressed that if this section were eliminated, the act might be deemed to apply to noncitizens acting outside the jurisdiction of the United States. Subject to this possible objection, the bill seems unobjectionable.

Footnotes at end of speech.

Preemption: A number of bills, including H.R. 3, S. 3, S. 294 and many others, were introduced to overcome the effect of the ruling in the *Nelson* case (350 U.S. 497), to the effect that the Smith Act preempted the field of sedition against the Federal Government and made invalid any State laws on the subject—except, of course, to the extent that they dealt with sedition against the States or were directed against actual violence. So anxious were the proponents of this change to effect it that the original bills H.R. 3 and S. 3 threw out the baby with the bath and in addition to specifically overruling the *Nelson* case, provided in general terms that no State legislation on any subject should be deemed void on the ground of preemption unless the Federal statutes contained a specific preemptive provision or unless the State statutes were in direct, positive and irreconcilable conflict with the Federal legislation.

It soon became apparent that so broad a provision would have unintended and at least in part undesirable consequences in many fields, including labor, railroad regulation and food and marketing, among others. In this broad form, the Department of Justice opposed the legislation and suggested that there might be serious doubt of its constitutionality.[5] The narrower bills, typified by S. 294, which confined the overruling of the Nelson case to the field of espionage, subversive activities and the like, received rather lukewarm approval from the Department of Justice.

At page 403 of the minutes of the hearing, the Deputy Attorney General said:

"As I say, State procedures are more flexible in some regards than Federal procedures. Arguably, in that respect it would be helpful. Actually, I cannot say that since the Nelson case has been decided there has been any gap developed where someone who could have been prosecuted had the case gone the other way was not prosecuted."

In this situation, there are those who believe that it is neither necessary nor desirable to open the field to legislative investigating committees and criminal prosecutions in 50 States, in addition to those now carried on by the Federal Government, nor to the chance of what is in effect if not, under recent decisions of the U.S. Supreme Court, in the constitutional sense, double jeopardy. The approval by the Department of Justice of this legislation, even in its restricted form, is evidently far from enthusiastic.

The next two categories of legislation arise out of the decision of the Supreme Court in the *Yates* case (354 U.S. 298) in which the opinion was written by Mr. Justice Harlan and the only dissent by Justice Clark.

The first of the rulings in that case to which proposed legislation is directed is the holding (pp. 303 to 311) that the word "organize" as used in the Smith Act means only the creation of new organizations and does not include acts thereafter performed in carrying on its activities.

The bills designed to change this rule include S. 527, S. 1300 and H.R. 2369. The proposal is to add a provision reading substantially as follows:

"Organize includes the recruiting of new members, forming of new units, and the regrouping or expansion of existing clubs, classes and other units."

This amendment is approved by the Department of Justice in the form which I have quoted. Somewhat broader versions in some of the bills (e.g. S. 1300) which include encouraging recruitment are deemed by the Department of Justice to be too broad and possibly unconstitutional, and are not approved by the Department.

The second point decided in the Yates case to which legislation is directed, is the holding stated by the Court, 354 U.S., page 318, as follows:

"We are thus faced with the question whether the Smith Act prohibits advocacy and teaching of forcible overthrow as an abstract principle, divorced from any effort to instigate action to that end, so long as such advocacy or teaching is engaged in with evil intent. We hold that it does not."

The bill intended to alter this result (S. 1305), provides in effect that advocacy of the forcible overthrow of the Government is punishable "without regard to the immediate probable effect of such action."

This bill is opposed by the Department of Justice both on the ground that they regard it as of doubtful constitutionality and on the merits. As to the latter, the Deputy Attorney General said:

"Now we were content with that meaning of the Smith Act. We asked the trial judge in the Yates case to charge as the trial judge had in the Dennis case along these lines, and he declined to do so, thinking that the Dennis case had charged that rule.

"We are quite content with that part, with the law as so interpreted.

"We think that this change will not really make it easier to get a sinister person who is advocating the overthrow of government by force.

"It may draw into the range of the statute people who engage—and this is a more abstract form of activity, who are on the crackpot fringe, who advocate this thing with no serious ability to do anything about it.

"All that would do would be to divert the prosecutorial forces of the country. It isn't going to help."

The next proposed change is embodied in S. 1301, which would make it a condition of Federal employment that a Government employee not refuse to answer an inquiry with respect to Communist, Communist front or other subversive activities or any other matter bearing upon his loyalty to the United States.

This, again, was disapproved by the Department of Justice. In addition to expressing doubts as to its constitutionality, the Deputy Attorney General testified as follows:

"Our feeling with respect to that bill is that it is not necessary, that the Presidential order which deals with the discharge of employees of questionable security in sensitive positions already incorporated the power to take into account such a refusal to answer.

"The Lloyd-LaFollette Act, and the Veteran's Preference Act * * * permit the Civil Service Commission to take into account a refusal to answer such an inquiry before the Commission.

"Now, from the point of view of screening unsatisfactory employees, we think that the Government has whatever power it needs as far as the refusal to answer is concerned.

"I don't think the Civil Service Commission has asked for his provision, and the Department of Justice does not. We are content with the law as it is."

The next two points are included in a single bill, S. 1302. The first section of this bill would overrule the *Bonetti* case (356 U.S. 691). In this case a petitioner first entered the United States in 1923. He was a member of the Communist Party from 1932 to 1936, when he left the party and never returned to it. In 1937, he went abroad, abandoning all rights of residence in the United States. In 1938, he was readmitted to the United States for permanent residence as a quota immigrant. He has since resided in the United States except for a 1-day visit to Mexico in 1939. In 1951, proceedings were brought to deport him under statute providing for deportation of any alien who at the time of his entry into the United States or any time thereafter, was a member of the Communist Party. The Court held that as he had abandoned his 1923 entry and was relying solely on his 1938 entry, the statute was not applicable to him and he could not be deported. The first section of S. 1302 is intended to overrule this decision by defining "entry" as meaning "any entry." However one may regard the Bonetti case, the situation there presented is obviously a very special one. This section is mildly advocated by the Department of Justice. The best statement they were able to muster up in favor of it is as follows:

"There was a case, a rather unusual case, where a man came into the United States, is said to have engaged in that activity, left the country, then came back and there was no proof that he engaged in that activity after he came back a second time. There was, nevertheless, an effort to deport him.

"The Court held the only conduct under review was the conduct after his last entry into the United States. This bill would overcome that. We have no objection to that. We don't think that this is a situation that is going to occur very often.

"But we have no objection to the change and conceivably it might make it easier to pick up a dangerous subversive.

"Senator KEATING. You have no objection to it. Do you favor it?

"Mr. WALSH. I think on balance we would favor it; yes, sir."

The balance of the bill was intended to overrule the *Witkovitch* case (353 U.S. 194), by tightening the control of the Attorney General over aliens against whom a final order of deportation has been outstanding for more than 6 months but who has not been deported.

The Department of Justice is not in favor of the enactment of this bill without further study. After considerable discussion back and forth, the Deputy Attorney General testified as follows:

"Mr. WALSH. * * * It seems to me that this is a matter which deserves further study. We have not asked for any such measure as this. Although my recollection is that the Witkowich case was decided about 3 years ago, we have not asked for this power.

"We recognize the constitutional power that exists, and my own feeling is that the Department is fully using the power that it has now, keeping track of this man and his availability for deportation. We must first exhaust those powers to the full, and then perhaps, after further study, there could be some statutory improvement of our situation that will not bring this unreasonable hardship on a deportee.

"But we, at this point, don't have the solution, and we would ask, under these circumstances, that, except for the first part of the bill, which deals with the word 'entry,' that there be further study of the matter.

"SENATOR KEATING. In other words, you would oppose S. 1302 except for section 1.

"Mr. WALSH. We would oppose it this time without further study."

There remain for discussion what seem to me the two most clearly objectionable bills stemming from the American Bar Association resolution.

One of them (S. 1304) provides that, notwithstanding any other provision of law.

"The head of any department or agency of the Government may, in his absolute discretion and when deemed necessary in the interest of national security, suspend, without pay, any civilian officer or employee of the department or agency which he heads."

I am informed that the Department of Justice, awaiting the outcome of some pending litigation, takes no position on this bill.

That the result of the removal or suspension from employment for security reasons can be disastrous for the individual concerned is too clear for argument. To vest in

Footnotes at end of speech.

the head of the department the absolute power in all cases to suspend officers or employees, without pay, on security grounds, seems abhorrent to every consideration of a fair play and fair procedure.

The remaining bill (S. 1303) is designed to meet the decisions in *Kent* v. *Dulles* (357 U.S. 116) and *Dayton* v. *Dulles* (357 U.S. 144), which held that under existing laws the Secretary of State does not have the right to withhold a passport because of beliefs, associations or ideological matters.

The bill, in the broadest terms, grants the Secretary the power to do this very thing; expressly authorizes the refusal of a passport because of activities continued consistently over a long period of time indicating that the applicant for the passport has adhered to the doctrine of any group which has been found by Congress, agency or officers of the United States duly authorized for that purpose to be of a subversive character, or of any group affiliated with such a group. It provides—

"Nothing in this subsection shall alter or limit the authority of the Secretary of State to deny any application for the issuance of a passport, or to revoke a previously issued passport, on any ground other than the ground described in this subsection. The Secretary may withhold a passport in the national interest on the basis of confidential information where he shall certify that it is contrary to the interests of this Nation that a passport be issued to the applicant."

It provides that a passport may be withheld because of—

"(5) Any other conduct which tends to support the belief that the applicant is going abroad or traveling abroad for such purpose."

And provides:

"(c) The Secretary of State shall not issue to, or renew or extend the passport of, any person, and he shall limit, restrict, withdraw, cancel, or revoke a passport of any person, if he is not satisfied that such person's trip or such person's activities abroad would not—

"(1) violate the laws of the United States;

"(2) be prejudicial to the orderly conduct of foreign relations;

"(3) be contrary to the national welfare, safety, or security; or

"(4) otherwise be prejudicial to the interests of the United States."

After a proclamation has been made by the President that restrictions on travel are in the interest of the United States, the bill makes it unlawful to depart from the United States without a passport.

The act provides that the sole review of the refusal to issue or extend a passport or of the withdrawal or cancellation thereof, shall be before a special officer designated by and acting subject to the supervision of the Secretary of State and among others contains the following provision

"(h) The files maintained by the Department of State and any other pertinent Government files submitted to the special review officer shall be considered as part of the evidence in each case without testimony or a ruling as to admissibility. Such files may not be examined by the applicant."

It seems difficult to imagine a more shocking violation of the fundamental rights of the citizen.

The State Department has made a formal statement generally approving the principle of the bill, and concluding as follows:

"There are a number of provisions of S. 1303 which the Department feels could be amended so as better to accomplish these objectives. Therefore, the Department expects to comment formally and in detail on the provisions of S. 1303 in the immediate future."

The State Department does not state whether it believes the bill should be more severe or less so. Let us hope it means the latter. It seems difficult to believe that in its present form the constitutionality of the bill would be sustained by any court.

To sum up:

We have one bill (that relating to section 791 of the Criminal Code), which seem unobjectionable.

We have three—the narrower form of the preemption bill, the narrower bill enlarging the definition of "organize" in the Smith Act and the bill (S. 1302 first part) intended to overrule the Bonetti case, the advisability of which may be arguable. These three bills are approved by the Justice Department—two of them in an obviously unenthusiastic way.

Six bills or groups of bills seem clearly objectionable. These are the more general form of the preemption statute; the bills changing the rule that to establish a violation of the Smith Act there must be an incitement to action and not merely to thought; the bill (S. 1301) making it a condition of Federal employment that an employee shall not refuse to answer questions as to his affiliations; the bill (S. 1302 second part) designed to overrule the Witkovitch case; the passport bill (S. 1303) and the bill (S. 1304) giving heads of government departments the unrestricted right to suspend, without pay, for loyalty reasons. Of these, four are opposed by the Department of Justice; as to one, the Department of Justice has reserved its position; and as to one, the State Department, while approving in principle, has not approved the bill in its present form.

One's attitude toward the kind of legislation which we have been discussing depends, I suppose, on one's fundamental philosophy. To those who really value freedom of speech and of thought and the other fundamental freedoms guaranteed by our Federal Constitution, anything that tends to impair or nullify these freedoms seems to contradict the fundamental principles on which our country was founded. I cannot conclude more appropriately than by quoting the eloquent words of Mr. Justice Black, dissenting, in the Barenblatt case:

"Ultimately all the questions in this case really boil down to one—whether we as a people will try fearfully and futilely to preserve democracy by adopting totalitarian methods, or whether in accordance with our traditions and our Constitution we will have the confidence and the courage to be free."

REMARKS OF ROBERT M. BENJAMIN

At the conclusion of Mr. Nordlinger's address, Mr. Robert M. Benjamin asked to be heard.

Mr. Benjamin said that he spoke as a member of the house of delegates of the American Bar Association who had participated in the proceedings of the house; he did not speak for the American Bar Association, since nobody (including the special committee on Communist tactics, strategy and objectives) can speak for the American Bar Association except with the authority of the house of delegates or the board of governors.

Mr. Benjamin said that he wanted to emphasize that the house of delegates had not approved the report of the committee on Communist tactics, but had acted only on those of the committee's recommended resolutions which were submitted to the house by the board of governors, and had adopted those resolutions only with significant changes. It is not the practice of the house of delegates ever to approve or disapprove committee or section reports as such; it acts only on recommended resolutions.

Mr. Benjamin said that he had voted for Orison Marden's motion to postpone consideration of the resolutions until the August meeting of the house of delegates, but he could recognize a valid reason for voting against postponement. Despite the cautionary note that is always prominently printed on the face of committee reports that such reports do not represent the official policy of the American Bar Association, and that only recommendations adopted by the house of delegates represent association policy, it appears that an earlier draft report of the committee on Communist tactics had somehow been publicized, and had even been printed in the CONGRESSIONAL RECORD as if it spoke officially the views of the American Bar Association. Those who voted against postponement of official action thus had reason for thinking it wise to state official policy promptly.

As an introduction to his own further remarks, Mr. Benjamin read excerpts from an article in the March 9 issue of the New Republic, which began:

"Like the early intelligence of Mark Twain's death, newspaper stories of the American Bar Association's criticism of the Supreme Court are greatly exaggerated. * * *"

After commenting on certain specific resolutions with which it agreed and others with which it disagreed, the New Republic continued:

"But the Court has been supported rather than attacked by this action, and one may regret that a contrary impression has got abroad. We are strongly confirmed in our view by an examination of what the Association declined to do. It declined to say that the Court has invoked 'technicalities * * * against the protection of our Nation,' and it declined to imply (as by use of the phrase 'restore to' in lieu of 'amend' the Smith Act) that there is something fishy about the Court's recent work. A proposed recommendation in favor of Executive authority to deny passports on the basis of confidential information, though approved by a committee, was not put to a vote of the delegates. The same is true of recommendations to extend the loyalty-security program to nonsensitive government jobs."

Mr. Benjamin referred further to the two major changes made in the house of delegates in the resolutions as they had been drafted by the committee. The reference in the first committee resolution to "technicalities * * * invoked against the protection of our Nation" had been the subject of critical comment in the New York Times and elsewhere. In the house of delegates a revision was proposed by Albert E. Jenner, Jr., president of the American Judicature Society, and strongly supported, to eliminate this clause. Peter Campbell Brown, chairman of the committee on Communist tactics, accepted the proposed amendment. He accepted also amendments proposed by Garner Anthony, former attorney general of Hawaii, to amend resolution IV so as to provide for "amending" the Smith Act and other statutes in certain respects instead of "restoring to" those statutes things that were in effect never in them.

What was left in the resolutions, Mr. Benjamin said, was a series of recommendations for legislation to cure what were thought to be defects disclosed by Supreme Court decisions. This is in no sense disparagement of the Supreme Court or its decisions. As to the particular recommendations for legislation reasonable men may differ. Mr. Benjamin said that he himself, for example, agreeing that the Government can properly inquire into Communist or other subversive activities of a prospective employee, might have preferred to limit such inquiry to the employing agency rather than to include inquiries by others, as paragraph (c) of Resolution IV does. But such differences on matters of legislative policy lend no support to the view that has been put forward that the American Bar Association has disparaged the Supreme Court.

Mr. Benjamin said also that two legislative matters which the press and others have

frequently referred to as having been within the resolutions adopted by the house of delegates, namely, procedures relating to the issuance of passports and the Federal loyalty-security program affecting those already in Government employ, had not in fact been submitted to the house of delegates or acted on officially by the American Bar Association.

Mr. Benjamin was not, he said, concerned primarily with defending the American Bar Association against misunderstanding of what it had in fact done, though he thought it ironic that the association should be subject to any such misunderstanding in the face of the preeminent part it had played in defeating the 1958 Jenner-Butler bill, which would have drastically limited the Court's jurisdiction, and in the face of Resolution I adopted in February 1959, strongly reaffirming its disapproval of all such proposals. What primarily concerned Mr. Benjamin was the resulting damage to the Court and to the public; it is a fundamental disservice to both, he said, to have the view presented that the American Bar Association is against the Court.

---

[1] Meeting of March 10, 1959. The resolution was introduced by the executive committee of the association and was unanimously adopted at the meeting of the association.

[2] Published in the Record of the city bar association for June 1959.

[3] Footnote: Sept. 2, 1957.

An interesting sidelight on the generality of the principles involved is the fact that last Monday (June 22, 1959), the Supreme Court decided three cases involving the so-called Jencks Act. None of them involved subversive activities.

[4] When the present address was delivered at Saranac, Robert M. Benjamin, of New York City, stated that some of the bills referred to below are not within the scope of the resolutions adopted by the House of Delegates of the American Bar Association; and this is no doubt correct at least as to S. 1303 and S.1304. All of the bills, however, are clearly within the recommendations of the report. In introducing bills S. 1299 to S. 1305, inclusive, Senator EASTLAND said (CONGRESSIONAL RECORD of Mar. 5, 1959, p. 3006):

"I introduce for appropriate reference a number of bills to carry out the recommendations of the American Bar Association to correct certain decisions of the Supreme Court of the United States."

In view of this, it seems not only proper but necessary to discuss all of these bills here. Senator EASTLAND'S statement, moreover, is an excellent illustration of the impact on the public mind of the action of the American Bar Association.

[5] According to the New York Times of June 25, 1959, the House of Representatives pased H.R. 3 on June 24. The Times story states (p. 12) that the Justice Department has called this bill the most hazardous bill before Congress.

A Spirited, Responsible Defense of Castro's Cuba

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. PORTER. Mr. Speaker, Walter Lippmann and Senator FULBRIGHT are two of many outstanding leaders in this country who have urged that we be sympathetic and understanding in our relations with Cuba. We must not forget the misery, the corruption, and death Batista spread through Cuba for so long.

The following, included under unanimous consent granted previously, is a letter to President Eisenhower and the people of the United States. Its signators are distinguished Cubans. I commend it to the attention of my colleagues and others who want a clearer picture of Cuba and its revolution:

AN OPEN LETTER TO PRESIDENT EISENHOWER AND THE PEOPLE OF THE UNITED STATES

DEAR MR. PRESIDENT: If you have read the book entitled "Fidel Castro," by Mr. Jules Dubois of the Chicago Tribune, chairman of the committee on freedom of the press of the Inter-American Press Association, you will know that on the date, August 26, 1958, while Cuba was still engaged in the tragic civil war in which our people overthrew the powerfully armed despotism of Fulgencio Batista, the civilian revolutionary front directed a letter to you signed by Dr. José Miró Cardona, one of Cuba's most distinguished citizens. We believe you were never apprised of that letter, since it was answered only on October 13, 1958, by an officer of your State Department.

In order that the same fate may not befall this letter, and desiring at the same time to inform the U.S. public as well as its President of the truths given below, we have chosen this public way of addressing you.

Representing as we do the vast majority of the civic, professional, and religious organizations of our country, we wish to thank you for the assurance given to the press on July 15 last that the U.S. Government does not accuse the revolutionary government of Cuba as Communist.

At the same time, we protest as an offense to the sovereignty and dignity of our Nation the recent action by a subcommittee of the U.S. Congress which took testimony from a person who is charged as a traitor and deserter from the armed forces of a neighbor nation.

We believe that it should not be necessary to repeat continuously that the Cuban Revolutionary Government is not Communist, nor is the 26th of July movement nor its leaders. The principles and goals of this revolution have been clearly and repeatedly stated by Fidel Castro and other revolutionary leaders. We consider that, in dignity, we should not have to dwell on what the Cuban Revolution is not.

Dr. Milton Eisenhower recently stated that a great incomprehension exists between the two Americas. We believe that that is true and that, apart from the obvious factors of language, tradition and temperament, one important reason for this incomprehension lies in the understanding of the word "revolution." We believe that this word in the United States signifies nowadays only disorder, perturbation, a negative situation which alarms. For us, "revolution" signifies life, a moving forward at last toward ideals and goals too long detained, too long obstructed, a positive and creative approach to problems.

Our revolution did not start with the resistance against the despot, Batista. That was merely the rebellion which made the revolution possible. The revolution started on January 1, 1959, upon the triumph of the rebellion, in the same way that what is known in the United States as the American Revolution did not consist of the rebellion against England, which was the War of Independence, but began with the world-shaking truths set down for the first time in history in a political document by Thomas Jefferson in the Declaration of Independence—that document which ignited the French Revolution, sounded the death knell to the system of monarchical despotism and opened the door in the United States and Europe to political democracy.

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

These political doctrines of 1776 were upheld by José Martí, and they are upheld by Fidel Castro and the people of Cuba in the Cuban revolution. Can these great truths even remotely be reconciled with communism?

But that is not the crux of the problem. Political democracy alone, the nations are agreed, is not enough. There must also be economic democracy. Man does not live by bread alone, but neither can man live by votes alone. To what avail are a million votes if there is not bread?

When this problem reached a crisis in the United States, it was solved by a series of measures—bitterly combated in their day—known as the New Deal, which led the United States away from a strictly captalistic economy into what became known as a mixed economy, in which the Government played a far greater role than ever before. Many European nations went farther in the role granted to government until today virtually all, including Great Britain, France, Sweden, Denmark, Norway, etc., have adopted varying degrees of Socialist economies.

The Cuban revolution, not wishing merely to copy any other system but to find solutions most applicable to our particular problems, has adopted its own methods which are not derived from communism, capitalism, or any other of the accepted isms and has given these methods the name of democratic humanism.

These methods, which are entirely in accordance with Christian concepts of social justice, seek to improve the well-being and the happiness of our people through a better distribution of the means of access to the national wealth, through a new orientation of private and public investment to the end that it serve social interests above individual interests, through Government-encouraged industrial and agricultural diversification, based to the greatest possible extent upon our own savings, our own capitalization, our own hard work, our own sacrifice, since a people, as an individual, only finds happiness in what it itself creates.

But Cuba in this decision had to face a serious problem. During the years of U.S. expansion under a capitalist economy, many powerful U.S. landowning corporations had established themselves in Latin America (usually with the consent of governments which had no other solutions to offer) and wielded an influence in the life and politics of those nations, in the same way that they have always wielded an influence in the political life of the United States. This situation has inevitably produced resentment and ill feeling, much as the influence of well-meaning in-laws frequently produces resentment and ill feeling within families.

At the same time, these corporations wield considerable influence in the foreign policies of the United States toward Latin America.

Agrarian reform, which the U.S. Government itself undertook in Puerto Rico and Japan, is obviously (as both Cuban and

international economists have long pointed out), an essential first step toward the solution of our economic problems. This measure necessarily affects a number of large private U.S. corporations, as well as Cuban. The intention, however, is not to offend but to obey national necessities which we believe the people of the Untied States will understand.

As a result of the agrarian reform program, the Cuban revolution has been accused of extreme nationalism when we seek only to be—as all peoples should be—truly free, self-respecting and independent, dependent only to the extent that all nations should be interdependent on a basis of mutual respect and friendship.

We believe that a higher degree of economic development in Cuba coincides with the best interests of both our countries and with the best interests of democracy itself, for communism is an evil weed which does not grow on well-cultivated soil. It thrives on idle, uncared-for soil, held in reserve for the exclusive benefit of the few against the needs of the many—dangerously ignoring every lesson of history since the rights of man were first proclaimed in 1776.

Rejecting the timidity and the half measures which have prevented other nations of our continent from solving their economic problems, Cuba has resolved to go once and for all to the roots of its problems, cost what it may cost. We are prepared to make all of the sacrifices necessary to achieve our goals; 20,000 Cubans died—among them many of our finest sons—that we might build a new future based on freedom and human dignity. We are resolved that they shall not have died in vain.

But the forces against us are powerful and well financed. And we have witnessed the tragedy of the United States, birthplace of Thomas Jefferson, seemingly standing behind the foes of freedom in Latin America.

We have witnessed innumerable unfriendly interventions in the past, immoral ambassadorial intrigues, arms supplied to despots, hospitality toward deposed tyrants and their henchmen who have come to your shores heavy with wealth stolen from their countries, threats of economic sanctions, laws refusing aid to any country which confiscates U.S. private properties and, more recently, the U.S. delegate to the Organization of American States voting side by side with the delegates of the despots of Santo Domingo and Haiti against the delegates from the democratic nations of Latin America. When all of these things occur, it is the United States which betrays democracy, not we.

One by one, the tyrants of Latin America have been overthrown by their peoples: Peron in Argentina, Rojas Pinilla in Colombia, Perez Jimenez in Venezuela, Fulgencio Batista in Cuba, and the list could go back much further. Today there remains only Trujillo in Santo Domingo, Duvalier in Haiti, the Somozas in Nicaragua and, to a lesser degree in tyranny, perhaps, Sr. Stroessner and his friends in Paraguay.

What Cuba has achieved already in its Revolution serves as a beacon of hope to all of our sister nations still living under oppression and as a warning to the remaining handful of tyrants and would-be tyrants of what a determined people seeking freedom can do.

It is for these reasons and these reasons only that powerful forces have been organized against us by the friends of privilege and despotism in an attempt to paint us as aggressors and Communists—forces whose influence reaches even into the U.S. Senate, the Pentagon, and the U.S. Department of State.

The goal is to destroy the Cuban revolution and with it the democratic aspirations of Latin America, in order to preserve the status quo, even if only for a little while longer. But the course of history is against these forces; the needs of our people cannot wait. This revolution, which belongs to all of America, cannot be destroyed, no matter how strong the campaign against us. Our road ahead is clear. We shall not turn back or betray our principles.

Neither shall we, as our government has clearly stated, attempt to export revolutions, firm in the belief that each people must seek its own salvation. Cuba can merely set an example.

We shall, however, defend the ideals and principles of democracy everywhere, encourage their propagation and the downfall of tyrants and oppressors, extend our hands in friendship to all who seek freedom and democracy. That is our sovereign right and our solemn duty to our martyrs. We shall never adopt the principle that democracy is good for us but not for others, nor shall we be detained by an ignoble or hysterical fear of communism, for that is to play into the hands of the supporters of tyranny and totalitarianism.

One of your magazines recently stated: "There is fear in Cuba." We deny this statement and answer: "Our time of terror is past. What there is now in Cuba is a great faith."

There are some, unquestionably, who tremble, as many trembled in the United States in 1776, because powerful interests have been challenged which were never challenged before. Most of the Bastistianos have left the country and are denouncing the revolution from Santo Domingo and the United States, just as 100,000 persons fled from the American Revoltuion in 1776 and denounced that revolution from Europe and Canada. Had communism existed then, the American Revolution would also have been called Communist. The U.S. Government confiscated the properties of those who fled then, as the Cuba revolution has done here. The Cuban revolution is radical, as was the Revolution of 1776, and our theme is also "libertad o muerte," liberty or death.

Anyone without a criminal record who wishes to leave Cuba is free to do so, just as anyone who wishes to come is free and very welcome to come. Why, then, have there been a number of cases of escapes from Cuba? Most of those who have escaped have been required for criminal actions. But others have been persuaded to escape as a part of the campaign of calumny against us. Because if Cuba is to be painted as Communist, it must be made to look like a Communist nation, with dramatic escapes included.

It is also true that some in good faith, particularly of the older generation, have doubts about this revolution. It is not possible that all have the same comprehension and understanding; it is not possible that all are able to acquire a revolutionary spirit and conscience. But a recent survey by Bohemia, one of the outstanding publications of Latin America, showed that more than 90 percent of the Cuban population stands firmly behind the revolution, which represents a clear mandate. And the recent ministerial crisis demonstrated beyond question the unequalled place which Fidel Castro, intellectual and moral author of this revolution, holds in the devotion of his countrymen.

We offer this statement in a desire to dispel some of the incomprehension which undoubtedly and understandably exists in the United States concerning our revolution and we call upon the President and the people of the United States to support our struggle, firm in our belief that the great majority of North Americans still uphold the revolutionary principles of 1776, which are also our principles.

Jewish Chronic Disease Hospital

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mrs. KELLY. Mr. Speaker, the Jewish Chronic Disease Hospital located at East 49th Street and Rutland Road, Brooklyn, N.Y., is a hospital of outstanding achievement. The good work of this hospital is known throughout New York City, the State, and the Nation. I am happy to insert in the RECORD a statement concerning the hospital's inauguration of a unique medical care program for victims of long-term diseases:

HOSPITAL TO INAUGURATE UNIQUE MEDICAL CARE PROGRAM; OFFERS PREHOSPITAL CARE AND TREATMENT TO VICTIMS OF LONG-TERM DISEASES; $330,000 NIH GRANT TO AID PROGRAM

A unique prehospitalization care and treatment program is being inaugurated by the Jewish Chronic Disease Hospital, Brooklyn, for victims of long-term diseases, it was announced by Isaac Albert, hospital president.

This program, supported by a grant of $330,000 from the National Institutes of Health will open a 5-year study to determine the feasibility of offering care and treatment in the home to victims of strokes. This new service will be offered prior to hospitalization as a possible means of avoiding the need for hospital care. This program is designed to offer services which would ordinarily be given in a hospital.

"It is hoped," said Arthur Feigenbaum, executive director of the hospital, "that by starting the treatment shortly after the stroke occurs, it will be possible through this new program not only to prevent further damage to the patient, but also to improve the patient's condition so that he may live as normally as possible."

"We hope to determine the feasibility of such a program," he declared, "so that hospitals throughout the country which have no facilities for long-term patients may be encourged to undertake similar programs and so offer care and treatment to individuals who are languishing in their homes while waiting for months and even years to be admitted to a hospital. The long wait works to the disadvantage of the patient and often creates a very difficult medical situation since the patient's condition generally worsens."

Such a program, Mr. Feigenbaum pointed out, will be far less costly to the patient who requires medical care and treatment over a long period of time, and to the hospital providing such care. It will also make more hospital beds available to those who require constant medical and nursing care.

Present home-care programs offer care at the conclusion of an appropriate period of hospitalization, when the patient has received the maximum benefits.

The advantage of this new program for the active chronically ill patient, according to Dr. Joseph B. Rogoff, the hospital's director of physical medicine and rehabilitation, who is principal investigator of this project, is that he will receive early treatment at home. Even a relatively short period without effective medical and social rehabilitation may result in a lifetime of invalidism, indigency, and uselessness, with the attendant problems to the family and to the community.

To carry out this program a closer working relationship is being developed between the Jewish Chronic Disease Hospital and other hospitals, public health nursing agencies, family agencies and welfare services.

The program, under medical direction, will consist of a broadly based complement of medical, nursing, social caseworker, physical and occupational therapies, and housekeeping services to be made available to the patient to the degree determined by professional standards of rehabilitation. Where necessary, such other specialists or consultants on the hospital staff will be provided. Should the patient develop an acute condition of the primary illness, or should other acute conditions develop, such medical and nursing services as may be required will be provided. This will include hospitalization for any acute ailment that may occur.

Mobile units of physical therapy and occupational therapy will be brought in and adapted for home use.

Among the services to be provided under this program are the preparation of meals and light housekeeping as required, nutritional control, administration of necessary drugs, instruction of family members in methods of assisting the patient to carry out the therapeutic regime, and counseling of the patient and his family. The services to be offered each patient will depend upon the patient's needs.

The Jewish Chronic Disease Hospital, located at East 49th Street and Rutland Road, Brooklyn, is the largest, voluntary, nonsectarian institution of its kind in the country. It has facilities for the care and treatment of 810 patients.

Among its patients are men, women, and children afflicted with such chronic conditions as cancer, cerebral palsy, leukemia, heart disease, arthritis, polio, spina bifida, multiple sclerosis, rheumatic fever, diabetes, Parkinson's disease, muscular dystrophy and Tay-Sachs disease.

The hospital maintains the following clinics: Cardiac, orthopedic, neurology, tumor, rheumatology, multiple sclerosis, cerebral palsy, epilepsy, pediatric, cleft palate, child guidance and orthodontics.

The prehospitalization care program is an extension of the hospital's rehabilitation services which aids patients to develop the use of paralyzed and handicapped limbs, it includes an outpatient cerebral palsy clinic, physiotherapy, occupational therapy and manual arts therapy departments, a speech clinic and vocational and prevocational divisions.

The hospital's emphasis is on the rehabilitation of patients who can be helped and be returned to their families within the shortest possible time.

It serves as a training center for students from New York University, and Columbia University in physical therapy; Brooklyn College in speech therapy; New York City Community College in dental hygiene; Long Island University in psychology; Yeshiva Univeristy in psychology; and New York School of Social Work (Columbia University) training in social work.

September has been designated as Jewish Chronic Disease Hospital Month by Mayor Robert F. Wagner. It launches the hospital's annual campaign for funds for the maintenance of the hospital and for research and rehabilitation. The institution's 1959 campaign marks the beginning of its 35th anniversary.

Gen. Richard K. Mellon

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FULTON. Mr. Speaker, Gen. Richard K. Mellon, of Pittsburgh, Pa., has unanimously been selected as the Sportsman of the Year for 1959 by the Allegheny County Civic Sportsmen's Association. Richard Mellon has had an illustrious career as a civic leader, financier, humanitarian, soldier, and sportsman. He has made an outstanding contribution to the Pittsburgh Renaissance and Allegheny County redevelopment.

Richard Mellon received this award as a sportsmen because of his founding 25 years ago the International Rolling Rock Hunt racing events at Ligonier, Pa. I quote from the letter of my good friend, Judge Samuel Weiss:

ALLEGHENY COUNTY CIVIC SPORTSMEN ASSOCIATION,
Pittsburgh, Pa., August 7, 1959.

Congressman JAMES G. FULTON,
House Office Building,
Washington, D.C.

MY DEAR JIM: Gen. R. K. Mellon was unanimously selected as "The Sportsman of the Year for 1959" by the above organization.

Because of his founding of the International Rolling Rock Hunt Racing Events 25 years ago at Ligonier, Pa., as a horse sportsman, and because of his great contribution to the Pittsburgh Renaissance, as a great financier, humanitarian, soldier, statesman, and sportsman, our organization honors him.

The executive committee of our group consists of Judge Samuel Weiss, president; Dr. Hubert Wagner, vice president; Harry Kalson, Esq., secretary; Meyer Gefsky, treasurer.

Harry Keck, Pittsburgh Sun-Telegraph; Al Abrams, Pittsburgh Post-Gazette; Chet Smith, Pittsburgh Press; William "Red" Friesell, corporate executive and outstanding athlete; Luby Dimiellio, former Pitt western Pennsylvania U.S. marshal; Attorney David Fawcett; Attorney "Ted" Buckley; Carl K. Rebele; Judge John Brosky; and Dr. William Campbell, superintendent of Homestead schools, are members of the executive board.

Sincerely yours,
SAMUEL A. WEISS,
Judge, Common Pleas Court
of Allegheny County.

On the occasion of this award I think it is fitting that we review the career of this outstanding American.

Richard K. Mellon was born June 19, 1899, in Pittsburgh, Pa., the son of Richard Beatty and Jennie Taylor Mellon. He was educated at Shady Side Academy, Culver Military Academy, and Princeton University. In 1918, he enlisted in the Army and served as a private. He was awarded the Victory Medal and the Pennsylvania World War I Victory Medal. He began his banking career as a messenger at the Mellon National Bank in Pittsburgh, rising through the ranks as assistant cashier, and then vice president. He was elected president in 1934.

After the outbreak of World War II, Richard Mellon was commissioned a major in the Army of the United States, and in 1943, with the rank of colonel, he was appointed Director of Selective Service for the Commonwealth of Pennsylvania. During this period he was assigned to the General Staff Corps and journeyed into the Asiatic-Pacific campaign area for the completion of a special mission. In 1945, Dick Mellon was appointed Assistant Chief of Staff of Reciprocal Aid Section of the International Division of the War Department. During World War II he earned the Asiatic-Pacific campaign, American campaign, European-African-Middle Eastern campaign, and World War II Victory Medals.

Dick Mellon was returned to inactive military status in 1945. The following year he became chairman of the board of the Mellon National Bank & Trust Co., when the Mellon Bank merged with the Union Trust Co. That year he was also awarded the Distinguished Service Medal by the U.S. Army.

In 1948 Richard K. Mellon established the Richard King Mellon Foundation for "public, religious, educational, scientific, and literary grants," giving priority to undertakings in the Pittsburgh area.

Dick Mellon continued his interest in the military and in 1948 he was commissioned a brigadier general in the Army of the United States; in 1950 he was commissioned a major general in the Pennsylvania National Guard and in 1956 was commissioned a major general in the U.S. Army Reserve. In December of 1954 he was awarded the Distinguished Service Medal of the Commonwealth of Pennsylvania.

Richard Mellon is a director of a number of large corporations: Aluminum Co. of America, General Motors, Gulf Oil, Koppers Co., the Pennsylvania Railroad, and the Pittsburgh Plate Glass Co. He also serves as a trustee of the Carnegie Institute, Carnegie Institute of Technology, Mellon Institute of Industrial Research, and the University of Pittsburgh. He is chairman of the museum committee of the Carnegie Museum. He is also active in a number of civic and philanthropic organizations.

Richard Mellon is married to the former Constance Prosser. They have four children and make their home in Ligonier, Pa.

Richard K. Mellon has received numerous honorary degrees and awards. They are listed below:

RICHARD K. MELLON

HONORARY DEGREES

June 2, 1946, Mr. Mellon received honorary degree of doctor of laws (LL.D.) from Waynesburg College, Waynesburg, Pa.

September 3, 1946, Mr. Mellon received honorary degree of doctor of political Science (S.P.D.) from St. Vincent College, Latrobe, Pa.

June 9, 1947, Mr. Mellon received honorary degree of doctor of laws (LL.D.) from Washington and Jefferson College, Washington, Pa.

June 9, 1948, Mr. Mellon received honorary degree of doctor of laws (LL.D.) from the University of Pittsburgh, Pittsburgh, Pa.

April 11, 1950, Mr. Mellon received honorary degree of doctor of commercial science (D. Com. S.) from New York University, New York, N.Y.

November 12, 1954, Mr. Mellon received honorary degree of doctor of engineering (D. Eng.) from Duquesne University Pittsburgh, Pa.

May 1, 1954, Mr. Mellon received honorary degree of doctor of laws (LL.D.) from Pennsylvania Military College, Chester, Pa.

June 5, 1956, Mr. Mellon received honorary degree of doctor of science (Sc. D.) from Carnegie Institute of Technology, Pittsburgh, Pa.

AWARDS

January 16, 1947, Mr. Mellon received plaque from the Chamber of Commerce of Pittsburgh in tribute to his patriotic service, both as a civilian and a military man.

November 3, 1947, Mr. Mellon was awarded a citation by Forbes magazine upon his selection, in a nationwide poll, as one of today's 50 foremost business leaders.

January 19, 1948, Mr. Mellon was acclaimed the Man of the Year for 1947 by the Pittsburgh Junior Chamber of Commerce. He was chosen because his "outstanding leadership especially during 1947 brought about a marked revolution and a revived hope in the industrial and urban redevelopment of Pittsburgh."

November 13, 1949, Mr. Mellon was presented with the Heart Award (first annual award) by Tent No. 1 of Variety Club International (Pittsburgh chapter), "for your humanitarian service to the people of the tristate area."

September 12, 1950, Mr. Mellon received special citation for "outstanding optimism in Pittsburgh's future" from the Optimist Club of Pittsburgh as the No. 1 Optimist for 1950.

October 9, 1950, Mr. Mellon received a commemorative plaque from western Pennsylvania chapter, Society of Industrial Realtors honoring him as the outstanding industrialist in the Pittsburgh area who has made the most significant contribution in the public interest.

November 16, 1953, Mr. Mellon received the Gold Medal of Merit Award from the Wharton School of Finance and Commerce, Alumni Society, University of Pennsylvania, Philadelphia, "for the greatest contribution to American business during 1953."

December 11, 1954, Mr. Mellon received the Gold Medal Award, the Pennsylvania Society, for distinguished achievements and his many significant contributions to the welfare and public service of the State and Nation.

February 9, 1956, Mr. Mellon received the Gen. Arthur St. Clair Award from the Ligonier Valley Chamber of Commerce in recognition of his lasting contributions to the cultural, historical, and recreational advancement of the Ligonier Valley.

April 27, 1956, Mr. Mellon received the Veterans of Foreign Wars Citation from the Allegheny County Council, Veterans of Foreign Wars of the United States, and the committee on Americanism for outstanding community service.

November 6, 1957, Mr. Mellon was awarded a citation by Forbes magazine upon his selection, in a nationwide poll, as one of today's 50 foremost business leaders.

January 22, 1958, Mr. Mellon received a certificate of honorary association in the Pittsburgh chapter of the American Institute of Architects, in recognition of his distinguished service to our community.

April 28, 1958, Mr. Mellon was cited as a great living American by the Chamber of Commerce of the United States, the award being presented to Mr. Mellon for his personal leadership in the rejuvenation of Pittsburgh.

BANKING AND INDUSTRIAL ACTIVITIES

Aluminum Co. of America, director; General Motors Corp., director; Gulf Oil Corp., director; Koppers Co., Inc., director; Mellon National Bank & Trust Co., chairman of the board, director, and member of executive committee; T. Mellon & Sons, president and governor; the Pennsylvania Railroad Co., director; Pittsburgh Plate Glass Co., director.

CULTURAL, EDUCATIONAL, AND SCIENTIFIC ACTIVITIES

Carnegie Institute, trustee; Carnegie Museum, chairman of the museum committee; Carnegie Institute of Technology, trustee; Mellon Institute of Industrial Research, trustee; the University of Pittsburgh, trustee.

CIVIC AND PHILANTHROPIC ACTIVITIES

Allegheny Conference on Community Development, member of citizens sponsoring committee and point park committee; Pittsburgh Regional Planning Association, chairman of the executive committee; Sarah Mellon Scaife Foundation, trustee; Regional Industrial Development Corp., director; ACTION (American Council To Improve Our Neighborhoods), director.

[From the Pittsburgh Sun Telegraph, Aug. 13, 1959]

RICHARD KING MELLON: DAD TOLD HIM, "LIVE WHERE YOU WORK, WORK WHERE YOU LIVE"

Pittsburgh's dramatic rise to new strength and greatness during the past 15 years represents the accomplishments and work of corporate interests, foundations, government and many individuals, in public and private life, uniting their efforts for a single objective—the good of the community.

Richard King Mellon, perhaps more than any other person, has been responsible for the city's amazing rebirth. He would be the first to state and stress this formula of cooperative civic enterprise, this pattern of partnership that has been the basis for the successful community development program in Pittsburgh.

Mr. Mellon's abiding interest and decisive role in the affairs of his native city are as natural as the hills and valleys and rivers that give western Pennsylvania its rugged beauty.

An anecdote about his early life provides an insight into this aspect of the Mellon personality.

As a young boy, he was riding with his father, Richard Beatty Mellon, along New York City's Fifth Avenue, where many Pittsburgh steel barons had built mansions and lived much of the time, when his father turned to him and said:

"Son, live where you work and work where you live." This wise counsel made an indelible impression on the young man, who has followed so closely in the footsteps of his distinguished father.

OBSERVATIONS OF A TEENAGER

Growing up in the home of his parents on Pittsburgh's Fifth Avenue, Dick Mellon observed firsthand the imaginative planning that must precede a period of immense physical construction, like the present here.

Many of the meetings of the Citizen's Committee on City Plan for Pittsburgh, forerunner of the Pittsburgh Regional Planning Association in which Mr. Mellon served as president for 11 years and of which he is still chairman of the executive committee, were held at 6500 Fifth Avenue while he was a teenager.

Today this site, donated by the Mellon family to the city for park purposes, is Mellon Park, where thousands of Pittsburghers in the densely populated East End can enjoy sports and the outdoors—interests that have absorbed Richard Mellon all his life.

The annual races at Rolling Rock, sponsored for the benefit of the Industrial Home for Crippled Children, are an expression of two dominant aspects of the well-rounded Mellon personality—the sportsman and the humanitarian.

In the world of business, where 2 and 2 are 4, Richard King Mellon has reached the pinnacle, and in his quiet, modest manner brings a vast personal knowledge and experience to corporate affairs in which Mellon interests are concerned.

KEY TO CITY'S RENAISSANCE

During the lifetime of Mr. Mellon, the United States had fought two World Wars. At 19 years of age he enlisted as a private in World War I. In World War II he served on active duty in the U.S. Army from 1942 to 1945, when he was honorably discharged with the rank of colonel. He was commissioned in 1956 as a major general, USAR. Mr. Mellon has a profound grasp of American history that is reflected in a patriotism that is refreshing in these times.

Richard King Mellon is a builder. As an active member of the Allegheny Conference on Community Development, he has been in the forefront during these years of spectacular change and reconstruction in Pittsburgh.

Mellon Square, in many ways the crowning achievement in the renaissance and certainly a key to the rebuilding of the midtown Triangle, was conceived in his mind as he strolled around San Francisco's Union Square one evening during World War II.

In 1953 at the University of Pennsylvania, Richard Mellon set forth in an address before the alumni a fresh concept of management, a responsibility to the community, and of a clear, convincing logic the part of business has in shaping the environment in which its employees live and work.

GOOD NEIGHBOR POLICY

In the course of his remarks, he observed:

"It was Abraham Lincoln, I believe, who said, 'A man cannot be truly happy unless he is doing something for somebody else.' Participation by business leadership in community activities provides such a vehicle for basic happiness. After all, we must consider people and their individual happiness. Part of that happiness is supplied by the environment under which they live and work.

"People live in the same communities in which corporations do business, and they and their neighbors work for them. They expect business to be a good neighbor and a good citizen. And good neighbors collectively make a good community in which to live."

No city has benefited more from this forward-looking concept of the role of present-day business in the community than Pittsburgh.

Through the years Pittsburgh has bred great men. As Pittsburgh commemorates its bicentennial, it is especially proud of Richard King Mellon, whose vision, leadership and philanthropy have set such a splendid example of unselfish devotion and service to his native city.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Khrushchev's Kind of Peace

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks I include a powerful analytical article exposing communism, written by the Rev. (F.) Robert H. W. Martin, appearing in the September 11, 1959, issue of the Catholic Standard, an article which should be widely read, entitled "Khrushchev's Kind of Peace."

KHRUSHCHEV'S KIND OF PEACE—A PRIMER OF COMMUNISM AND COEXISTENCE

(By the Reverend Robert H. Wharton)

Soviet truth is stranger, and much more terrifying, than fiction.

A mind would have to be extremely fertile to come up with stories to match the power struggle of the Communist leaders. When Stalin was master of all he surveyed, a rising Red star by the name of Nikita Khrushchev brought forth this paean of praise for his master's birthday: "Our father, sage, Stalin, teacher and brilliant leader of the party, of the Soviet people, and the toilers of all the world."

Yet 3 years after the father, sage, teacher, and brilliant leader had died, he was denounced by the star now secure in his firmament, Nikita Khrushchev. Armed with a fierce determination and a disarming grin, Khrushchev had seized power from the heirs-apparent and was ready to demolish them one by one.

Malenkov followed Stalin as Premier in a "collective leadership," but relinquished his post of party chief to Khrushchev. The Premier and the head of the party then joined forces to bring about the execution of Beria, the powerful police chief.

Shortly thereafter, Malenkov "confessed his errors" and resigned the premiership. The master plan called for grandfatherly and goateed Bulganin to step in as Premier.

STRUGGLE CONTINUES

The battle royal became exciting after that. Khrushchev pooled his craftiness with the prestige of war hero Marshal Zhukov. Result of the pact: Molotov, Malenkov, Shepilov, and even Kaganovich (who had discovered Khrushchev in the Ukraine and had been the young Communist's patron in his rapid rise to power), all were discredited, ousted, and lost in obscurity.

This amazing feat should have added another medal to Zhukov's chest; but the wily puppeteer had other plans. Out went Zhukov.

There was only one name left on the list of important Communists, that of Bulganin. The Premier "decided" to accept a minor post and meekly added his vote for Khrushchev as the new Premier. At last, the New Stalin was in charge of both the Government and the Communist Party.

What is the strange system that could bring a Khrushchev to power and enable him to calmly knife his compatriots one by one?

It is not the pudgy, smiling man's personality that makes him the most hated person in the world. His vitality and color would not cause him to be known as the "hangman of the Ukraine" or the "butcher of Budapest."

There must be a philosophy, a way of thinking, a system to produce a man so skilled in treachery and deceit and murder. That philosophy is communism.

WHAT IS COMMUNISM?

It is not enough for us to know that the enemy is wicked. We should be able to answer the simple question: "What is communism?"

Pope Leo XIII realized what it is. As long ago as 1878, he said it is "the fatal plague which insinuates itself into the very marrow of human society, only to bring about its ruin." The Holy Father spoke these words long before the plague had contaminated all the nations of the earth and long before the brutality of Hungary and Tibet.

Even earlier than Leo's reign, in 1846, Pope Pious IX was one of the first men to recognize insidiousness of communism. He described the system as "absolutely contrary to the natural law" and something which threatened to "utterly destroy the rights, property and possessions of all men, and even of society itself."

Communism as we know it today was derived from the social and economic theories advocated by Marx and Engels, developed by Lenin and the Bolsheviks, and later by Stalin. The "Communist Manifesto" of Marx and Engels (1848) presented the basic doctrines to the world and became the "Old Testament" of communism. Lenin made the theory a living thing by the 1917 revolution in Russia, and his writings together with those of Stalin make up the Communist "New Testament."

The economic theory of communism is important. The theory holds that all wealth is derived from labor and that all capital is therefore theft. All capital tends to concentrate in the hands of fewer and fewer and will finally, by economic necessity, be taken over by the working class.

These ideas, of course, start out with a denial of man's right to possess property and predict the coming conflict between the classes—with victory for the working class.

Behind this is materialism. Communism denies all spiritual realities; everything is just matter. Marx also taught that this matter develops through a conflict of forces, the dialectic. Thus the high-sounding name for Marx's theory: dialectical materialism.

ROOT OF THEORY

Because communism claims that all causes are economic and that matter is the only reality, denial of God and of human rights are essential to the whole system. The Communist's atheism is not the kind that "lives and let live," but a militant atheism calling religion a delusion and waging ceaseless war against it.

The ideal of communism is a classless society where all property is owned in common in an earthly paradise. All forces are supposed to work to hasten the coming of this state of bliss. That is why conversion of the whole world to the theory is an essential part of Communist doctrine.

This all sounds rather quaint in the abstract. But ever since the Czar was dethroned in 1917 and the Bolsheviks seized power in Russia, the frightening results of the deadly theory have been only too apparent.

Communism makes war on all religion. Witness the trials of prelates, execution of priests and nuns and ministers, the exquisite methods of torture that would make the ancient Romans sit up and take notice, the fierce efforts to discredit the church and wipe out all religious sentiment in the countries subjected to communism's iron rule. As long as communism is communism, it will of necessity hate and persecute all faiths.

DENIAL OF MORALITY

Along with this struggle against God there is communism's denial of morality. Man is just another brute animal; there is no God. So what basis is there for right and wrong? Lying, murder, theft, treason, broken pledges—all are approved methods in the Communist catechism. The concept of honor and justice has no place in a system which murders or enslaves millions with wholehearted dedication to the cause.

The doctrines of communism result in state dictatorship as well. The state is supreme; its rulers are absolute; obedience is essential. Our Nation was founded on the principle that God has given us rights that cannot be taken away. To us, the state exists merely for the good of the individual. This will not do for communism.

To the Communists' twisted mind, man exists for the state. Everything an individual does should be subordinated to the interests of the state. It is true that this all-knowing and all-powerful state is supposed to disappear eventually in the future Communist paradise. Until the arrival of that happy time, however, the state is the beginning and the end of a loyal Communist's life.

Communist leaders come and go. They change tactics, they frown and then smile, they threaten and then utter soothing words, they murder millions and then kiss babies. But through all these things the foundation remains: communism's determination to take over the world.

Right now, it would seem that this international conspiracy would rather use its supply of honey to attract the flies. It would rather be at peace to consolidate its gains, to infiltrate another country, to let people forget the Hungarian massacre, to build up its economic strength.

It makes no difference to Communists what methods are used, as long as there is steady progress toward their ends. Sometimes force must be used. The true face of Communism was shown in 1956 when 40,000 Hungarians were killed and 200,000 others were forced to flee their homeland. The crime of the Hungarians was unforgivable; they wanted to run their own country.

THE RED APPEAL

Where do all the Communists come from? Why does anyone embrace such an obviously destructive menace to the human race? In order to gain disciples, the Red leaders preach paradise to hungry and downtrodden people They are adept at the use of beautiful words such as justice, freedom, abundance, equality—even though they never give these things.

Communists are masters at crying against abuses: the selfishness of the rich, injustice in the world, race prejudice, social snobbery.

Communism has a method for every occasion, a solution for every problem, a slogan for every cause.

Every American would benefit from reading a recent speech by Gen. C. P. Cabell, Deputy Director of the Central Intelligence Agency. At present, says General Cabell, the Soviets are engaged in a triple-threat attack on the free nations.

The most obvious form of the Soviet Union's attack is its use of military, political, diplomatic and economic weapons for its own ends. The second wing of the assault is a worldwide program of subversion (10,000 spies in the United States alone, our authorities say). The third way of securing their purpose lies in their use of Communist-front organizations in nearly all countries of the world. Our Attorney General's list contains the names of hundreds of these supposedly patriotic groups.

WHAT HE MEANS

Khrushchev, the disciple of Marx and Lenin and Stalin, will now show his smiling face to the people of the United States. We must remember that, more than anyone in the world, Khrushchev is communism. All the things said about the evil theory, its aims and methods, apply especially to this absolute dictator. We can endure the smiling face, if we can be sure that all Americans will look beneath the surface and see the soul blackened by teachery and mass murder.

Lest we think the smile might mean a new and enlightened Khrushchev, we would do well to think about these frequently quoted words of Dimitry Z. Manuilsky of the Lenin School of Political Warfare (1931):

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come. To win we shall need the element of surprise * * *. So we shall begin by launching the most spectacular peace movement on record * * *. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist."

Khrushchev stated only recently that there are two alternatives facing us: Peaceful coexistence or the most destructive war in history. Besides his disarming grin, the Soviet ruler offers us a seductive word: coexistence. We will play into his hands if we fail to see the fraud of this tinsel word, coexistence.

Khrushchev believes that communism will be victorious in the end, of course. But he would have us think that the only sensible way, the only "sporting" way to achieve victory is by peaceful competition. The struggle between East and West, we are assured, should be kept in the realm of ideas.

Is it possible that anyone could believe him? Bullets, not ideas, killed millions of Ukrainians and Hungarians. Barbed wire, not ideas, keeps countless thousands in slave-labor camps all over Russia and satellite Europe. Ideas alone did not seize Tibet from its ruler's hands; ideas are not murdering in Laos now. Nor have ideas caused unspeakable suffering for the church in several countries.

Peace and coexistence are empty words as long as an evil and powerful enemy seeks to bring the world under its domination. These words mean nothing as long as millions are forced to bow to the rule of Communist masters.

Our true watchwords have been given by Allen Dulles, Director of Central Intelligence: "Our defense lies not in compromise but in understanding and firmness, in a strong and ready deterrent military power, in the marshaling of our economic assets with those of other free countries of the world to meet Communist methods of economic penetration, and finally in the unmasking of Communist subversion."

It was 40 years ago that Woodrow Wilson, appealing for ratification of the Versailles Treaty, spoke these courageous words against compromise: "So long as wrongs like (enslaving of peoples) exist in the world, you cannot bring permanent peace to the world. I go further than that. So long as wrongs of that sort exist, you ought not to bring permanent peace to the world, because those wrongs ought to be righted, and enslaved peoples ought to be free to right them."

Now, 40 years later, these wrongs exist more than ever in the history of mankind. We would have to turn deaf ears to the cries of millions of suffering human beings, abandon our Christian and American ideals, and be guilty of crass appeasement in order to accept Khrushchev's kind of peace.

What Khrushchev Really Wants

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. DODD. Mr. President, on Saturday, September 5, an editorial of the Tablet of Brooklyn, N.Y., pointed out the probability that one of the motives of Khrushchev's visit is to secure credits and other forms of monetary assistance in the United States.

The editorial wisely points out that we must resist any move in this direction which could only serve to strengthen the Soviet Union and increase the strain on our own fiscal stability.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT KHRUSHCHEV REALLY WANTS

There has been a lot of emphasis in the official utterances on the forthcoming visits to be exchanged between Washington and Moscow, on the educational value of such travel, contacts with people in the United States of America and the U.S.S.R., their way of life, and so on. The discussion, favorable or unfavorable, in Congress, in weekly reviews and in the metropolitan and specialized press, has touched upon the possible agenda and the consequences that these exchanges and conferences may have.

It is surprising that no one has suggested that the primary objective of the Soviet regime in this business is to get vast credits from the Government of the United States, directly or indirectly. Anyone who has followed closely the events of the past few years is aware that next to the total and unconditional neutralization of Germany—on the model of the Austrian Peace Treaty—the Soviet Union has most urgently wanted easy and unimpeded contact with the major industrial nations.

Apart from the Czechs, there is no considerable community within the entire range of the Communist world which possess any substantial tradition of skilled artisan labor, that takes generations to develop. Without skilled artisans which central, western, and southern Europe have known for all the centuries when eastern Europe was still seething in tribal warfare, and still importing both skilled labor and the products of artisan skill, the Soviet Union cannot simultaneously organize the extractive and heavy fabricating industries and produce the wide range of consumers' goods that its people (particularly as they become more urbanized in consequence of their industrialization) will more and more incessantly demand.

Why not, therefore, come to terms with the U.S. Treasury, get large credits, establish trade on a reciprocal basis, provide a share in the economic expansion of the great "underdeevloped" areas under Soviet control for the "capitalists" of New York, Cleveland and elsewhere in the United States and in Great Britain (some of whom have been so active in trying to bring this very situation to pass)? After all, when the United States lifted the price of gold from $20.67 per ounce to $35, some 25 years ago, it contributed to transform the practically insolvent Soviet Union, almost overnight, into a prosperous customer with considerable purchasing power because of its gold production. Why should not the United States again step into the situation and help out, now when even the Soviet gold stock is not equal to the vast load it must assume in carrying out its role as distributor of both capital goods and consumer goods for more than a third of the population of the planet?

When the International Bank for Reconstruction and Development and the International Monetary Fund were set up at the Bretton Woods meting of 15 years ago, the Soviet Union did not see fit to enter them, despite the priminent part that Harry Dexter White and other friends of the U.S.S.R. had teken in bringing these institutions into being. In later years, there may have been a feeling in Moscow that this aloofness was a mistake. It is even possible that much of the Soviet animus toward Nationalist China arises from vexation that the latter steadfastly retains her very large subscription in these institutions, which the Communist Chinese and Soviet Union would doubtless love to divide betwen themselves. Membership in these institutions is almost as much a shortcut to the U.S. Treasury as a direct loan would be.

Congress has lately greatly increased the U.S. subscription in both institutions; our Federal debt statement discloses that just short of $2 billion in non-interest-bearing notes of no fixed maturity have now been made available to them. Possibly, when the annual meetings of the two institutions occur in Washington shortly after the Soviet First Minister has arrived there, we shall hear a chorus of loud welcome to the U.S.S.R. as a subscriber to their capital on a generous scale, in the interest of expanded trade between "peace loving peoples."

To our way of thinking, the greatest practical danger in the new policy lies precisely in the financial support, direct or indirect, which the United States is evidently on the verge of granting to the U.S.S.R. Even if it creates a new boon in "peace stocks" (in contrast to "war stocks") and stimulates something like full employment over the next year or two, this policy is inherently suicidal because it must end by committing this country to unconditional endorsement of the economy of the U.S.S.R., its way of life, its currency, and the rest, no matter how many reservations are uttered about "our capitalism" and "their communism." It can only end in the dollar moving down to the level of the ruble, and the interpenetration of the two systems of social, economic and political organization.

In addition to "Not Welcome" signs, let's ask Congress to post guards around our Treasury with signs reading "The U.S.S.R. is not coming in here."

Christianity—Private Enterprise—State Socialism

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. PILLION. Mr. Speaker, for the past decade, or longer, I have noticed an increasing interest on the part of the clergy in this country in economics, politics, and sociology.

A considerable segment of our Protestant ministers appear to be ready to replace our freedoms and our form of government with socialistic measures.

My attention was recently called to a publication entitled "Christian Economics." This most worthwhile publication is published by the Christian Freedom Foundation, 250 West 57th Street, New York, N.Y.

Its basic philosophy is:

We stand for the free market—the economic system, with the least amount of government and the greatest amount of Christianity.

I am pleased and delighted to know that a publication of this character is available for circulation to the Protestant ministers in this country.

The following article by Rev. E. F. Molnar, Ph. D., is typical of this publication. Dr. Molnar's article is most timely in view of Mr. Khrushchev's impending visit to this country:

WHO SHOULD OWN CAPITAL?

(By Rev. E. F. Molnar, Ph. D., St. Luke's Presbyterian Church, Bathurst, New Brunswick)

Who should own the means of production? Private individuals or one single political party? That is the great debate of our generation.

If you believe that the people should own capital than you are for freedom. If you believe that a single political party should appropriate, in the form of a monopoly of production, all forms of property, lands, animals, factories, machines and money, then you have identified yourself with communism or socialism—the rule of a single political party.

Public opinion on this vital question affords an insight into the most carefully guarded secrets of the Communist Party—the growing belief of the Communists that the whole venture of communism is based on a blunder and promoted by bluff. Party members are beginning to sense that the monolithic monopoly of production enjoyed by the Communist Parties in Russia and other states cannot find the way from absolute tyranny—the rule of terror, the secret police, the concentration camps and liquidation of all dissenters—for a better world.

The writer questioned 100 people on each of the following propositions and with the results noted below. In each case the 100 persons represented all walks of life:

Should any single political party appropriate all forms of property, lands, animals, factories, labor, machines, and moneys? Yes, none. No, 94. Indifferent, 4. No opinion, 2.

Should people own capital, all forms of property, lands, animals, factories, labor, machines, and moneys? Yes, 96. No, none. Indifferent, 2. No answer, 2.

The overwhelming answer given to the first question shows that communism can never take over the central power by vote of the majority. People everywhere, even in Russia, are opposed to monopoly. The world has never before witnessed such a complete monopoly and such an absolute control of a nation's human and material resources. The Russian arch conspirators conjured up into real existence that fearful and fallacious type of big capital that devoured its own children and sets even the members of one family against each other.

The positive answer given to the second question shows the will of the people that capital should not be united under the ownership of one single party as in Russia.

The true issue that divides the people of the world in our present world crisis is one party-owned monopoly of production against peoples' free enterprise rooted in privately owned capital i.e., means of production. The Russian type of production can be upheld solely by terror while the production of the free world is anchored to the validity of law enacted by a majority vote.

By contrast, freemen owning property may set up a free government based on law which is quite capable of adaptation not only for maximum production but to safeguard the rights and privileges and promote the well-being of its citizens, leading on to their highest spiritual and material welfare.

The people everywhere should learn the plain truth about the fundamental issue of the present world crisis. Guns cannot decide the issue. It will be resolved when the truth is widely perceived. A government of law over a property-owning people can evolve as needed to promote their well-being, but a government of tyranny and monopoly of the means of production suppress human liberty and human welfare in order to maintain itself in power.

Deception and Misinformation in Private Power Advertising

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. ENGLE. Mr. President, one thing I always have admired about the private power lobby is the proficiency of its propaganda. But I could be wrong. Because it seems to me that its national propaganda campaign is getting a little stale, and when that happens it is likely to emit a bit of an odor, especially after it has been exposed as baloney in the first place. I have here an editorial which makes that exposure which I would like to submit for the RECORD. It was published in the Sacramento, Modesto, and Fresno Bees of August 30, 1959.

The Bee papers call this private power campaign willful misrepresentation which I think it is. The editorial challenges a recent advertisement in Time magazine by America's Independent Electric Light & Power Companies. I have another here from the Saturday Evening Post of August 8 which is likewise full of half truths—for example, it speaks only of public power costs, never of public power revenues which return to the people and help pay taxes to boot. This kind of advertising is more pernicious than it is proficient. It is becoming more and more distasteful. I do not think the majority of our people will swallow it.

I ask unanimous consent that the editorial, entitled "Foes of Public Power Carry on a Campaign of Misinformation," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOES OF PUBLIC POWER CARRY ON A CAMPAIGN OF MISINFORMATION

A rank deception being perpetrated on the American public these days is the advertising campaign conducted against Federal public power in a national magazines by the privately own electric utilities.

The surprising thing is quite a few otherwise discerning people have fallen for the propaganda, hook, line and sinker, among recent examples being an editorial in the Santa Rosa Press Democrat.

Seldom have so many misstatements been made in so few words but this may be because the editorial simply retailed the misinformation in the advertisements put out by America's independent electric light and power companies.

One page ad in a recent issue of Time magazine depicts John Q. Public writing a check for Federal public power in the sum of $5,500 million, and says:

"Public power spending goes on because most people don't know they, themselves, are paying the cost."

Most people do not know it because they do not pay it.

The $5,500 million is hard to rationalize. The total bureau of reclamation investment in the United States is $3,500 million. This includes irrigation, flood control, navigation, municipal and industrial water, recreation and other benefits as well as power.

About 30 percent of the reclamation bill is allocated to power, or around $1 billion. Add TVA, add all the Army Corps of Engineers powerplants and you still are far under $5,500 million.

Seemingly the utility propagandists have taken the total cost of western water development and put it on the bill for public power, which if true would be willful misrepresentation.

All money invested in Federal public power projects is being repaid to the Treasury, plus 3 percent interest—and much more.

This and more is important. Take the Central Valley project. The total Central Valley project investment is $800 million. Of this, $319 million is allocated to power. But the repayment from power will be $416 million.

In other words, power is subsidizing irrigation and the other public benefits to the extent of $100 million.

The Press Democrat states:

"One thing your tax dollars have done is provide low rate tax free power to Sacramento."

The Sacramento municipal utility district will repay about half of the Central Valley project power investment, with interest. So maybe the Sacramento municipal utility district customers are the ones to complain they are subsidizing irrigation by about $50 million.

The Press Democrat further says the redwood empire has not received a single watt of Federal power. If that is a lament the reason may be found in the fact the redwood empire contented itself for years to electing as its Congressman HUBERT SCUDDER, who not only failed to seek water projects for his district but vigorously fought public power.

Neither the people of the redwood empire nor of Connecticut or any other State pay the cost of public power but profit from it.

A Bill To Promote World Peace

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. McINTIRE. Mr. Speaker, in our endeavors to promote world peace and assist underdeveloped, friendly countries, many ideas are expressed by many interested citizens.

Mr. D. T. Larson, Sr., of 809 14th Street, Berlin, Conn., has an idea which he has prepared in legislative draft. I believe it will bear study:

A BILL TO PROMOTE WORLD PEACE, TO RAISE STANDARDS OF LIVING AND COMBAT HUMAN HUNGER AMONG THE PEOPLES OF ALL NATIONS, AND TO FACILITATE INTERNATIONAL COMMERCE AND THE DISPOSAL OF SURPLUS COMMODITIES THROUGH A SYSTEM OF REGIONAL BANKS UNDER THE GENERAL COORDINATION OF A CENTRAL BARTER AND SURPLUS POOL

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) it is the intention of the Congress and the purpose of this Act to promote world peace, raise standards of living, and combat human hunger throughout the world by providing an international market and a system of international trade and commerce for the sale or exchange of surplus agricultural commodities and other goods and commodities so that the peoples of the world who are in need of such goods and commodities can more readily obtain them from those possessing adequate or surplus supplies.

(b) The President shall administer the program established by this Act through the personnel and procedures established under the Agricultural Trade Development and Assistance Act of 1954 or in such other manner as he may deem appropriate to insure the complete and efficient functioning of such program.

PART I—REGIONAL BANKS

SEC. 101. (a) In order to carry out the purpose of this Act, the President is authorized to negotiate and carry out agreements with nations or organizations of nations to provide for the establishment of five regional banks for economic development whose operations will respectively cover North and South America, Europe, Africa, the Near East, and the Far East; except that the President, pursuant to negotiations with the nations involved and in accordance with such agreements, may take steps to provide such other division of geographical jurisdiction for such banks as he may deem appropriate.

(b) Each of the five regional banks created pursuant to subsection (a) shall have such powers and functions and operate through such procedures consistent with this Act as may be prescribed by the applicable agreement. Each such bank shall be separate and distinct from the other banks and shall be controlled exclusively (except as provided under part II of this Act) by the participating nations of the region involved plus the United States, in proportion to the respective investments of such nations in such bank.

SEC. 102. (a) It shall be the function of each regional bank to assist in promoting world peace, improving standards of living, combating human hunger, and facilitating trade and commerce in the region involved by assisting in the sale or exchange among the countries of that region and between such countries and those of other regions, in the manner provided in part II of this Act or in such other manner as may be appropriate, of surplus agricultural commodities and other goods and products.

(b) In carrying out the function described in subsection (a), each regional bank shall—

(1) assist each country in its region in the sale and exchange of goods and commodities by providing full information concerning the needs and available resources of the other countries of the region;

(2) assist such countries in the sale and exchange of goods and commodities which are in surplus supply in such countries;

(3) assist the countries of its region (in the manner provided in part II of this Act or in any other manner which may be appropriate) in the sale and exchange of goods and commodities in transactions involving countries outside such region;

(4) prepare and disseminate a code of standards for goods and commodities to be sold or exchanged under the program established by this Act;

(5) establish a program of insurance on and guaranties of goods and commodities to be sold, exchanged, transported, or stored under the program established by this Act;

(6) assist the countries of its region in making loans and exchanges of currency involving other countries in its region or (in the manner provided in part II of this Act or in such other manner as may be appropriate) countries of other regions; and

(7) take such other action as may be appropriate to achieve the purpose and objectives of this Act within its region.

Each regional bank shall impose a reasonable charge for its services rendered in connection with such functions, to the end that its operations will be self-sustaining and self-liquidating.

PART II—INTERCONTINENTAL MARKET PLACE

SEC. 201. (a) In order to further carry out the purpose of this Act, the President is authorized to negotiate and carry out an agreement or agreements with all other interested nations for the establishment of a central barter, surplus, and credit pool (hereinafter referred to as the "Intercontinental Market Place").

(b) It shall be the function of the Intercontinental Market Place to assist in achieving the purpose and objectives of this Act by coordinating the activities of the five regional banks established under part I and assisting them in the performance of their functions.

SEC. 202. (a) In carrying out the function described in section 201(b), the Intercontinental Market Place shall—

(1) assist the regional banks in sales and exchanges of goods and commodities between countries in different regions and subject to the jurisdiction of different banks;

(2) provide full information to the five regional banks and to other interested persons with respect to the location, availability, and cost of goods and commodities which may be available for such sale or exchange and with respect to areas where specific types of goods and commodities are needed and those where there is a surplus;

(3) make loans to any of the regional banks, secured by goods and commodities held under the program established by this Act, in amounts not exceeding 50 per centum of the value of the goods and commodities so held, provided that clear title thereto has been assigned to such bank;

(4) promote and assist in the exchange of local currency among the regional banks and the individual nations of the world to the maximum extent practicable;

(5) establish and maintain such accounting and related procedures as may be necessary or appropriate for the coordination and supervision of the regional banks; and

(6) take such other action as may be necessary or appropriate to coordinate the activities of the five regional banks and to insure that the purpose and objectives of this Act will be achieved as rapidly and effectively as possible.

The Intercontinental Market Place shall impose a reasonable charge for its services rendered in connection with the performance of such functions, to the end that its operations will be self-sustaining and self-liquidating.

SEC. 203. There shall be a Policy Board to provide advice and consultation in the administration of this Act and in the exercise by the Intercontinental Market Place of its functions. Each of the five regional banks shall be represented on such Board, and shall have a voice in the determination of the policies of the Intercontinental Market Place equivalent to its proportionate investment therein but in no event to exceed 40 per centum.

SEC. 204. In addition to its other functions under this part, the Intercontinental Market Place shall have authority to make loans and grants of food and other goods and commodities, on such terms and conditions as it deems appropriate, when necessary on account of crop failures or other emergencies in any part of the world; and it shall establish and maintain a reasonable reserve of goods and commodities for use in such emergencies in accordance with this section.

SEC. 205. From and after the execution of the agreement or agreements described in section 201(a), the Intercontinental Market Place shall accept, for sale, exchange, distribution, or other disposition in accordance with this Act and the agreements entered into hereunder, goods and commodities aggregating in value not more than $30,000,000,000.

Roseburg, Oreg., Plans To Build Modern Community on Shattered Rubble of Disaster

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. NEUBERGER. Mr. President, occasionally from the ashes of disaster there arises the phoenix of progress. On August 7, a tragic detonation of high explosives occurred in the city of Roseburg, Oreg., a leading lumber community with a population of 12,000. Some 13 people were killed and at least $10 million in property damage occurred. Many blocks were leveled and buildings destroyed.

Now, the people of Roseburg are determined to rebuild a series of modern, utilitarian structures in the area which was devastated by the blast. An outstanding western architect, Richard Neutra, of Los Angeles, is to assist Roseburg in this enterprise.

Because the Roseburg calamity has come to the attention of the Senate on

several occasions, I believe my colleagues will be interested in two articles appearing the Oregonian of Portland of September 8, 1959, which describe the far-sighted vision of the civic and governmental leaders of Roseburg, who are planning this modern city. The Senate already has taken cognizance of what occurred at Roseburg by passing S. 1606, a bill to tighten up and make more effective Interstate Commerce Commission regulations over the transportation of high explosives and radioactive materials in interstate commerce. Therefore, I ask unanimous consent that these articles from the Oregonian about a dynamic new city arising from the rubble of Roseburg, Oreg., be printed in the Appendix of the CONGRESSIONAL RECORD. The author of the articles is Ken David, able staff writer of the Oregonian.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Oregonian, Sept. 8, 1959]

PLANNERS HOLD KEY TO "NEW ROSEBURG"

(By Ken David)

A dramatic new city—dynamically modern, artistically exciting—may arise from the ashes and rubble of blast-shattered Roseburg.

Out of this southern Oregon community's disaster could emerge a showplace of the West.

This prospect is envisaged in plans brewing to engage world-renowned Architect Richard Neutra of Los Angeles, a man whose name has been synonymous for more than a quarter of a century with the new and the daring in architecture, as adviser and consultant in drafting a master plan for development of the area destroyed by the tragic August 7 explosion and designing the buildings which will replace those leveled in that disaster.

The idea to engage Neutra (pronounced Noytra) came from Francis W. Brown, Portland, editor of Western Building, a trade magazine.

LUMBER USE ADVISED

Brown, looking over the devastation in the wake of the detonation of 6 tons of explosives in downtown Roseburg, recommended that since Roseburg is one of the centers of the State's lumber industry, reconstruction of the buildings should employ "interesting and dramatic uses of lumber."

He took his idea to the wood promotion committee of the National Lumber Manufacturer's Association, meeting in San Francisco; Roseburg city officials, including City Manager John Warburton and City Planning Director Lyle Glenn, and lumbermen operating in the Roseburg area.

He suggested Neutra be engaged by the lumber industry, primarily local lumbermen, and his services offered to city officials, architects who will be employed to design new buildings, and the consultants hired by the city to draft a master plan for reconstruction.

He won favorable response and then took the idea to Neutra. The world-famous architect responded with enthusiasm and told Brown, Warburton, and Glenn he would be available for such an assignment in about 3 weeks, if the plans crystalized.

Neutra, who has helped cities the world around rebuild from devastation of war, flood, and earthquake, told the Oregonian Monday he contemplates that his role in the reconstruction of Roseburg, if the plans materialize, would be one of a guiding spirit.

He indicated he would enjoy taking part in a project that would demonstrate to the rest of the Nation that the people of Roseburg, stricken by disaster, could "pull themselves up by their own bootstraps without help from the Government" and bring a dramatic new city to life out of the disaster.

He emphasized that realization of this goal would mean that the businessmen of Roseburg must delay plans for rebuilding until an overall development plan is worked out.

Warburton and Rosenburg City Attorney Paul Geddes told the Oregonian that the businessmen of the community are cooperating with city officials in this respect.

PLANNING FIRM HIRED

City officials last Thursday employed the Seattle-Portland firm of Clark, Coleman & Associates to draft a master plan for development of the blast-shattered core business district. A preliminary plan is scheduled to be submitted to the city council in 30 to 60 days, Warburton said.

Within the eight-square-block area of total destruction the ruins still smolder, and an acrid stench clings in the air. But beyond this zone merchants and homeowners are busily removing the scars from the massive explosion which took 13 lives, injured more than 100 persons, and caused an estimated $10 million in property damage.

Brown believes that Neutra could create from the Roseburg disaster a business and industrial area that would win for this small southern Oregon lumber community a nationwide reputation that would benefit not only Roseburg but all of Oregon.

[From the Oregonian, Sept. 8, 1959]

ARCHITECT RICHARD NEUTRA ENTHUSIASTIC OVER CHANCE TO HELP REBUILD BLASTED ROSEBURG

"If you want to build a house for a polar bear, you must be interested in, even like, polar bears. If you want to build a house for humans you must understand and love them."

This is Richard Neutra's philosophy of architecture summed up by him for the Oregonian Monday from his office in Los Angeles.

Neutra, who has become a legend in his world of stone and steel, wood and concrete within his lifetime, may furnish the guiding spirit in the rebuilding of explosion-torn Roseburg if current plans materialize.

And Neutra is enthusiastic.

He indicated as much Monday to the Oregonian just before he left on a 3-week trip to Brazil as guest of the Brazilian President and to Venezuela to check on a couple of housing developments he is building in that country.

Citizens of Roseburg are rapidly recovering from the extensive property damage caused by the August 7 explosion of a truck laden with dynamite and other explosives.

Roseburg City Manager John Warburton said the master plan now being prepared will contemplate possible relocation of streets and utilities to gain the most and best uses of the land and the location of a new bridge across the North Umpqua River so it will blend into the development plan.

The State highway department has come up with a bridge location plan which is not completely satisfactory. The new bridge under this plan would cost about $2.7 million but would siphon traffic directly into the congested downtown area, Warburton said.

The sounds of hammers and saws fill the air all over Roseburg as homeowners and businessmen repair damage from the disaster.

SCHOOL PROJECT LARGEST

Insurance representatives said the number of properties damaged total about 2,500. They said insurance would cover about 60 percent of them. Dollarwise, the picture is less certain. Insurance agents figure 85 percent of the depreciated value of damaged and destroyed property was covered by insurance. How much replacement value was insurance covered seems to be anybody's guess now since no one knows yet what use will be made of the zone of completed destruction or what kinds of buildings will be constructed there.

Wendell Smith, school district business manager, said no final decision has been made on whether to rebuild or repair the Central Junior High School.

The school district was fortunate in its insurance—it was covered for replacement value. This will be the biggest single reconstruction project. A new building will cost an estimated $550,000. Repair of the Umpqua Hotel, second largest project, will cost an estimated $250,000 to $300,000.

LAND USE CONSIDERED

The blast wrecked an estimated $10 million of property in varying degrees. This dollar estimate of the results of the explosion does not include the loss to businesses interrupted nor the value of the 13 lives lost and the scores of persons injured.

Approximately 75 percent of the businesses closed after the blast of an explosives-laden truck shortly after 1 a.m. August 7 have been reopened wtih major repairs completed but with board still substituting for window glass in many cases.

Warburton said a group of businessmen is toying with the idea of buying up residential property in the zone of complete destruction and holding it for future industrial development. In most cases, he said, insurance will not cover the cost of rebuilding these homes and apartments, and purchase of the land by the businessmen would enable owners of these destroyed homes to rebuild outside of this essentially business and industrial area.

City officials have already rezoned this section of the city so a stricter fire code must be observed by builders. This may present some problems if plans materialize to develop an overall, harmonizing scheme for rebuilding the area to emphasize wood in construction.

Neutra said he thought agreement could be worked out for designs stressing dramatic uses of wood.

Brown said indications are now that Neutra will send one or two of his associates to Roseburg to confer with planners and city officials pending Neutra's return from his South American trip.

Neutra, who recently completed the U.S. embassy building in Karachi, Pakistan, has been honored throughout the world for his bold concepts in architecture. He has served on the California State Planning Board, and a secretary told the Oregonian he has been deeply interested during his career in city planning. He has won more than 50 awards in worldwide competition for commercial and residential designs, has won honorary doctorate degrees from several universities and has been made an honorary member of architectural associations of numerous foreign countries.

Conference Report on Labor-Management Reporting and Disclosure Act of 1959

SPEECH

OF

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. BARDEN. Mr. Speaker, I hope the few brief comments which I am about to make on several sections of the bill,

which are in addition to those I have already made, will be helpful in clarifying legislative intent.

With reference to section 701(b), it is clearly intended that the regional directors in making any decisions or rulings pursuant to a delegation permitted by that section would be subject to and bound by the various precedents and rules and regulations established by the Board and, furthermore, an appeal to the Board is provided to prevent and/or remedy any abuse of discretion or departure from Board precedent or Board rules and regulations by the regional directors.

Section 501 imposes fiduciary responsibilities and obligations upon the officers, agents, shop stewards, and other representatives of a labor organization and provides that such persons occupy a position of trust in relation to such organization and its members. The McClellan committee recommendations on regulation and control of union funds specifically stated that:

> Since union dues moneys, as well as health and welfare funds, are in actuality a trust, being held for the members of the union by their officers, the committee feels that attention should be given to placing certain restrictions on the use of these funds, such as are now imposed on banks and other institutions which act as repositories and administrators for trust funds.
>
> This type of legislation, in the committee's opinion, would go a long way toward preventing wholesale misappropriation and misuse of union funds such as that disclosed by committee testimony.

Section 501 is intended to meet the needs, purposes, and objectives set forth in the McClellan committee recommendations which I have just quoted. The language of section 501 clearly and unmistakably carries out that intent.

The general principles stated in section 501 are familiar to the courts, both Federal and State, and therefore incorporate a large body of existing law applicable to trustees and a wide variety of agents. The purposes for which funds of a labor organization may be expended or invested will necessarily therefore, be restricted and limited by such existing law regardless of any provision in the constitution, bylaws or resolutions of a labor organization purporting to limit the application of such law.

Section 702 only restores the law with respect to voting of economic strikers to what it was prior to the enactment of the National Labor Relations Act of 1947, as amended, with the qualification, however, that after the expiration of 12 months after the commencement of the strike, economic strikers not eligible for reinstatement, would lose such right to vote as they may have had prior to the expiration of such 12-month period. Prior to 1947, the Board sometimes permitted either the strikers, the replacements, or both the strikers and replacements to vote depending upon all the circumstances. It is important to note that section 702 does not give employees engaged in an economic strike who are not entitled to reinstatement an unqualified right to vote. Rather this section provides that they shall be eligible to vote only under such regulations as the Board shall find are consistent with the purposes and provisions of this act and then only if the election is conducted within 12 months after the commencement of the strike.

Impressive evidence was presented to the labor committees of both Houses of Congress with respect to the devastating injury to the businesses of employers, the jobs of employees and the welfare of the public, which has often resulted from the blackmail organizational and recognition picketing activities engaged in by certain labor organizations.

The purpose of the proviso to paragraph (C) of section 704(c) which states that when such petition has been filed the Board shall forthwith direct an election, is to enable an employer or the employees to obtain a prompt election instead of having to go through an indefinite and prolonged period of picket line warfare which could have the effect of placing the employer's business and the jobs of his employees in jeopardy.

Such being the problem dealt with, it was not the intent that this proviso, which was added in conference, should be used as a device or subterfuge by a picketing union to bring about a prehearing or so-called quickie election.

Therefore, in all cases, it will be appropriate for the Board to investigate as to whether a labor organization is using the picketing as a device simply to bring about a prehearing election. Where the Board has reason to believe that this is the intent of the petitioning labor organization, the Board will be under a duty to direct the petitioner to follow the provisions of section 9(c)(1), and to afford the opportunity for a hearing. The right to a hearing is a sacred right and it should not be denied where such denial would lend support to a subterfuge.

Tribute to George Evan Roberts

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. MARTIN. Mr. President, it is an honor, to have an opportunity to pay tribute to distinguished native sons of one's State. One such distinguished native son of my State of Iowa was George Evan Roberts, who in a lifetime that spanned the years from 1857 to 1948, made a name for himself first in Iowa as a newspaper publisher and later throughout the country as director of the U.S. Mint and one of the Nation's outstanding bankers.

I ask unanimous consent to have printed in the Appendix of the RECORD a tribute to George Evan Roberts prepared by Mr. Homer C. Platt, vice president of the Delaware County, Iowa, Historical Society.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

GEORGE EVAN ROBERTS

(By Homer C. Platt, vice president, Delaware County (Iowa) Historical Society)

Out of the past has come the present, and on it we build for the future.

The early adventurers who followed Columbus were largely motivated by personal greed and ambition. Their main objective was gold and silver; the history of the Spanish American colonies bears testimony to this spirit.

When Sir Francis Drake sailed from England in 1577 he was aware of the presence of gold in California, where 3 centuries later those gold fields were to lure the Forty-niners. But few of the Forty-niners became rich. Often they made only $10 for a week of back-breaking labor. Merchants, land speculators, gamblers—they were the ones who profited.

Meanwhile, discoveries of a far less spectacular nature were taking place within the area of northeastern Iowa; such as the discovery of great quantities of blue clay, produced by the weathering of the shale. In the deep valley cut by the rampaging Little Turkey River, the shale and clay were left exposed. Tests proved the excellent quality of this clay in making high-grade pottery wares.

Here it was that a young man named David Roberts arrived in 1857 and founded a pottery at Colesburg, Iowa. Here, also, was born a son who was destined to help shape the course of American political history.

George Evan Roberts, eldest son of David and Mary Harvey Roberts, was born on August 19, 1857, at Colesburg, Delaware County, Iowa. Exactly 1 century ago, in 1859, the family moved to Dubuque County, Iowa. David Roberts subsequently brought his family to Delaware County and resided for a time in Manchester, the county seat, where young George E. was employed as an apprentice in the Manchester Press printing shop, then owned and operated by H. L. Rann, Sr.

During the year 1873, the family took up its residence in Fort Dodge, Iowa, where George E. Roberts grew up. This was where, at the early age of 21, George Roberts became editor and publisher of the Fort Dodge Messenger, then as now a widely respected daily newspaper. He retained control of this paper until 1909, but during that period his ambition and his ability already were carrying him beyond the confines of the Fort Dodge area. From 1883 to 1889, he served as Iowa State Printer.

In 1898, George Roberts moved into the national scene with his appointment as Director of the Mint, an office he held until 1907 when he resigned to become president of the Commercial National Bank of Chicago. In 1910, he left the bank to return to the post of Director of the Mint, where he stayed until 1914 when he again resigned, this time to become assistant to the president of the National City Bank of New York. He moved steadily up the ladder of National City Bank officialdom until he became its top vice president, then retired from active business in 1931.

Throughout the latter part of the 19th century, a continuous debate was waged over various phases of the money question. Although exposed to all the "isms" of that era, George E. Roberts used his own good sense; meantime pursuing his studies along financial lines. Too, he inherited certain views of his father who was orthodox on the money question.

Again and again, George Roberts denounced the fallacy certain groups cling to: viz, that they can keep the price of their products or their services up, while the prices of other things are going down. Mr. Roberts denounced such attempts as unfair and unworkable.

"The whole situation," said he, "affords another demonstration that the basis of

sound economics is the moral law. In truth, the economic law and the moral law are one and the same."

It is the desire of this writer that the memory of George Evan Roberts be perpetuated in a manner benefiting our American tradition.

Report of the Commission on Civil Rights

SPEECH
OF
HON. WILLIAM L. DAWSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. DAWSON. Mr. Speaker, day before yesterday, on September 9, 1959, each Member of Congress received a copy of the report of the U.S. Commission on Civil Rights, together with a smaller volume containing an abridgment of the substance of the report and the Commission's findings and recommendations. I hope every Member will read the Commission's findings and recommendations, and will also take the time to read extensively through the text of the whole report. It is a document that should be widely read by the people of this country, just as was the October 1947 report issued by President Truman's Committee on Civil Rights, which greatly helped make the entire country more aware of the gross discriminations perpetrated against millions of Americans solely because of their race, religion, or ancestry.

There has been much progress since 1947 in reducing these discriminations. Almost all of that progress has been through court decisions, actions of administrative agencies, and by voluntary actions of groups and individuals. I am disappointed that Congress has done almost nothing to fulfill its legislative responsibility to bring about a greater realization of our ideals of equality under the law. As the present Commission's report shows, an enormous amount of discrimination still remains.

Since I received the Commission's report, I have been examining it carefully. I am much impressed by its factual and legal analysis. It concentrates particularly upon the fields of voting, public education, and housing. These are very important in the life of our Nation, and as the report shows, they are full of problems of racial discrimination. I am sorry that the Commission did not also include in its report an analysis and findings concerning discrimination in employment. In a capitalistic society such as ours, economic discrimination is often the pit in which most other rights are lost. However, I realize that the Commission had scarcely 16 months in which to do its job, and I think it deserves great credit for making its good factual study in the fields of voting, public education, and housing.

This report should be of great value in bringing into sharper focus the facts of discrimination and inequality that still plague the Nation. It is especially significant that although three of the six members of the Commission are southerners who have in the past been closely identified with the maintenance of segregated patterns of life, many of the recommendations of the Commission were unanimous.

They unanimously affirmed that—

Many Americans, even today, are denied the franchise of race * * * through the creation of legal impediments, administrative obstacles, and positive discouragement engendered by fears of economic reprisal and physical harm.

They stated that—

It has become apparent that legislation presently on the books is inadequate to assure that all our qualified citizens shall enjoy the right to vote.

Their statement that "no one had yet been registered through the civil remedies of the 1957 act" points up how woefully inadequate the watered-down Civil Rights Act which Congress enacted in September 1957 has proven to be.

Their findings and recommendations concerning the widespread denials of the right to vote, a right which the Commission describes as "the cornerstone of the Republic, and the key to all other civil rights," certainly emphasize the urgency for congressional action on the bills now pending in Congress to give greater protection to this basic civil right.

The Commission's report contains much valuable material concerning the problems of desegregation in public education, and thus serves a useful function in presenting the facts to the public. However, I am somewhat disappointed at the meagerness of the Commission's recommendations for dealing with discrimination in public education. The problem of bringing the schools into compliance with the decisions of the Supreme Court deserves more than simply providing for additional collection of information and the mediation of disputes concerning proposed desegregation plans. Three of the Commissioners have frankly recognized that it is inconsistent for the Federal Government to grant financial assistance to institutions of higher education that practice racial discrimination, and recommended that Federal funds be withdrawn from such schools. A more positive program is embodied in the civil rights bills now pending in Congress, such as my bill H.R. 300, which would provide for necessary financial and technical aid and legal sanctions to assist in preventing or eliminating denials of constitutional rights to public education.

Even though some of the Commission's recommendations seem weak or inadequate, the Commission has certainly performed a valuable public service in presenting a comprehensive and factual analysis of the present status of racial discrimination in the dynamic fields of voting, public education, and housing. I therefore urge everyone who is interested in the welfare of our country to study the Commission's report, and I hope that it will lend a sense of urgency for the enactment of at least some of the pending civil rights bills.

We have had ample study of the problems and the proposals. Now we need legislative action. America cannot afford to fiddle and dawdle any longer with the burning issues raised by the continued denials of equality and justice under law.

A Tribute to Goldie Graham

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. SCOTT. Mr. President, Joseph (Goldie) Graham, who passed away recently, was a much beloved friend of thousands, who remember him not only as the high school coach, but as a sunny, friendly man. I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Bill Shefski, entitled "A Tribute to Goldie," which was published in the Daily News, Philadelphia, Pa., on September 5, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TRIBUTE TO GOLDIE
(By Bill Shefski)

Joseph "Goldie" Graham was more than just a coach to be interviewed to me. My association with him begin 11 years ago when I was a 101-pound quarterback in the Pop Warner conference and it continued as a Roman junior varsity player for 1 year, as a South Catholic opponent for 2 years, and, finally, in my present sportswriting capacity. I hope this humble work will describe the impression he left on me:

IN MEMORIAM: A SMILE PERPETUATED

"There is something about a smile;
It will brighten most any gloom.
And whether Roman won or lost
Goldie's lit the dressing room.

"Some smiles sparkle like diamonds;
others obscure hidden truths.
Goldie's glistened like sunlight
despite fumbles and other goofs.

"Compared to some of his players,
Goldie seemed almost too small.
But to Katcavage, Glasscott, and Kahana
His spirit made him 10-feet tall.

"His 44 years matched his nickname;
For he gave a smile to us all.
Though some coaches have greater records.
Goldie's '47 champs rate top call.

"Chiodetti dashing off tackle.
Bob Evans opening a hole.
That team has never been equaled,
When it comes to crossing a goal.

"Touchdowns meant a lot to Goldie;
After all, he wanted to win.
Though no more titles were due him,
Still his players were treated like him.

"Roman kids did have their hardships;
A trolly ride before each drill.
After class the trip was tiring,
'Till that smile at the field named Cahill.

"Cahill surely will seem lonely now;
Ask John Hoban, if you care.

'Bring me the line, John' is missing
And that smile just isn't there.
His loss hits not only Roman;
Somehow the league's not the same.
'Cause Goldie was quite a tradition,
Like Thanksgiving and the big game.

"Goldie was not a Knute Rockne;
No national fame had he won.
But privileged are we who knew him.
And sad are we that he's gone."

One Hundredth Anniversary of the Death of Great Shelburne Benefactor

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. CONTE. Mr. Speaker, under leave to extend my remarks I wish to include the following interesting article from the Greenfield (Mass.) Recorder-Gazette concerning the 100th anniversary of the death of one of our region's greatest early benefactors, Ira Arms of Shelburne, Mass.:

SHELBURNE MARKS 100TH ANNIVERSARY OF ARMS' DEATH

SHELBURNE FALLS.—Today marks the 100th anniversary of the death of Ira Arms, Shelburne farmer, whose benefactions established Arms Academy, Arms Cemetery and Arms Library.

Arms was born in Greenfield on May 14 or 15, 1783, and died here September 9, 1859. He spent part of his life in Shelburne in the house now owned by John Friend, and also in Buckland on the site of Walter Legate's house on State Street. His last years were passed in the Thaddeus Merrill house south of the Congregational Church here.

A Mason and a Congregationalist, Arms served in the house of representatives in 1830, 1832, 1835, and 1838.

Though personally opposed to mixing politics, schools, and religion, he was induced to include a clause in his will requiring the school he intended to have built to use only orthodox Congregationalists as trustees. This clause prevented the building of the school as a public institution. It was about 20 years after his death before Arms Academy, a private institution, was built. By that time the fund of $20,000 had reached $50,000, largely through the sale of land owned by Arms on Severance Street, which he had given, with the money, as a site for the school. The school graduated its first class in 1882. It was made a high school in 1895, the town renting the building and managing it through the school committee.

Arms also gave $1,000 and a plot of land on the Buckland side of the river for a cemetery. Because the Buckland site seemed a poor location, land for the present Arms Cemetery was purchased and laid out.

His wife, Sophia, died in 1848, and an adopted daughter, Isabelle G. Newton, died in 1853, at the age of 20. Included in his will were bequests of $5,000 for Arms Library, $5,000 for the Shelburne Falls Congregational Society and $500 for the Shelburne Center Congregational Church.

Arms' life was summed up by Zebulon Piske in a speech at the Shelburne centennial exercises as follows:

"His sympathies were always with the common people and for their welfare. No attractions of wealth or fashion or rank could ever withdraw them. With them he associated and as familiarly with the laborer as the capitalist. A pattern of industry, he loved labor. He never sought an unfair advantage, never drove a hard bargain, and as a point of honor, would never receive in any way more than legal interest. He never overvalued his services. Though often called to represent his town in the legislature, he never retained his full pay, but paid into the town treasury for the benefit of the schools a generous portion, as wages not earned, and that too when sessions were short, and pay per diem low compared with those of modern time."

Miss Ruth Hillis, Corpus Christi, Tex., YWCA Worker, Carried American Friendship to Our Good Neighbors in South America

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. YARBOROUGH. Mr. President, Americans are rightly concerned with the image they present to the other peoples of the world. It is vital that we live in an atmosphere of peaceful cooperation with our neighbors if we are to survive.

People such as Miss Ruth Hillis, new executive director of the Corpus Christi, Tex., Young Women's Christian Association, have helped that image abroad to be a good one. Her work in Brazil, in helping organize the YWCA there, proved we are willing to work with our friends in South America and elsewhere that we may mutually benefit from the exchange of ideas and culture.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by Joanne Townsend published in the Corpus Christi Caller-Times for Sunday, August 30, 1959, and entitled "Miss Ruth Hillis, New Director, Organized YWCA in Brazil."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISS RUTH HILLIS, NEW DIRECTOR, ORGANIZED YWCA IN BRAZIL

(By Joanne Townsend)

About the same time Corpus Christians were forming a YWCA here, 13 years ago, Miss Ruth Hillis was busy in Recife, Brazil, organizing one there, the second in that country.

With her many years of experience with the YWCA include more than 20 years in Brazil, Miss Hillis will begin her job here Tuesday as executive director of the YWCA.

"I think I'm going to like it here very much. The YWCA seems so well organized and productive. And too, the weather is not too unlike that of Brazil, where I lived until last year," the tall attractive Oklahoman said.

Born in Oklahoma City, Miss Hillis has followed a variety of means of helping others.

Between her junior and senior year at Asbury College in Wilmore, Ky., she taught in the hill country and after she received her degree in Spanish and education, she taught in the two Indian camps and did substitute teaching.

"I did a lot of things in those 2 years between getting my bachelors and beginning my masters. Those were the depression years."

After she completed her master's degree in religious education at Scarrit College in Nashville, Tenn., she did graduate work at Union Seminary in New York. She accepted a job as a social worker missionary in the Methodist Church in Rio de Janeiro.

"I was registered at Columbia University for a doctorate, but I went to Brazil instead," she said.

Although she had majored in Spanish, she had to learn Portuguese, the language of Brazil. Because of her background in Spanish, however, she passed her 3-year examination in 6 months.

Although there was a large American colony there, Miss Hillis was among native Brazilians most of the time.

After 5½ years as a social worker, she went to a mission and organized a home economics department and then was assistant director of a USO.

During the war years, she worked with this group, from helping to start new USO's to being in charge of the food.

Following the war, she accepted a job with the YWCA in Rio and after several months she moved to Recife to begin the country's second YWCA.

A new building was inaugurated in 1956 and within a year, they had outgrown it. Another was finished in 1958. Nearly all of the funds were raised by the people.

One of the most significant things she organized was a children's club, which are quite common in our country, but completely new to Brazilians.

The children, ranging from 5 to 11 years of age, were taught handcrafts, attended day camps, and worked on fiestas.

In the 20 years she was in Brazil, Miss Hillis came home seven times. Each visit was filled with speaking engagements, visits, and plans to return to the country she felt was like home.

"When I felt my work at the YWCA was finished, I decided to come back to the States. I took a job in Akron, Ohio, as associate director of the YWCA because I wanted to get used to the American ways again," she said.

When she was considering the job here, the Corpus Christi Chamber of Commerce sent her loads of information on south Texas.

"They certainly did a good job of helping me decide. And when a friend who works for an insurance company had an opportunity to transfer to Harlingen, I felt like a native telling her all about it," she said with a smile.

"I chose Corpus Christi because I thought it would be like Brazil and because I will have a chance to work with Latin American people. And because it's integrated," she said.

Many of the small mementos from South America are used in her apartment at 711 South Broadway.

"Once I get established at the YWCA, I hope to become active in other activities, but right now I want to concentrate on learning more about the YWCA."

Income Tax Deductions

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. FASCELL. Mr. Speaker, I call to the attention of my colleagues in the House a bill I introduced today to allow our taxpayers a deduction for income tax purposes for all charges levied by a municipality, county or other local government. The term "charges" refers to any tax, special assessment, fee, or other service charges which is established and imposed by the local government for the performance of a service or the provision of a local improvement, which the taxpayer has no option to reject. These public services include sewage disposal, water, garbage-trash collection, utilities, recreation, roadbuilding, welfare, and

other services deemed necessary or desirable.

The need for consideration of such legislation was called to my attention by a very active civic group in my congressional district. The Opa-locka (Fla.) Civic Improvement League conducted a survey of 114 cities located in 44 States to determine what services they were providing their residents and the methods used in financing the services. Results of the survey showed some cities finance public services through general revenue collections; others by imposition of service charges for the individual items; others by a combination of both methods. In all cases, there is a wide variance in the rate of taxation or assessment; one thing they all have in common: the charge is imposed by the local government, the taxpayer having no option to reject it.

Under existing law, taxes paid which tend to increase the value of the property assessed are not deductible from income tax. On the other hand, taxes paid directly under the classification of "real property taxes"—which in some cities support all or most of the public services—are tax deductible. Therefore, in those communities where the real-property tax is substantial and there is little or no use made of the so-called service charge, fee, or assessment, the taxpayers residing therein enjoy a tax deduction for these payments. In other communities where the tax rate on real property is low and the revenue to finance public services is collected through individual service charges or fees, these residents are not allowed such a tax advantage on the theory that such taxes tend to increase the value of the property assessed. This policy penalizes the citizens of those communities where the local government is forced to levy these service charges and assessments in order to equitably distribute the cost of municipal services and public improvements.

I submit the basic theory for discriminating between these two types of charges is unrealistic and outmoded. We have witnessed in the last 20 years a tremendous mushrooming of our communities with the resultant demand for more and better roads, hospitals, sewage systems, water-supply facilities, and the like. With the wide range of revenue sources already tapped by the Federal Government, local governments are hard-pressed for taxing sources with which to provide and support such services. The service-charge method therefore has been gaining in popularity, as a means to furnish necessary and needed services and improvements.

In the interest of being fair and treating all taxpayers equitably, I feel it should make no difference to the Federal Government whether or not local service and improvements are financed under the general taxation method or the special taxation method.

Congress took a step in this direction when the law was amended in 1954 to allow a deduction for taxes assessed by special districts for debt retirement and capital purposes. To be deductible, the assessment must be levied annually at a uniform rate on the same assessed value of real property in the district, including improvements, as is used for purposes of the real property tax generally. Deduction was also allowed for the amount of local taxes properly allocable to maintenance or interest charges.

With the tremendous variance in the rate of taxation or assessment and with the different methods of collection in common use, I feel the Congress should seriously consider this legislation making all charges imposed by municipalities tax deductible. Then it will be up to each local government to collect for these functions in the manner best suited to its own individual situation.

I introduced this bill today in the hope that the Ways and Means Committee will request the appropriate governmental reports on this question and that all individuals and groups who share an interest in it, will participate in the consideration of it. The bill and this statement in support of it are necessarily broad and I would expect more definitive amendments would be made to it after consideration by the committee. While it is expected that the Treasury Department will once again voice its opposition to the bill because of the anticipated loss of revenue, I feel that justice to all taxpayers and the interest that this Government certainly has in the development of our communities will far outweigh any such objection.

Matt Dillon, U.S. Marshal

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from George R. Bainum, of Topeka, Kans., under date of August 25, 1959, with reference to Matt Dillon, U.S. marshal.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TOPEKA, KANS., *August 25, 1959.*

Re Matt Dillon, U.S. marshal.

The Honorable ANDREW SCHOEPPEL,
U.S. Senate,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR SCHOEPPEL: I have read and heard the uneducated comments of the local press, radio, and television reporters concerning your comments about our next most famous Kansan. These people blindly are saying he is a myth, there never was a real Matt Dillon. How wrong they are.

There are people in Kansas who also say the Jayhawk is a myth, but any real Kansan knows better indeed. We see the works of the great Kansas bird around us every day just the same as we see that which was accomplished by Matt Dillon. Yes, Matt Dillon, the marshal of Dodge City, Wichita, Atchison, Cimarron, Fort Scott, Abilene, LeCompton, or any Kansas town wherever a lawman once drew his trusty gun with which he brought that strange element called law and order to our early Kansas. Matt Dillon is every man who ever paid an installment on our civilization as it is today, with his life. Matt Dillon came to Kansas slowly, but eventually and after much blood, sweat, and tears, he was all over Kansas at once. Matt Dillon was short and he was tall, he was fat and he was skinny, dependent, of course, on how you looked at him. He used every kind of weapon ever made, and was good with them. Under the name of Jimmie Jabara, Matt flew jets, and under the name of Glenn Cunningham and Wes Sante, he was a whiz at track. Under the name of Dwight D. Eisenhower he went to the White House. He was Walter Chrysler, Carrie Nation, Wyatt Erp, and many others rolled into one. Matt Dillon was and is Kansas.

Would any committee of the Congress dare go to Minnesota and say Paul Bunyon was a figment of the imagination, or go to Atlanta, Ga., and say General Sherman after all was a fine gentleman, or to Alaska and laugh at Sourdough Joe? I very much doubt it.

Perhaps Matt Dillon did spring from the pen of a television writer, or maybe he did follow the wagon trains to the West. Really, though, who cares, because he certainly has been here and still is here, and I am glad you corrected a glaring deficiency by at last recognizing Matt in the U.S. Senate. Matt Dillon is Kansas, you, me; all of us as one.

Who cares whether Matt Dillon was cited by error or not? The important thing is he has at last been recognized. Keep up the good work, and don't let anyone back you down.

Very best regards.

Sincerely,

GEORGE R. BAINUM.

Monetary Gimmicks Are No Substitute for Fiscal Integrity

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. BETTS. Mr. Speaker, in the last three decades the United States has spent itself into a position of impending financial crisis. That crisis is inevitable only if we disregard the warning signs, continue the mistakes of the past 30 years, and refuse to deal forthrightly with our Nation's fiscal affairs.

The record of the past 30 years indicates that despite unprecedented tax burdens we have spent more than our income so that the public indebtedness has increased 17-fold from $16.8 billion in 1931 to upwards of $290 billion at the present time. In the last 30 years the Federal Government has had annual budgetary deficits in 25 years, or 83 percent of the time, ranging from the smallest annual deficit of $462 million up to $54 billion. It is not being a Cassandra to say that if we continue in the next 5 years the mistakes we have made in the past 30 years, we will be inviting inflation, retarding economic growth, and possibly bringing about the destruction of our free enterprise economy.

Mr. Speaker, the President of the United States has said that matters

dealing with debt management are the most important legislative issues to come before the Congress in the current session. The President was not crying, "Wolf"; he was not advocating a resort to fiscal gimmicks. He was admonishing the Nation that we must face the fiscal and economic facts with realistic determination to put our house in order. The simple truths are: we cannot spend ourselves rich; we cannot pay today's bills with tomorrow's taxes; we cannot solve anything with fiscal quackery; we cannot repeal basic economic laws even if we were willing to accept totalitarian regimentation; we must govern ourselves with fiscal rhyme and monetary reason.

Mr. Speaker, I recently noticed in the RECORD that one of my distinguished colleagues was advocating what I regard as the gimmick approach to dealing with our Nation's fiscal affairs. It was alleged by this colleague that it was the administration that had raised the interest rates, and that it was the administration that had imposed higher interest rates, not only on the American people, but also on the other nations of the free world. I submit, Mr. Speaker, that my distinguished colleague was wrong in his ascribed reasons for rising interest rates, wrong in his analysis of their effect, and wrong in his proposed solution.

Mr. Speaker, this colleague stated that all that was necessary to enable the Treasury Department to sell Government bonds at 4¼ percent or less was for the administration simply to reduce interest rates. He implied that this could be done by requiring the Federal Reserve to support the Government bond market. This would mean that the Federal Reserve would stand ready, as it did for the 9 inflation-ridden years ending in 1951, to buy all Government bonds offered by holders, presumably at par.

Let us look at the plan proposed by this gimmick advocate so that it can be seen for exactly what it is—an inflation-spawning monster.

The active money supply of this country is now about $140 billion. Moreover, about $140 billion of marketable Government securities are held by private investors. What my colleague is advocating, then, is that the Federal Reserve adopt policies that could almost immediately add this additional $140 billion or so to the existing money supply. Because, if any investor, at any time and regardless of conditions, could convert his marketable Government securities into cash at par, these securities would in fact be the equivalent of money.

It does not take an expert in economic theory to realize the disastrous consequences of a doubling of the money supply in a short time. We would be doubling the flow of money to purchase available goods and services. This would have a major impact on the cost of living and would destroy meaningful economic growth. With the economy already operating at a very high level, the only possible result would be galloping inflation. This would inevitably be followed by a financial crisis involving wholesale redemptions of savings bonds—of which more than $50 billion are outstanding—and determined efforts by people both here and abroad to get rid of dollars so as to purchase property, gold, other currencies—anything that appeared safe.

This is not the whole story—my colleague who advocates that the Federal Reserve should peg the Government bond market understands full well that when the Federal Reserve buys $1 of Government securities, the purchase provides the basis for a $6 expansion in bank deposits and the money supply. So what we have here is the advocacy of a plan that could promote new money creation with a vengeance, along with the crippling inflation that would be sure to follow.

Mr. Speaker, the time is long overdue for us to call a spade a spade. To promise to all private holders of Government securities that they can always get dollar for dollar for their securities is tantamount to financing the Government's requirements by cranking up the printing press and issuing greenbacks. Why bother to issue securities in the first place. If they are to be freely convertible into cash? Why not save the cost of printing the securities by taking the direct step of printing the money?

The advocates of Federal Reserve Board support of Government bond prices point out that we had Federal Reserve support prior to 1951 and claim that things did not turn out badly then. Wholesale prices doubled during that period. I wouldn't call that an exactly happy development. It is true that during part of that time our Nation was at war but the primary fault for the inflation was the manner in which we financed the war—too much money creation, too much reliance on Federal Reserve support of the Government's securities market, too much of exactly the same type of policies that my colleague is advocating today, in a period of peace and prosperity.

My colleague who was speaking in the well of the House the other day went on to say that the so-called high interest rate policies in this country have brought about high interest rates abroad. Germany was mentioned as an example. I don't believe that any one could convince the German people—especially the older generation—which recalls the disastrous inflation of the 1920's—that sound money, even if it means high interest rates, is to be avoided. The German people know what inflation means and what it can do. They know that it wiped out their savings, paralyzed their industry, and provided the basis for a rise to power of one of the most ruthless dictatorships this world has ever known. And they know too that their phenomenal economic gain since the end of World War II could not have been possible without the discipline of sound money.

These people abroad—the Germans, the French, and many others—have learned from bitter experience that you cannot compromise with inflation. They are now showing that they are willing to accept the disciplines that are essential if integrity of their currencies is to be maintained. And they realize full well that a central bank is not a toy to be used for money creation at the whim of the easy money inflationists. Instead, the central bank must be a responsible institution that is devoted first, last, and always to the true economic well-being of all the people.

Mr. Speaker, if these advocates of printing press money and Federal Reserve Government financing want inflation, if they want a managed economy with governmental regimentation, if they want to destroy the value of the dollar, let them advocate such a position without posing in the posture of one who has an easy solution to a grave and serious national problem. In that way the American people will be able to decide what course our Nation should take—the road to inflationary disaster or the road to fiscal discipline through paying our own way.

Improving Our National Parks: Padre Island Seashore Area Should Be Added

---

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. YARBOROUGH. Mr. President, the population of the United States and the world is increasing rapidly.

Changing Times magazine said in the August issue:

> Every time your watch ticks off a minute, world population increases by 85 people. * * * U.S. families are doing their part. For every 100 families in 1940, there are about 135 today. Some of the reasons: more couples live to celebrate their golden wedding anniversary; there are more remarriages; economic conditions are better; and fewer people stay single.

As the population rises, our Nation must keep apace with the needs of the increasing number of people. These needs include our national park system.

And a needed addition to the system is the creation a national seashore area on Padre Island, Tex. This fine, almost completely undeveloped beach on the shore of the Gulf of Mexico between Corpus Christi and Brownsville has the rich potential of becoming an outstanding winter playground for the Nation. The popularity of the Cape Hatteras facilities speaks loudly for this type of area.

The establishment of a national seashore area would preserve this beach in its primitive form. Yet, just beneath its sands—surrounded by salt water—is a reservoir of fresh water which would prove invaluable.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Dallas (Tex.) Times Herald for Wednesday, September 9, 1959, entitled "Improving Our National Parks," and an article by Dr. J. A. Hockaday, mayor of Port Isabel, Tex., published in the Port Isabel Press for Friday, September 4, 1959, and entitled

"Now Dig This, Water in Sufficient Amount for Seashore Park Area on Padre Island."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Dallas (Tex.) Times Herald, Sept. 9, 1959]

IMPROVING OUR NATIONAL PARKS

Since July of 1956 the Interior Department has been waging a concerted program to improve the national park system. Returning vacationers are, many of them, in position to say whether results of the program are noticeable.

The Interior Department itself says the park system is in the best shape it has ever been in. Through June 30, under the Mission 66 improvement program, as it is called, nearly 2,000 construction projects costing nearly $100 million have been completed. Another 710 projects to cost $59,083,000 were under construction or committed for construction as of June 30.

Aim is to make these recreational meccas capable of handling 80 million visitors annually by 1966. Probably this is no overestimate of the need. Some taxpayers may believe, however, that with essential Government costs at an alltime high, park improvement is one of the things that could be put off until later.

But undoubtedly, our national parks make an important contribution to the health of the citizenry. As the Nation's life becomes more complex such outdoor refuges will increase in value. Likely we are a long way from being too poor to afford to keep up these splendid assets and to make them adequate for our expanding population.

[From the Port Isabel (Tex.) Press, Sept. 4, 1959]

WATER IN SUFFICIENT AMOUNT FOR SEASHORE PARK AREA ON PADRE ISLAND

(By J. A. Hockaday)

Certain physical factors concerning Padre Island and Port Isabel and other adjacent islands along our coast has long remained a mystery to many. The presence of ground water at these points has been known for many years but why it existed has never been satisfactorily explained to the rank and file of our population. In the old days of Point Isabel fresh water was looked upon as manna from heaven by the local population; without it we could not have lived as a community in this area of long periods of limited rainfall. No one then living in Point Isabel or upon Padre Island could satisfactorily explain why one could sink a well to a depth several feet below sea level and draw from it a bountiful supply of sweet water of a potable quality.

Point Isabel was and still is in fact, an island and not a peninsula as its name implies. For almost a century and a half Point Isabel existed as a village of several hundred population. With the exception of a small amount of rainwater, caught and impounded in cisterns, man and beast depended upon ground water for existence long before any form of municipal water supply was available, e.g., before 1928. Point Isabel was a substantial village as early as 1800 and was a thriving community for half a century from 1850 to 1904. A portion of this period from 1870 to 1904, known as the golden age of our early history, there was great activity at this point when merchandise to the value of over $4 million per month passed through our portals and we maintained a population of almost 1,000 persons, and many animals, who depended almost entirely upon ground water.

Wild animal life existed upon Padre Island long before it was first seen by the Spaniards and the cattle industry thrived there for many years, quenching their thirst from the ground waters of the island and at times small lakes during heavy rainfall. Thousands of cattle waxed fat on the rough vegetation upon the island, with no water for their subsistence except the ground water of the island.

The story of the tenderfoot whose car became stalled about midway of the island and who attempted to walk back to the southern tip of Padre on a hot summer day, a distance of approximately 45 miles, is worth relating. He became exhausted, sunburned, and almost famished from thirst. He lay down to die, thinking his end was near, when he was approached by one of Pat Dunn's "bacheros." He told of his thirst and related his impending doom for lack of water. The cowboy dismounted, stepped a few yards back from the beach and with a clamshell dug a hole in the sand about 2 feet in depth which promptly filled to several inches of good, sweet water and handed the distressed stranger the clamshell and told him to drink his fill. To die of thirst on Padre Island while standing or walking over thousands of gallons of sweet water not more than 2 feet before his footsteps implies an example of ignorance to the nth degree, but it could well happen to anyone, unfamiliar with the area and not knowing that beneath the surface of the island is stored a bountiful supply of good, sweet water.

As in all things, "street corner engineers" had an explanation for the presence of ground water in this locality, but like all curbstone philosophers, they seldom come even remotely close to the correct answer. The most accepted theory formulated by them being that a substrata of clay, impervious to water held the rainfall that seeped into the soil, like an earthen vessel, thus separating the fresh rainwater from the sea water that lay beneath the clay. This condition actually exists in some limited areas. However, borings made at Port Isabel and upon Padre Island in those localities where the most abundant water is to be found, show this deduction does not apply.

The recent coming into the limelight nationally of Padre Island, the causeways at each end, its development at the north and south tips of the long narrow island which stretches for 90 miles along the Texas coast and the proposal that the middle section of Padre be made into a national park focuses attention upon its physical characteristics. The availability of a domestic water supply becomes an almost insurmountable factor in the middle reaches of this long, narrow strip of sand dunes, where even the installation and operation of a salt water conversion plant would become an expensive operation. The availability of a supply of good fresh water close at hand becomes of increasing importance, even though such a supply is limited.

It has long been known that fresh water does exist on many small sandy islands completely surrounded by sea water in a surprising amount. The reason for such a condition was explained and published as early as 1887, by a Dutch engineer by the name of Badon Ghyben, and later Bauret Von Herzberg, a German engineer, working independently of Ghyben, published the same proof in 1900. Neither of these studies were accepted by the engineering profession outside of Holland and Germany until recently. Later research into the physical properties of waters of different density developed the law of equilibrium between fresh and sea water which became known as the theory of Herzberg in recognition of the work of this famous engineer and scholar.

In 1925, the U.S. Department of the Interior, published Water Supply Paper No. 537, by John S. Brown, "A Study of Coastal Ground Water." This information is available at a few cents cost from the U.S. Government Printing Office, Washington, D.C. This pamphlet of 100 pages explains the physical phenonomen in simple terms, adequately illustrated. The theory of Herzberg applies principally to small islands and narrow land masses made up of freely previous material, especially sand. Small cores of clay, gravel, or shell may exist but do not interfere with this phenomenon.

As rain falls upon sandy islands there is little if any runoff, but the rainwater soaks into the island soil or sand. It does not mix with the sea water in the absence of agitation. Due to its lesser density it lies as a lenz upon the top of the subsurface sea water depressing and displacing the water of greater density, sometimes to a depth of over 200 feet, below the mean sea level, in areas of heavy rainfall. Above sea level the fresh water lays as a convex lenz but to a lesser degree. The higher the land mass the greater the thickness of this lenz of fresh water.

The following illustration shows this condition as it exists on the island of Norderney, Germany. Showing the application of the Herzberg theory, taken from the Department of Interior pamphlet on island ground water. It is common knowledge that this same condition exists on Padre Island and in most of the area of Port Isabel but few realize the physical properties that accounts for this condition. However, it only exists in that portion of Port Isabel where the soil is sandy, chiefly south of the railroad and in the area near the Delhi-Taylor Refinery. It was near the northwest boundary of the refinery property, in an area known by the Spanish word "Palangana" that the city of Port Isabel obtained most of its domestic water in our early years. The water from this area being more desirable due to a minimum of contamination and more palatable. Nearby is now the sewage disposal plant of Port Isabel's recently constructed sanitary sewage project. Progress has again destroyed another of old Port Isabel's early landmarks—the Palangana Wells.

The recent heavy rainfall that raised the water table in south Port Isabel, damaging our paved streets is simply the operation of the theory of Herzberg. In some areas the water table came to within a few inches of the surface where the elevation of the land was from 8 to 10 feet above sea level. By the elimination of the enormous volume of septic tank effluent, with the connection of all buildings to the sanitary sewer system, this elevated water table should be reduced in the event of a similar wet season. At least the soil will not become too heavily contaminated. The only remedy appears to be the installation of an expensive subsurface drainage system which Port Isabel cannot afford at this time. There is a ray of hope that some of the funds that will be available from the urban renewal project, may be diverted for this purpose, in the more critical areas of south Port Isabel.

In the inhabited portions of Padre Island and Port Isabel with no sewer system the increased effluent offsets much of the natural evaporation. This contaminated effluent of fresh water makes it impractical for any domestic use of our ground water. However, in the expansive undeveloped area of Padre Island, free from contamination, this enormous underground storage of water could probably be utilized for any moderate demand. Much of the time this water would conform to the U.S. Public Health standard of less than 1,000 parts per million of solids. The solids or minerals contained therein would be chiefly sodium chloride or table salt and esentially free from boron, alkali, etc., found in the inland ground waters of the valley.

Imports and Our Domestic Mass Production Industries

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. KNOX. Mr. Speaker, within the past few years the foreign commerce of the United States has undergone revolutionary changes of vast long-range significance to this Nation and every citizen in it. Yet, so far, only a few isolated voices have been raised to point out the tremendous problems created by this transformation in our trade.

For the first time, the emphasis in our import trade has shifted to manufactured goods produced in mass volume by some of the largest domestic industries. Automobiles are a prime example; steel is another; electrical appliances and office equipment are others.

These great mass-production industries, providing employment for hundreds of thousands of workers, are those to which the Nation will look first to provide jobs for our expanding population. In the next 10 years, our economy must create employment for 10 million to 15 million more Americans. This can only be accomplished if our largest industries set the pace for economic expansion.

However, in many instances, it is these very industries which now confront intensified competition from abroad, not only in the U.S. market but in export markets the world over. Under these conditions, can we reasonably expect industrial expansion to keep pace with the job requirements of our growing population?

American taxpayers, under decisions and commitments made by their Government representatives, have pumped tens of billions of dollars in economies abroad. The unprecedented generosity of the American people has restored the world economy, raising standards of living to new heights, opening new vistas of opportunity and prosperity to free peoples everywhere.

No thoughtful American will begrudge the fact that our friends abroad have never had it so good. As citizens of the most prosperous nation in all history, Americans faced up to the obligations of international brotherhood. Willingly, we have diverted great shares of wealth and resources to those less fortunate, so that they too could enjoy the fruits of free men's initiative, imagination, and enterprise.

However, there must be a limit to the sacrifices that a single nation, however great and prosperous, can make in behalf of its friends and allies. There must be a point of diminishing return, a point at which the cost becomes too great to justify the effort. I suggest that we have reached this point insofar as our foreign trade policies have contributed to the dynamic development of competitive economies abroad.

Two recent accounts of thriving conditions in foreign mass-producing industries underscore this fact. Both reports appeared in the magazine Business Week:

FOREIGN STEELMAKERS BOOST OUTPUT, ENLARGE THEIR SHARE OF WORLD MARKET

With the steel strike in its sixth week, executives of the struck U.S. mills are closely watching the speedy progress of steelmakers in Western Europe and Japan. Foreign steel companies are boosting their share of world steel markets—including the United States.

Steelmakers in West Germany and Japan are enjoying the liveliest boom. But steel output is also curving upward in France, Britain, and Italy.

In West Germany, steel producers are headed for a new output record of more than 30 million tons. Renewed capital investment and machinery exports have helped boost demand this year.

In Japan, the industry has been setting records all year, thanks to rising exports and a capital spending boom. With production likely to top 15 million tons this year—about 2 million tons over 1958—Japan threatens to displace France as the world's fifth largest steelmaker. Some of Japan's steel companies are getting ready to ask the World Bank for loans for a $300 million expansion program to raise capacity to 25 million tons in 1965.

In Britain, steel output has reached 80 percent of the industry's 26-million-ton capacity. While investment still remains low, an upsurge in autos and appliances is adding to steel consumption. Auto production, in fact, has been gobbling up steel so fast that a shortage of sheet is feared.

In France, steel production has climbed almost 5 percent above last year's record level. Aided by devaluation, the French industry has managed to improve its share of Europe's growing steel market by being able to offer lower prices.

In Italy, steelmakers also enjoy expanding sales because of the Common Market. One sign of expansion is the Government's proposal to establish a new 1-million-ton steel plant in southern Italy.

TRANSISTOR RADIO MAKERS WILL MARKET JAPANESE MODELS UNDER U.S. LABELS

In the past year, the U.S. electronics industry has watched Japanese manufacturers grab more than half the market here for transistor radios—largely by sales under Japanese labels. Now, some companies have decided to meet the foreign competition by marketing Japanese-made radios under their own U.S. trade names.

Latest transistor radio manufacturer to join the importers is big Emerson Radio & Phonograph Corp. Through its international bargaining subsidiary, Emerson has concluded an agreement with Tokyo's Standard Radio Corp. to import 100,000 radios in coming months. Emerson officials say it is making the move because Japanese companies are making radios and parts too small to be produced competitively in the United States. Emerson, which will sell the imports under its Jefferson Travis label, follows Motorola, Inc., as the second big radio maker to move into the Japanese import field.

Meanwhile, Tokyo's Ministry of International Trade and Industry is spurring Japanese efforts to make electronic computers. MITI plans to sponsor a company—50 percent privately owned—to produce 50 computers next year, and more than that in each succeeding year.

The American steel industry provides perhaps the classic current study of import penetration into a long-established, mass-production domestic industry. Even before the strike, imports were climbing dramatically. In the first 6 months of 1959, nearly 2 million tons of foreign steel landed here, against some 1.7 million tons in all of 1958.

With domestic manufacturers immobilized by the work stoppage, foreign steel producers are devoting every effort to gaining a strong and permanent foothold in the American market, as well as capturing American markets abroad. And regardless of the outcome of the strike, there is considerable doubt that American steelmakers will be able to regain these losses.

For instance, one of this country's largest can manufacturers is now buying tinplate from Great Britain for its factories on the west coast. Even though this tinplate is shipped thousands of miles, and through the Panama Canal, it is still 5 percent cheaper than tinplate manufactured in California.

The chief executive of a major American steel company added a new dimension to the competition facing his industry when he reported that agents of Japanese steel producers insist that American customers agree to continue buying their steel after the strike ends if they expect to receive any now.

Another problem worrying the American steel industry is the rising volume of imports of foreign products in which steel is a primary component. Automobiles are a case in point. Imports of foreign cars will probably exceed 600,000 in 1959, compared to 57,000 in 1955 and 260,000 in 1957.

Exports of American cars, on the other hand, have declined appreciably. If the present export pace continues, our auto exports will not exceed 115,000 in 1959, or less than 25 percent of the import volume. A scant 10 years ago we exported 10 cars for every 1 we imported.

Signs of crisis abound throughout our foreign trade structure. More than 2 million transistor radios will reach here from Japan in 1959; in fact, 6 of every 10 Japanese transistor sets exported find their way into the American market.

Imports of steel pipe and tubing surpassed 200,000 tons last year, upon nearly 300 percent since 1955, and so far this year imports are running some 30 percent ahead of last year's pace.

As my committee colleague from Pennsylvania [Mr. SIMPSON] informed the House a few days ago, the CONGRESSIONAL RECORD is stitched with British wire because American producers, meeting American wage standards, cannot match their competitors' prices.

In 1950 the United States imported 2,000 tons of wire rope; in the first 5 months of 1959 imports of this product exceeded 16,000 tons. Records of the Independent Wire Rope Manufacturers Association reveal that the U.S. Navy, a large buyer of wire rope, gives most of its business to foreign mills. In 1958 the Navy's General Stores Supply Office in Philadelphia bought $470,144 worth of wire rope; of this sum, 73 percent, or nearly $350,000, went to oversea manufacturers.

In the last fiscal year, the Tennessee Valley Authority, a large consumer of heavy electrical equipment, paid nearly $18 million to foreign manufacturers of turbines and generators. This was more than three times the total outlay by TVA for foreign-made goods in all previous 25 years of its existence.

It is not really necessary at this time to reexamine the reasons for the amazing upsurge of import competition. It can be summed up simply: We cannot match their prices.

And one of the major factors in our failure to remain competitive in a broad range of industries is clearly illustrated by a few uncomplicated statistics, as follows:

In West Germany the average hourly wage for nonfarm workers is 53 cents; in France, 62 cents—and that makes French workers the highest paid in the European Common Market; in Italy, 34 cents; in the Netherlands, 38 cents; in Benelux, 53 cents. Surprisingly, all of these hourly rates, pitifully low by our standards, reflect increases of 19 to 38 percent since 1955.

The American garment industry, sorely distressed by a flood of imports from the Far East, supply additional data on comparative wages. The American garment worker draws $2.12 per hour, including fringe benefits, for a 40-hour week. The Japanese garment worker receives 14 cents, including fringe benefits, for a 50-hour week; the garment worker in Hong Kong is even worse off, collecting less than 10 cents per hour. Labor costs account for about one-third of the total cost of manufacturing men's suits.

With such a disparity in wage rates at home and abroad, it is not surprising that more than 3,000 American companies, including 99 of our 100 biggest industrial corporations, are now engaged in production at overseas facilities. It is not surprising that direct U.S. private investment abroad has more than doubled since 1950. It is not surprising that American business expects sales from its foreign operations to increase at twice or more the pace of export sales in the next 10 years.

In short, the problems created by current trends in foreign commerce, especially when weighed against the urgency of creating at least 10 million more jobs at home in the next decade, seem so clear cut, so starkly defined, as to preclude all argument over their validity.

Yet that is not the case at all. We are still belabored by demands for more tariff handouts, for more relaxation of our import laws. Truly, there is precious little left to give away. In the past 25 years, in a lonely and largely futile quest for real reciprocity, the United States has pared its tariffs until they are now among the lowest in the world—as even the most ardent free trader will concede.

Moreover, the outlook is that things will get worse before they get better. A year ago the Congress saw fit, for reasons beyond my comprehension, to authorize still further cuts in our frail tariff structure. The administration was granted power to reduce tariffs by another 20 percent over the next 4 years; much of this authority will be called into play when the United States joins its partners in the General Agreement on Tariffs and Trade at the bargaining table in January 1961.

Fortunately, the GATT negotiations are still many months away. There is still time to alert the American people, to bring the facts, however distressing, to the attention of citizens across the land. There is still time to prevent another headlong sprint down the road to economic catastrophe and still time to save countless thousands of American jobs at a time when we cannot afford to lose a single one.

I know that many of my colleagues have pledged themselves to this task. I know, too, that our ranks will grow as more and more American industries become imperiled. As a nation, we are coming to our senses—slowly, to be sure, but we are getting there. We can only wonder how many more plants will close, how many more jobs will disappear, before our eyes are completely opened.

The Hollywood Motion Picture: A Revolutionary Force of Our Time

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hollywood: Today's Revolutionary," written by Kenneth H. Campbell, manager of the Foreign Commerce Department, U.S. Chamber of Commerce, and published in the Film Daily of September 10, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Film Daily, Sept. 10, 1959]

TODAY'S REVOLUTIONARY

(By Kenneth H. Campbell)

The Hollywood motion picture is one of the most revolutionary forces of our time.

I am not speaking in a political sense, although it cannot be doubted that our motion pictures reflect the democratic character of our society. Politically—as I have informally gathered—the motion picture does this by the "soft-sell approach," or, to use another phrase, "a low pressure approach"—and no approach could be more valuable when the American motion picture takes out a passport to visit foreign lands.

High pressure salesmanship for democracy would get us nowhere. In the long run I believe that the soft-sell approach will win. In our approach, there are no bayonets glittering in the near distance.

Meanwhile, I would like to mention, briefly, the impact of the American motion picture upon foreign trade, as I see it. The American motion picture has an undeniable effect on the marketing and consumption of the products of our factories, forests, farms, and mines.

Here in America, we have created an unparalleled society of abundance as a result of our dynamic, competitive, private enterprise system.

We have done this through a process of mass production and mass consumption. An affluent society depends upon that process. It is imperative.

The future of our economic system depends upon continual growth and expansion. Stagnation and constriction—or Government controls, to put it another way—are the enemies of growth and expansion. We must export much of our total product—and we must not raise artificial or unnatural barriers to imports. We need two-way trade.

I do not say that we have solved the problem of perpetual economic abundance. We are far from that. Our economic system is like cropland. It demands constant attention, the constant irrigation and fertilization of constructive thinking, a constant reinvigoration. The human factor can promote it or destroy it.

Now we get back to the Hollywood theme—the economic impact of the motion picture.

Let us lay aside the glitter and tinsel of Hollywood. They have nothing to do with the economic impact of the motion picture except to the extent that they sell tickets.

As a world traveler, the American motion picture, as I can plainly see, stimulates economic desires. It suggests actual needs that were not realized before. All this, is a by-product of sheer entertainment. It is not a conscious effort. Once again, it is the soft-sell approach.

As a foreign commerce man, I know nothing about dramatic impact, but as an ordinary citizen, I can appreciate the fact that a farmer in Africa, with nothing but a wooden plow at his disposal, might be deeply stirred by a motion-picture scene of a Kansas farmer plowing with a tractor.

The African farmer's wife does the washing on a flat rock beside a stream. I wonder what she thinks of a motion picture which depicts an American farmhome with an automatic washer and dryer?

Perhaps she thinks that as far as she is concerned it is nothing but a Cinderella dream. On the other hand, she might well wonder why she doesn't have what other people have. At all events, her imagination has been stirred. The revolutionary force of the American motion picture has made an inroad on the thinking of a far-distant people.

I am given to understand that this influence of Hollywood is sometimes accused of portraying America as too materialistic, too callous to human values, too indifferent to native cultures.

That premise fails to hold water, because the scene of Mrs. America with her automatic washer and dryer is not a calculated portrayal. The scene is necessary to the unfolding of the dramatic story.

I can see nothing wrong in creating human desires and wants. There is nothing wrong, as I see it, in creating dissatisfaction with poverty and hopelessness.

In recent years, we have witnessed an upsurge of nationalism and individualism in territories held for centuries within the bonds of feudalism and colonialism. I could not possibly estimate the extent of the motion picture's impact on these revolutionary developments, but I can guess that the impact has been substantial.

As a result of our own experience here in America, we know that no such thing as permanent poverty need exist.

Communism is trying to ensnare the undetermined peoples of the world with the promise of a full rice bowl. We try to win their allegiance to the democratic way with no promises at all except the suggestion that a full life, plus a full rice bowl, is possible.

The motion picture has played a significant role in this suggestion, and I am sure that its influence will continue to be one for good for ourselves and for the well-being of all peoples.

Typewriter Imports, Job Exports

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. BETTS. Mr. Speaker, the Business and Defense Services Administration, an important adjunct of the Commerce Department, has completed a comprehensive research analysis of international trade in typewriters over the decade 1948–58.

In order to offer my colleagues the benefit of this excellent report, I have compiled a series of pertinent excerpts which highlight the major findings. These excerpts follow:

The United States clearly dominated world typewriter trade before World War II, supplying from one-half to two-thirds of the world demand through exports. Exports from the United States in 1958 supplied less than one-tenth of the world demand. * * *

After the Korean war, U.S. typewriter firms were faced with increased competition in their traditional markets; a thriving European typewriter industry that enjoyed a competitive advantage in lower production costs; a larger and growing world demand for typewriters; and established trade patterns, trade controls, and regulations, and economic organizations. As a result, widespread changes were required in the structure and marketing strategy of the U.S. industry.

To share in the growing world market and to meet the challenge of European competition, U.S. typewriter firms moved overseas. Emphasis was shifted from exporting to overseas production. * * *

The countries that have registered the greatest gains in world typewriter trade during the decade 1948–58 are important members of the OEEC (Organization for European Economic Cooperation): Germany (West), Italy, the Netherlands, the United Kingdom, Switzerland, Sweden, France, and Belgium.

These eight countries, together with Canada and the United States, account for practically all the world production and exports of typewriters. In 1948, the eight countries, combined, supplied about 33 percent of the estimated world total exports of typewriters. Their combined share of the world market has steadily increased. In 1957, they accounted for about 85 percent of the estimated world export trade in typewriters.

Since 1948, the U.S. share of the world export trade in typewriters has declined steadily. In 1948, U.S.-made typewriters accounted for an estimated 63 percent of the total world trade. In 1957, the U.S. share declined to about 9 percent of the world total. Preliminary estimates for 1958 indicate a further decline in the U.S. share, to perhaps 7 to 8 percent of the world total export trade.

The decline in exports of typewriters has not only been relative—i.e., in terms of percentage of the world total—but also in terms of actual numbers of machines. The United States exported 278,118 typewriters in 1948; 106,169 in 1957; and only 56,063 in 1958. With the exception of the years 1950 and 1951, when exports increased abruptly, the decline has been steady. * * *

The year 1958 was a turning point for the United States in world typewriter trade. It marked the first year in history that the value of imports of typewriters and parts exceeded the value of exports of these commodities. U.S. exports totaled $14.7 million, and imports totaled $19.9 million. * * *

U.S. exports of typewriters and parts to the OEEC countries in 1958 totaled about $5 million, and imports from the OEEC countries were $17.4 million. This volume of imports during 1958 was more than enough to overcome the U.S. net favorable balance of trade of the previous 10 years, and to shift abruptly the balance in favor of the OEEC countries. Including 1958, the 11-year cumulative trade balance shows: OEEC, $60.4 million; United States, $54.5 million. * * *

The establishment of U.S. typewriter plants in the OEEC countries has been a major factor in the decline of U.S. exports of typewriters, and also in the increase in U.S. exports of parts. It has also been a factor in the rise of several European countries to importance in the world typewriter industry. * * *

Market considerations were the chief factors prompting the U.S. firms to shift from exporting to production overseas. The European economic organizations, as organized in 1948 and after, and their concomitant trade regulations and foreign exchange controls made a European location attractive as a base for serving an expanding world market. For example, a location in the United Kingdom permitted preferential access to the British Commonwealth markets as well as the OEEC. A location on the Continent offered access to the growing OEEC markets and also entry into the Common Market.

Thus, the prospect of entering a concentrated, regional market having a combined population of 250 million, and a combined gross national product almost equal to that of the United States, coupled with the possibility of exporting from Europe to dollar shortage areas of the world with European currency credits, could not be ignored by American firms. * * *

Another, though secondary, factor in this development was the growing competition from European producers for the U.S. domestic market in lower priced typewriters. By building plants overseas, the U.S. typewriter firms also strengthened their competitive position for the U.S. domestic market in the lower priced field, particularly in portable typewriters.

Because of generally lower production costs in Europe, low-priced, foreign portables early in the post-World War II years began to account for an increasing share of the growing U.S. market. Some U.S. firms moved to protect their domestic market by locating overseas, or by acquiring foreign production facilities and meeting foreign competition on a more equal production-cost basis.

As a result, some foreign-made American portable models are sold in the United States in competition with imported foreign models. Not all the U.S. firms producing overseas, however, export typewriters to the United States. Some confine overseas production output solely for the European and world markets.

The 10-year trend in imports of typewriters is the reverse of the export trend. While exports have declined, imports have increased phenomenally. In 1948, total U.S. imports of typewriters numbered 13,229, valued at about $1 million. Canada supplied 10,513, and the OEEC countries supplied 2,706. The following year, in 1949, imports of typewriters nearly doubled, totaling 25,558 units and valued at about $2 million. Canada supplied 16,703, and the OEEC supplied 8,809—more than three times the number of the previous year.

By 1958, U.S. imports of typewriters had risen to 390,814 units. Canada supplied 20,902 and the OEEC countries 345,420, valued at $17.2 million.

Research and Development Pools for Small Business

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. JAVITS. Mr. President, under the amendments to the Small Business Act enacted by the Congress last year, there were provisions for the encouragement of the formation of research and development pools by small business firms to enable such firms to maintain a competitive position with the larger companies which can afford to maintain such activities as a branch of their own operations. We live in a fast-changing world in which businesses—and entire nations—find it hard to survive unless they can through research adapt their methods and their products to this new scientific age. I ask unanimous consent to have printed in the RECORD an announcement published by the Small Business Administration of the formation of the first of these small business research and development pools authorized under the new law.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

The first small business research, development and production pool—composed of three Colorado small firms engaged in research and development work and in performing production contracts for the missiles and aircraft industries—was announced today (Saturday) by Wendell B. Barnes, Administrator of the Small Business Administration.

The pool, Spec Products, is located at 6300 East 44th Avenue, Denver, and is composed of the B. K. Sweeney Manufacturing Co., Denver—developers and manufacturers of special tools and equipment; the McPherson Corp., Denver—engaged in the production and heat treatment of nonferrous castings; and the Physics, Engineering, and Chemistry Corp. (P.E.C.) Boulder—engaged in research and development in physics, engineering, chemistry, and mathematics.

The pool has a total of 262 employees and will seek Government research and development contracts, as well as defense production orders. Spec Products was organized for the purpose of obtaining contracts, chiefly in research and development and in defense production, to be performed by its member companies located in the Denver-Boulder area. The pool is interested in research and development and the production of items in the missile and aircraft industries, as well as ground support equipment such as tracking devices, launching apparatus, and testing units.

Mr. Barnes explained that the three firms desired to associate as a group for the pur-

pose of bidding or negotiating for research, developments, and defense contracts from which they, as individual companies, would otherwise be excluded due to their respective limited capacity.

Prior to approving the pool, Administrator Barnes consulted with the Chairman of the Federal Trade Commission and the Attorney General. Since the pool has received approval of the Small Business Administrator and the Attorney General, activities of the pool and its members in carrying out the approved programs are exempt from the prohibitions of the Federal antitrust laws and the Federal Trade Commission Act.

Under section 9(d) of the Small Business Act of 1958, the SBA was given authority by Congress to approve research and devedopment pools to be composed of small firms for the purpose of greater participation in the Nation's expanding research and development programs. The agency also has authority under section 11 of the Small Business Act to approve small business defense production pools.

Mr. Barnes said that research and development are major factors in the growth and progress of industry and the national economy, but the expense of carrying on such programs often is beyond the means of many small business concerns. "By forming the pool the member firms have obtained an advantage in research and development work as well as in obtaining and performing defense production contracts," he said.

Not To See but To Be Seen

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. DORN of South Carolina. Mr. Speaker, patriots everywhere are saddened and alarmed over the Khrushchev invitation. The result is going to be a great political revolt in 1960. The American people are not going to stand for this appeasement with the "Butcher of Budapest."

I commend to the Congress and to freedom loving people everywhere the following broadcast by Dean Clarence E. Manion over the Manion Forum network September 6, 1959:

KHRUSHCHEV VISIT MOST SERIOUS MISTAKE IN AMERICAN HISTORY

DEAN MANION. It is undoubtedly safe to say that President Eisenhower is the most popular man in the world. Press and public, here and everywhere, respond to him with unprecedented enthusiasm.

When the President makes an obvious mistake in the administratian of his high office, important, influential criticism is hard to find, and even more difficult to publicize when it is found.

This being so, we must wait for history to weigh the full gravity of Mr. Eisenhower's great mistake in inviting Nikita Khrushchev to visit this country in exchange for a subsequent visit by our President to the Soviet Union.

From my own researches into congressional feelings on this subject, I am convinced that, without the force of the President's personal persuasion, a proposal for such a visitorial exchange would have been voted down in House and Senate by a margin more than 4 to 1.

Nevertheless, when the President suddenly announced that Khrushchev was coming, all but a few of these congressional opponents shrouded themselves in silence.

Fortunately, there were notable exceptions. As soon as he could get from his sick bed to the Senate floor, the Honorable THOMAS J. DODD, of Connecticut, put the scandalous history of Nikita Khrushchev into the CONGRESSIONAL RECORD in one of the most learned, powerful and persuasive Senate speeches that has been heard in modern times. If you want the whole sordid story of the President's upcoming Communist guest of honor, read this revealing speech by Senator DODD. The Manion Forum will mail you a copy for the asking.

In Washington last week, I asked Senator DODD for a short statement to be included in this broadcast. Here it is:

"Senator DODD. I hope that during Khrushchev's visit we shall hear church bells in the land tolling their remembrance for the murdered millions behind the Iron Curtain. I hope that there will be public observance of prayer for the deliverance of the captive nations.

"I am not opposed to a meeting between the President and Khrushchev at a proper time, under proper conditions, and in a proper place, but I think it is a national disgrace to give this Red dictator a state visit as the guest of the American people at this time in our country with all the fancy trimmings."

DEAN MANION. The Honorable STYLES BRIDGES, of New Hampshire, is the ranking member of the President's own party in the Senate. He has been a Member of that distinguished body continuously since 1937. I asked Senator BRIDGES to give me his opinion of the Khrushchev invitation. Here is what he said:

"Senator BRIDGES. I have strongly opposed Khrushchev's coming to this country. I am still strongly opposed. I can foresee no good from his visit and I fear his presence here will further soften some of our more complacent citizens and discourage and dishearten people in Communist captivity as well as our own free world allies."

DEAN MANION. One of the most able, energetic and influential Members on the Republican side of the U.S. Senate is the Honorable BARRY GOLDWATER, of Arizona. I had the good fortune to see him in Washington. For the benefit of his friends in the Manion Forum nationwide radio audience, Senator GOLDWATER said this:

"Senator GOLDWATER. I believe that the invitaton to Mr. Khrushchev to visit the United States is a propaganda and psychological victory for the Russians. They attempted to achieve this through the summit conference and, failing there, they were able to achieve this invitation.

"If Mr. Khrushchev comes to this country and is invited to the U.S. Senate, such as has been suggested, the junior Senator from Arizona will certainly vote against his being there, and if he is invited, the Senator is going to be conspicuous by his absence. I see no reason to be overjoyous in our welcome to this land of this murderous brand of communism that Khrushchev is spreading across the world."

DEAN MANION. One of the American ports of call arranged for Khrushchev by his managers in Washington is Des Moines, Iowa. This puts the Honorable Herschel Loveless, Governor of that great State into the position of official host to Khrushchev, whether the Governor likes it or not.

From the newspapers, I gathered the impression that the Governor of Iowa did not like it, and so, through our affiliated station KWDM, at Des Moines, I went to the Governor for verification. Here is our recorded interview:

"Governor Loveless, I understand that you are something less than enthusiastic about Khrushchev's prospective visit to the United States. Is that true?"

"Governor LOVELESS. Yes, Dean Manion, I have qualms and misgivings about the pending Khrushchev visit. I expect to receive him in Iowa as I would any foreign visitor and will try to be as hospitable as we Iowans are noted to be, but I fear the reaction on our many allies throughout the world on our receiving someone from the Communist area, and I am sure that they might be wondering just what is going on and if we are deserting them."

SOUTHERN GOVERNOR POINTS UP DANGERS

DEAN MANION. In a dispatch from the recent Governors' conference at Puerto Rico, I read that the popular and personable Governor of South Carolina, the Honorable Ernest F. Hollings, also had misgivings about the upcoming visit of Mr. Khrushchev. With the help of our affiliated station WIS, in Columbia, I obtained the following statement from Governor Hollings in South Carolina:

"Governor HOLLINGS. The foreign policy of the United States is to win over to the free world the neutral nations and promote the resistance of the captive nations. To support this policy; we have pledged that we will resist any further aggression by communism. This firm policy has created hope and courage within the neutral and captive nations.

"However, when we accept Khrushchev as a political and social visitor to the United States, we cannot help to a degree giving stature to what he stands for—tyranny, murder, and communism. The neutral and captive nations immediately lose hope and courage, and our struggle for world peace suffers irreparable harm."

DEAN MANION. One of the most respected and influential men in America is retired Adm. Ben Moreell, of Pittsburgh, former chairman of Republic Steel Corp. Admiral Moreell is now the guiding spirit of Americans for Constitutional Action, a powerful working organization of American patriots. Through our affiliate, station WCAE in Pittsburgh, I obtained the following statement from Admiral Moreell on the subject of Khrushchev's visit:

"Admiral MOREELL. Mr. Khrushchev's visit raises disturbing questions as to its political, economic, defense, and moral implications. Since we are a people whose trust is in God and whose social structure cannot endure without that direction which stems from our religious beliefs, the moral aspects of this visit overshadows all others.

"We should then ask these questions: Do we, by inviting him to our shores, give moral sanction to his past misdeeds and those of the Government he represents? Are we prepared to endorse as conforming with Judeo-Christian moral values their cruelties to the peoples of Hungary, Poland, East Germany, Latvia, Estonia, Lithuania, Tibet, and other enslaved countries?

"Do such actions conform to our concept of the nature of things as they should be? The answers are clear. Although he is an invited guest, we must not by any act of public or private acclaim indicate that we condone his inhumanity."

DEAN MANION. My friends, these are samples of responsible patriotic opinion concerning this most ominous event of our lifetime. It would take hours to evaluate all of the similar opinions that I have received and observed since the fateful announcement was on August 3.

For instance, Eugene Lyons, a newsman with long experience in Moscow and now a senior editor of Reader's Digest, said in a public speech (UPI, Madison, Wis., Aug. 26) that the invitation to Khrushchev was a political mistake which could be turned into a political catastrophe. It will add dimen-

sions of prestige to world communism. It could spread defeatist gloom among millions of our friends and secret allies within the Communist world.

Chief Justice M. T. Phelps, of the Arizona State Supreme Court, wrote a public letter of protest in which he told the President that "your invitation involves the moral integrity of the sovereign citizens of whom you are the servant. It involves a flagrant breach of your duty to the people. You have invited and propose to break bread with the arch-murderer of all ages."

At the American Legion convention in Minneapolis, Vice President NIXON made an eloquent plea in defense of Khrushchev's visit to this country and urged the assembled legionnaires to do nothing that might upset President Eisenhower's bold plan to melt some of the ice around the cold war.

The delegates listened politely and then passed a resolution demanding an end to diplomatic relations between the United States and the Soviet Union, unless the Kremlin releases American soldiers and citizens now held behind the Iron Curtain; holds free elections in the satellite countries, and ends espionage against America.

What is wrong with these sensible, moral, and self-respecting prerequisites for continued diplomatic association with any government worthy of the name? Nothing could be better calculated to melt the ice of the cold war than the Kremlin's prompt compliance with these conditions.

Will the President, therefore, please present this resolution from his old comrades-in-arms to his upcoming guest of honor and get an official reply for all of the American people?

The wives and mothers of the 11 missing American airmen deliberately shot down by Russian fighter planes over Soviet Armenia just 1 year ago would like to know where these men are and when, if ever, they are to be returned to this country. Will these wives and mothers be permitted to speak to our distinguished guest of honor? If they are denied access to him, as they undoubtedly will be, then will not the President or the Vice President please speak for them?

NIKITA JOCKEYS IKE TO AIRPORT

The President and the Vice President have defended this unfortunate invitation by their determination to show Khrushchev the might and power of this country, lest he start a war in ignorance of our ability to strike back. Khrushchev has now let it be known that he has other ideas.

He is not looking for a balanced picture of the United States of America. On the contrary, he wants to appear before large crowds in big cities where he can expect top newspaper, radio, and television coverage.

Khrushchev is not coming here to see, but to be seen; not to learn, but to teach; not to be softened, but to further soften our already badly weakened resistance to the satanic evil of communism, of which he is the personification.

The wily conspirator has already seized the propaganda initiative from President Eisenhower. Mr. Eisenhower had explained that, since Premier Khrushchev was not the titular head of the Soviet state, that position being held by one Kliment Voroshilov, the President would not be required to greet him at the airport.

That was all Khrushchev needed to know. He immediately announced that, for the purpose of this trip, Voroshilov is deposed and Nikita himself will be the head of the Soviet state when he gets to Washington.

So, President Eisenhower must meet the big burglar at the airport after all, and ride with him through the streets of Washington. You will see it all on television. So will the enslaved people of the capitive nations—Khrushchev will take care of that.

Mrs. Khrushchev is coming, too, which will bring the official Washington hostesses into the big act—Mrs. Eisenhower, Mrs. Nixon. More pictures, more propaganda, all calculated to cause the hopes of the Communist-held slaves to curl up and die. Says the Indianapolis Star (August 27):

"After (all) this has been done, America can never look quite the same to the victims of barbarism everywhere who have looked to America as the champion of right and justice. They will feel, rightly, that America has turned its back on them and on its own great principles of liberty and justice for all."

In the Khrushchev visit, President Eisenhower is sowing a wicked whirlwind. It will take all of his great popularity to ride him through the resulting storm.

Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. MCNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely and well-written article, entitled "Federal Aid to Schools," published in the Spirit of Jefferson Advocate, Charles Town, W. Va., on September 10, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL AID TO SCHOOLS

(By Henry W. Morrow)

I could not help but be wryly amused when I read an editorial in the Martinsburg Journal last week criticising Senator JENNINGS RANDOLPH for the position he has taken on Federal aid to education. Had the editorial been written 50 years ago it might have fallen on a more receptive ear; but what amused me was that the arguments advanced against Federal aid were of such a vintage and have been disproved for so long a time that I had not thought anyone would care to dust them off and get by with it in 1959.

The editorial took the position that aid to education is a matter which should be dealt with exclusively by the States, and that Federal aid can only result in Federal control. I was somewhat surprised that creeping socialism was not mustered into action, but I assume that this argument was carefully kept in the closet in the hope that, through its absence, I might not detect the vulnerability of the other arguments used.

To begin with, the voices that shout the loudest about leaving the matter of education exclusively in the hands of the States are the very same voices that protest the loudest when the States do undertake to do something about it. The only difference is that when the States start to do something about it the shout is, "Let the respective counties do something about it." And then when it gets down to the county level the shout becomes, "Raise everybody's taxes but mine." What strikes me about all this clamor is that at no place is there any denial that something should be done. At all stages there is virtual admission of the need for something to be done, with the critics doing absolutely nothing about it except shouting that someone else should do it. This is a traditional type of argument employed by those people who don't dare to oppose the idea, but seek to defeat the goal by shifting the responsibility for action to whatever class is either unable or unwilling to do anything about it.

But it's when you get to this argument about Federal control that I really become annoyed. Those who invoke the argument of Federal control seem to think there is a magic in the phrase that will automatically incite opposition, and that nothing more need be said. And, unfortunately, in many instances they are right. In fact, the antieverything lobby in this country has been so successful and in many instances the public has been so gullible, that the word "Federal" has become a dirty word. It took a long time to get around to thinking that Federal housing isn't a nasty idea, although some Republicans, including the President, haven't gotten out of the woods yet. Of course, you can talk to the President about a Federal highway program or a Federal Army or Navy and if you are talking about the right thing you can even mention Federal Government; but for heaven's sake don't use that phrase "Federal aid to education." It's on the list of "Federal" taboos.

Education poses one of the biggest national problems in our country. It is a real problem in Jefferson County; it is a problem in West Virginia; it is a problem in the United States. To say that it is not a national problem, to say that it is 50 separate State problems, is akin to saying that a fire in the middle of the block is of no concern to the other inhabitants of the block. And since education is a national problem of the first magnitude, it is a problem that demands national action. Every bill that has ever been introduced in Congress dealing with this subject has been carefully worded so as to dispense with the unwarranted fear of Federal control, and yet notwithstanding this, the opponents of the program continue to shout. (My son had a lunch at school today under the Federal lunch program and I must hasten home this evening to decontaminate him.) Federal aid to education may not be the very best solution to the problem; but it is better than no solution at all. And I rather suspect that no solution at all is precisely what most of the opponents of the idea want.

Our Newest Plant Gets Rolling

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. HECHLER. Mr. Speaker, it is always good to report the establishment of a new industry in our district or our State.

Today, I am proud to announce that the recently completed Goodyear Tire & Rubber Co. plant at Apple Grove, W. Va., has begun large-scale operations. This plant is producing synthetic textile fiber resins at this time, and soon will begin the production of Videne, a remarkable new protective-coating material.

We are all happy to have Goodyear represented in our district. Under leave to extend my remarks in the RECORD, I am placing in the RECORD the following article, from the pages of Goodyear's employee newspaper, the Wingfoot Clan:

VITEL RESIN PRODUCTION UNDERWAY AT WEST VIRGINIA PLANT

Volume production of Vitel resin at Goodyear's new $10 million plant in Apple Grove, W. Va., is now underway.

Production of Videne laminating film is expected later in the fall. This new polyester material is now being produced at plant C in Akron and eventually these production units will be transferred to the West Virginia plant.

Limited Vitel resin production began last April. Known as the Point Pleasant Plant, the new facility consists of two main buildings—a processing and warehouisng unit and a utility center—plus several smaller structures, a tank farm area and parking lot.

Vitel is the resin from which synthetic textile fibers can be spun. It is to be sold to textile converters for processing into fibers for such end uses as shirts, suits, dresses, and related products.

Initial customer for Vitel is Beaunit Mills, Inc., which now is converting the resin at its Elizabethtown, Tenn., plant into a fiber sold under the trade name of Vycron.

Videne is the unique film to be utilized for direct or stretch-laminating applications in the textile, metal, wood, paper, plastic, automotive, and packing industries. Videne also can be converted into a special wrap—Videne TC—for machine packaging of meat and other food products.

For porduction, a labor force of some 200 is expected to run the plant at peak capacity.

Total construction area of the plant facilities is approximately 100,000 square feet. Of this area, 80,000 square feet is utilized in the processing and warehousing building, which is divided into three sections.

The largest section, containing 47,000 square feet and rising 5 stories, handles resin production. Film operations are in a second section of 15,000 square feet. The remaining area of 18,000 square feet provides office, maintenance, locker facilities, and warehousing for finished products.

Approximately 9,000 square feet are contained in the utility building. The steam powerplant, refrigeration and air-conditioning occupy 6,500 square feet. Another 2,500 square feet is allotted to raw material handling and storage. Electrical demand for production is about 3,000 kilowatts. Water requirements run at about 500 gallons per minute.

Alaska Agricultural Expands

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. BARTLETT. Mr. President, Mr. Sterling R. Newell, Director of the Division of Agricultural Estimates of the U.S. Department of Agriculture, was recently in Alaska in connection with the establishment of a crop reporting service there. Mr. Newell returned to Washington via California and while in Sacramento he was interviewed for an article which appeared in the Sacramento Bee for August 16. There Mr. Newell gave a report on Alaska agriculture which is especially interesting because it comes from an expert. I take pleasure in making the article available for reading by my colleagues. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sacramento Bee, Aug. 16, 1959]

ALASKAN FARM DEVELOPMENT IS TOLD HERE

Agriculture in Alaska is expanding steadily and there is room for considerable further development.

This is the reaction of S. R. Newell, chairman of the crop reporting board of the U.S. Department of Agriculture, who conferred with California Department of Agriculture officials here last week en route to Washington, D.C. from Alaska.

Newell had been in Alaska to investigate the possibility of establishing a Federal crop reporting service similar to that operated in other States of the Union.

LAYING PLANS

We are laying plans prior to the 1960 farm census and trying to figure out how an Alaskan crop reporting service could be established. We don't know when such a service could be established because it takes governmental action and appropriation of funds.

Alaskan agriculture is growing and farmers there are interested in learning about and adapting the advances made in other States, especially in grading and packaging. They have some fine quality home grown products which have a flavor distinctive to their area.

BIG CABBAGES

They grow fine cold weather vegetable crops, cabbages running up to 40 pounds in weight; they also grow good quality potatoes and barley and many other crops.

Milk production is on the increase and there are some large, modern farms with milk parlors and all the latest equipment. A Danish Red breed of cattle crossed with Holsteins is proving successful in the dairy herds.

Poultry is coming along too but a large increase hinges on the problem of producing feed.

Sheep are being raised successfully in the southern portion of Alaska and are being tried along the Aleutian chain.

Newell said farm development is slowed by the high cost of labor and land clearing, but it is not a forbidding land and has many fertile valleys and tremendous potential.

The 86th Congress Compiles an Impressive Record

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. GEORGE. Mr. Speaker, now that legislation has been passed by the Congress to maintain the interstate highway program, it appears certain that this is one bill that will not receive a White House veto.

An editorial in the Kansas City Times—the Morning Kansas City Star—which appeared on Monday, September 7, stated that the compromise legislation is the work of a legislative session that is compiling an impressive record.

This record was made even more impressive by the action of the Congress in overriding the veto of the public works appropriation bill—the all-American measure for the benefit and the welfare of the people of the United States.

It is requested, Mr. Speaker, that this editorial be included as part of my remarks.

THE ROAD PROGRAM IS SAVED FROM FAILURE

It was unthinkable that Congress would sabotage the great road-building program, yet for a while that seemed a possibility. Then the House heard the rising demand for better roads from the States, cities, and civic groups. Now the Senate, in a marathon weekend session, has passed the compromise bill that would continue the great building program. The action is another feather in the cap of the 86th Congress.

The alternative, of course, was a coast-to-coast shutdown of what had been advertised as the greatest construction project in history. Failure to finance it now could have been advertised likewise as the biggest construction flop in the history of man.

We could hardly believe that Congress would take that responsibility. For beyond the highways, a break in construction would have been a blow to all industries and industrial jobs that are involved in road building. If the highway projects had screeched to a halt, a lot of workmen would have been turned loose to hunt for other jobs. And the Nation would have been deprived of the safer, modern roads that the motor age must have.

We assume that the minor differences between the House and Senate versions of the 1-cent gasoline tax increase will be ironed out quickly. Of course the administration can't be too happy about the provision to earmark for the roads a small part of the excise taxes on automobiles and parts. That money would otherwise go to the Treasury. But the change will not be effective until July 1, 1961. Meantime, roads will be built, though at a somewhat slower pace. That is the important thing.

Nor do we think that Congress need worry about a great roar of outrage over the higher gasoline tax. The tax is so small that the average motorist will hardly notice it. If he drives 10,000 miles a year and gets 12 miles to the gallon, he'll pay $8.33 a year more. Anyone who uses the rural superhighways or the city expressways is going to get far more in value received from easier and safer driving.

In the last few weeks Congress has had every opportunity to see the consequences of failure. The word came particularly from the States that originally had made a play for some other form of financing. At the recent Governors' conference in Puerto Rico the State executives called for any compromise between Congress and the administration that would finance construction.

Congress found the formula and the tremendous Interstate System of 41,000 miles has been saved from catastrophe. The compromise is the work of a legislative session that is compiling an impressive record. The motorists of the Nation can be thankful.

A Clear Need for Item Veto

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Winchester (Va.) Evening Star with respect to the veto of the public works appropriation bill, which empha-

sizes the need for the item veto authority. Had the item veto been in existence it would not have been necessary for the President to veto the entire bill. It is important, in my judgment, that the item veto provision be adopted by legislation, if possible, and, if not, by an amendment to the Constitution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Winchester (Va.) Evening Star]

A CLEAR NEED FOR ITEM VETO

A great shout went up in the House of Representatives yesterday when the vote to override the President's veto of the public works appropriation bill was announced.

What were the Congressmen shouting about? Is it a time for glee when a decision is made to spend millions of the taxpayers' dollars on projects described with more than a little accuracy as "pork barrel" items? The Congressmen were shouting over a victory which will be anything but victorious for the tax-paying public.

This was the second public works bill the President had vetoed, and with good reason. The bill includes 67 new projects not recommended by the President or the Army Engineers. It probably is in understatement to say that these projects, which the President says will ultimately cost about $800 million, are of dubious value.

But even if a good case could be made out for deepening this river channel or widening that canal, the cost should be weighed against the Government's ability to pay for them. Considering the fact that the Federal Government is already $272 billion in the red and the debt is rising, the reading on the scales would be obvious. The Government is already spending billions of dollars it doesn't have.

Virginians will be interested—and should be proud of—the fact that there were four Virginians among the seven Democrats in both Houses of Congress who stood for economy by voting to sustain the President's veto. Senator BYRD, of Virginia, and Senator LAUSCHE, of Ohio, were the only Democrats in the upper Chamber voting to sustain. In the House, five Democrats voted to sustain, and three of them were Virginians: Congressmen ABBITT, SMITH, and TUCK.

The Senate vote overriding the veto came shortly after the House received the veto message and voted.

There is one small consolation. At least the public's attention is being focused on the kind of wasteful spending that has put our Government so deep in the red.

The whole affair is a clear demonstration of the need for an item veto provision. As it stands now the President must accept an appropriations bill in toto or veto the entire bill. In Virginia, as in many States, the Governor may exercise his judgment, vetoing items he deems unwise and accepting others.

An item veto provision in the Federal Government would save the taxpayers millions of dollars almost every year.

Committee for Hungarian Liberation, Inc.

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. PILLION. Mr. Speaker, I received the following letter from Gen. Julius Kovacs, executive vice president of the Committee for Hungarian Liberation, Inc.

The gist of his communication is that no appeasement or compromise of our position with respect to the Soviet and world communism be made by reason of Mr. Khrushchev's visit to the United States.

We should keep in mind that the Soviet is haunted by these facts of life:

First. Recent events in Hungary, Poland, East Germany, and the Baltic countries prove that the Soviet cannot in the event of war rely upon the loyalty and devotion of the peoples in the satellite countries.

Second. There is a growing awareness on the part of the world's nations of the dangers and disadvantages of affiliation with the Soviet and the Communist ideology.

The nations of the free world are united more than ever in their determination to resist Soviet threat or aggression.

Third. China, with a population of 650 million and a radical revolutionary regime, will continue to threaten the integrity of Russian Asia.

The attainment of A- and H-bombs by China will upset the balance of power in Asia so that Soviet policy and military power will no longer dominate this area.

General Kovacs' letter follows:

COMMITTEE FOR HUNGARIAN LIBERATION, INC.,
Cleveland, Ohio, August 20, 1959.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
Washington, D.C.

SIR: All of us feel that the forthcoming visit of Mr. Khrushchev to the United States of America is the beginning of a series of meetings and conferences concerning matters of worldwide importance. These meetings and conferences will mark the irresistible and rapid changes in the course of history. Two ways of life, one of freedom and justice as envisioned by the free West, one a dictatorship based on force, will be sparring to take the leadership of man's destiny. A third solution in inconceivable.

The captive peoples clearly realize that these meetings and conferences will decide their fate and the fate of their progenies, may be forever. Since the plight and future of the captive peoples was not on the agenda at the just concluded, unsuccessful conference at Geneva, the acute anxiety of the captive peoples is obviously understandable; and this anixety is increased by the knowledge that the Soviet Union will do everything in its power to prevent these captive peoples from having a voice at all at the meetings where their destiny will be determined.

We Americans of Hungarian descent are familiar with the Communist way of life, which we fear and positively reject. In the course of the last four decades, Hungary repeatedly withstood in arms the territorial advances of communism. In 1956, during their sacred freedom fight, they made a supreme and futile effort to become free again. The barbaric assaults of communism upon the Hungarian people gave them a firsthand knowledge of the nature of communism. On the other hand, the free world obtains only superficial and abstract reports of the true nature of communism from the East German and Polish uprisings and the terrible sacrifices and brutal massacre of the Hungarians and the Tibetans.

The captive nations know from experience that the word "peace"—under existing conditions—does not have the same meaning behind the Iron Curtain as it does in the free West. There is no doubt that Communist world imperialism under Soviet leadership is employing every suitable method in its program of world conquest. But communism can only advance where there is decay in strength of will, unity, morality, and economy. Under the label of peaceful coexistence and peaceful competition, communism will be laying its groundwork of confusion and chaos for the West.

Because of direct experience the captive peoples intuitively sense the danger signals long before the free West suspects anything. We know that the Soviet Union does not have any conventional political or territorial boundaries. Through its methods of political warfare, the Soviet Union, not inhibited by law or morals, is physically present within the political boundary of every free nation. Mr. Khrushchev is not only making an official visit to the United States. With his presence he is encouraging his unseen allies and the potential fifth columns. The captive nations recognize the sinister implications of this visit and that is why they are so apprehensive of the future.

Mr. President, in your proclamation of Captive Nations Week, you stated the following: "* * * it is appropriate and proper to manifest to the peoples of the captive nations the support of the Government and the peoples of the United States of America for their just aspirations for freedom and national independence."

Mr. President, the captive peoples cannot wait indefinitely for freedom. It is not because of impatience that they cannot wait. They know from the cruel history of the Soviet Union over the past 40 years that the Soviet Union will eliminate their national existence in a period of time, or disperse them in the Communist empire to liquidate them as a nationality.

If captivity continues for long those who are willing and abel to fight for freedom will be eliminated when they become absorbed in the vast territories of the Soviet Union. If the day of liberation is delayed too long, there will be only ghosts of once great and cultural nations to rejoice at the posthumously arrived hour of freedom.

Mr. President we therefore ask you to:

1. Refuse to recognize the present status quo under any promise or compromise. Such recognition would permit the Soviet Union to consolidate its penetration into the free world and provide the necessary basis for further advance;

2. Discourage the continuation of the present division of the world into two spheres of influence; coexistence in the eastern half of the world means stabilization of the slave status of the captive nations;

3. Hurry the day of liberation of the captive nations; these peoples are doomed to extinction, the delay helps only the captors in their work of genocide;

4. Enforce the international peace treaties. Since the signing of the Austrian Peace Treaty the Soviet Union is in illegal military occupation of Hungary;

5. Prevent the decisions of the United Nations to be forgotten which were voted for by the overwhelming majority of its member nations, among them the most important: the evacuation of Soviet troops from Hungary;

6. In considering a neutral zone between the East and West, the Carpathian Basin must be included in this zone, because such a zone would be of no value and use for the West is so much as a portion of the geographical unit of the Carpathian Basin would be under sovereignty by a strong military power, always ready to attack the West.

7. Use the dignity of your office to release the Hungarians imprisoned in the Soviet Union, the political prisoners, the deported, the prisoners of war, and to stop the persecution of the freedom fighters in Hungary;

8. Consider the future of the Hungarian people, help them, give them every practicable political support so that they may regain their freedom and national independence. The unsuccessful freedom fight, in which Hungarians made the supreme sacrifice in blood and tears, represents the free West's greatest victory over the Soviet Union and world communism.

In spite of the terrible lessons and experiences of our century, the Hungarian people still believes in a just and free future. They unshakenly trust that you Mr. President, the Congress and the people of the United States of America will never negotiate and ratify a treaty which confirms slavery and surrenders the ideals of justice and freedom.

On behalf of the member and supporting organizations and the members in the United States of America, Canada, South America, Europe and Australia of the Committee for Hungarian Liberation, Inc., among them:

National Committee of Hungarians of Czechoslovakia, Dr. Bela Szilassy, president.

Council for Liberation of Southern Hungary, Anthony Lelbach, M.D., president.

Committee of Transylvania, Father Gabor Takacs OFM, president.

Committee of Western Hungary, Victor Falk, president.

Sub-Carpatho-Ruthenian Liberation Movement, Mihaly P. Pancelos, president.

Delegated by the board of directors of the Committee for Hungarian Liberation, Inc.

Respectfully yours,

Gen. JULIUS KOVACS,
Executive Vice President.

Admiral Rickover Says Russian Schools Are Better Than Our Own

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. YARBOROUGH. Mr. President, Vice Adm. Hyman G. Rickover, who visited the Soviet Union last month, had an excellent chance to see first hand the Russian educational system.

He says the Communists' schools produce students with an educational level 2 years ahead of their counterparts in our own country.

As we move more completely into the space age, we realize more and more the values of education—not just for the scientists but for all our people. There are all types of positions calling for trained technicians, skilled workers, and people who have studied and prepared themselves for their jobs.

Admiral Rickover's report to the House Appropriations Committee on August 18 is an enlightening statement.

Unless we take steps to improve our educational system, we may find ourselves ahead in the battle of missiles but hopelessly losing the war for increasing our brainpower, the most important battle of all.

I ask unanimous consent to have printed in the Appendix of the RECORD two articles from the Washington Post and Times Herald for Saturday, September 12, 1959, the first entitled "Rickover Says Russian Schools Outclass Ours," and the second headed "Parents Challenged To See Soviet Tests."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Sept. 12, 1959]

RICKOVER SAYS RUSSIAN SCHOOLS OUTCLASS OUR

Vice Adm. Hyman G. Rickover, who visited the Soviet Union last month with Vice President NIXON, has told a congressional committee that American education is the Russians' greatest "secret weapon."

The outspoken admiral, developer of the Navy's nuclear submarine, has been a caustic critic of "frills" and "softness" in American schools. He told the House Appropriations Committee:

"If I were the Russian Government, I would do all I could to keep us from changing our present system of education."

Rickover appeared before a secret session of the committee August 18 to testify that the Russians are winning the technological and scientific race with the United States because they have a far better education system. A transcript of his testimony was released yesterday.

He said the Russians are graduating about the same number of high school students as the United States, "but the Russian children are at least 2 years ahead of the American high school graduates in sound, basic education.

"By that I mean mathematics, the sciences, mastery of the mother tongue, knowledge of their own classical literature and that of major foreign nations, foreign languages, and history—though their history study is colored by Marxist doctrine," he added.

The admiral, whose qualifications to criticize the schools have been challenged by professional educators, told the committee he was "forced into the educational problem because I saw the poor products of our educational system."

"I am a customer for the products of our schools," he said. "I tried to get people to help me do a job in nuclear power development, and I found the product of our schools quite unsatisfactory, so I set out to find the reasons."

Among the reasons he found, Rickover indicated, were "contempt for education, a lack of understanding of what education is and can do, a failure in responsibility to our children and a selfish attitude by grownups where they are more interested in acquiring material things than in developing the minds of our youth and taking care of the future of our country.

"There are many schools in this country where the boys and girls drive up in expensive cars but have to go double shift in the school."

Rickover said the Soviet Union will have 2 million scientists and engineers by 1961, compared with 1.6 million here.

He blamed a lack of adequately educated people for the Nation's waste of money on missiles and other technical projects, and told the committee:

"This is what I don't understand: Why Members of Congress are willing to appropriate large sums of money for things which they know may not succeed, but will hesitate to spend money to set up educational standards and otherwise help education, when the return on the investment is certain and great."

When Rickover spoke of inequalities in educational opportunities in the various States, some members of the committee rushed to the defense of their States' schools. Rickover invited them to try Soviet test questions on their high school graduates.

Though the exchange does not appear in the transcript, a member of the committee told a reporter that Representative JAMES L. WHITTEN, Democrat of Mississippi, assured Rickover that his State's schools were better than the District's.

"God help the District of Columbia," Rickover reportedly replied.

The Admiral asked Congress to take the lead in establishing nationwide standards for pupils and teachers, a longer school year, simpler school biuldings, separate schooling for children of markedly different abilities and Federal equalization to permit poor States to offer good education.

Referring to congressional concern about Federal control of education, Rickover asked: "Is anyone worried that it is wrong to regulate airplane travel and train travel, food and drugs, and so on?

"The products of our schools certainly move across State frontiers. * * * Isn't honest labeling of educational diplomas as important as honest labeling of drugs?"

The Admiral charged that the National Education Association and the U.S. Office of Education are part of "a vast bureaucracy of 'life adjustment' people who control our primary and secondary schools."

[From the Washington Post and Times Herald, Sept. 12, 1959]

PARENTS CHALLENGED TO SEE SOVIET TESTS

Vice Adm. Hyman G. Rickover, father of the nuclear submarine and stormy critic of American education, challenged the Nation's parents yesterday to see how their children would do on tests required of Russian high school graduates.

Rickover introduced a set of Russian examinations into the record when he testified before the House Appropriations Committee last month. He said the set definitely shows that our schools are not the best in the world.

The admiral told the Washington Post yesterday that he hoped parents would write to the committee for copies of the transcript.

"I hope they become angry enough to force their school boards to improve the curriculum, to improve the teaching and to stop wasting the time of our children with fun subjects and other matters unrelated to educations," he declared.

Rickover said 1,600,000 Russian students passed the oral maturity examination in 1957 to graduate from the Soviet Union's 10-year schools—the equivalent to our high schools. He compared the number with 1,458,000 American high school graduates that year—including many who took nonacademic courses.

The Soviet examination "covers a much broader field of knowledge than our college board achievements tests," Rickover told the committee.

Following is an outline of subjects covered by the examinations together with some sample questions. The first and thirteenth topics in each field have been selected as representative samples:

ALGEBRA

1. The types of combinations and permutations. Number of permutations of n elements taken n at a time. Number of permutations of m elements.

Quadratic equations. Complete and incomplete quadratic equations. Solution of quadratic equations of the form $x^2+px+q=0$.

13. Theorem concerning the equivalence of inequalities with multiplication and division of both sides of the inequality by positive and negative numbers.

Logarithums to the base 10 and their properties.

GEOMETRY

1. Properties of the faces and diagonals of a parallelepiped.

Property of the obtuse angles of a convex polyhedral vertex.

13. Right polyhedrons.

Bihedral angle. Linear angle. Equality and inequality of bihedral angles. Theorem: "To equal bihedral angles correspond equal linear angles." Converse theorem.

PHYSICS

1. The first and second laws of Newton.

Laboratory work: Determining the internal resistance of a source of current.

13. Series connection of conductors. Derivation of the formula for the common resistance of conductors connected in series. Additional resistance in voltmeters. Application of series connections of conductors in technology.

Solving the problems concerned with melting and boiling of the type of problem No. 721 (given below) and giving an explanation of the solution.

Problem No. 721: In a container there were 800 grams of water and an equal amount of ice at 0°. What quantity of steam at 100° would be needed to melt all of the ice and to raise the temperature in the container to 30°? The specific heat of the container is 40 calorie/C°.

CHEMISTRY

1. Oxides: Their classification and chemical properties.

Problem: To compute the release of the product of a reaction in terms of percent of theoretically possible, if the quantity of the initial substances and the quantity of the obtained product are known.

Sample problem: In a laboratory 105 grams of nitrobenzene were obtained from 78 grams of benzene during a nitrating reaction. This amount constituted what percentage of the theoretically possible yield?

13. Characterization of the group of alkaline earth metals.

Problem: To determine with the aid of characteristic reactions each of three furnished inorganic substances.

ENGLISH

1. Reading and translation of an unfamiliar text with a dictionary. Answers to questions relating to the text read.

Find in the text compound and derived (common or abstract) nouns; in the derived nouns indicate the suffix.

13. Reading and translation of an unfamiliar text with a dictionary. Answers to questions relating to the text read.

Find in the text verbs in the past perfect; explain the necessity of using past perfect in the given text.

Plans Set for $3 Million Oceanographic Institute

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, as chairman of the Subcommittee on Oceanography of the House Committee on Merchant Marine and Fisheries, I wish to call to the attention of my colleagues an article which appeared in the Boston Sunday Globe, August 23, 1959, under the heading of Canadian-American News, setting forth the fact that Canada is establishing an Oceanographic Institute at a cost of approximately $3 million.

I am very happy to see the Canadian Government taking this action as we need their cooperation and all of the knowledge possible in this field of science.

Canada's initiative in this should quicken our own conscience with regard to expenditures in this field.

[From the Boston Sunday Globe, Aug. 23, 1959]

PLANS SET FOR $3 MILLION OCEANOGRAPHIC INSTITUTE

(By Leonard Lerner)

Canada, with the longest coastline of any country in the world, is expanding oceanography in the Department of Mines and Technical Surveys to fill the need of data on its coast waters for defense and resource assessment.

It is seting up, in Bedfort Basin near Halifax, N.S., a $3 million oceanographic institute, which will have the facilities to allow studies in any phase of this science.

The new institute will take 5 years to complete. It will have a staff of some 300 oceanographers, hydrographers, submarine geologists, and other scientific personnel, plus an operating fleet of 10 vessels.

The first of the new vessels, the $7 million CGS *Hudson*, is expected to be commissioned in 1961.

The entire project will include liaison with the Fisheries Research Board, the Atlantic Oceanographic Group which will be housed in the new institute, and with Dalhousie University which is setting up an institute to train scientists.

Findings on Salmon Migrations at International Oceanographic Congress, Held Under Auspices of the United Nations

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. NEUBERGER. Mr. President, one of the truly great mysteries of nature is how a migrating salmon can find the exact creek or streambed where it was spawned 5 or 6 years earlier. Such migrations often involve more than a thousand miles of travel, among thousands of tributaries. How does it happen? Biologists of the U.S. Fish and Wildlife Service and others have sought the answer for countless decades.

Now a Scottish scientist at the United Nations has suggested that a sense of smell may lure pilgrimaging fish across trackless oceans and through a labyrinth of rivers. This is so significant a dispatch from the U.N. headquarters, at the International Oceanographic Congress, that I believe it should be printed in the CONGRESSIONAL RECORD.

I know that it will be a source of profound interest to many hundreds of people associated with the Chinook salmon industry in my native Pacific Northwest. I ask unanimous consent, Mr. President, that the article from the New York Times of September 11, 1959, describing this phenomenon, be printed in the Appendix. Its title is "Fish May Follow Noses Home, Scot's Tests on Salmon Indicate."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FISH MAY FOLLOW NOSES HOME, SCOT'S TESTS ON SALMON INDICATE

(By Harold M. Schmeck, Jr.)

UNITED NATIONS, NEW YORK, September 10.—Some of the fish that mysteriously find their way across tracking oceans to ancestral spawning grounds may simply be following their noses home, a scientist said here today.

There is evidence that certain fish can follow trails made by extremely dilute chemical traces drifting downstream on ocean currents from the spawning area, said Dr. C. E. Lucas, director of the Marine Laboratory, Aberdeen, Scotland. The chemicals are present in concentrations of a few parts per million or even less.

Dr. Lucas said experiments showed salmon could be guided along the faint chemical trails by what amounted to a combined sense of taste and smell. Fish that had their nostrils plugged in the interests of experiment had greater than normal difficulty in finding their way, he said.

Dr. Lucas spoke at the International Oceanographic Congress, which closes tomorrow at the United Nations. He cited the experiments on fish homing as an example of the unexpected ways in which traces of organic chemicals, spewed out by living things, affect other forms of life in the seas.

Frequently, he observed, minute sea organisms produce compounds essential to the life and well-being of other plants and creatures.

Research suggests, he said in an interview, that this ability to follow faint chemical trails may apply not only to salmon but also to fish that spend their entire life cycles in the open ocean.

In either case, he said, the system appears to work about this way:

In its early life in the spawning area, the fish somehow becomes conditioned to the presences of certain traces of organic chemicals that are characteristic of the locality.

Later, when the fish is ready for spawning, it senses these traces as they drift down current and follows the trail to the home ground.

Just how far such trails may extend is not known, he said. But salmon were thought to travel certainly for hundreds of miles and perhaps thousands to spawn. Some fish find not only the right river but also the right branch of that river in their quest to return to their birthplace.

Experiments on the homing capabilities of Pacific salmon were done originally by Dr. A. D. Halser of the University of Wisconsin, Dr. Lucas said. Further work has been done at the Aberdeen Laboratory.

The evidence may have practical commercial implications, Dr. Lucas indicated. But for the present, there is no hope that a fisherman can attract a salmon by smearing the right chemicals on his hook. The specific nature of the traces the fish appear to follow is unknown.

Probably, Dr. Lucas said, the traces are a proportion of this, that and the other a representation together of the living things peculiar to the immediate area.

Impact of Federal Spending on the Economy and Welfare of the People of the State of New York

EXTENSION OF REMARKS
OF

HON. JOHN R. PILLION
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. PILLION. Mr. Speaker, the Republican Members of the House of Representatives from the State of New York are increasingly concerned with the harmful impact of Federal spending upon the economy and the general welfare of the people of the State of New York.

There is extensive unemployment in the State of New York. Federal defense spending has increased on the west coast, while New York State has suffered substantial cutbacks in this area. Federal aid programs increasingly siphon taxes from the people of the State of New York for redistribution to other States. The channeling of wealth out of the State of New York into other areas of the Nation is unjust per se. This process also tends to increase total taxes for New York business and allows other States to attract new industry and New York State industry with State and local tax reduction inducements.

In May 1959, the members of the Republican delegation from the State of New York unanimously agreed to request the Library of Congress to compile the pertinent facts to be used as a basis for remedial measures. The members of the Republican delegation from the State of New York are: JOHN TABER, CLARENCE E. KILBURN, DEAN P. TAYLOR, R. WALTER RIEHLMAN, KATHARINE ST. GEORGE, WILLIAM E. MILLER, HAROLD C. OSTERTAG, J. ERNEST WHARTON, FRANK J. BECKER, ALBERT H. BOSCH, STEVEN B. DEROUNIAN, FRANCIS C. DORN, PAUL A. FINO, JOHN R. PILLION, JOHN H. RAY, STUYVESANT WAINWRIGHT, EDWIN B. DOOLEY, HOWARD W. ROBISON, ROBERT R. BARRY, SEYMOUR HALPERN, JOHN V. LINDSAY, ALEXANDER PIRNIE, JESSICA MCC. WEIS, and CHARLES E. GOODELL.

On July 29, the Library of Congress submitted its report to this group. This study is confined to fiscal year 1958, ending June 30, 1958. The following extracted data glaringly points up the systematic Federal extraction of the wealth and earnings out of New York State's citizens:

New York's percentage of the Nation's population: 9.5 percent.

Percentage of Federal tax collected in New York State: 19.52 percent.

Federal tax revenues, fiscal year 1958: $76.06 billion.

Federal taxes paid by New York State, adjusted on the basis of the origin of tax: $10.1 billion.

Percentage of Federal tax paid by New York State on basis of origin of tax: 13.28 percent.

Total Federal expenditures, 1958: $80.49 billion.

Federal expenditures and grants 1958 for New York State: $7,565 billion.

Percentage of Federal expenditures and grants 1958 for New York State: 9.40 percent.

Net loss in 1958 to New York State—difference between tax revenues paid by origin and Federal expenditures plus grants to New York State: $2.45 billion.

The net loss of $2.45 billion amounts to the payment by each man, woman, and child in New York State of about $155 more in Federal taxes than the average citizen of the United States. This huge sum of $2.45 billion is more than the annual total tax revenues of the State of New York. It amounts to an overpayment to the Federal Government by the citizens of New York State of an amount more than the total New York State tax.

FEDERAL GRANTS-IN-AID

New York State is particularly and severely penalized in the field of Federal grants-in-aid. The expansion of this type of Federal activity is a most serious threat to the economy and the political well-being of the State of New York.

Federal grants-in-aid in the year 1925 amounted to $124 million. Federal grants-in-aid in 1958 totaled $7.42 billion, an increase of 6,000 percent over the space of 33 years.

In 1958, Federal aid payments in New York State were $482 million out of the national figure of $7.42 billion. The percentage receipts for New York State is 6.5 percent as compared to its population of 9.5 percent and its taxpayments—by origin—of 13.28 percent.

There are 105 different grants-in-aid. Each of them have different formulas or criteria for the distribution of Federal funds. There is no uniform or central rationale or objective.

In practical effect, Federal aid is socialization on the State level. Wealth and earnings are siphoned off from one group of States and redistributed to other States.

CONCLUDING REPORT

The Republican Members of the House representing the State of New York express their gratitude to the Library of Congress and particularly to the members of the staff who worked so diligently on this thorough and exhaustive report.

A concluding report is expected to be submitted by the Library of Congress in January 1960. This report will gather the statutes, formulas, rules, regulations, and policies relating to the allocation and expenditures of Federal funds to States or other geographic areas.

Summarizing, tables I and II of this report are presented:

TABLE I.—*Estimates of Federal tax revenues by State of origin and expenditures by State of recipient or activity, fiscal year 1958*

State	Aggregate		Amount per capita		Amount per $1,000 of personal incomes [1]

Progressive Public Works Are Not "Pork Barrel" Projects

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, September 12, 1959

Mr. YARBOROUGH. Mr. President, there has been a marked tendency on the part of the news reporters covering our Nation's Capitol to refer to projects in the public works bill as "pork barrel" works. This slur is both untrue and unfair.

My own State of Texas, which in the past 7 years has known both drought and flood, and now sees larger ships wanting to enter its ports, and the necessities of many vital water conservation projects, shows that the items in the public works bill are not just made work. It is projects such as these in the past which have helped keep our Nation on the road to progress with a dynamic and growing economy.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Corpus Christi Caller for Wednesday, September 9, 1959 entitled "Progressive Public Works Hurt by 'Pork Barrel' Slur."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Corpus Christi Caller, Sept. 9, 1959]

PROGRESSIVE PUBLIC WORKS HURT BY "PORK BARREL" SLUR

Federal public works appropriations, vetoed successfully by President Eisenhower and now under congressional revision, carry the handicap of a slur label that begs reexamination. Like its annual predecessors for many years, the legislation is cynically referred to as the "pork barrel bill."

Webster's defines the "pork barrel" as Federal funds "regarded as appropriated more for local patronage than to make needed improvements." The term is closely allied with another political slang word, "logrolling," which means you vote for my pet project and I'll vote for yours.

No one should be so naive as to deny that Congressmen seek Federal funds to gain and keep their constituents' favor. Nor is it any secret that individual Congressmen and blocs trade out to accomplish that. What needs to be understood is that, within reasonable bounds, that is an indispensable phase of the democratic process of accumulating and compromising minority views and demands to weld them into a practical expression of the majority will.

While the priorities and fiscal impact of the various items in the public works bill may be endlessly debated, we doubt that few, if any, of them fail to merit classification as "needed improvements." The President's veto was on budget-balancing grounds; no

charge was made that the objectionable items were "boondoggles"—valueless projects.

The "pork barrel" slur has moved some to renew the suggestion that the President should have the item veto, such as Texas' Governor has, so that he could eliminate projects he opposes without having to send back the entire public works appropriation bill to Congress for reconsideration. That, however, would place a vast and dubious new power in the Presidency. By threatening Congressmen's pet projects with the item veto, the President could whip them into line behind his own policies. Congress is not likely to subject itself to such dictation from the White House.

In the future, it would be well to discourage the reckless labeling of public works appropriations as "pork barrel bills," unless they actually deserve such approbrium. The bill now under consideration has not deserved that slur, either before or after revision.

Excerpts From Trade Relations Council Publication, Tradeways

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Trade Relations Council of the United States, largest coalition of industry and agriculture dedicated to improving our foreign trade policies in the interests of a stronger domestic economy, has just issued the first edition of its publication, TRC Tradeways.

Among other interesting and newsworthy material presented in the first edition is an editorial which, for its concise and analytical appraisal of trends in international trade, merits careful consideration and study. The editorial follows:

This publication, Tradeways, and its sponsor organization, Trade Relations Council, begin life at an historical moment when the trading world enters a dramatic new phase.

All over the globe trading units are reshaping into new production and marketing alinements and patterns. The motivating force is basically political.

The United States and Soviet Russia are today's political giants. In their shadow other countries—even the former top world power, Great Britain—feel individually feeble and frustrated. Hence their desire to merge into the giant class.

The common market is the bridge. Central Europe already has organized one. An outer ring is forming a free trade area. Similar blocs are emerging in Latin America and the Near East. Africa may be the next scene.

The common market is but a means to an end. That end is unification of the component countries. And the end is good if it means stronger allies in the fight for a free world.

While these political units are forming they will throw around themselves all sorts of protective devices to foster the unification process, the effect of which is to discriminate against the outsider. And the United States is outside all of them.

Some of our Government officials appear to think of the European Common Market as an economic manifestation only. They talk of bargaining it out of its dedicated course by offering U.S. tariff cuts via the General Agreements on Tariffs and Trade. Already they are preparing for tariff-negotiating sessions in 1961.

We are only deluding ourselves if we think we can hold back an historic groundswell by offering to cut our already-decimated tariffs once again. The only certainty would be to expose American industries to the increasingly injurious effects of imports from low-wage countries.

Those of us familiar with the forthright policies and programs of the American Tariff League, predecessor organization of the Trade Relations Council, have come to expect from this group such candid and realistic statements on public issues. I commend the council for this frank and open presentation of its views.

Passport Legislation

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. FULTON. Mr. Speaker, I submit for the RECORD an excellent and high level statement on passport legislation:

STATEMENT BY THE HONORABLE JOHN W. HAYNES, JR., ADMINISTRATOR OF SECURITY AND CONSULAR AFFAIRS, DEPARTMENT OF STATE, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE ON PASSPORT LEGISLATION AUGUST 5, 1959

Mr. Chairman and members of the Foreign Affairs Committee, we are grateful for the opportunity to appear before this committee to testify about passport legislation, and particularly about the need for prompt legislative action to deal with the problem of passports for dangerous American supporters of the international Communist movement.

Our recommendations are necessary because of a present lack of legislative authority in this field as pointed out last year by the Supreme Court, primarily in two decisions. In June 1958, in the Kent, Briehl, and Dayton cases, the Supreme Court by a majority of 5 to 4 said, in effect, that Congress has never given the Secretary of State the authority to deny passports to members or supporters of the international Communist movement, or even to persons whom he has specifically found, are going abroad willfully and knowingly to engage in activities which would advance that movement. The Court did not hold that it was unconstitutional to deny passports to such persons, but only that the Secretary lacked legislative authority to do so. The Court further said that any legislation giving the Secretary such authority must carefully protect the constitutional rights of citizens.

Since that time, the administration has been consistently seeking the passage of such legislation by the Congress. The President and the Secretary of State have both reiterated the need for such legislation. Just over a year ago, representatives of the Department of State appeared before your committee to testify about the urgent need for legislation empowering the Secretary of State to refuse passports to certain supporters of the international Communist movement. At that time the administration suggested a comprehensive bill on passport matters, but we endeavored to make it clear to the committee that we were not suggesting that particular bill reflected the only possible approach to the outstanding problems.

Last year's hearings, before this committee and before the Senate Foreign Relations Committee indicated there was some congressional preference for a measure dealing separately with the Communist problem rather than for comprehensive passport legislation. Indeed, this committee reported out and the House passed such a bill in the closing days of the last Congress. It was not acted on by the Senate.

We still believe a comprehensive measure is ultimately desirable.

We fully agree, however, that the critical problem today is to remedy the total lack of legislative authority to deny passports to really dangerous participants in the international Communist conspiracy. In messages to the Congress last year both President Eisenhower and the late Secretary Dulles underlined the danger represented by this legislative gap which makes legislation in this field essential. Accordingly, the Department has strongly supported such specific remedial proposals now before the Congress. These represent what we believe is the minimum required in the light of the present and continuing danger to our national security.

Mr. Chairman, this committee has the responsibility constantly to consider and to review all aspects of our foreign policy. There is, therefore, certainly no group which understands more clearly than this committee how pervasive and total is the hostility and the menace of international communism.

The late Secretary of State Dulles, in his characteristic terse manner, said that international communism "seeks to unify and harmonize the world by gaining control of all national governments." That basic objective was sought by the Soviet leadership in the days of Lenin, and it has in no way been altered by any of the changes in Soviet leadership down to the present day.

One of the greatest dangers posed by international communism is the full awareness both of its leaders and its followers that they are engaged in a total war with the rest of the world. They wage this war with an unswerving singlemindedness of purpose. They wage it in every way they dare, politically and diplomatically and economically; and they do not hesitate to wage it secretly and subversively.

International communism maintains in every foreign country, and particularly in the United States, a vast well-trained, well-financed subversive organization solely devoted to winning that war. This organization is truly international; its worldwide activities are controlled and centrally directed with ruthless efficiency. Some members of that organization hold American citizenship, but their allegiance is not American, and their loyalty and service is to international communism.

Communication and personal contact are essential to the effective operation of any such complex organization. When, in addition, it is directed from abroad, this becomes doubly important. It requires travel—travel by the leaders and travel by those who carry their messages and their instructions, and by all the others whose activities are necessary to keep the apparatus operating.

Some travel and personal contact would undoubtedly be required even if this whole organization were operating quite openly and legally. Obviously, however, it becomes even more important because so many of its activities must be both secret and illegal. Those who engage in such activities usually fear and avoid regular communications for obvious reasons, and instead use personal assignments and personal discipline. Such a conspiracy can operate suc-

cessfully only so long as it can maintain secure and rapid communications. It is a basic rule of Communist practice to communicate by word of mouth rather than in writing and to avoid the usual communications methods. If their vast personal communication network is impaired, their operations are rendered less effective and the whole conspiracy is placed under a serious handicap. We believe it is a handicap which we should impose on it to the limit of our ability; and we certainly think that we should not be required to facilitate its communication.

Our weapons against Communist subversion in this country have been a closely interlinked set of techniques. They have included penetration of the conspiracy and constant surveillance. Always, to the extent we could achieve it by passport and visa and immigration regulations, they involved denial to the conspirators of free movement in and out of the country and thereby of easy and satisfactory communications.

The loss of our ability to stop American members of the Communist apparatus from getting passports has blunted the other weapons we have against the Communist conspiracy. For example, our success in preventing the entry of foreign Communist agents and couriers with their financing and instructions from headquarters becomes rather hollow if American members of the apparatus can travel freely out of the country. Similarly, the most successful penetration of the domestic Communist apparatus by agents of the United States is rendered much less useful if the persons can evade observation for extended periods by traveling abroad, probably behind the Iron Curtain where we can hardly expect to know what they are doing.

The Communists have invariably stepped up their activities whenever we have let the bars down. At one time the dangerous members of the conspiracy, if they had to travel abroad, had the alternatives only of doing so illegally without a passport, or of resorting to fraud and falsification to get passports, and thereby exposing themselves to criminal prosecution. Today an American Communist does not have to resort to fraud—there is no incentive for it. He may get a passport, in his own name, on his own birth certificate, with his own picture. He can require his Government to legalize and assist his travels. This is the facilitation he wants and needs.

I would like briefly to try to put the problem of control of Communist travel in proper perspective. For the 2 calendar years preceding the Supreme Court decisions of last summer, over a million passports were issued or renewed. Out of this group, 51 were initially and tentatively turned down because of alleged affiliation with the Communist movement. These individuals were afforded access to an elaborate hearing and appeal machinery. Indeed, in the entire 6 year period since that machinery was established in 1952, the Secretary of State—and it must be the Secretary personally—finally denied passports on Communist grounds to only 15 persons after they had exhausted their administrative remedies. Some others were granted passports after hearings; and some did not contest the Department's ruling.

I think that these figures concerning the number of Americans whose passport privileges were actually curtailed by the Department's Communist regulations are very revealing; but obviously they do not represent the scope of the problem posed by the travel of Communists.

When these regulations were in effect, most of the really active Communists refrained from applying for a passport. The few who did apply were usually stopped at the threshold, because they refused to supply the Department with a sworn statement concerning their current and past affiliation with the Communist Party. There were just over a hundred such cases in each of the calendar years 1956 and 1957. Most dangerous Communists are equally unwilling either to expose their party connections or to run the risk of a perjury indictment.

There can be no doubt about the deterring effect of our regulations and the affidavit requirement. For, since the Supreme Court decisions of last year, a number of old-line, dedicated Communists have applied for and have had to be granted passports.

The objectives of the legislation we need are rather simple. We need legislative authorization for the Secretary of State to deny passports (as appropriate) to persons who are presently engaging in activities knowingly intended to further the purposes of the international Communist movement. This authority should be based on congressional findings as to the danger to our country inherent in those purposes.

You will notice that I spoke of people who are engaging in activities and that I further said presently engaging. We think both these matters are important.

We do not want authority to restrict the movement of people who hold political, social or economic opinions which are not of the orthodox American variety.

We seek only the authority to deny passports because of a person's present knowing engagement in activities for the purpose of advancing the Communist movement. We do not seek authority to deny passports to American citizens who are not today a danger to our security, even though at some time in the past they may have supported the Communist conspiracy. We do believe, however, that present membership in the Communist Party, or present activities under party discipline or under the direction or control of the Communist movement, should be considered as important evidence of furtherance of the international Communist movement. When a person is knowingly engaging in such activities, he should carry the burden of demonstrating clearly that he will not engage in such activities while abroad. On balance this is fair, since the Department first has to show that the person is knowingly engaging in such activities.

A person's past actions alone, of course, should not disqualify him from receiving a passport, although naturally they cannot be entirely ignored in assessing his present and probable future actions.

If a person does come within these carefully defined categories, the Secretary of State should be able to deny him a passport without demonstrating the specific harm he would do on a specific future trip. Indeed, at the time of application, a Communist may have no specific trip or mission in mind, or he may not receive his orders until long after he receives his passport. The passport, however, once issued, remains valid for 2 years, renewable for 2 more.

As a general rule, we cannot show in advance what a dedicated Communist is going to do on a particular trip abroad. We may not find out for many years, if ever. Communists do not tell us on their passport applications that they seek to subvert us. We may have some indication what a particular Communist intends to do abroad, but this is the exception rather than the rule. The fact is, the more nefarious his purpose—the more important his mission—the less likely we are to know about it; and even if we do know we would, in all probability, not be in a position to document it for the open record. We must be able to anticipate harm to our foreign relations and our national security. The action we take is and should be preventive, but never punitive.

This brings up one other essential of passport legislation which is often misunderstood, and that is the necessity for the Government to be able to utilize confidential information, under carefully controlled circumstances, as part of the basis of its decision.

I would like to make very clear that in our opinion any legislation purporting to deny passports to Communist supporters would not achieve that purpose if it entirely prohibited the Government from utilizing confidential information. We certainly do not seek legislative authority to rely absolutely on confidential information, or to utilize it so as to preclude an opportunity for the passport applicant to rebut it. On the other hand, our experience and careful analysis of past cases has shown that almost without exception dangerous cases in the Communist area involve some confidential information. The reason for its being confidential is almost always in order to protect the investigative source. Indeed, the more recent and meaningful the information is, the more likely it is that it has come from current investigative sources within the Communist movement.

The Government has an overriding interest in maintaining the security of these investigative sources and methods. Of all the weapons which we have against the Communist conspiracy, our knowledge of its current operations is certainly the most important. If faced with the unpleasant choice of exposing and thereby destroying a valuable and continuing source of such knowledge, and issuing a passport to an individual member of the conspiracy, the Government would have no alternative but reluctantly to issue the passport as the lesser evil.

I do not mean to imply that confidential information comprises a major, or even a very large part of any total case. It almost never does. But the part it does play is often vital in relating the separate parts of the case.

Legislation designed to prohibit passports to Communist supporters but which would prevent us from utilizing any confidential information whatsoever by requiring full confrontation, would, we fear, generate the dangerous illusion that the travel of Communists was being controlled, when actually it would not be. Such legislation would, in effect, guarantee the most dedicated and dangerous Communist an absolute right to travel.

The situation is similar with regard to highly sensitive information obtained from foreign sources or our own diplomatic and consular representatives abroad. Our foreign intelligence depends to a great extent upon close cooperation with other friendly governments and we cannot afford to prejudice these arrangements.

However, we have not operated, nor do we seek to operate, in an unrestricted manner in this field. Unless the full disclosure of information and the sources thereof would, in the opinion of the Secretary of State, have a substantial adverse effect upon the national security or the conduct of foreign relations, then the Department would either disclose both, or not rely upon the information. Under existing case law, there must be findings of fact by the Secretary of State and these findings must state the extent to which they are based upon confidential information, and must set forth specifically the reasons why such information cannot be fully disclosed. We think this is wise and should be continued. Under such requirements the Secretary could hardly, even if he were so disposed, render a decision based on unsubstantiated rumors or gossip.

Moreover, we are suggesting a further significant step to safeguard the interests of the individual applicant. We feel, after careful consideration of the details of past cases, that the Department can and should provide the passport applicant with a fair

résumé of any confidential evidence which cannot be disclosed fully. In most cases, this would mean giving him everything except the identity of the source. The applicant would then have due notice of the points in issue and would be given an adequate oportunity to rebut this information.

I believe that when the Secretary of State asserts that he cannot spread certain information on an open record; explains with as much particularity as possible the reasons of national security why he cannot do so; furnishes a summary which he certifies to be a fair summary of the information; and makes specific findings of fact, we should be able to rely on the Secretary's integrity and accept his statement.

Lastly, we feel there should be legislative approval of a reasonable oath requirement as to present or near-past Communist Party membership. We think it desirable to have a clear expression of congressional approval on this subject.

The oath requirement under our now defunct regulations was very helpful to us. So long as the requirement is reasonable and pertinent, we do not believe that such an affidavit infringes unduly on the rights of anyone seeking a passport. I am not speaking of any so-called test oath. The affidavit would not have to be answered in any particular way in order for the applicant to receive a passport. Nor would any particular answer cut short the administrative procedure open to him. His answer would be merely another factor in the consideration of his case on its merits.

I would now like, with the committee's permission, to comment briefly on some of the bills which are before you.

H.R. 55 (SELDEN BILL)

H.R. 55 and a number of other identical bills before the committee are in the same form as the bill which passed the House on August 23 last year.

The Department is in full accord with the objectives of H.R. 55. Representatives of the Department apepared before this committee twice last year in connection with the formulation of a narrow bill directed at the problem of Communist travel. The bill which this committee reported out, H.R. 13760, was, in the Department's opinion, adequate to meet the problem. However, the bill was amended on the floor to provide that the judicial review established by the bill should be on the record. The Department had previously advised the committee, when consideration was being given to such a provision, that it would seriously reduce the effectiveness of the bill in accomplishing the purpose intended, and would place the Government "in the hopeless dilemma of revealing confidential information and sources, or, failing to do so, of issuing the passport."

H.R. 55 contains this same provision which is the only aspect of the bill with which the Department disagrees.

The Department, in commenting on H.R. 55 earlier this year proposed certain revisions which we think would strengthen it. We also suggested the addition of rather complete administrative review provisions to spell out adequate safeguards of the citizen's constitutionally protected right to exit the United States.

If the committee decides that only the most minimum provisions should be enacted, and a bill should be kept to its simplest terms, the Department would endorse H.R. 55 if it were amended (by deleting three words) to conform to the bill unanimously reported by this committee last year. We believe that this bill would give the Department the legislative authority found lacking by the Supreme Court in the Kent-Briehl and Dayton cases.

H.R. 7006 (BENTLEY BILL)

H.R. 7006 was introduced after the Department submitted its comments on H.R. 55. This bill contains all of the suggestions the Department made in those comments.

We believe that H.R. 7006 would also give the Department the legislative authority it needs.

We believe this is a good bill. We strongly support it and we hope the committee will report it favorably to the House.

I understand the Department of Justice forwarded its technical comments on H.R. 7006 to the committee in mid-June. However, I am sure the committee would be interested in a current statement of the position of the Attorney General on passport legislation.

The Attorney General has advised me that the Department of Justice shares the view of the Department of State that the enactment of legislation along the more comprehensive lines of the administration's bill in the last Congress would be preferable. However, he agrees with us that our most urgent current problem in the passport field is the lack of congressional authority to deny passports to those persons in situations where information establishes that their travel abroad would constitute a real danger to the United States. Accordingly, if the Congress decides to enact legislation dealing with this narrower problem, the Attorney General informed me that his Department joins with the Department of State in supporting the provisions of H.R. 7006 and believes it would supply statutory authority found lacking by the Supreme Court in the Kent-Briehl and Dayton cases. He continues to feel, as he suggested, that certain minor technical revisions of the bill would be helpful.

H.R. 8329 (HAYS BILL)

H.R. 8329 was only recently introduced and the Department received a request for comment last Friday. Our comments were forwarded to the committee this morning.

Basically the Department feels that this bill would not provide effectively for the denial of passports to Communist supporters, and therefore is inadequate to counter the existing danger. We also feel that, inasmuch as it obviously is a comprehensive passport bill, it would, by the omission of certain important provisions, severely restrict the existing authority of the Secretary of State to act on considerations of foreign policy in the passport field.

Section 103 of H.R. 8329, for example, appears to enumerate certain sole grounds upon which passports could be denied. This enumeration would by omission severely restrict the existing authority of the Secretary of State to act on individual passport cases on the basis of reasonably anticipated harm to the foreign relations of the United States.

Section 103(a)(3) of H.R. 8329 lists three rather extreme grounds on which passports may be denied on national security grounds. Naturally, we agree with these three grounds, although we feel that the Department presently has authority to deny passports in any cases where there is substantial evidence of such serious activities. We believe, however, that the exclusion of all other grounds would make it unlikely that even dedicated and known Communists could be refused passports under the provisions of this section.

An advance showing that a particular person would, when abroad, engage in one of the narrowly defined extreme activities listed in this section would be impossible in almost every case, for reasons I have indicated earlier in this testimony. We rarely have reliable information even as to where a Communist is going, much less as to what he specifically intends to do when he gets there. Our experience teaches us that such people frequently misrepresent the places they intend to go, as well as the true purpose of their travel. Furthermore, under section 201 of this bill the Department would not even be able to inquire of the applicant about the purpose or length of his proposed travel.

Section 201(c)(2) of H.R. 8329 specifically prohibits the Secretary of State from asking an applicant for any information with regard to membership in any organization which is not finally registered under the provisions of the Subversive Activities Act of 1950. Of course, as the committee is aware, no organization (including the Communist Party) is yet included in this category because of protracted litigation. The Department doubts that reliance on this provision of the 1950 act (which has not yet become effective and appears unlikely to do so in the near future) is the best way to meet the Communist passport problem in 1959.

A difficult problem is posed by section 307 of H.R. 8329, especially subsection (d). This provision would require the judicial branch of the Government to substitute its judgment for that of the executive branch in determining whether the disclosure of particular information would have a substantially adverse effect upon national security and foreign relations. The courts have long held that in such areas the executive branch has special competence as well as broad constitutional authority, and the courts should be hesitant to trespass. The Department fears that this section might effectively nullify those desirable provisions of H.R. 8329 which recognize the necessity for the Government to rely on confidential information under some circumstances.

There are many provisions of H.R. 8329 with which the Department is in agreement, and there are a few other technical objections which are set forth in greater detail in our letter of comment. The Department's overall opinion, however, is that the bill would not be effective in meeting the present danger to the national security, and that it would not supply the statutory authority found lacking by the Supreme Court in the Kent-Briehl and Dayton cases.

H.R. 2468 (COLLIER BILL)

H.R. 2468, on which the Department recently submitted views to the committee, appears identical with H.R. 7315.

The Department is in accord with the apparent objectives of this bill. We feel that H.R. 2468 would probably meet the problems we face in the Communist area. The Department believes, however, that its provisions are more restrictive than is required.

Furthermore, the bill proposes to incorporate into statute provisions of our passport regulations which were not invalidated by the Supreme Court. The Department finds no objection to this; however, in the last Congress both this committee and the Senate Foreign Relations Committee indicated a preference for adopting a narrow approach to the Communist problem. We would not wish to prejudice the likelihood of getting remedial legislation in that area by insisting on legislative recognition of any broader authority at this time, even though it would be ultimately desirable.

We have often pointed out to the Congress that we do not believe there is only one magic formula to our legislative needs in this area. However, we think provisions along the lines of H.R. 7006 are more adequate both from the standpoint of the individual and the Government.

H.R. 5455 (CURTIS BILL)

There are many features of this bill with which the Department is in agreement. Again we believe H.R. 5455 would probably provide adequate authority in the Communist area, but the bill includes provisions that are much broader than this. In fact, certain provisions of the bill seem to go beyond the comprehensive legislative endorsement of authority we requested in the administration's bill submitted to the last Congress. If this type of comprehensive bill is to receive consideration, the Department would prefer provisions along the lines of those formerly proposed.

Additionally, H.R. 5455 (sec. 7) would create a U.S. Passport Service. The Department is firmly opposed to this feature of the bill. The Department feels strongly that the Secretary of State should be permitted to organize his Department as he deems necessary. It has been longstanding executive branch policy, as well as the recommendation of the Hoover Commission, that department heads should not be deprived of authority to determine the organization of their respective departments.

Section 7 of H.R. 5455 is defective in a number of other ways besides being a violation of sound administrative practice, as the Department has pointed out in our detailed comment upon the bill.

I have tried to make clear the Department's earnest desire to establish a fair administrative process by which we can achieve a balance between a danger to the security of the United States and the citizen's right not to have his freedom of movement unreasonably restricted.

We seek only the means to protect the United States by denying passports to those relatively few citizens who are knowingly engaged in the activities of the Communist conspiracy, and whose travel abroad would thus be a danger to the security of the United States.

Algeria and the 14th General Assembly of the U.N.

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mr. PORTER. Mr. Speaker, Homer A. Jack is the newly appointed associate executive director of the American Committee on Africa, which has offices in New York City. Before joining the committee staff he was minister of the Unitarian Church, of Evanston, Ill.

Dr. Jack has written an enlightening article on the Algerian problem, which appeared in the Christian Century for September 9, 1959, which is included here under a previous unanimous consent.

[From the Christian Century, Sept. 9, 1959]

THE FORGOTTEN WAR

UNITED NATIONS, N.Y.—The 14th General Assembly of the United Nations, due to open September 15, will hardly be less concerned with Africa than the 13th, which discussed at least 20 issues affecting Africa and in February held a special session on the Cameroons. Once again the case of South-West Africa will be reopened, with South Africa continuing to dodge responsibility for her mandate. The International Court of Justice may be asked to accept jurisdiction and compel South Africa to submit reports on that territory to the U.N.

South Africa will also be reminded at the U.N. of apartheid within her borders, including her treatment of residents of Indian origin. And again on the U.N. agenda will be challenges to Portugal's claim that Angola and Mozambique are integral parts of metropolitan Portugal. Efforts will also be made to induce the General Assembly to discuss Britain's Central African Federation, although Charter obstacles might prevent a full-dress debate on deteriorating conditions in the Rhodesias and Nyasaland.

I

But the chronic issue before the U.N. is the continuing war in Algeria. The past decade has witnessed war in Korea, Indochina, Suez—and Algeria. All the other wars have, in one way or another, come to an end, but the Algerian war will enter its sixth year on November 1 with no end in sight.

Recently the French have come under increasing attack for various acts of cruelty and for their treatment of an estimated million Algerians held in regrouping centers. In April 35 French Roman Catholic priests serving with their country's army in Algeria formally condemned the use of torture and the summary execution of civilian and military prisoners by the French. In May two of France's leading Christians, Maurice Cardinal Feltin and Pastor Marc Boegner, jointly issued a statement suggesting that the Christian conscience cannot remain indifferent to the treatment of the Algerians in the French regroupment centers. In June a small book, "La Gangrène," by seven Algerian students was published. It described tortures administered to them by the French police in Paris: "The gangrene of torture has traveled from Algiers to Paris." This book was promptly banned, but its allegations have not been disproved. Indeed the Catholic weekly Christian Testimony commented: "As long as France's answer to the expressed will of a people to live is torture, it is France that will be menaced by death."

About 300,000 Algerians are refugees in Morocco and Tunisia. They receive some help through the Red Crescent, an affiliate of the International Red Cross. Aid is also coming to them from the United States, including Church World Service, and two dozen Algerian students have scholarships in the United States. More aid to Algerian refugees is badly needed in this World Refugee Year.

Although General de Gaulle was put into office partly by French extremists in Algeria, there were hopes that, because of his popular mandate, he would try to negotiate an end to the Algerian war. But though there are rumors of secret talks, his government has refused to enter into serious negotiations, except on terms that Algerians will not accept. France has now begun the "integration" of Algeria into France—as if there were no continuing war. Recently the French army opened a new offensive.

II

For almost a year there has been in existence the Provisional Government of the Algerian Republic, created by the National Liberation Front. With Ferhat Abbas as Prime Minister, this government has headquarters in liberated Algerian territory. Some of its ministerial departments operate from Tunis and Cairo and it has offices in London and New York. Despite threats of reprisals from France, 16 nations have recognized this government, the latest being Ghana. The nine independent African states, at their inaugural meeting in April 1958, voted to aid Algeria to become independent. Their foreign ministers held an unprecedented meeting in Liberia early in August primarily to decide what further steps they could take to help Algeria become free. Several Arab nations also have given the provisional government economic and perhaps military aid.

The so-called Algerian question was first put on the U.N. agenda in 1955. However, no extensive debates took place until the 11th and 12th sessions of the Assembly in 1957. Twenty-four Asian-African nations requested that the issue be considered by the 13th session last autumn. In debates in the political committee, a resolution was passed recognizing the right of the Algerian people to independence and urging negotiations between the two parties concerned with a view of reaching a solution in conformity with the charter of the U.N. The vote was 32 to 18, with 30 nations abstaining and the United States voting in the negative. This resolution contained a reference to the provisional government of Algeria which the sponsors volunteered to omit during the plenary debate. The vote on this modified resolution was 35 to 18, with 28 abstentions. This time the United States, in a partial but significant change of policy, abstained. The result was one vote short of the two-thirds majority necessary for Assembly approval of the resolution, but the moral result was clear to everybody—except France.

Some weeks ago 22 Asian-African nations sent to the U.N. Security Council a memorandum urging it to look into the deteriorating situation in Algeria. At about the same time 25 nations, including Japan and the Philippines (both of which abstained from voting on the Algerian question in the 13th Assembly), requested that Algeria be put on the agenda of the 14th Assembly. It is predicted that there will easily be a two-thirds vote in the plenary session, with several more Latin American states supporting the resolution.

III

Algeria apparently constitutes one of the most difficult decisions for American policymakers. The United States wants to be friendly with France, its longtime ally and NATO partner. Yet it presumably wants to keep in step with its own revolutionary tradition, with modern history, and with the Asian-African world. Present State Department policy (dictated, significantly, by its European rather than its African Section) calls for a peaceful, democratic, and just solution for Algeria. This is the essence of ambiguity. One U.S. official recently said that the American vote on Algeria in the next General Assembly will be decided on the highest level, almost a military decision rather than a political one.

The Algerian war is the forgotten war. Nobody in the United States seems very concerned. The labor movement has passed several resolutions on Algeria, but what has the church done? In England, however, a British Committee on Algeria has lately been formed. In Tunisia and Morocco there are still hopes that together with a free Algeria they can form a North African federation, the Mahgreb. Tunisian Premier Habib Bourguiba in July urged the Pope to mediate the Algerian conflict. In France itself many intellectuals are deeply disturbed by the intransigence and cruelty exhibited by the representatives of their nation in Algeria. As Jean-Paul Sartre said some time ago, "If we want to save France from this disgrace and the Algerians from this hell, there has always been and still is only one way—to open negotiations and to make peace."

The 14th General Assembly of the United Nations will ask France to do just that. We of the United States should get off the political fence, interest ourselves in this vital issue affecting the Mediterranean and the whole African world, and risk the worst with France if necessary.

HOMER A. JACK.

C. D. McNamee, Great Newspaperman and Outstanding Citizen

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. GRIFFIN. Mr. Speaker, a great newspaperman, and one of Michigan's outstanding citizens recently retired as editor of the Muskegon (Mich.) Chronicle published in the Ninth Congressional District, which I have the honor to represent. Mr. C. D. McNamee steps down after he devoted 51 years of his life earning a reputation as one of Michigan's top journalists.

Mr. McNamee's distinguished newspaper career began in 1908 with the Owosso (Mich.) Press-American. He served as a reporter and editor with the Detroit Tribune from 1911 to 1917. When he left the old Detroit Tribune 42 years ago, he joined the staff of the Muskegon Chronicle, serving first as a county and city reporter, then as associate editor beginning in 1925, and managing editor beginning in 1936, and, finally, as editor since 1950.

His many readers and those who have worked for him over the years revere and respect Mr. McNamee as a man who knows his business as a newspaperman, who is firm in his convictions, and who has never hesitated to take a forthright public position on vital issues affecting his community, State and Nation.

Throughout the period of his editorship, Mr. McNamee was eminently successful in his dedicated efforts to publish a newspaper which was interesting to read, complete in its coverage of national and local affairs, forthrightly independent in its leadership in public affairs, and highly influential not only in western Michigan but throughout the State.

In addition to the long hours which he spent at his editor's desk, Mr. McNamee always found time for great personal sacrifices in time and effort in a wide variety of civic activities. To mention only a few of his community interests, Mr. McNamee provided outstanding leadership in the organization of the West Shore Symphony, the Muskegon Civic Theater Association, the Greater Muskegon Community Chest; he has been a tireless leader in the Boy Scouts organization; and he pioneered the establishment of the commission-manager form of city government for Muskegon.

Over the years, he has been the recipient of many honors and awards for distinguished service; for example, he received the distinguished service award of the Michigan Department of the Marine Corps League, he was cited by Temple B'nai Israel in 1952 as the outstanding Christian of the year, and, more recently, a special resolution of appreciation was adopted by the Muskegon City Commission in recognition of his leadership in successful community efforts to attract new industry to Muskegon.

A few months ago, Mr. McNamee received the annual award of the Michigan United Conservation Clubs, honoring the Muskegon Chronicle as the outstanding newspaper in the State of Michigan for its reporting of conservation news.

Mr. McNamee has been active for many years in such professional organizations as the American Society of Newspapermen, the Michigan Press Association, the Associated Press Managing Editors Association, and the University of Michigan Press Association. He served as a lecturer in the University of Michigan School of Journalism.

He has always taken a particular interest and genuine pride in the training of young journalists. His cub reporters usually found him to be a rough taskmaster at the beginning, but they soon learned that his example and demanding standards provided invaluable guidelines for their own careers.

Mr. McNamee's half-century of service as a newspaperman and civic leader stands as a record of outstanding achievement worthy of the attention and recognition of Congress.

Mr. Speaker, on behalf of my colleagues in the Congress and my constituents, I warmly extend to Mr. McNamee the wish that he may enjoy many happy years of retirement and good health.

Farm Imports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. DORN of South Carolina. Mr. Speaker, when farm imports exceed farm exports in our country with its overwhelming farm surpluses it is a national calamity and unbelievable; but, Mr. Speaker, here are the figures:

FARM EXPORTS FELL BELOW 1958 IMPORTS

In a reversal of form, the United States imported more agricultural products during the year ending July 31 than it exported.

In the previous 12-month period, the exports exceeded the imports.

Preliminary figures put exports during the year at $3,720,450,000 in value and imports at $4,005,258,000. In the preceding year, the exports were $4,001,820,000 and the imports $3,929,422,000.

Agriculture Department officials said the decline in foreign sales during the past year largely reflected a sharp drop in cotton sales. U.S. cotton prices were above world levels.

An upsurge in exports is expected during the 12-month period ending next July 1, largely on the basis that cotton has been returned to a competitive price basis in world markets.

Petition of the Federated Indians of California for a Redress of Grievances

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. BALDWIN. Mr. Speaker, there is reproduced below the contents of a petition of the Federated Indians of California for a redress of grievances, which today has been filed in the House of Representatives:

PETITION OF THE FEDERATED INDIANS OF CALIFORNIA FOR A REDRESS OF GRIEVANCES

To the GOVERNMENT OF THE UNITED STATES:

We, the Federated Indians of California, one of the organizations among the 36,000 enrolled Indians of the State of California, pursuant to a resolution unanimously adopted at a convention, duly called and peaceably assembled, at the county courthouse, in the city of Sacramento, State of California, on the 16th day of August 1959, do hereby submit to the Government of the United States this, our petition for a redress of grievances under the first amendment to the Constitution of the United States which reads as follows:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

Our President, whom the Indians of this country call the Great White Father has just obtained from Congress the passage of legislation to curb and eradicate what he called gangsterism, racketeering, and corrupt practices existing in the field of labor-management relations brought to light by months of investigation by the committees of the Congress.

In presenting this petition we desire to bring to the attention of the Government of the United States the fact that the Indians of California, in the matter of the just settlement of their claims against the United States, authorized to be presented to the Indian Claims Commission, and by appeal, to the courts, are suffering now, and have suffered for many years, from the same evils, namely, racketeering, gangsterism, and corruption largely in connection with the selection of attorneys to present our claims to the legal tribunals established by law and in some instances the attorneys themselves have violated the laws of the State of California and of the United States. These evils have existed for many years and have caused us, not only substantial losses in money, but have delayed and thwarted the just settlement of our claims for many years. Selfish and unprincipled men, some of whom have criminal records, have wormed their way into our affairs and for years have collected large sums of money from our people on false pretenses; in one instance of which we have documentary proof, a group of men organized a gambling corporation in Nevada, transferred their activities to California, the par value of the stock being the sum of 10 cents with provision in its articles of incorporation under Nevada law for the sale of 1 million shares, and the purpose set forth in said articles was dealing in the claims of thousands of Indians against the United States for a profit; and we also have documentary proof that several attorneys now

prominent and vocal in our affairs have, or had a contract with this company. We have found that a number of other violations of law have occurred in connection with the activities of some attorneys in our claims cases.

We have brought these evils to the attention of the officials of the State of California and of the United States but so powerful have been the political and personal influence brought to bear upon public officials that our rights have not been protected; we cannot mention or recall a single instance of anything ever having been done by either Federal or State officials to correct the evils we have mentioned, herein.

We, therefore, as members of the Indian race and duly enrolled descendants of the tribes and bands of Indians who occupied and owned the major part of the lands of the State of California at the time they were acquired by the United States from the Republic of Mexico under the Treaty of Guadalupe Hidalgo in the year 1848, and vitally interested in the just settlement of our claims against the United States now being litigated before the Indian Claims Commission; and also as citizens of the State of California and of the United States, in the exercise of a right given to us by the first amendment to the Constitution, for the purpose of freeing ourselves from the chains of servitude and oppression placed upon us by gangsters and racketeers to the end that our just claims may be settled according to the principles of right, truth, and justice and the schemes and purposes of these selfish men exposed and thwarted and the men involved in them forever banished and forever expelled from our midst, and prevented hereafter from ever having anything to do with our affairs, do hereby submit this petition for a redress of grievances to the Government of the United States earnestly urging it to see to it that the laws enacted by Congress for our protection be enforced and fully carried out.

By authority of the Federated Indians of California as set forth in the foregoing resolution:

FEDERATED INDIANS OF CALIFORNIA,
By BERTHA STEWART, *Secretary.*

Signed at San Francisco, Calif., September 8, 1959.

I Am an American

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. MONTOYA. Mr. Speaker, under leave to revise and extend my remarks, I include an excellent and sympathetic speech made by Miss Clora Ann Click of Des Moines, N. Mex., when she won the New Mexico 4-H talent and public speaking contest held in Las Cruces, N. Mex. I think all of us can profit by reading the remarks made by this fine young girl:

I AM AN AMERICAN, THIS IS MY COUNTRY

The title of my speech is "I Am an American, This Is My Country." Have you ever made this statement, or even thought about it? I think that it is one of the greatest things a person can say, because, after all, what other statement can you think of that covers so much ground and means so much to you personally?

The main trend of events during the last 2 years has been toward the scientific phase and development of America. People have been concerned with the number of satellites we have in comparison to the number Russia has, whether the next rocket try will reach its goal or will fall back to earth a failure, with the long months of preparation ruined in one fatal moment, and whether the experts in charge will ever perfect the means to actually send a person to the moon. I'm not going to minimize this scientific part of America, because I believe that it is a very important part of our lives—both personally and as a Nation of people. I do believe, however, that while we have not been putting too much emphasis on this part of America, that maybe the rest of America and what it means to be an American, has not had enough emphasis.

Since I live in a ranching part of the country, I am naturally more aware of the bountiful lands of America than a person would be who had always lived in the city. The various industries all have their places in this land and many of them are dependent on natural resources. For instance there are the mining, petroleum, and forestry industries, to mention just a few. May I add a word here on these natural resources? We should all realize that they are part of our heritage on this great land and that we must help to preserve them for future generations.

The educational opportunities are better here than anywhere else in the world. Where else can a person go to school in public schools, use free textbooks, have the advantage of having good teachers who are well trained, and further their education in their own chosen field without fear of interference from the government? We should remember that people everywhere are not as privileged as we are and in many cases are told what field to enter and then put to work where they are needed most rather than where they want to work. I believe that young people too often don't realize that their responsibility in return for this trust in them is great. We are the future leaders of the world and it is up to us to take full advantage of every opportunity coming our way to better prepare us for the work ahead.

There are many of us who are born Americans and have all the rights of Americans as soon as we can use them. There are many others who are immigrants and have fought hard to become Americans. Stop to consider for a minute—what if you had been born somewhere else? Don't you think that you would want to become an American as quickly as possible? I am sure that I would. While some of the immigrant Americans have been content to merely stop at the slums, there are those who are striving earnestly to better themselves and their position whenever possible and many have been successful.

Politics may seem very remote and far away from us right now, but it is really a very strong influence on our lives. Even though the great majority of us will never actually run for a public office, it is still our personal responsibility to try to get the best person into office. We can do this by supporting the campaign of the person who is our choice for the office and above all, by our vote. Voting is one of our most important privileges and duties. To vote wisely, we should inform ourselves and then by our very presence at the polls, we will show that we are willing to take up the fight to keep America on a democratic basis.

President Roosevelt appeared before Congress on January 6, 1941, and outlined a plan to help the Allies in the war against the Axis. First of all he stated the four freedoms. They are as follows: The first is freedom of speech and expression. This is used many, many times, and without it many democratic functions of this country would fail and we would have an almost insurmountable personal obstacle. This second is freedom of every person to worship God in his own way. This is very important to us personally. The Bible is the greatest book we have and we must have faith in God and in his supremacy before we can ever fully complete our mission on this earth. I believe that we were all put here to fulfill a purpose and if we don't pay proper respect to our maker and study his word, we will be left with a huge void in our lives. The third is freedom from want, and the fourth is freedom from fear. In world terms these last two insure our happiness and safety here. Freedom from want must be obtained through economic understandings and freedom from fear can be obtained through a world reduction of armaments to such an extent that nations cannot commit an act of physical aggression against any neighbor.

These four freedoms were intended to reach all over the world, and apply to every nation. Of course we know that they have not been followed throughout the world, but freedom of speech, freedom of religion, and other freedoms, such as freedom of the press, are in effect in this country. Our forefathers have fought many battles to give us these freedoms, and now it is up to us to keep them going and to do our best to live up to them in their fullest sense.

Modern science and inventions have shaped our lives to a very great extent. Laboratories have turned out countless devices and gadgets and have made discoveries to further our comfort, pleasure, and knowledge. Let me mention a few of the more important ones: Electricity, automobiles, airplanes, missiles, movies, radio, television, radar, medical advances, development of atomic power, plastics, telephones, and many others. I could use all of my allotted time in talking just about these inventions. Take, for instance, the telephone. We all know that it was invented by Alexander Graham Bell in 1876. Two years later the first central switchboard was put into operation, and by the end of the century more than 700,000 telephones were in use in the United States. Now the United States has more telephones than the entire remainder of the world combined. Pehaps another good example would be the automobile industry. We all know something of the tremendous advancements in this industry since the first cars were invented. There really are not too many things in the new cars which are like those of the first cars, and the appearances are, at least, certainly different.

Our scientific advancements are superior to those found anywhere else in the world. Even from behind the Iron Curtain, students are sent to America for more advanced training in this field.

I think that you can see by now that America is by far the most advanced country, with so many advantages over any other country that they can hardly compare. I am proud, and I'm sure that you are too, to be able to make the statement: I am an American, this is my country.

Petroleum Industry Centennial

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. KEARNS. Mr. Speaker, the 100th anniversary of the birth of the petroleum industry in Titusville, Pa., August 27,

1859, was celebrated the week of August 23 through 29, 1959.

It was indeed a great honor to have the Honorable Arthur E. Summerfield, the Postmaster General of the United States, as the speaker on the auspicious occasion of the dedication of a new postage stamp, issued in commemoration of the drilling of the first commercial oil well by Col. Edwin Drake.

As a Member of Congress from the 24th Congressional District of Pennsylvania, I consider that it was a high tribute to my district and to the oil industry to have the Postmaster General take time out of his busy schedule to make this contribution to the success of the oil centennial.

Small Businessmen Plagued by Government Forms

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 11, 1959

Mr. McGOVERN. Mr. Speaker, recently I received a letter from Mr. Al Schock, president of the Terrace Park Dairy, of Sioux Falls, S. Dak. Mr. Schock is an outstanding business and civic leader. His letter to the Director of the Census, in reply to a request to complete a new Government form is, in my opinion, a graphic statement of the small businessman's legitimate complaint about the morass of Government forms. Many small businessmen have told me that a sizable amount of their time is taken up trying to work their way through blanks and forms now required by the agencies of the Government.

I include Mr. Schock's letter for the attention of my colleagues:

SEPTEMBER 8, 1959.

ROBERT W. BURGESS,
Director, Bureau of the Census, U.S. Department of Commerce, Washington, D.C.

DEAR MR. BURGESS: In September 4 I received a monthly Industry Survey Form that you have requested us to fill out. Aside from the fact that we are already overburdened filling out meaningless forms, the form you have provided is no more applicable to obtaining a dairy report than is a Cadillac for hauling livestock.

The trouble with America today is that small business is being demoralized by incessant redtape harassment imposed by Bureau dictators of every sort from Washington. When will all this meaningless monkey business cease? When will operators of small business be permitted to use their energies to produce rather than waste time in nonproductive effort. The wealth of a nation is determined by the quantity of goods produced at low cost for the masses. Industry will do this provided our Government does not place too many demoralizing stumbling blocks in its path.

Since I'm in no mood to fill out additional forms I am returning your form to you for your bulging files.

Sincerely,

AL. A. SCHOCK,
President.

P.S.—All the information that you seek can be obtained by your office from the Milk Marketing Division of the Department of Agriculture. We report monthly to that Department. You'll find the latter in the vicinity of your own building in Washington.

P.S.S.—Incidentally this letter is being written on Labor Day. Holidays for small business management are fast becoming a thing of the past. Thanks in part to you.

NALC President William Doherty Presents Compelling Plea for International Understanding

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. NEUBERGER. Mr. President, a major element in efforts to maintain peace in the world is understanding between peoples of different races, nationalities, and cultures. Recently, in a speech prepared for delivery at a trade union congress in Stuttgart, Germany, William C. Doherty, president of the National Association of Letter Carriers, described, in very cogent terms, the role of the international labor movement in efforts to increase communication among the world's populace.

In his address, Mr. Doherty states with forceful clarity a fundamental fact of vital importance to a world engaged in a war of nerves. He declares that—

> Freedom of communication and dictatorship cannot exist in nature together. For the dictator, to be successful, must make of every man an island. * * * It is because of this truth that a free system of communications has always been freedom's first creation and tyranny's first target.

Mr. President, I ask unanimous consent that the text of that portion of Mr. Doherty's able talk dealing with the necessity for exchange of information and fellowship between citizens of different countries be printed in the Appendix of the RECORD. The address was delivered at Stuttgart on September 10, 1959.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY WILLIAM C. DOHERTY, PRESIDENT, NATIONAL ASSOCIATION OF LETTER CARRIERS, AND VICE PRESIDENT, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, BEFORE DEUTSCHER GEWERKSCHAFTSBUND CONGRESS, STUTTGART, GERMANY, SEPTEMBER 10, 1959

It has always seemed a curious and significant thing to me, that the ordinary everyday people of this world, such as you and I, have no trouble whatsoever in maintaining friendships which ignore international boundaries and which survive military alliances—and which always seem to survive even the activities of the professional diplomats. It is only governments which have trouble in maintenance of friendship.

We of organized labor have forged a true brotherhood which includes men of good will everywhere, regardless of race, creed, or nationality. Ours is the only true and successful brotherhood on earth.

The AFL–CIO has uncompromisingly supported a firm and aggressive position against all kinds of totalitarianism and for the advancement of free trade unions in every corner of the world.

We feel strongly that the programs for organization and workers' education which are required in the lesser-developed areas of the world—in particular, in Africa and Asia—have created new challenges to the free trade union movement, and have made new demands on its resources.

In view of the efforts of the ICFTU to meet this situation adequately, a number of suggestions have been made about how that organization should be reinvigorated in order to accomplish its indispensable world role. We in the American trade union movement are anxious to join with our fellow ICFTU affiliates to support the necessary measures and changes to accomplish this work.

It is good to be able to state that the affiliates of the AFL–CIO are also now playing an increasingly vital role in the work of the International Trade Secretariats. We believe it is becoming clear to anyone with the eyes to see that a good deal of the organization work that is required to be carried out in large parts of the world can best be accomplished by organizations such as the International Trade Secretariats that have a particular interest in a trade or industry where the organizing is to be carried on.

I am glad to be able to inform you that our experience in organizing work along these lines—that is, through the International Trade Secretariats—has become increasingly successful in the Western Hemisphere, and it is our hope that in this type of activity we have found the way in which we can be of real and permanent assistance to our Latin American brothers south of our border.

The new Soviet-Communist line calling for peaceful coexistence and united fronts has greatly increased our task in the so-called neutral or uncommitted areas. It is vital that we remain mindful of the fact that even while the Russians are talking loudest about entering into peaceful economic competition with the West, they are not diminishing at all their ruthless program of forceful international aggression.

This was well illustrated by their provoking the crisis over Berlin. Our friends in India have also experienced a similar sense of urgency created by Communist China's unforgivable aggression in Tibet.

More than ever, it is our feeling in the AFL–CIO that the response of the West must be to safeguard its unity, and that we must not allow false promises and propaganda campaigns to weaken or dissolve in any way our solid opposition to any and all attempts of international communism to encroach upon the free world.

I am happy to be able to state that in our own country the AFL–CIO has taken the lead—both before congressional committees and in representations to the executive branch of our Government—in asserting that the foreign economic policy of the United States must be attuned to the welfare and security, not only of our own Nation, but to the economic requirements and aspirations of all the people in the free world.

Now, why have we in the international labor movement been successful in creating and maintaining international friendship when professional diplomacy has so often failed? Because diplomacy, though necessary, is a bloodless exchange on a government-to-government level.

The international labor movement, on the other hand, is a people-to-people operation; and in the realm of human affairs this is the only kind of operation that has permanent value.

Men of good will are basically the same the world over. And, given half a chance, we always do very well together.

This is not surprising. After all, to paraphrase another great poet, Shakespeare: We

are fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer.

I sincerely believe this vast potential for international understanding and friendship should be recognised by the governments of the world and exploited to its fullest extent. We who make up the labor organizations of the free world have the membership, the will, and the machinery to accomplish this objective, and in this we are unique among all other organizations in the world.

You know, my friends, in a way it is very significant that I was selected to represent American labor at this Congress, for I have the honor to lead a union which deals with communications, and the key to peace in the future is the extension and refinement of communication between people.

Freedom of communication and dictatorship cannot exist in nature together. For the dictator, to be successful, must make of every man an island—it is necessary to make him feel that he alone has the will to lift a dream strong hand against oppression or, if need be, to stand barefoot against the hobnails.

It is because of this truth that a free system of communications has always been freedom's first creation and tyranny's first target.

Compare our own free communications with the situation that exists among those bleak meridians of slavery behind the Iron Curtain. In that great commonwealth of fear, the postman, in most instances, does not make his appointed rounds; the radio is the progenitor of propaganda lies, the newspaper is a creature of the State and the telephone an instrument that makes men's tongues thicken with terror.

Soviet Russia has made enormous technological advances; in two generations she has jumped from the oxcart to the cyclotron. But there is less freedom of communications there today than there was in the time of Genghis Khan. And there wil always be a limitation of communications until freedom is once again available in wholesale quantities and when men can once again walk upright and call no man master, and worship the Almighty as they see fit.

But wherever freedom still exists, there is a possibility that we of organised labor hold in our hands and our hearts the key to the future. The perspiration from our brows could well be the force which can turn the wheels that will crush those wanton wills who hold freedom in contempt and account democracy a fraud.

That is why—to me—this tremendous spirit of brotherhood that exists among us—this deep and abiding fellowship, has never had such profound implications as it has today.

For it may well be that we—who have traveled so far through adversity, who have borne the burden of contempt, who have felt the whiplash of calumny—even we shall someday be the chosen instrument through which all men everywhere can learn that the Lord God of trajectory and blast is also the Lord God of fresh bread and April morning, and that peace is not as hopeless of achievement as the warmongers would have us believe.

And so—brothers—if there is a message which I can bring you today from across the water it is this:

Let us face the future with courage, with confidence and with pride; and let us face it together.

Let us lift up our eyes. Above our heads extends the bright and singing land of infinite hope, infinite accomplishment. Let us march forward into that promised land together as brothers and comrades in a mighty endeavor.

The Labor-Management Reform Bill

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, September 12, 1959

Mr. BYRD of West Virginia. Mr. President, I voted for the Kennedy-Ervin bill when it passed the Senate, and I also voted for the conference report when it came to the Senate. I have been criticized for my vote by a district president of the UMWA in West Virginia, and I have received from his office a resolution of condemnation, to which I have today responded by letter. I ask unanimous consent to have printed in the Appendix of the RECORD the resolution and a press article carrying the labor leader's attack upon the two West Virginia Senators, published in the Beckley (W. Va.) Post-Herald, on September 10, 1959. I also ask unanimous consent to have printed in the Appendix of the RECORD my letter of reply to the resolution of condemnation.

There being no objection, the resolution, article, and letter were ordered to be printed in the RECORD, as follows:

Whereas during the past several years in the National Congress, a group known as the Senate Labor Rackets Committee has been developing a patter of approach designed to destroy the organized labor movement and reduce the men and women who toil to chattel slaves. It accomplished its work well in providing a forum of discussion and dissemination to the public of a garbled and distorted picture of union labor. Whenever and wherever possible this committee worked in the atmosphere of the savage passions of Washington politics and the irreconcilable conflict of personal conscience and personal ambition; and

Whereas the hour of decision came to the Congress within the past few days when against the pleading of House Speaker RAYBURN, a coalition of southern Democrats and reactionary Republicans were successful in passing the Landrum-Griffin bill—the most stringent of the three before the honorable body—a bill designed by the malefactors of great wealth and the disciples of entrenched greed to take the laboring masses back down that long road when we were nothing more than outcasts deprived of performing any meaningful function in our communities, denied the basic necessities of life including adequate health care and unable to maintain the minimum standards of decency this social stagnation made living a thing to be deplored; and

Whereas in the last political campaign we were confronted with political chameleons—lizards that change color of their skin—who uttered praise and platitudes for the greatest labor organization in all the world—the United Mine Workers of America—and swore allegiance to the cause we collectively espouse. In these allegations they gave only lipservice and we submit that to this date they have not performed one single act that may be considered constructive in performing the task they purported to perform—the slogan on their campaign posters was "Build West Virginia With RANDOLPH and BYRD."

Whereas this stab in the back will, if not taken lightly, perform a great service for our people—it will cause them to come to the realization that a politician cannot be trusted when the chips are down; it will awake in them the graveness of the situation and cause them to realize anew that their only hope is in the power and influence of our great organization and our great leader, John L. Lewis, who has toiled always with unyielding courage and persistence in their best interest. In the discharge of his duties, Mr. Lewis in his high office, has with fairness of appraisal, poise amid confusion, a kindly heart, a nobility of goodness, and the simple faith in men that all great leaders possess continued to give much of himself to make the road smoother, the trip more rewarding as we have journeyed down through the years and continue into the uncertain tomorrow; and

Whereas this good man made an appeal through our legislative agent, Bob Howe, to the several Representatives and Senators, to stand by their campaign promise and keep West Virginia building. For this only can be accomplished by keeping labor free in free America. Prior to this he appealed personally to our two Senators on behalf of the confirmation of Lewis Strauss. You know the answer as it is a matter of public record. Before Congress had barely convened in January they went contrary to our great leader on civil rights legislation. When the question arises as to what they thought is the best interests of our union—their hitting average is 100 percent against your wives and children and those yet unborn. For the far-reaching effects of this labor legislation will be here to plague us for many, many years to come if it follows the pattern of Taft-Hartley; and

Whereas during all this hour of betrayal three Representatives from West Virginia did not forget the men and women who sent them to Congress and will keep them there—Mrs. ELIZABETH KEE, Mr. HARLEY STAGGERS, and Mr. CLEVELAND M. BAILEY stood up and were counted on our side if you please. Through courage, honest devotion, and unsullied fighting spirit they proved their worth beyond question in this grave responsibility of their stewardship. Their integrity in office and faithfulness to trust has ever been their longing and aspiration—they covet and cultivate your friendship by deeds not words and promises; and

Whereas we believe that those who have been faithful to their trust should be rewarded—likewise our betrayers should receive our everlasting condemnation. We must have Representatives who realise that while their duties present a thorny and laborious problem, the reward of a task well done becomes progress toward the fulfillment of human destiny; therefore be it

Resolved, That Local Union 9375 of Tralee, W. Va., in regular meeting assembled, condemn the action of our Senators and Representatives in the National Congress who play footsie with the U.S. Chamber of Commerce, the Manufacturers Association, and all other groups who prowl the streets and buildings in our Nation's Capital seeking to prevent the people who toil in America from having some of the better things of life, and commend for high honors, KEE, BAILEY, and STAGGERS; and be it further

Resolved, That we begin to plan now to eliminate from the lawmaking body those who stood against us in the supreme challenge and put our plans into action when we go to the polls in 1960.

Fraternally submitted.

This resolution was unanimously adopted at the District 29, United Mine Workers of America Labor Day celebration held at Pineville, W. Va., Monday, September 7, 1959.

The motion to adopt the resolution was made by Fred Wooten, Local Union 6026, Coalwood, W. Va., and was seconded by Ernest Moore, Local Union 7633, Thorpe, W. Va.

[From the Beckley (W. Va.) Post-Herald, Sept. 10, 1959]

TITLER BLASTS SENATORS FOR "STAB IN THE BACK"

West Virginia's two U.S. Senators, JENNINGS RANDOLPH, of Elkins, and ROBERT C. BYRD, of Sophia, have been accused of "stabbing labor in the back" in a resolution already mailed to them and now being sent to every local union of the United Mine Workers of America in the State.

The resolution was adopted at the Labor Day celebration Monday in Pineville. George J. Titler, president of District 29, of the UMWA, repeated some of the charges made against RANDOLPH and BYRD in Pineville.

Titler said: "The labor unions and coal miners, especially in West Virginia, have been shocked and nauseated by the action of the so-called pro-labor BYRD and RANDOLPH in the 86th Congress.

"The first real stab in the back by RANDOLPH and BYRD, a stab at the coal miners of West Virginia, was when they allowed LYNDON JOHNSON to pull them around by the nose and get them to vote against Lewis Strauss when his confirmation came before the U.S. Senate for Secretary of Commerce.

"For 10 years we have been trying to get quotas on import of residual oil—and 2 months after Strauss succeeded in having this done the two Senators from West Virginia cut his throat from ear to ear. Their votes constituted the balance of power which rejected him.

"Their next two antilabor votes were for the Kennedy-Erwin bill and when they voted for the compromise Landrum-Griffin bill.

"In the last 10 years we have had three nasty thrusts of fascism in America. The first was the Taft-Hartley Act, the second the right-to-work laws in 19 States, and the third the Kennedy-Erwin and Landrum-Griffin bills."

The blunt resolution of protest came from UMWA Local 9375 at Tralee. It was unanimously adopted by those present for the celebration.

SEPTEMBER 12, 1959.

Mr. GEORGE TITLER,
President District 29, United Mine Workers of America, Beckley, W. Va.

DEAR GEORGE: I have noted the Beckley Post-Herald story of September 10, captioned "Titler Blasts Senators for 'Stab in the Back.'" The article refers to a resolution adopted at the District 29 Labor Day celebration in Pineville on September 7, and states that the resolution is being mailed to Senator RANDOLPH and to me and every UMWA local union in the State.

I have received the resolution. It came to me in an envelope mailed from Beckley and bearing your return address. I have noted the condemnation of my action, and that of Senator RANDOLPH and Congressmen HECHLER, SLACK, and MOORE, in voting for the labor-management reform bill which recently passed both Houses of the Congress.

The resolution speaks of "political chameleons" who, in the last political campaign, "swore allegiance" to the cause which the United Mine Workers of America "collective espouse." May I say that those who prepared the resolution, and I assume you took part in its preparation, might do well to remember that I stated, time and again, during the last campaign, that I intended to vote for a labor-management reform bill. I made this statement to the people several times during my appearances on television and otherwise. No individual need have been under any false impression as to where I stood, because I felt at that time, as I feel now, that the American people as a whole wanted and deserved some legislation to prevent, as much as possible, future corruption and racketeering in the labor-management field. The rank and file membership of many of our unions needed protection, and I am confident that many of the labor leaders themselves throughout the country realized that something had to be done.

The resolution goes on to state, in referring to the two West Virginia Senators, as follows:

"To this date they have not performed one single act that may be considered constructive in performing the task they purported to perform—the slogan on their campaign posters was 'build West Virginia With RANDOLPH and BYRD.'"

It is to be regretted that those who seek to criticize Senator RANDOLPH and me find it convenient to overlook the many efforts we have put forth in behalf of our State and our people. We have performed not "one single act" but many acts which should redound to the best interests of our constituency. What about the Coal Research and Development Act, which was cosponsored by the two West Virginia Senators? The efforts of Senator RANDOLPH and me in urging upon our leadership and upon the appropriate committee of the Senate that action be taken on this measure, were responsible in great measure for enactment of this legislation. What about the area redevelopment legislation which passed the Senate several months ago? Have those who criticize us today forgotten that my subcommittee held hearings in West Virginia on the need for such legislation and that Senator RANDOLPH appeared and gave testimony in its behalf? What about the Youth Conservation Corps Act? This bill, which Senator RANDOLPH and I joined in cosponsoring, passed the Senate, and its enactment into law would put many thousands of young men to work. What about the public works measures which have been made possible by the work of the West Virginia Senators on the Public Works Committee and the Senate Appropriations Committee? These projects will put men to work at Summersville and Princeton and East Rainelle and at other places throughout the State. What about the appropriations made by my committee for armory construction in West Virginia? Ask our mutual friend, Congressman BAILEY, as to who was responsible for the inclusion of additional moneys for West Virginia in the military construction appropriation bill.

I could go on and on, if it were necessary, to recall the many accomplishments by the West Virginia delegation in the Congress, but I shall only touch now upon one other significant action by Senator RANDOLPH and me, inasmuch as you have been quoted in the press as alluding to the Strauss episode. You have criticized our vote in opposition to the confirmation of Lewis Strauss. You would have the rank-and-file membership of the UMWA believe that Mr. Strauss was solely responsible for the imposition of mandatory controls on imports of residual oil. You should have known that this is not the case. The voice of Mr. Strauss was only one voice, and who is there to say that his successor will not favor mandatory import quotas? In bringing up the matter of mandatory import controls on residual oil, why do you not give credit where it belongs? In my 7 years in the Congress I have been waging this fight, as have others of the West Virginia delegation. Prior to the imposition of mandatory controls this year, your two West Virginia Senators and the West Virginia Members in the House of Representatives waged a determined campaign to have the President institute such controls. We went to Acting Secretary Strauss; we met with the Director of the Office of Civil and Defense Mobilization, Mr. Leo Hoegh; we went to the Department of the Interior; we took our fight to the late Deputy Secretary of Defense, Donald Quarles; we went to Under Secretary Dillon in the Department of State; and Senator RANDOLPH and I climaxed our efforts by going direct to the President of the United States in the White House. We helped to fight the battles and carry the burden in the heat of the day, but your statement seeks to give Mr. Strauss the credit. Mr. Strauss has long since been gone from Government circles, but the import controls are continuing. Of course, I have no way of knowing how long they will remain in existence, because the New England area continues to bring considerable pressure on the President to get him to recede from his action. But the fact remains that your West Virginia Senators and your House Members were, in a very considerable measure, responsible for the import controls.

As for the unfortunate Mr. Strauss, the propaganda that was disseminated in his behalf backfired on him, and he is about as much to blame as is anyone for his own defeat. Some of the New England Senators were told that he helped to keep coal out of their States; conversely, the two West Virginia Senators were told that he was a friend of coal. So you can see that his supporters were working both ends against the middle. I voted against him because I did not feel that it was in the best interests of the country to have him confirmed, and I reached my decision after I had read the 1,128 pages of the hearings. I think I did the right thing, and I am willing to stand on my decision.

The resolution charges that the West Virginia Senators played "footsie with the U.S. Chamber of Commerce, the National Association of Manufacturers, and all other groups who prowl the streets and buildings in our Nation's Capital seeking to prevent the people who toil in America from having some of the better things of life * * *." Your two Senators have not played footsie with these groups or with any other groups. We simply do not wear anybody's collar around our necks.

The bill which passed the Congress will not hurt honest unions, and it will give added protection to the rank and file members in the unions. Honest union leaders have nothing to fear from the legislation. George, the flagrant disregard of the rights of the rank and file members of organized labor by men like Hoffa and Beck, and the corruption and racketeering that have been revealed in the fields of both labor and management, made it imperative that some kind of legislation be enacted. The people of this country, and this includes thousands of individuals in the ranks of labor, were determined that legislation should be written to prevent such future abuses. I came up in a workingman's home, and my sentiments have always been very friendly toward the lot of working people. I cannot condone, however, a reckless disregard of and a disrespect for the public, the Government, and the union movement itself, by those who would wreck organized labor in their efforts to build little empires for themselves. Men like Hoffa and Beck do not serve the best interests of laboring men and women generally, so I am convinced that I voted for that which was right, under the circumstances.

After the Kennedy-Ervin bill had passed the Senate, I told you, George, that labor would do well to support the Senate-passed bill—else you would get even stronger legislation before the session was over. It turned out as I said. Some people were adamant in their opposition to any kind of labor-management reform bill whatsoever, and, if I remember correctly, this represented the

position of your national office. A few labor leaders even went so far as to threaten Members of Congress who supported such legislation, and their threats reacted against labor. Many of the people who wrote insisting that we support the bill and many of the people who wrote demanding that no bill be passed at all were entirely unfamiliar with any of the provisions in the bill. I would venture to say that, in various instances, many of those who wrote protesting the bill had been incited to write to us by people like you, George.

I have been a friend of labor throughout my 13 years in public service, and I am confident that fairminded working men and women will not be misled by a few individuals who, because I have not voted exactly as would have pleased them in this instance, would seek to have the union membership believe that I have betrayed labor. I have had my battles with you before, George, and I do not say this disrespectfully, but a man can be with you 99 times and vote opposite to your views once and you will crucify him as one who has betrayed labor.

If certain labor organizations had cleaned house, the people would not have demanded that the Congress do the job. I realize that unions, generally, in West Virginia have not been subjected to dishonest leadership, and I have spoken with pride upon numerous occasions concerning the honesty and fairness of most of the union leaders in West Virginia, but this does not gainsay the fact that a situation had developed in the Nation which could no longer be tolerated.

If blame must be placed somewhere, then, let it rest upon the shoulders of Hoffa and Beck and others of their stripe. Let the blame also be shared by those who publicly defended Hoffa. Your two West Virginia Senators and your House Members did not "stab labor in the back," George; labor's position was undermined by a few reckless leaders who stubbornly refused to read the handwriting on the wall.

Sincerely yours,

ROBERT C. BYRD,
U.S. Senator.

Schedules of Conferences and Visits With Residents of the Fourth District of Ohio

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. McCULLOCH. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever official duties do not require him to be in Washington.

When Congress adjourns in a few days, I expect to return home and to be available for conferences and visits with residents of the Fourth District in the courthouse of each county seat between 8 a.m. and 4 p.m., in accordance with the following schedule:

Allen County, Lima: Wednesday, September 30.

Auglaize County, Wapakoneta: Tuesday, October 6.

Darke County, Greenville: Monday, October 5.

Mercer County, Celina: Wednesday, October 7.

Miami County, Troy: Tuesday, September 29.

Preble County, Eaton: Thursday, October 1.

Shelby County, Sidney: Monday, September 28.

No appointments will be necessary. Any problem with, or opinion concerning, the Federal Government will be proper subject for conference.

Of course, I will be glad to see residents of the district, in my Piqua office, any time that Congress is not in session, except on the days scheduled above.

When You Buy Shoes

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. PORTER. Mr. Speaker, Changing Times, the Kiplinger magazine carried an informative and pertinent article, entitled "When You Buy Shoes," in its August 1959 edition. I have introduced legislation—H.R. 1320—which would require the labeling of domestic and imported shoes. A portion of the Kiplinger article discusses labeling:

WHEN YOU BUY SHOES

The odds are that you will buy something like $25 worth of shoes this year. Multiply the number of people in your family by $25 and you will have an approximation (probably minimum) of what you can expect your normal annual family shoe bill to be.

Americans typically buy three or four pairs a year, though that figure varies considerably. Men usually get one or two pairs, women four or five, and children about five. And, of course, there are wide individual variations, too.

The price will average out to about $6 a pair—the industry expects to get about $3,600 million for 600 million pairs. But both the number purchased and the average price include not only dress and street shoes but also a sizable volume of low-cost slippers, sandals, play shoes, etc.

Whatever your shoe bill is now, you are going to be spending more. Retail prices have risen more than 10 percent over the past 3 years, are 30 percent higher than they were 10 years ago, and will almost certainly increase this fall.

Far more important than the squeeze on your pocketbook is the potential squeeze on your feet. Improper selection of shoes can lead to extreme discomfort and serious foot troubles—especially with growing youngsters.

The chairman of the National Foot Health Council says, "By the time children reach high school age, 65 percent of the boys and 80 percent of the girls show evidence of foot trouble." Much of it is caused by wearing poorly chosen shoes.

APPEARANCE, MATERIAL, STYLE

Can you judge a shoe by its appearance? No—but neither can an expert without dissecting it. It's not enough to know simply what materials (leather, synthetics, or fibers) are in a shoe. The quality of the materials, as well as the quality of both machine and hand work, varies widely, and it takes a trained eye—if not extensive tests—to detect the significant differences.

Would a label help? There is a shoe-labeling bill currently pending in Congress, intended by its sponsors to take some of the mystery out of shoe buying. It would require that all shoes carry a label specifying the materials used in their manufacture.

Critics of the bill point out that such labeling would offer you only limited assistance. For example, whether a synthetic is preferable to leather in a certain part of the shoe depends on the particular function the material is to perform. And it depends on the quality of the particular leather or synthetic used, which the label would not have to reveal under the bill.

Not only are you in the dark when it comes to appraising material and workmanship, but you are also at the mercy of style. Style is king in the shoe business, especially in women's shoes, and determines what your shoes look like and to a great extent the materials used in them and how they are made.

The extreme tapered toe of women's shoes today may often require a longer size for proper fit. But this is a small sacrifice of vanity to exchange for comfort and foot health. The National Foot Health Council says that the tapered toes do not cause discomfort or harm the feet provided they are properly fitted. (Tapered toes are on the way out, anyhow.)

This advice applies to the selection of shoes for any member of your family: fit is the most important consideration. Though you can't judge materials and workmanship, you can make sure the shoes you buy fit your foot.

HOW SHOES ARE FITTED

The fit of the adult shoe is more directly related to the shape of the last (the wooden form that determines the basic shape of the shoe, and on which the shoe is constructed) than to the shoe's length and width. A manufacturer may have from 2,400 to 5,400 lasts on hand to make his current styles in a variety of shapes and sizes.

Shoe size is a combination of measurements around the ball, the instep, the waist, and the heel of the last. But lasts of identical size can vary appreciably in shape and contour. They differ, for example, in the finer measurements from the big toe to the ball of the foot, or from the ball of the foot to the instep.

It is because of such variations that you probably have found that you can comfortably wear different sizes in different types of shoes. A size 6B may be made on a last molded more closely to your foot than the last of a 7AA, or vice versa. Or, to use a more obvious illustration, two people with the same measured shoe size probably do not find identical shoes equally comfortable. Their feet, while measuring the same size, are shaped quite differently.

Follow these rules in fitting shoes:

1. Take your time shopping. A shoe selected in haste and improperly fitted is a poor buy. You can assume that a $25 shoe is superior in quality of materials and workmanship to a $14 brand. But a less-expensive shoe properly fitted is preferable to a shoe at any price that doesn't fit your foot comfortably.

2. Insist on careful fitting by the salesman. This harassed fellow has been the victim of jokes and cartoons for years, but it's his job to assist you in finding the shoe that fits from among the assortment of sizes, styles, and lasts available.

3. Measure both feet (they may not be identical in shape, you know), not only the length but the width and the ball-to-heel span. This is all accomplished with the metal Brannock measuring device in common use.

4. Don't be a slave to a specified size. Fit the shoe to the foot, as the experts advise, not the foot to the shoe.

5. Don't choose a shoe on the basis of one appealing style in one brand alone. Try similar styles in the same or other lines. Re-

member that the wide variation in last shapes offers you a choice, in most styles, of a shoe that will fit the shape of your foot—if you will look for it.

6. If you find by experience a shoe that gives you outstanding comfort and fit, ask the salesman for the name assigned by the manufacturer to the last on which the shoe was built. Ask for that last type the next time you buy shoes. You may or may not find it again in the kind of shoe you want, but it's worth a try. This advice, unfortunately, is limited to men. Style changes in women's shoes often force changes in last types from season to season.

The most comfortable shoes for men, women or children are those that have: a straight-line construction along the inside line of the shoe from the heel to the big toe; a broad, round toe with about one-half to three-quarters of an inch of space between the end of the big toe and the inside front of the shoe; a firm, but not rigid arch that conforms to the natural arch of the foot; a snug heel counter.

For women's shoes that are to be worn regularly the heel should not be too high, too tapered or to steeply pitched for comfort.

If you find that you are unable to fit your foot comfortably with shoes available in regular retail stores, or if you are troubled by extreme discomfort, you had better consult a physician or an orthopedic specialist. Orthopedic or corrective shoes can be fitted or constructed from a last created to match your foot to alleviate irregular or abnormal foot conditions.

SHOES FOR CHILDREN

Style exerts an increasing influence in children's shoes. No longer do youngsters settle for a plain oxford or a loafer (in brown or black) and an occasional pair of saddle shoes. Parents are reeling these days from demands for ballerina-type slippers, lightweight casuals in a vareity of materials and colors, shoes with zippers, shoes with straps, buckles, etc. Too often proper fit is forgotten or neglected under pressure for the current craze.

The paradox in fitting a shoe to a child's foot is that it must provide proper support and, at the same time, room for the rapid growth of the foot. The chart at the left shows the astonishing rate of that growth. [Not printed in RECORD.]

The points made earlier about the most comfortable construction are of special importance in choosing children's shoes. In addition, you should look for enough width and circumference at the ball of the foot to provide room for growth of the metatarsal bones (a child's shoe should not be tight across the width of the shoe at the ball of the foot); a box toe that is high and wide enough to allow the toes to lie flat and wiggle; a broad heel base for foundation.

In the early years, a child will ordinarily outgrow his shoes before he outwears them. Less expensive shoes are all right for growing children (with normal feet) so long as they satisfy the requirements of fit and room for growth.

Have your pediatrician check a young child's feet and walk periodically. If there is any need for corrective, orthopedic shoes, he should be able to detect it and refer you to a competent specialist. A normal, healthy child's foot needs no special shoe, but neglect of a tendency to foot abnormality in the critical early years can lead to serious troubles.

The time and attention you devote to the proper fitting of your child's shoes, and to periodic checks to see whether they have been outgrown, will be the greatest contribution you can make to his foot health in later years.

Maine Needs and Must Develop Low-Cost Power for Industrial Expansion

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 10, 1959

Mr. OLIVER. Mr. Speaker, next month, a decision may be made which can determine to a large extent the future prosperity of the State of Maine and, indeed, the industrial future of the New England States.

I refer to the forthcoming report of the Engineering and Fisheries Boards of the International Joint Commission on the great Passamaquoddy tidal power project.

There have been indications that the current engineering investigations being carried on by the U.S. Army Engineer division of New England and other agencies of the United States and Canadian Governments will result in a concrete proposal for construction of the Passamaquoddy project. A two-pool project using Passamaquoddy Bay and Cobscook Bay for water storage already has been selected for detailed design. A companion project at Rankin Rapids on the upper St. John River also has been suggested as part of the most promising and economical combined project by Brig. Gen. Alden K. Sibley of the U.S. Army Engineer division in New England.

If the October report finds Passamaquoddy feasible as a power project, Maine can look forward to the possible injection of many kilowatts of low-cost power into the State's lagging economy.

Waterpower was the basis for Maine's early industrial development. Lacking in coal, oil, or other fuels, Maine developed her industry—primarily woolen and cotton milling—early in the 19th century, with the mills located on the State's rushing streams.

So rich was our State in waterpower that an 1869 power study estimated the total energy discharged annually by the rivers of Maine as equal to the work of 34 million men working without interruption for 1 year. Many of our early leaders saw in the "white coal" of rushing water the key to a great industrial development.

But what happened?

As other regions began to develop industry, Maine lagged behind. Like other New England States, Maine has "enjoyed" some of the highest electric rates in the Nation. The rivers, for the most part, went right on flowing to the sea.

Today, our State has an estimated 1,262,600 kilowatts of undeveloped hydroelectric power in its rivers, as compared to only 500,211 kilowatts of developed hydro, according to the latest available Federal Power Commission estimate. This does not take into account the tremendous potential of 'Quoddy itself.

Many reasons could be advanced for this lag, and many have. For example, it has been said that the rugged individualism of Maine people prevented any Federal development, and that there was no market for power from 'Quoddy or any other major project, and that industry does not concern itself greatly with the cost of electric power.

I will concede at once that Maine people are independent; but a greater factor, I believe, than personal antagonism to Federal development has been the bitter opposition of private utilities, clinging to a high-cost, low-use concept of electric service.

As for the lack of market for the power, the same argument was used when Muscle Shoals in Alabama and Grand Coulee in Washington State were proposed. In both of these cases, what actually happened was that abundance of power stimulated vast industrial developments which led to greater and greater demands for power and ultimately to the great power systems of the Tennessee Valley Authority and of the Bonneville Power Administration.

There is no reason to believe that 'Quoddy cannot be the Muscle Shoals of Maine and launch a similar rebirth of industry, progress, and better living standards for our people.

The third argument—that power costs are not important to industry—can be advanced in the case of some industries. But with increasing automation it becomes apparent that electric power is an ever-growing factor in most industries. Further, there are many modern industries which locate only where large quantities of low-cost power are available. Needless to say, these have not chosen Maine.

Our State produces 25 percent of the feldspar used in the United States, but exports it to four other States for the manufacture of porcelain and pottery. Aroostook County has one of the largest deposits of low-grade manganese ore in North America. An even more challenging propect is open to Maine—the vast Labrador iron ore deposits which some day may replace the ore of the Mesabi Range of the Middle West as the major source of America's steel.

The possibility that Eastport's excellent harbor can be used for shipping the raw materials and products of great new steel mills in the vicinity of a Quoddy power project is no idle dream. It makes economic sense. It can happen, if we can only provide the energy to process the raw materials at a competitive cost.

Not long ago the Governor of Washington State reviewed the changes which have come to his State as a result of hydroelectric power development by the Federal Government. The parallel between that great northwest State and our State of Maine is very close. In the early 1930's, the Governor said, Washington's economy was based primarily on agriculture, logging, wood products manufacturing, and mining. Agriculture and logging similarly are basic industries in Maine.

Today, after the development of only a portion of Washington's hydro resources, new industries have grown up in Washington, the population has increased rapidly, and its people enjoy a high degree of electrical living. Aluminum aircraft and defense establishments have brought their payrolls to Washington State. Its people use more than 2½ times as much electricity as the average American family, enjoying many more electric servants than the average Maine family.

The Governor of Washington declared that during a recent trip east to talk with industrialists about locating in Washington—

I was greatly impressed by the value of low-cost power to industry. * * * At a series of meetings with industrialists in Boston, New York, and Philadelphia, we presented information on the industrial advantages of our State. The point evoking the greatest comment and even surprise among the industrial leaders was the abundance and low cost of our electric power in Washington State.

Before TVA, there was a saying in Tennessee that the average farmer woke to the clang of a Connecticut alarm clock, climbed out of his Baltimore bed and into a pair of Oshkosh overalls and Sheboygan shoes and Chicago shirt. He washed his face and hands in a Pittsburgh pan, using Cincinnati soap, and dried on a Trenton towel, sat down in a Chillicothe chair to a Patterson plate, filled with St. Joe grits fried in Kansas City lard. After breafast he put a New Bedford bridle on a Missouri mule, hitched him to a Peoria plow and, using Yankee cuss words, planted Columbus corn to satisfy a Massachusetts mortgage.

With certain variations in the menu, much the same story could be told of many farmers in my State of Maine today.

TVA has brought many changes to the valley it serves. Laboratories and factories have grown up in its industrial centers, the march of erosion has been halted, a reforestation program has renewed a once faltering lumber industry. Flocks of tourists pour into the valley to enjoy the man-made lakes, commerce moves along the inland waterways, valuable land along the rivers can be used without fear of major floods.

Will this story be told of New England 20 years from now? It is up to us.

Today, families in the New England States pay the highest average monthly electric bills in the Nation. Consider these averages for 250 kilowatt-hours of service, published in FPC's latest edition of "Typical Residential Electric Bills":

New Hampshire, highest in the Nation, $8.92.

Massachusetts, second highest, $8.91.

Vermont, third highest, $8.90.

Rhode Island, fourth highest, $8.74.

Maine, sixth highest, $8.51.

Connecticut, twelfth highest, $8.

At the other end of the scale, consider families living in the states enjoying a high degree of Federal hydroelectric development:

Washington, lowest in the Nation, $4.53.

Tennessee, second lowest, $4.84.

Oregon, third lowest, $5.40.

Alabama, fourth lowest, $5.42.

Perhaps the difference of $4 a month—close to $50 a year—is not of vital importance now to the average family. As the use of electric servants grows, however, this electric bill will become an increasingly important part of the family budget.

From industry's standpoint, power costs can be of real significance. As an example, take the private utilities serving in Maine and in upstate New York, where hydroelectric power has been developed on a large scale. An industry in Bangor, Maine, using 400,000 kilowatt-hours would pay $6,275 per month for electricity, while an industry in Niagara Falls, N.Y., would pay only $3,391 per month for the same service, according to the latest FPC figures.

These thousands of dollars could make the difference between profit and loss to many industries.

Some years ago, in 1951, the Committee on the New England Economy of the President's Council of Economic Advisers, headed by economist Leon H. Keyserling, prepared a detailed report on the New England economy which mapped the route the area could take to achieve lasting prosperity.

New England has many problems—

The report said—

but if there is one that stands out it is how to make the most of its resources, its human resources including its resources in ideas as well as its natural resources, and to facilitate the adaptation of its industrial structure to changes in its underlying competitive position.

'Quoddy is one of the most challenging ideas which Maine's human resources have come up with in many generations, just as the power of the tides is one of the State's great natural resources. We can develop both.

At another point, the report declares:

We are concerned over the failure of utilities in this (New England) area to seek larger use of power through more venturesome pricing policies. * * * In some other regions, the presence of public power has tended to force private utilities to be more venturesome in their rate policies. The use of electric power has been thereby stimulated greatly without any loss to the utilities.

In short, the injection of public power from 'Quoddy into the high-power-cost economy of Maine can stimulate a new approach on the part of the utilities. As has been shown in the TVA area and in the Northwest, low rates and the aggressive promotion of widespread power use can bring new industry a higher standard of living, and a handsome rate of return to existing utilities all in one package.

Civil Rights Commission Should Be Terminated

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 11, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, the Civil Rights Commission should be terminated. There is no reason that I can see for its continuation.

The recent report of this Commission contains some of the most vicious proposals that have been presented. These proposals, if placed into law, would ultimately bring about the end of our type of constitutional government.

And one of the most vicious of these suggested plans is the proposal to create the Office of Federal Registrar. Such a proposal, in the first place, flies in the very face of our Constitution itself. In no age, and in no place, has any responsible public official in the past urged that the power of controlling elections be taken from our 50 States and placed under control of the U.S. Government in Washington; and yet this is in essence what the proposal to create the Office of Federal Registrar will do.

Should such a proposal become law, the Federal Registrar will be able to supersede any local registrar, appointed and controlled now by the several States, and permit the new Federal Registrar to operate the elections. It is true that there will be those who will argue that this provision should apply only to Federal elections. But, Mr. Speaker, a registrar does not list voters for only Federal elections. He sets up a register for voting—not for Federal voting, but for all kinds and types of voting and in all elections, under restrictions provided by State laws.

If such an Office of Federal Registrar which handles only Federal elections and which undoubtedly provides its own procedures and methods of handling the registration lists for Federal elections, are we not then setting up two different types of elections and two different types of voters? It is obvious that the Federal Registrar will do his own interpretating and construction of Federal statutes. These decisions may be en-

tirely different from the construction placed upon State and Federal statutes by the duly constituted local registrars or voters. As a result of that fact we may ultimately have two classes of voters: federally accepted voters and State approved voters. This situation will inevitably ultimately lead to Federal control of elections and to the loss of our States as we know them under our Constitution.

Even worse than this is the proposal to further amend the Constitution to provide additional power for the enforcement of civil rights. Already more power is available under the terms of our present Constitution than will ever be needed for this purpose. Further amendment will provide useless and redundant language in our basic law and will not make available one jot of additional needed authority.

What is needed, Mr. Speaker, is not further laws and further constitutional provisions, but what is needed is commonsense and realism in the handling of a most delicate problem. If there was ever a problem which calls for local handling, it is the racial problem. Such a problem goes directly to the root of our own private lives and personal relations in this land. Changes in customs, in habits, in local procedures, and in the manners of our people are all matters which should be handled locally. In my judgment they are not even susceptible of being handled on a State basis, but should be handled as close and near to our people as any problem of government which we now have before us. If commonsense and feet-on-the-ground reasoning returns to us, we will send this problem back to the grassroots for solution, as we should have done years ago.

Mr. Speaker, this Commission has not helped solve our racial problems. It has merely stirred up further trouble and turmoil, and has produced further racial hatred throughout areas of the Nation in which it has operated. I therefore am against the further extension of the authority of this body, and will vote accordingly.

Housing Act of 1959

SPEECH
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 10, 1959

Mr. LINDSAY. Mr. Speaker, once again I wish to add my support to the bill S. 2654. From the very first, I have been urging this session of Congress to produce a housing bill which would not only keep alive the many fine aspects of the Federal housing program already in existence, but would also provide new legislative bases for dealing with the urgent housing needs of the Nation. It has become evident that such a bill can be attained only by cooperation between the President and the Congress. In my judgment, the present bill, our third attempt for adequate housing legislation, represents just such an approach. I urge my colleagues to give it their speedy approval.

I am particularly delighted to find that this bill contains, as did its two predecessors in the House, my public disclosure proposal. This measure, section 407 of the bill, would require prospective redevelopers to make public the details of their proposals before any commitment of any kind could be made to them by local authorities charged with responsibility for title I projects. This provision, which has the blessing of the administration and of the distinguished chairman of the Housing Subcommittee [Mr. RAINS], will do much to remedy the defects which have developed in the operation of title I of the Housing Act of 1949 in New York City and elsewhere.

Savoia Lodge, Sons of Italy

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent excerpt from the celebrated Clinton Daily Item containing remarks in part which I made at the 50th anniversary celebration of the Savoia Lodge, Sons of Italy. This occasion was one of several very well arranged programs which were formulated by the able committee in charge of the lodge's 50th anniversary celebration.

The banquet was held in the imposing edifice, the Clinton Town Hall, and was largely attended by members of the organization, their families and many of their friends, including distinguished leaders of the bar, bench, and the public service.

I felt privileged indeed to add my voice to those which were raised in praise of the lodge; its members; its illustrious history, its many contributions to the country, the vital and inspiring role which citizens of Italian ancestry have played in developing the economy, strengthening of the Nation in peacetime and defending the country in time of peril. It would take many phrases indeed to elaborate adequately upon the great achievements and loyal citizenship and service of our dear friends of Italian ancestry.

Many volumes could be written on this subject, yet I was proud on this occasion to add my humble words to many that were spoken about the contributions of this outstanding group of Americans.

The people of the rich Italian heritage are very dear to me and have been a source of constant encouragement and support. I express warm gratitude to them for their inspiring loyalty and monumental achievements.

May this great, outstanding group continue to receive choicest blessings of the good Lord. May they steadfastly move into the future reinspired and rededicated to the high ideals they exemplify.

The excerpts follow:

CONGRESSMAN PHILBIN PAYS TRIBUTE TO SAVOIA MEMBERS

Speaking at the 50th anniversary of Savoia Lodge, Sons of Italy, Saturday night, Congressman PHILIP J. PHILBIN highly extolled the contributions of that body and the Italo-American group as a whole.

"The patriotism, loyalty and achievements of people of Italian blood in war and in peace in behalf of the community, State, and Nation could never be exceeded by any other group," said PHILBIN.

"The history of this great organization in our beautiful town covers a period of marked material progress and advancement never before equaled in the entire history of the world.

"But it has been a period of great stress and turmoil as well—three bloody wars and now the cold war, an uneasy peace so-called, severely testing the fiber, stamina and courage of our people.

"It has been the hard work, honest, law-abiding, God-fearing citizenship of your group, and other fine Americans like you, your faith in and devotion to basic spiritual values of religion and patriotism that has enabled you to play such a vital, constructive role in sustaining the moral integrity and the safety and security of the Nation.

"With your great reliance in the Almighty and your high purpose and determination to preserve your ideals and rich heritage, the future of your great organization is bound to be a continued and growing contribution to Clinton and the country.

"I heartily congratulate and compliment you and wish for you all very many happy, glorious, successful years of service to your fellow man and devotion to our great Nation."

Speech by Hon. William C. Kern Before the National Congress of Petroleum Retailers, Inc.

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. BARR. Mr. Speaker, on August 18, 1959, in New Orleans, La., one of my distinguished constituents, the Honorable William C. Kern, Commissioner of the Federal Trade Commission, spoke before the National Congress of Petroleum Retailers, Inc. Many of the things that Mr. Kern had to say applied to some of the basic problems of this Congress. I think it only fitting and proper that this be made a part of the CONGRESSIONAL RECORD, and I heartily recommend it to all Members.

Mr. Chairman and members of the National Congress of Petroleum Retailers, Inc., I am delighted at this opportunity to address your convention. I am told that about 30,000 individual retail service station operators belong to the various groups that make up your Congress. That certainly makes this meeting wonderfully representative of independent small business. I believe that independent small business is at

the very heart of the political and economic traditions of America. Our free enterprise economy will remain viable and strong so long as the average citizen is free to start a new business, to make his own business decisions without coercion or intimidation, and to succeed, if possible, in making his business grow into big business by dint of his own initiative and hard work. It is the duty of all of us to keep it that way; that is what we at the Federal Trade Commission are trying to accomplish. However, as I shall point out later, in my judgment the spokesmen of many businesses, both small and big, are asking our Government to do more for them than they legitimately should ask with the result that individual initiative and hard work may, like the Indian, be vanishing from the American scene. Government handouts, special purpose and privilege legislation, and the curse of subsidies may be causing a spiritual atrophy that endangers our very existence as a nation. Too many demands are being made both upon the Congress for legislation and through the Congress upon the Public Treasury for the solution of every difficulty. It is about this that I wish to speak to you today.

But before I discuss this subject may I assure you that the Commission is thoroughly aware that your line of business has its troubles—and plenty of them. The Federal Trade Commission has been alive to those problems for a long time and has tried to do something about them. Indeed, perhaps our activity in this area has been disproportionate to our overall responsibilities. Let us review that activity for a moment.

As early as 1915, the Commission made its first general investigation of gasoline prices and of competition in the marketing of gasoline. From that time, over the years, there have been no fewer than 12 general investigations of various aspects of petroleum distribution and a number of other investigations on related subjects. In addition to such general inquiries, there have been a great many specific investigations of suspected law violations and a considerable number of these have ended in formal commission proceedings. There has never been a time when matters involving some aspect of your industry were not pending before the Commission.

I am sure that you are just as familiar as I am with the situation out of which these problems arise. The major oil companies are competing more-or-less vigorously among themselves for shares of the branded gasoline market. At the same time they are also competing with the unbranded products in the total market for gasoline. The supplier of gasoline frequently may be strongly tempted to reduce prices in particular territories or to particular stations—for example, to meet the price of a local competitor or cut into his volume, or to dump a temporary and localized surplus of gasoline without disturbing prices over a broad area. If the supplier is able to discriminate in price among his customers, it is obvious that his individual customers who do not receive the favored price will absorb most of the hard knocks of this competition.

Now the Commission has no business interfering with legitimate competition, even though a competitor might be injured or even destroyed as a result of it. Risk is inherent in business. But the Commission does step in when any of the laws it is charged with enforcing is violated. In relation to the pricing of gasoline, the competitive situation has frequently given rise to charges of price discrimination and price fixing—practices which do violate those laws.

The Standard Oil[1] case was one of the Commission's most frustrating experiences. The essential facts are that in the Detroit market the Standard Oil Co. sold gasoline to so-called "jobber" customers, who resold both at wholesale and also at retail. These "jobber" customers were charged 1½ cents a gallon less than regular service stations which competed directly with the so-called "jobbers" for retail business. The Commission's complaint charged that this price difference violated the Robinson-Patman Act. After long litigation, however, the Supreme Court decided that this was a price discrimination but did not violate the act because Standard Oil's lower price fell within an exception to the act that permits a seller to meet its competitor's price in good faith.

Depending upon one's point of view, the Supreme Court's decision either created or revealed a vast loophole in the Robinson-Patman Act. The price-meeting defense was held to be absolute. Thus, under this decision a supplier is perfectly free to discriminate in favor of a customer once that customer has been offered a lower price by a competing supplier—and this is true even though the discrimination might have a disastrous effect upon competition with the seller or with the buyer. Likewise, the powerful buyer is free to solicit discriminatory prices from various suppliers by the use of offers from other suppliers.

It goes without saying that the Standard Oil decision was completely contrary to the Commission's interpretation of the Robinson-Patman Act. From the beginning I strongly favored new legislation to close this loophole and supported the bill known as S. 11 or the "equality of opportunity" bill. In supporting that bill before the Senate Committee on the Judiciary I stated:
